The Hoffiel Officer of Hoelth sate in a statiar capacity for the Mari-Division of Angebury, Mariborouse & Manabury, and Found. These continued districts have a permistion of 68,020 and an area of 23,259 acres. They have appointed a lotat Condition, The Bast Wile United Matricts (Medical Officer of Health) Condition, to deal with all return to Institute to the office of Health Direct of Health. The Medical Officer of Coults also perform duties for the Wilterire County Council under the Dedical Medical Medical Service and Florith Statistics County Council under the Dedical Medical Medical Service Structure act.

BOROUGH OF MARLBOROUGH

ANNUAL REPORT of the MEDICAL OFFICER OF HEALTH for the Year 1971

> Council Offices, 1, The Green, Marlborough.

To The Mayor, Aldernen and Councillors:

Mr. Mayor, Ladies and Gentlemon,

I have the honour to present my annual report for the year 1971. This report in view of reorganisation of Local Government is likely to be my penultimate one, and is compiled on similar lines as last year. I am grateful to Mr. Yeoman, the Chief Public Health Inspector for his report which is included. I an also indebted to Dr. Lycett, the County Medical Officer for supplying details of immunisation procedures carried out during the year, and to Mr. Hampshire, the Water Engineer, Borough of Swindon for supplying me with a summary of bacterial and chemical analysis.

Marlborough is situated on the river Kennet at an elevation approximately 470 feet above sea level, and although a small Borough, has an importance which is not related to its size.

Primarily a shopping centre, the town is also an important educational centre, as in addition to Marlborough College, there is the Granmar School dating from 1550, and also a Secondary Modern School, both now in new modern buildings in excellent surroundings. The livelihood of the population is provided in the main by work in local trades and services, a little light industry, agricultural pursuits, and further afield the industrial town of Swindon. There is a flourishing catering industry to meet the meeds of the many visitors to the town, which provides employment, much of it on a parttime and seasonal basis.

The town is very fortunate in having the Savernake hospital within two niles of the centre in pleasant surroundings. This hospital of 70 beds provides in-patient facilities for at least 90 per cent of these who require hospital admission, has a first class maternity unit, and a modern well equipped out-patients department. Arrangements for the provision of a geriatric unit referred to in last years report are due to come into operation almost immediately, with fifteen beds, ten for women and five for men. Plans for a Day hospital too are, I understand, in the pipe line. This is an important development since we frequently experience problems with old people who do not require full residential care, particularly those living with relatives, for when this would be a most welcome provision. HEUOROELIEN TO HOUORDE

APPRIED REPORT of the REDIGAL OFFICIA OF HEALTH. for the Year 1971

Mariberough in situated on the river femant at an eleverich approximited ATO fost above son lovel, and although a scall Berough, has on importance which is not related to its size.

Privarily a shopping control the term is also an inpresent electronal centro, as in addition to faritherough folloge, there is the Greaner School define from 1550, and also a Goomdary Holert School, both new in new molern buildings in excellent correandings. The involuted of the sequention is provided in the rain by work in local trades and corvices, a liftle light industry, erriculturel pursuits, and forther shield the interial town of Beindon. There is a flourishing catoring industry to cost the mode of the state and consents have which provides employment, took of it of a parttice and consents have, which provides employment, took of it of a part-

https://archive.org/details/b29791510

The general health of the town is satisfactory, although undoubtedly inflation has adversely effected the standard of living of those on small fixed incomes and families where the bread winner is in a low income bracket. The population estimate has shown no change in spite of the fact that the number of occupied houses has increased by 53, and the natural increase, excess of births over deaths, is 41. The opening of the M4 motorway seems to have had some effect in reducing the volume of traffic passing through the town, but the increased size of the modern lerry has largely offset any benefit this has brought, while it is too carly to estimate what effect it will have on future population trends.

The number of births has risen slightly, which has resulted in a lower percentage figure for illegitimate births, although the number of these, ten, is the same. Although family planning has a part to play in this situation one feels that this is not the real answer at a time when promiscuity has lead to a situation in which venereal disease, particularly genorrhoea, is virtually out of control. Family planning, a centre for which was established some years ago in the town in the County Clinic, as a result of voluntary effort, has ceratinly however a large part to play in the overall control of population, vital if the quality of life is to be maintained at anything like its present level.

The pattorn of deaths has shown little change, the total being five more than last year, at 68. Of the ten deaths from malignant disease, lung cancer accounted for only two, but there were sixteen from coronary heart disease, an increase of six, and one each from pnounonia and chronic bronchitis. The causes of all those deaths are closely related to cigarctto smoking, underlined in the report of the Royal College of Physicians, published during the year. Their estimate that in 1968 of the 99,082 deaths which occurred among men aged 33-64 there were 31,000 premature deaths associated with cigarette snoking, is worth repeating together with their firm findings that there is a steady and comparatively rapid decline in the risks to the individual who gives up snoking and remains a non-smoker. I believe that information of this type should be widely ventilated so that snokers are in a position to make up their minds on their attitude to the snoking habit based on accurate evidence. However, since the burden, both physical and financial on the N.H.S. is a heavy one, and recent work published by an M.O.H. Dr. Taylor, seems to indicate that in school children whose parents are snokers there is a significantly increased liability to respiratory disease, every effort should be made to try to influence smokers to abandon the cigarette, and even more important to influence I believe that everything should be done where the young to abstain. possible to discourage smoking in public places, and I was particularly pleased that the Council agreed to provide permanent notices either "Smoking Discouraged" of "No Snoking Please" for distribution to owners and managers of establishments and other places to which the public have access, and that as a result a great nany ostablishements in the town are displaying these noticos.

The number of cases of infectious disease notified was the lowest since 1962, but of the five that were notified, two were due to respiratory tuberculosis - a reminder that this disease is still with us. The other three due to measles, are now preventable by vaccination. This present happy position in respect of notfiable diseases is entirely due to our successful vaccination policy, wholeheartedly accepted by the parents in this town for their children, and ably implemented by the County Health Department. This has exceeded our greatest expectations of the early post war years when I first entered the Public Health Service. Although modifications to the vaccination policy such as the abandement of routine infant smallpox vaccination, may be made from time to time, in general it will be necessary to continue the policy of The general bealth of the from is estimizetory, altaough undervicely inflation has advarably offected the standard of living of those on shall fixed incomes and families where the bread winner is in a low income bracket. The population coticate has above no connect in apito of the fact that the number of committed houses has increased by 53, and the natural increase, excess of Martha over denting, is 41. The opening of the Winnersty scene to have had some effect in reducting the volume of traffic passing the form. The increased size of the reducting the increase of the had the increased size of the reducting the form of this fact the increased size of the reduction the scene to have the brought, while it is too contain terry has largely effect any hear it the facture population treads.

The marker of births her rison eligitly, which has required in a lower percentage figure for illegittents births, although the mucher of these, ten, is the sense. Although faulty planning here a part to play in this situation one feels that this is not the real answer at a tice when predictedity has lead to a situation in which veneraal disease, perifecularly generances, is virtually qui of control. Faulty planning, a centre for which was established some years are in the town in the Genety Clinic, as a result of voluntary effort, here constitut to gent a large part to play in the overall control of population vital if the quality of life is to be relationed at anything like its present icred.

The particular of deaths has shown little charge, the total boing Tive hore into has you, at 68. Of the fact he from unlignent disease, hung canoor secondated for only two, but there each strict on recently heart disease, an increase of all these datas are closely related to right or the restrict arching, underlied in the report of the first of the 99,062 deaths which countries the year. Their estimates the in 1966 of the 99,062 deaths which countries the year. 32-64 there were discond the first of the 99,062 deaths which countries the year. 32-64 there were discond the first of the 99,062 deaths which countries the year. and countratively report of the 99,062 deaths which countred and your and their estimation of the interval of the 99,062 deaths which countred and your settle report of the interval of the 99,062 deaths which countred and your settle report of the interval of the 99,062 deaths which countred and your settle report of the interval of the settle of the interval of the your of the set their estimation of the analysis and the interval of the interval of the stand restlet of the analysis and the settle of the Willer to rester the first of their estimates to the analysis and the settle of the Willer of their estimates to the analysis and the settle of the Willer to rester the first their estimates to the analysis and the set in the Willer to rester the first the restlet of the analysis and the set and the Willer to rester the first the rest of the total and be and the set of the set of the set in the set of 500 deaths the set interval the set of the the set interval of the first in the set of the the first in the set in the set of the restrict of the set interval of the set o

The number of encode of infectious disease notified was the forein since tuberculesis - a variator that wave notified, two were due to respiratory three due to mersion, are now preventable by vaccination. This present have positive in records of notificite discusses is will with us to our successful vaccination policy, ubolescentally accepted by the present in the term that cliften, and shift ingle-ented by the fourty Sailis Department. This then exceeded our provected with the early post was years when I first their cliften, and shift ingle-ented by the fourty Sailis Department. This cutored the Fuelts Sarvise. Altients of the early post was years when I first antered the Fuelts Sarvise. Altients in edifications to the vaccination policy much as the chardenant of review mailion was included policy much as the chardenant of review take analy be and the vaccination policy much as the chardenant of review takes and the accination policy much as the chardenant of review takes and the accination of the policy to policy the policy in general is review to the acconstingtion of the policy of policy we have the chardenant of review the takes and the second and from the policy in general is review to the acconstingtion of the policy to policy the the time to the policy in general is the acconstingtion of the policy of the policy have the chardenant of review the taken to continue the policy of the policy time to the policy in general is the second of the policy to continue the policy of the policy of the policy in the policy of the policy of the policy of the policy of the policy to the policy in the policy of the policy in the policy of the policy universal vaccination indefinitely, which will require at least as much attention in the future as the County Health Department has given to it in the past.

Although the longth of the housing list for council house accommodation shows little evidence of any decline - at present there are 110 on the list for general housing acconnodation, and 72 for old persons acconmodation housing conditions are reasonably good, and the points scheme in respect of housing applicants for council accommodation has worked very well. I have however suggested minor alterations to the scheme to give greater priority to families with young children occupying older properties, usually flats situated above or behind business premises in the centre of the town, which although possessing in most instances all the five amenities, are by their "bad arrangement" often a poor environment for optimum child development. One is reluctant to deal with such premises under Housing Act procedure, since in most cases they provide useful residential accommodation for adults, at least up to middle age, in light of the current housing shortage. The extension to York Place warden controlled grouped accommodation was completed, providing anothor 16 flatlets, and plans have been put in hand to provide for 21 flatlets at the Priory in the centre of the town, with a warden and full community facilities. The Council decided however not to provide full grouped accommodation facilities at the flats to be built at Port Fields. mainly on the grounds that this site was not particularly suitable, as I undorstand it, for old people, and that there was a need for flatlets for the middle aged in this area. I feel however that it is difficult to overbuild in respect of grouped acconnodation with full community facilities, and to satisfy the need it may well be necessary to build flatlets in situations where due to circumstances the site may not be entirely ideal. Like many authoritics we are now facing problems with regard to temants in grouped acconnodation who have become too frail to support themselves adequately, even in these sheltered conditions. This is something which needs to be considered in co-operation with other interested authorities. In the future as is being done in some private schemes, "sick bays" should perhaps be provided in association with grouped accommodation, where tenants can be nursed during temporary illness or when awaiting admission to a geriatric hospital.

The Luncheon Club for old people continues to flourish and at present there are plans to provide accommodation for it in the Priory in the future. However, some day I hope that it will be possible to find suitable accommodation to provide for a Day Club on the lines of that now established at Devizes. Meals on Wheels has carried on its unobstrusive good work during the period. Our greatest thanks are due to all those who give their time freely and contribute so much to the success to both.

The water supply is now the responsibility of the Swindon Water Department, and has given no cause for anxiety.

I an very grateful to the members of the Council for their continued support and for the kindness and co-operation of all the Officers of the Council. This has been yet another difficult year for local authority staff, particularly for those working in Public Health Departments for when the future is even less secure. There seems to be little insight by some with regard to the work which goes on, and is required to maintain our present high standards in environmental health. As I have said in my previous reports, it is crucial that the present relationship between the Medical Officer and the Public Health Inspectorate is maintained when the Medical Officer of Health disappears, and is replaced by a Medical Adviser who is expected to come from universal vaceination indefinitely, which will require at least as mon

the staff of the N.H.S. I regret that the appointments of Medical Advisers and also that of Chief Public Health Inspectors are not to be statutorily designated officers at a time when it seems likely that appointments to be made by the new Counties in the fields of commerce and even in the supervision of gambling are likely to be so. This would seem to indicate, to me at any rate, a rather curious attitute of mind with regard to the importance of public health. There will of course also be no security of tenure of office for the Medical Adviser or for the future Chief Environmental Health Officer, presumably a Chief Public Health Inspector; at a time when it seems as important as it ever was for a Medical Adviser to be able to make his own unbiased comments on any matter which affects the health of those living in the area for whom he is responsible in this regard without fear of the consequences.

Finally I should specifically like to thank Mr. Yeoman and his staff, Dr. Lishman for acting as my Deputy, Dr. Wormald and the staff of the Public Health Laboratory for their continued help and frequent valued advice, and my secretary, Miss Boswell for her help and co-operation, particularly for her work in preparing this annual report.

I have the honour to bo,

Your obedient servant,

F. D. F. STEEDE,

Medical Officer of Health.

the staff of the H.B.S. I regret that the appointments of Medical Mavisors and also that of Chief Fublic Health Instructors are not to be statutorily designated officers at a time when it could likely that appointments to be rade by the new Counties in the fields of connerse and even in the supervision of grability are Hitsly to be so. This would seen to indicate, to co at any tate, a rether curious stiltuies of mind with regard to the inpervision berith. There will of course also be no security of temps of office for the Medical Advisor or for the future Chief Barir meental Health Officer, presenably a Chief Inibile Health Inspector; at a time when it secure as inpertant as it over whether a Medical Advisor to be able to indee the energy of a chief Inibile Health Inspector; at a time when it secure as important as it over whether a Medical Advisor to be able to indee the as important as it and the restor when allocies the be able to indee the energy of the sector as the origon when allocies the best of the able to indee the area for when he is a contract which allocies the best of the able to indee the area for when he is a the setter when allocies the best of the able to the approximate and allow restor which allocies the best of the consequences.

Finally I should specifically like to thank Mr. Yeaman and bis staff, Dr. Makman for acting as my Deputy, Dr. Vermaid and the staff of the Fublic Health Laboratory for their continued belg and frequent valued advice, and my socretary, Mass Bessell for her help and co-operation, particularly for her work in memoria, this second report.

REPORT OF THE CHIEF PUBLIC HEALTH INSPECTOR FOR THE YEAR 1971

Telephone: Marlborough 2474

Council Offices. 1, The Green, Marlborough.

To the Mayor, Aldermen and Councillors.

Mr. Mayor, Ladies and Gentlemen,

I have the honour to present my twenty third Annual Report on the work of the Public Health Department. The report covers the year ending 31st December, 1971 and is prepared in accordance with the Department of Health's circular dated 3rd January, 1972.

Yours faithfully,

H. C. YEOMAN. CHIEF PUBLIC HEALTH INSPECTOR.

January, 1972.

FACTORIES

12 inspections were carried out during the year and details are set out in the appendix to the report.

WATER SUPPLY

The water undertaking for the district is Swindon Corporation. 2 bacteriological samples were taken during the year, both of which were satisfactory.

OFFICES, SHOPS & RAILWAY PREMISES ACT, 1963

Little progress was made in the detailed inspection of regiseterod premises but routine complaints were investigated.

MOVEABLE D. FLLINGS

There is only 1 licensed site within the Borough. The 2 caravans are well maintained.

RODENT CONTROL

66 complaints of rodent infestation were received during the year, 28 of which came from business premises. In addition a test baiting of 25 manholes on the main severage system was carried out and 4 manholes were found to be infested. The infestation was cleared after several re-visits. The work of rodent control is carried out by a member of the outside staff under the direct supervision of the Public Health Inspector.

SWILLING BATH

The open-air heated swimming bath continued to be well used, and there were no problems with heating, filtration or chlorination. Tintometer readings are taken 3 times a day and 3 bacteriological samples taken during the year. The bath was open from 11th April to 26th September.

PETROLEUM REGULATIONS

There are 20 licensed installations within the district, all of which have been inspected at least once.

EACTOR AS

UDUTACO TREAL

66 complaines of redard inflatentian ware received during the year, 20 of which cans from brokenes president. In shifting a best baiting of 25 tranholos on the mains see not be broken war carried out and 4 manholos ware from to be inflated. The inflatentian was carried attact after several re-visites. The work of related. The inflated out by a mainer of the catalos staff reader the direct canarylaton of the Public Scalth Independent.

<u>20148 (417) 1168</u>

The open-all housed attacks bash continued to us and dard, and anone sare no problem with bonting, filteration or ohlochestica. Theorem readings are taken i three a cry cal i bearintological samples taken during the your. The week was open from tith applit to foth deptations.

Carl Marth States of Contract

There are 20 iterand installetions within the district, all of water here been instated at loast once.

SEWERAGE

The optimism concerning the new sewerage scheme expressed in the previous report was not fully justified, and at the end of 1971 the scheme had still not been commenced. Tenders have been invited for the second time and it is hoped that a start will be made in the Spring. Negotiations are taking place for the acceptance of sewage from 3 neighbouring parishs in the Marlborough and Ramsbury Rural District.

The Works, in the meantime, continue to work reasonably satisfactorily, although some samples fail to meet the Thames Conservancy Standard.

PUBLIC CLEANSING

All parts of the district have a weekly collection and in addition cafes, restaurants and school canteens have a second collection. Disposal at Prrtfields continues to be satisfactory and discussions are now taking place over the extension of the site, or possibly the shared use of the Rural District's existing tip.

HOUSING

<u>Cauncil Houses</u>. Phase I of the Portfields development was completed during the year, comprising 9-3 bedroom houses, 9-2 bedroom houses, 3-2 bedroom flats and 3-1 bedroom flats. The second stage of York Place (grouped Old Persons flats) was nearing completion. This comprises 10-1 bedroom flats, 6 bed/sitters and will provide a total number of units in the entire scheme of 31 units and a Marden's flat. The 3 houses in Tinpit were completed, and a start made on 2 flats and a shop at 3, Kingsbury Street.

Private Houses. 36 houses were completed during the year to give a total completed since the war of 446. At the end of December a further 59 were under construction.

Improvements to Pre-war Council Houses. The modernisation programme has continued satisfactorily and 109 houses are now complete. A further 50 had been commenced by the end of the year.

Improvement Grants. 13 Discretionary Grants, value £17,204 were made during the year. There were no applications for Standard Grants.
