MARLOW URBAN DISTRICT COUNCIL

ANNUAL REPORT

of the

MEDICAL OFFICER OF HEALTH

for the

Year 1950

MEDICAL OFFICER OF HEALTH:

F.H.M. Dummer, M.B., Ch.B., D.P.H. (Lond.).

SANITARY INSPECTORS:

C.K. Smith, M.I. Mun.E., A.R.I.C.S., M.R.San. I.

C.R. Lawless, M.S.I.A., A.R.S.I.

28, High Street,
High Wycombe,
Bucks.

July 1951.

To the Chairman and
Members of the Marlow
Urban District Council.

Mr Chairman, Madam and Gentlemen,

I have the honour to submit my third Annual Report as your Council's Medical Officer of Health.

One of the outstanding features of the report has been the maintenance of a local birth rate considerably higher than that of the country generally. Although this rate is less than that recorded last year, at 18.9 it compares favourably with the rate of 15.8 for England and Wales.

The crude death rate for the year is 12.2 compared with a general rate of 11.6, but when adjusted for age and sex the final figure is 11.2 per 1,000.

Three other records in the report are worth mention.

- (a) No person died of tuberculosis although there is an increase in the number of new cases notified.
- (b) No mother died as a result of childbirth, pregnancy or abortion. This is a feature which **one may almost** have come to expect in Marlow, but it would be a mistake to take this favourable circumstance for granted.

Behind this fact lies a wealth of care and attention on the part of doctors, nurses and hospital services. It also speaks well of health education which has established early clinical supervision of pregnancy as a sine qua non of modern thought.

- (c) The infantile mortality rate in Marlow for the year was 16.9 compared with a rate of 29.8 for England and Wales. This highly satisfactory result does great credit to the care of mothers for young children and the services which are available for sick infants. No feature of public health in the last 50 years has been more dramatically brought out than the infant mortality rate. Not so long ago the figure of 100 was regarded as ideal - today the rate makes this "ideal" look absurd.

Only two cases of infectious disease occurred in the year 1950, an all-time low record for Marlow.

My thanks are due to your Officers, Mr Kelvin Smith and Mr Lawless for their assistance and co-operation in the work of the Public Health Department.

I am,

Ladies and Gentlemen,

Your obedient Servant,

F.H.M. DUMMER.

38, High Street,
High Wycombe,
Bucks.

July 1951.

To the Chairman and
Members of the Health
Trust District Council.

Mr Chairman, Ladies and Gentlemen,

I have the honor to advise you that Annual Report as your
Council's Medical Officer of Health.

One of the outstanding features of the report has been the
maintenance of a local birth rate considerably higher than that
of the country generally. Although this rate is less than that
recorded last year, it is compared favorably with the rate
of 12.5 for England and Wales.

The crude death rate for the year is 11.5 compared with a
national rate of 11.0, but when adjusted for age and sex the
final figure is 11.2 per 1,000.

These three records in the report are worth mention.

(a) No person died of tuberculous disease there is no
reference in the number of cases notified.

(b) In other cases as a result of notification, however, the
disease. This is a disease which has not been reported
since it spread to Weymouth, but it would be a mistake
to take this favorable circumstance for granted.

Based on the fact that a number of cases and deaths are
the part of doctors, nurses and hospital workers. It
also speaks well of health education which has been
early clinical supervision of pregnancy as a whole and
one of modern thought.

(c) The tetanitic mortality rate in Weymouth for the year was
12.5 compared with a rate of 12.5 for England and Wales.
This highly satisfactory result is due to the fact that
the cases of tetanus are very rare and the services
which are available for the patient. The tetanus of
public health in the last 20 years has been almost
entirely brought under control. It is not possible to
put an exact figure on the number of cases reported as they
today the rate when this figure is taken.

Only two cases of infectious disease occurred in the year
1950, an all-time low record for Weymouth.

My thanks are due to your District Council for their
co-operation and assistance in the work of
the Public Health Department.

I am,
Ladies and Gentlemen,
Yours obedient servant,
F. W. H. BISHOP

CANCER DEATHS.

1950	-	Deaths from Cancer (all ages)	=	16.
1949	-	Deaths from Cancer (all ages)	=	16
1948	-	Deaths from Cancer (all ages)	=	13
1947	-	Deaths from Cancer (all ages)	=	7

The distribution related to organs affected, was as follows:-

Stomach.....	3
Lungs.....	1
Breast.....	2
Uterus.....	-
Other Sites.....	10

MATERNAL DEATHS.

- (a) From puerperal sepsis.....
- (b) From other maternal causes.....

INFANTILE MORTALITY.

Two infants (one male, one female) died under the age of one year. This represents an Infant Mortality Rate of 16.39 per thousand related births compared with 29.8 per thousand in England and Wales.

CANCER DEATHS

1950	-	Deaths from Cancer (all ages)	18
1949	-	Deaths from Cancer (all ages)	16
1948	-	Deaths from Cancer (all ages)	13
1947	-	Deaths from Cancer (all ages)	7

The distribution related to organs affected, was as follows:

Stomach.....	3
Lungs.....	1
Breast.....	2
Uterus.....	7
Other Sites.....	10

FATAL DEATHS

- (a) From respiratory organs.....
- (b) From other fatal causes.....

INFANT MORTALITY

The infant (one year) and female) died under the age of one year. This represents an infant mortality rate of 14.33 per thousand related deaths compared with 12.5 per thousand in England and Wales.

TUBERCULOSIS.

APPROXIMATE QUANTITIES FOR CONSTRUCTION OF STAIRS

IMMUNISATION AGAINST DIPHTHERIA.

Immunisation against diphtheria (and, where desirable, whooping-cough) continues to be carried out in schools and the Infant Welfare Centre, in your District, by arrangements made with the Bucks County Council. It is also optional for all persons to choose to have this service performed by their elected doctor under the National Health Service Act (1946). Completed record cards are now required to be returned to the County Health Department by all services. Completed courses of immunisation (including A.P.T. and combined diphtheria-pertussis vaccine) amounted to 86 for the year 1950.

AMBULANCE SERVICES.

The Ambulance arrangements for your District, made under proposals submitted by the County Council in accordance with Section 27 of the National Health Service Act (1946) and approved by the Ministry of Health are those which were already in existence before the appointed day.

(a) For Infectious Cases:-

An Ambulance is supplied by the Wycombe and District Joint Hospital Board for service in the Borough of High Wycombe, and the Urban Districts of Beaconsfield and Marlow and the Rural District of Wycombe. The facilities are adequate for the areas served.

(b) For Non-Infectious Cases:-

An Ambulance is maintained for Accidents and routine transport by the Local Corps of the St. John Ambulance Brigade. Ambulances are also available from Bourne End and the adjoining Boroughs of High Wycombe and Henley-on-Thames. These services are satisfactory.

HOSPITALS.

The available Hospitals in the district are the Metropolitan Hospitals The Royal Berkshire Hospital, Reading, and the King Edward VII Hospital, Windsor. In addition, there is the Marlow Cottage Hospital.

LABORATORY FACILITIES.

The laboratory facilities of the Public Health Laboratory, Walton Street, Oxford, are available for all investigations carried out on behalf of the Council. Arrangements are made direct with the Laboratory for the transport of material. Periodic use has also been made of the Camberwell Research Laboratories.

DRAINAGE AND SEWERAGE.

The Sewerage Disposal Works continue to function satisfactory. Consideration is now being given to the extension of sewers in parts of your Council's area not already drained to public sewers.

WATER SUPPLIES.

Water is supplied by the deep wells of the Marlow Water Company. It is estimated that 1,910 houses are supplied direct from the public mains, representing 98% of the inhabited houses. In all, 15 samples were taken throughout the year. The supply has been adequate in quantity and generally in quality, but in August 1950 some degree of contamination was reported by the Secretary/Engineer of the Company. An immediate survey of properties and drainage was undertaken and as a result (in conjunction with Wycombe Rural District Council) it was decided to extend the existing sewer to cover properties within the immediate area of operation of the boreholes.

At the end of the year, the following reports were made on the supply:-

IMMUNIZATION AGAINST TYPHOID

Immunization against typhoid fever, which is a bacterial disease, should continue to be carried out in schools and the latter village Centre, in your District, by arrangements made with the Health Council. It is also optional for all persons to choose to have this service performed by their selected doctor under the National Health Service Act (1952). Completed record cards are now required to be returned to the County Health Department by all services. Completed Government Immunization (including A.P.T. and combined diphtheria-typhoid vaccine) amounted to 86 for the year 1950.

ANNUAL WORK SERVICES

The following arrangements for your District, under proposals submitted by the County Council in accordance with Section 17 of the National Health Service Act (1952) and approved by the Ministry of Health are those which were already in existence before the appointed day.

(a) For Infectious Cases:-

An ambulance is supplied by the Wexford and District Joint Hospital Board for service in the Borough of High Wycombe, and the Urban Districts of Ransomefields and Harlow and the Rural District of Wexford. The facilities are adequate for the present service.

(b) For Non-infectious Cases:-

An ambulance is maintained for accidents and routine transport by the Local Group of the St. John Ambulance Brigade. Ambulances are also available from Bourne End and the adjacent Boroughs of High Wycombe and Harlow-on-Trent. These services are satisfactory.

LABORATORY FACILITIES

The available facilities in the district and the Metropolitan Hospital, The Royal Berkshire Hospital, Reading, and the King Edward VII Hospital, Wexford in addition, there is the Harlow Cottage Hospital.

LABORATORY FACILITIES

The laboratory facilities of the Public Health Laboratory, Wexford, General, Oxford, are available for all investigations carried out on behalf of the Council. Arrangements are made direct with the laboratory for the transport of material. Periodic use has also been made of the Government Research Laboratories.

DISPOSAL OF SEWAGE

The Sewerage Disposal Works continue to function satisfactorily. Consideration is now being given to the extension of sewer in parts of your Council's area not already drained to public sewers.

WATER SUPPLY

Water is supplied by the deep wells of the Harlow Water Company. It is estimated that 1210 houses are supplied direct from the public mains, representing 58% of the inhabited houses. In all, 15 houses were taken throughout the year. The supply has been adequate in quantity and generally in quality, but in August 1950 some degree of contamination was reported by the Wexford/Bourne of the Company. An immediate survey of properties and mains was undertaken and as a result (in consultation with Wexford Rural District Council) it was decided to extend the existing sewer to cover properties within the immediate area of operation of the treatment.

At the end of the year, the following reports were made on the

MARLOW PUMPING STATION,
CHALK PIT LANE, MARLOW.

Results of Analyses.

TABLE OF CONTENTS

TABLE OF CONTENTS

STATEMENT OF WORKS OF SANITARY INSPECTOR UNDER ARTICLE 27
OF THE SANITARY OFFICERS ORDER, 1935.

Acts and Sections.	Notices served		Complied with		Not complied with		In progress	
	Informal	Formal	Informal	Formal	Informal	Formal	In-formal	Formal.
P.H. Act 1936 Sect. 58	1	Nil	1	Nil	Nil	Nil	Nil	Nil
Sect. 75	2	1	2	Nil	Nil	1	Nil	Nil
Sect. 93.	Nil	5	Nil	3	Nil	Nil	Nil	2
Housing Act 1936. Sect. 9.	15	2	13	Nil	1	1	7	1
TOTAL	18	8	16	3	1	2	7	3

The Formal Notice served under Section 75 of the Public Health Act 1936 was not complied with and proceedings were taken against the Owners in the Local Court of Summary Jurisdiction. These proceedings failed and the Occupiers voluntarily and without prejudice provided a new dustbin.

MILK SUPPLIES.

Periodic inspections have been carried out of dairies, and inspections arising from complaints.

MEAT.

During the year inspections of carcasses at the Ministry of Food Slaughterhouse in the District have been maintained and the undermentioned amounts of meat have been condemned:-

<u>BEEF.</u>	<u>MUTTON.</u>	<u>PORK.</u>	<u>LIVERS.</u>	<u>OFFAL.</u>	<u>VEAL.</u>
13,749 lbs.	207 lbs.	539 lbs.	8,053 lbs.	4,854 lbs.	216 lbs.

During the year the number of kills at this slaughterhouse were as follows:-

<u>CATTLE.</u>	<u>SHEEP.</u>	<u>CALVES.</u>	<u>PIGS.</u>
1,890	4,258	434	23

The rate of killing from the month of August 1950 proved too much for the service available for inspection by the Public Health Department. This circumstance was brought about by the closure of neighbouring slaughterhouses and the subsequent re-distribution of carcasses. An appeal was made to Wycombe Rural District Council for the assistance of their Sanitary Inspectors in the duty of inspection. These Sanitary Inspectors carried out routine inspections throughout the remainder of the year and I have to record our deep appreciation of their services.

OTHER FOODS.

During the year the Sanitary Inspectors have issued 47 Condemnation Notes in respect of foodstuffs condemned. These certificates in the main, relate to canned food. Periodic examination of ice-cream has been carried out and samples were considered satisfactory.

TOTAL	10	0	10	0	10

The report of the Michigan Department of Agriculture for the year 1930 shows that the number of establishments inspected was 10,000. Of these, 10,000 were found to be in compliance with the laws and regulations governing the industry. No establishments were found to be in violation of the laws and regulations governing the industry.

MILK SUPPLIES

Periodic inspections have been carried out of dairies, and inspection reports have been prepared.

MEAT

During the year inspections of carcasses at the Michigan Department of Agriculture have been continued and the undersigned reports of meat have been prepared.

MEAT	BEEF	PORK	LIVER	OTHER	TOTAL
1,500 lbs.	500 lbs.	500 lbs.	500 lbs.	500 lbs.	3,500 lbs.

During the year the number of kills at this slaughterhouse were as follows:

CATTLE	SHEEP	PIGS
1,500	500	500

The rate of killing from the month of August 1930 proved too high for the service available for inspection by the Public Health Department. This circumstance was brought about by the closure of neighboring slaughterhouses and the consequent distribution of carcasses. As a result the Michigan Department of Agriculture for the assistance of their sanitary inspectors in the duty of inspection. These sanitary inspectors carried out routine inspection services and rendered all the year and I have to report our deep appreciation of their services.

OTHER FOODS

During the year the sanitary inspectors inspected 10,000 establishments in regard to foodstuffs. Periodic examinations of foodstuffs were carried out and samples were analyzed.

FOOD POISONING.

There were no cases of food poisoning notified during 1950.

FACTORIES ACT 1937.

Two additional factories have been opened up during the year and entered in the Register of Factories in the District. One registered factory was deleted from the Register in the year under review. Factories appearing on the Register have been inspected from time to time.

HOUSING.

(i) Unfit Dwelling-Houses.

(a) The total number of dwelling-houses inspected for housing defects under the Public Health and Housing Acts.....	44
(b) Number of dwelling-houses found to be in a state so dangerous or injurious to health as to be not fit for human habitation.....	Nil

Number of separate tenements or underground rooms in respect of which closing orders were determined but tenement or room having been rendered fit.....	Nil
---	-----

(e) Housing Act 1936, Part IV - Overcrowding.

The return of many families to the original areas from which they were evacuated during the war years has assisted in the lessening of overcrowding, but this fact still remains of considerable importance, although it is gradually being offset by the erection of new houses.

REPORT TO THE BOARD

These were the names of the persons who were reported to the Board in 1930.

REPORT TO THE BOARD

The following persons were reported to the Board in 1931. The names of the persons who were reported to the Board in 1930 are also given for comparison.
