MARYPORT URBAN DISTRICT.

ANNUAL REPORT

*Cum*

OF THE

MEDICAL OFFICER OF HEALTH,

R. SANDERSON, B.Sc. M.B. B.S.

FOR

1 9 2 0.

*Dartmouth*

PARCHMENT

*Handwritten mark*

*Dartmouth*

To the Chairman and Members of the  
Maryport Urban District Council.

Gentlemen,

In accordance with the instructions issued by the Ministry of Health, I beg to submit my report on the general health and vital statistics of your district for the year 1920. The various items are arranged and commented on as suggested by the official circular.

#### NATURAL AND SOCIAL CONDITIONS.

The Urban District of Maryport lies on either bank of the River Ellen where it flows into the Irish Sea. On the north bank the land is mostly elevated and undulating; that to the south (Grasslot district) is flat, while the eastern portion of the town (Netherton and Ellenborough) lies on ground gently sloping up from the river.

The majority of the inhabitants are employed in the coal mines of the surrounding districts, while others to a much smaller extent are engaged in the Ironworks (now closed), docks, fishing, the railway and in tanning. Except for a short strike, the miners have been fully employed, but there has been much unemployment among the iron and dock workers and distress has been experienced among their dependents. The total disbursed as Poor Law Relief during the year was £3,604 : 7 : 2.

#### POPULATION.

The population in 1911 was officially stated to be 11,423. This naturally decreased during the last few years, but has now recovered, the estimated population being given by Somerset House authorities as 11,570.

There is much over-crowding in various parts of the district, but this will be slightly relieved on the completion during the present year of part of the Council's new Building Scheme.

The Victoria Cottage Hospital, containing 14 beds, and supported by voluntary contribution, is freely utilized by local practitioners for cases requiring surgical treatment.

#### WATER SUPPLY.

The water supply has been determined by expert analysis to be satisfactory in quality, and there has been an efficient supply without interruption during the past twelve months.

The source of supply is the River Derwent near Cockermouth, and includes the compensatory water from Thirlmere - the Manchester Corporation reservoir. This is pumped to a higher level and finds its way by gravitation through filter beds to Maryport.

#### CLOSET ACCOMMODATION.

The water carriage system is almost universally adopted throughout the district, the sewerage outlet being on the shore near low water mark. The house refuse is deposited on the shore below high water mark and well removed from residences. A few ash-prives (9) still exist in the outlying parts, the contents of which are utilized by local farmers.

Section 1

In accordance with the last session laws by the  
District of Columbia, I have the honor to report on the  
health and the condition of the District for the year 1911.  
The various items are arranged and arranged on an alphabetical  
basis in the following order:

THE DISTRICT OF COLUMBIA

The District of Columbia is bounded on the north  
by the Potomac River, on the east by the Annapolis  
River, on the south by the Rappahannock River, and on the  
west by the Chesapeake Bay. The total area is 131,642  
acres, of which 11,000 acres are water.

The population of the District is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas. The population is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas.

POPULATION

The population in 1911 was 112,000, as compared  
with 100,000 in 1900. This increase is due to  
the fact that the population has increased 10% since  
1900. The population is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas.

The population in 1911 was 112,000, as compared  
with 100,000 in 1900. This increase is due to  
the fact that the population has increased 10% since  
1900. The population is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas.

The population in 1911 was 112,000, as compared  
with 100,000 in 1900. This increase is due to  
the fact that the population has increased 10% since  
1900. The population is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas.

DEATHS

The number of deaths in 1911 was 1,200, as compared  
with 1,100 in 1900. This increase is due to  
the fact that the population has increased 10% since  
1900. The population is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas.

The number of deaths in 1911 was 1,200, as compared  
with 1,100 in 1900. This increase is due to  
the fact that the population has increased 10% since  
1900. The population is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas.

DEATHS

The number of deaths in 1911 was 1,200, as compared  
with 1,100 in 1900. This increase is due to  
the fact that the population has increased 10% since  
1900. The population is 112,000, of which  
50,000 are males and 62,000 are females. The population  
has increased 10% since 1900. The population is  
distributed as follows: 40,000 in the city of  
Washington, 10,000 in the suburbs, and 62,000 in  
the rural areas.

## SCAVENGING.

This is collected daily from house to house and removed in covered carts, but it frequently happens that the open receptacles stand exposed in the Streets until afternoon with the result that the contents are often disseminated by wind, children and dogs to the detriment of the public health. Doubtless the inhabitants are to blame in many cases in not having their bins put out in time for the collecting cart, but this does not account for all cases of late collections.

It appears desirable that in order to complete the collection of refuse at an earlier hour, either a larger staff should be employed in this work, or a more rapid system of collection be instituted. It is imperative that the Council should set a high example of cleanliness in their sanitary administration, especially in those parts of the town where, to state it mildly, the hygienic conscience is not readily awakened. The common practice of shaking mats in the Streets at all hours of the day is much to be deprecated and calls for rigorous enforcement of the Public Health Act.

## SCHOOLS.

The schools are in a satisfactory hygienic condition and have a good supply of water. The children are medically examined at regular intervals by the County School Medical Staff and by this means many constitutional defects are brought to the notice of local practitioners which might otherwise pass unnoticed.

## MILK.

A few complaints were received from parents that they were not able to obtain a sufficient supply of milk for their invalid children, but these were easily remedied on application to the Medical Officer. Otherwise the supply appears to be adequate for the needs of the community. Recent investigations have shown, however, that the standard of cleanliness in the production and transport of milk, which have hitherto been deemed satisfactory, must be raised to ensure purity in this important and essential article of diet.

## BIRTH RATE.

There were 325 births registered during the year, as compared with 277 last year and 229 of the previous year. This is the highest record during the last twelve years and gives a rate of 28.1 per 1,000 of population. That for England and Wales is 25.4 and for Cumberland 27.6. The population for each Ward is as follows:-

North Ward	118	-	31.8 per 1,000
South "	144	-	34.5 per 1,000
East "	63	-	17.5 per 1,000
Total	325	=	28.1 per 1,000

There were 169 boys and 156 girls.

Fourteen illegitimate births were registered, giving a rate of 43 per 1,000 births, that for the previous year being 54.

## DEATH RATE.

There were 160 deaths (100 males and 60 females) recorded, as compared with 142 and 160 in the two previous years, giving a rate of 13.8 per 1,000 population. That for England and Wales is 12.4 and for Cumberland 14.2.

Of the 11 residents who died outside the district,

This is collected daily from house to house and removed in covered trucks, but it is frequently happens that the cover is removed and the contents are often contaminated by wind blowing and thus to the detriment of the public health. Doubtless the authorities are to blame in many cases in not seeing that their duty is to see that the collecting cart, and this does not account for all cases of milk collection.

It is a grave mistake that in order to complete the collection of milk at an earlier hour, either a later shift should be employed in this work or a more rapid method of collection be instituted. It is imperative that the Council should not allow a high degree of cleanliness in their sanitary administration, especially in those parts of the town where it is most likely to be present. The Council should be made aware of the danger of all forms of milk and it must be depressed and call for rigorous enforcement of the Public Health Act.

REPORT

The schools are in a satisfactory hygienic condition and have a good supply of water. The children are examined at regular intervals by the County School Medical Officer and by this means any contagious diseases are brought to the notice of local physicians which might otherwise pass unnoticed.

MILK

A few complaints were received from parents that they were not able to obtain a satisfactory supply of milk for their infants and children, but these were easily remedied on application to the Medical Officer. Various measures were taken to separate for the needs of the community. Local investigations have shown, however, that the standard of cleanliness in the production and transport of milk which has hitherto been in vogue is satisfactory, and it is not to be feared that any further and essential steps are needed.

MILK RATE

There were 323 births registered during the year, as compared with 327 last year and 325 in the previous year. This is the highest record during the last twelve years and gives a rate of 18.1 per 1,000 of population. The rate in England and Wales is 18.4 and for Cumberland 18.2. The population for each year is as follows:-

1918	323	18.1 per 1,000
1917	327	17.8 per 1,000
1916	325	17.5 per 1,000
1915	325	18.1 per 1,000

There were 189 boys and 134 girls.

There were 13 infantile deaths were registered during a rate of 4.3 per 1,000 births, less for the previous year being 4.2.

DEATH RATE

There were 100 deaths (100 males and 50 females) recorded, as compared with 104 and 100 in the two previous years giving a rate of 12.8 per 1,000 population. The rate in England and Wales is 12.4 and for Cumberland 12.2.

Of the 11 residents who died outside the district,

6 died in Cocker-mouth Union, 2 in Carlisle Infirmary, 2 in the County Asylum and 1 was drowned on the Welsh coast. The ages at and causes of death are set out in the accompanying table, from which it will be seen that the majority occurred in infancy or old age, while pneumonia has exacted a fairly heavy toll at all ages.

INFANT MORTALITY.

Thirty-eight infants died under the age of one year, of whom three were illegitimate, giving a rate of 117 per 1,000 births, as compared with 104.6 and 104.8 of the two previous years. The rate for England and Wales is 80 and for Cumberland 90, so that this district compares very unfavourably with other parts of the country.

Cause of Death.	Wks. under	Weeks 1-2.	Wks. 2-3.	Wks. 3-4.	Mths. 1-3.	Mths. 3-6	Mths. 6-9.	Mths. 9-12.	Total.
Measles									-
Whooping Cough.									-
Enteritis			1			2	1		4
Influenza									-

Bronchitis			1			1			2
Pneumonia			1			1	2	2	6
Pleurisy									-
Prematurity	4	1							5
Marasmus	6				1		2		9
Other Causes	4			1	2	3	1	1	12
<b>TOTALS</b>	<b>14</b>	<b>1</b>	<b>3</b>	<b>1</b>	<b>4</b>	<b>5</b>	<b>7</b>	<b>4</b>	<b>38</b>

6 died in Cook County Union, 2 in Cook County, 2 in the  
 County Union and 1 was exposed on the 24th coast. The  
 at and cases of death are not in the accompanying table.  
 from which it will be seen that the majority occurred in  
 Albany or old New York, while Pennsylvania had exactly a fairly heavy  
 fall of all cases.

**DEATHS BY COUNTY.**

Thirty-eight deaths died under the age of one year  
 of whom three were illegitimate, giving a rate of 117 per 1,000  
 births, as compared with 104.8 and 124.8 of the two previous  
 years. The rate for England and Wales is 30 and for  
 Connecticut 50, so that this district compares very unfavorably  
 with other parts of the country.

Cause of Death. Wagon ## PREVALENCE OF AND CONTROL OF INFECTIOUS DISEASE.

Forty-two cases of infectious disease were notified during the year, viz:- Enteric Fever - 3, Diphtheria - 4, Erysipelas - 5, Pneumonia - 9, Scarlet Fever - 8, Chicken pox - 18.

The decrease in the number of notifications is partly accounted for by the fact that measles is no longer compulsorily notifiable. Owing to the prevalence of small-pox in other parts of the country the Council wisely decided to make chicken-pox a notifiable disease from 2nd August, and 13 notices of such have been received. The other cases were on the whole of a mild nature and the mortality low in consequence.

There was a rather alarming outbreak of measles in the summer months, especially in the Ellenborough district, but the prompt closing of the Junior Schools helped to mitigate the spread of this disease.

### TUBERCULOSIS.

Fourteen cases of tuberculosis were notified. In eleven of these the lungs were affected, in two the meninges and the other the spine. For all these cases sanatorium or domiciliary treatment is available.

### VENEREAL DISEASE.

A venereal clinic has been established in Maryport by the County Medical Authority and suitable treatment can be obtained free of charge once a week, while the benefits to be derived from this institution have been widely advertised.

### CHILD WELFARE AND MATERNITY.

No provision has yet been made for the establishment of a Child Welfare and Maternity Centre, but in view of the high rate of Infant Mortality much good work might be done by such an organisation, as much ignorance prevails as to the feeding of children both as regards quality and quantity.

### PORT SANITATION.

Owing to the small number of ships entering the port from foreign lands, due to adverse economic conditions, there appears little chance of the introduction of infectious disease through this channel. Weekly returns are received from the Ministry of Health showing the countries where infectious diseases are prevalent, and a careful watch is kept on foreign vessels. At the beginning of the year a Spanish ship arrived with 5 cases of influenza, but with confinement on board and medical treatment there was no further development. Another suspicious case later on turned out to be a recurrent attack of malaria.

Two visits have been paid during the year by a representative of the Ministry of Health, and his recommendations as regards Port Sanitation have already received your consideration.

I remain, Gentlemen,  
Your obedient Servant,

R. SANDERSON, B.Sc. M.B. B.S.

Medical Officer of Health.

Annual Report of the Sanitary Inspector for Year  
ended 31st December, 1920.

To the Chairman and Members of the  
Maryport Urban District Council.

Gentlemen,

I have pleasure in submitting to you my nineteenth annual Report of work done and action taken in connection with the Health Department for the year ending 31st December, 1920.

General Remarks.

For the abatement of nuisances and to secure the removal of conditions not conducive to health, 6175 visits and re-visits have been made, and 315 preliminary and 31 Statutory notices have been served. To secure compliance with these notices it was found necessary to revert to further action on two occasions.

In considering whether the general health of a district is good or not, the factors taken for that purpose are the number of deaths recorded by the Local Registrar of Births and deaths, together with the number of cases of infectious diseases notified annually to your Medical Officer of Health, and accepting such as the basis from which deductions are made, your Council may claim that the health of those under its jurisdiction has been satisfactory.

The infectious diseases notified during the year number 49, as compared with 74 for the year 1919. Twenty-four visits were made; sixteen rooms fumigated, and twenty-nine beds and bed coverings disinfected at the Isolation Hospital.

Cowsheds, Dairies and Milkshops.

Seventy-eight visits were made; six notices served for want of cleanliness. All the Cowsheds are provided with good ventilation, air-space and impervious floor pavement. There are seven registered cowsheds; 6 milkshops and 9 purveyors of milk, 5 of whom are resident outside your district and to whose premises your Sanitary Inspector has no right to visit for the purpose of inspection.

Workshops, Workplaces and Outworkers'  
Premises.

At the end of the year there were in your District 59 workshops, 7 workplaces and five outworkers' Premises. To these 65 visits were made. Arising out of the visits five insanitary conditions were noted, which were subsequently remedied. In two workshops no abstract was affixed and one was reported by H. M. Inspector of Factories.

Common Lodging Houses.

There is only one Registered House in your district. Thirty-eight visits were made and five notices were served on the keeper for want of cleanliness.

Port Sanitation.

Much time has been taken up with Port Sanitation inspection. One hundred and nine steamers and four sailing

To the Board of Health and Members of the Legislature

Gentlemen:

I have pleasure in submitting to you my annual report of work done and action taken in connection with the health department for the year ending last December, 1910.

General Summary

The statement of an increase in the number of deaths of children and infants is not to be regarded as a cause for alarm. It is a natural result of the increase in the number of births, and the increase in the number of deaths of children is a natural result of the increase in the number of births. It is a natural result of the increase in the number of births, and the increase in the number of deaths of children is a natural result of the increase in the number of births.

The number of deaths of children and infants is a natural result of the increase in the number of births, and the increase in the number of deaths of children is a natural result of the increase in the number of births. It is a natural result of the increase in the number of births, and the increase in the number of deaths of children is a natural result of the increase in the number of births.

The number of deaths of children and infants is a natural result of the increase in the number of births, and the increase in the number of deaths of children is a natural result of the increase in the number of births. It is a natural result of the increase in the number of births, and the increase in the number of deaths of children is a natural result of the increase in the number of births.

Deaths, Diseases and Epidemics

It is a natural result of the increase in the number of births, and the increase in the number of deaths of children is a natural result of the increase in the number of births.

vessels have been visited and thoroughly inspected. No cases of infectious disease were found among the crew, except on one occasion when influenza was prevalent, several of the crew were laid up with it. Leaflets and advice were given to all on board.

#### Meat Inspection.

Two hundred and twenty-seven visits were made to the Slaughter House for meat inspection. The amount of meat destroyed as unfit for human food was 2018 lbs. all of which was surrendered voluntarily. Number of cattle slaughtered - 887; Sheep - 3713; Pigs - 528; Calves - 90.

#### Offensive Trades.

These include four tripe boilers; three marine stores and one tannery, all of which were regularly visited during the year under observation. No serious complaint has arisen from any of them. There are several fried fish and chip potato shops in your area, and seeing there is such a large amount of food prepared for human consumption they are kept under constant supervision, and any lack of cleanliness on the premises is brought immediately to the notice of the occupier who invariably puts things right without delay.

#### Housing Town Planning etc., Act 1919.

Number of Inspections made in 1920 - 24.

A large amount of work has been accomplished during the year in order to put the houses into a reasonable state of repair, but much remains to be done, and will take some considerable time before the arrears are pulled up. Owing to the shortage of houses for the working class, nine houses that were closed as unfit for human habitation have been repaired and temporarily occupied.

I again desire to express my thanks to the Chairman and Members of the Sanitary Committee for their continued support and courtesy given to me in the discharge of the various duties assigned to my office.

I am, Gentlemen,  
Your obedient Servant,

J. MOORE, C.R.S.I.

Sanitary Inspector.

Town Hall,  
MARYPORT.

3rd March, 1921.

Water Closets.

To New seats provided	6
" Floors cemented	2
" New supplies of water for flushing	73
