To the Chairman and Members of the Matlock Urban District Council.

Mr. Chairman, Ladies and Gentlemen.

It is my pleasure to present the Annual Report as Medical Officer of Health for the year 1961.

#### 1. INFECTIOUS DISEASES.

The low incidence of infectious diseases is encouraging and all of the cases notified were of a mild nature.

#### 2. CAUSES OF DEATH.

Amongst the causes of death, those due to degeneration (hardening) of the arteries predominate. This degenerative process is hastened by environmental factors, particularly at the present time. This age has a craze for speed and little regard for human safety. The traveller, whether driver, cyclist or pedestrian, can never relax and is in a state of sustained tension, quite often for lengthy periods. Tension hastens the onset of fatigue. As a cause of accidents fatigue plays a large part. Assuming one avoids injury or death, this constant wear and tear may, and all too often does, precipitate physical disablement of some magnitude, for example a stroke or coronary thrombosis. Paradoxically the prompt availability of transport and communication does not ease the burden but adds to it by tempting us to do more in a day than we should. Most accidents can be prevented by planning and education. The aim of Public Health is the prevention of disease. Since the introduction of the first Public Health Act there has been a gradual decline in the incidence of infectious diseases and the virtual disappearance of some. The pioneers in public health education encountered strong opposition but eventually won.

In addition to the building of better and safer types of road, education of the road user is a matter of urgency. Disasters at sea, in the air and on the railways are subject to enquiry by an inspector. Should not a similar procedure be introduced in the case of road accidents. The latest figure for the annual death role is 7,000 and is the chief cause of death in men under 30 years of age. In addition there are many thousands seriously injured. Apart from the pain and suffering involved, the annual cost is estimated to be in the region of 239 million pounds. As in the case of the pioneers in public health, sustained effort will be required before persuasion will result in any official action.

#### 3. CARE OF OLD PEOPLE.

In spite of the hazards of modern life, people are living longer and for the most part healthier lives, but nevertheless require more care as they grow older.

The provision of housing of old people is best served by the building of bungalows. The absence of stairs makes for greater safety. Showers are safer and more convenient than baths and take up less space. Bungalows should be built in small groups conveniently situated near to shops, post offices and handy for public transport. Also they should be so placed as to enable people to choose, as far as possible, the locality in which they wish to retire. Such schemes should be given priority. Provision for old age is an essential service for the whole community. Money spent now is provision for our old age. When infirmity overtakes us, quite often the only alternative to living in a bungalow is admission to hospital, with the inevitable consequences of separation from relatives and loss of a certain amount of independence and It is, of course, much cheaper to live at home as the privacy. average in-patient cost is £11. per week and shows every sign of increasing.

#### 4. DRUGS.

Healthy persons do not need drugs at all. Many minor ailments require little in the way of treatment, e.g. the common cold and influenza, in fact there is, as yet, no known remedy for either. Tablets for slimming are not necessary and the value of pep pills is negligible. Only patients suffering from serious nervous disorders need tranquillisers. Should you be worried about yourself go and see your Doctor, having received assurance that you are quite fit and still you cannot stop worrying, it will help to think about somebody else. The happiest people are those who think least of themselves. In view of the publicity recently given to the dangers of a certain drug, it is well to emphasise that no drug is above suspicion. Constant care and supervision is necessary. The advance in scientific progress is often quite alarming and, as we have learnt, the more efficient a new weapon the more lethal it can be. The same consequences can apply to the discovery of a new drug. Modern techniques devoted to clever advertisement and high pressure salesmanship when confined, for example, to consumer articles such as refrigerators, spin dryers and washing machines are much less likely to prove fatal to, or be the cause of deformities in housewives. The pharmaceutical industry is highly competitive.

Drug firms spend large sums on research and need large sales to survive. The value of their contribution is widely recognised and, also the prompt action of the Association of British Pharmaceutical Industries in forming a Committee to look into necessary safeguards in the use of drugs.

One does not question the good intentions of drug firms but, it would appear opportune to examine and overhaul the present system, which could best be done by the setting up of an "independent and representative body", as asked for by the British Medical Association.

My thanks to the members of the Council and to the Chairman and members of the Health Committee for their help during the year. I would also like to express appreciation of the assistance received from the staff of the Health Department, and also the co-operation of officials of other Departments.

G.L. Meachim,

Medical Officer of Health.

September, 1962.

Herbert Maddock, M.R.S.H., M.A.P.H.I.

Clerical Assistants:-

A. S. Duncan.

A. Ambrey. (Left 31.1.62.)

To the Chairman and Members of the Public Health Committee.

Mr. Chairman, Ladies and Gentlemen,

I have the honour to present my Annual Report for the year, 1961.

The past year has seen the introduction of two new Acts of Parliament affecting Public Health viz. The Housing Act, 1961, and the Public Health Act, 1961. Certain provisions in the legislation are aimed at simplifying procedures introduced by earlier statutes and helping Public Health Officers overcome some of their day to day problems.

There is, however, one problem which has remained with us throughout the year which cannot be overcome by statutory powers.

I refer to the recruitment and retention at all times of a sufficient number of physically fit men to ensure a regular and satisfactory public cleansing service throughout the district.

The lot of a refuse collector is arduous, and, to say the least of it rather unpleasant, and the remuneration for this job at the present time does not appear to be sufficient to attract applicants. We must, therefore, make every effort to raise the status of the refuse collector, and make his job more congenial. Many local authorities faced with similar difficulties are now experimenting with the use of a disposable paper sack for the storage of household refuse, and one authority has introduced such a scheme throughout its entire district apparently with considerable success, and it may be that in the very near future serious consideration will have to be given, to the introduction of a pilot scheme, at least in the most difficult collection areas of this district. As the years go by it is anticipated that labour for refuse collection, will become more and more difficult to obtain, and any action that can be taken to lighten the load and provide cleaner working conditions, will in my opinion help considerably to alleviate this problem.

The first area to be dealt with under the Council's programme for the compulsory conversion of pail and earth closets to the water carriage system of drainage was the Tansley district, and I am pleased to say that by the end of the year most of the conversions had been carried out. It is hoped by the end of 1962 to clear Cromford of these insanitary abominations, and I look forward to the day when the "night soil cart" with its attendant unpleasantness for the general public **and considerably moreso for the men working on it**, is a thing of the past.

Slum Clearance has occupied a considerable amount of time throughout the year, and it is pleasing to report that certain Clearance and Demolition Orders outstanding since before the second world war, were finally carried to their conclusion and, in particular, the derelict property in Holt Lane was finally demolished.

At the present rate of Council building it would appear that the bulk of the Slum Clearance programme will be completed by the end of 1962, but there will still remain to be dealt with the problem of persons unwilling to move to Matlock from unfit houses in the outlying wards of the district. Many of the people concerned have lived in these houses all their lives, and do not look forward to breaking life-long ties. One cannot help but feel a little sympathy towards their point of view.

In the field of Food Hygiene, many inspections were made of various types of food premises. Most of the occupants make every effort to keep their premises in a satisfactory condition, but unfortunately there are a few who consider that the minimum standard is sufficient.

-1-

1961 saw the introduction into this district of the ice cream van carrying a continuous extruder in which the liquid or powder mix is actually finally converted into ice-cream on the vehicle, and it would appear that this type of softer ice cream is gaining in popularity. One can visualize that these machines must be completely stripped down, cleaned and sterilised at the end of each working day to ensure the provision of a satisfactory product from a bacteriological standpoint.

May I take this opportunity of once again thanking the Chairman and Members of the Public Health Committee and the Council for their continued help and co-operation, the Medical Officer of Health and other Officials for their help, and last, but by no means least, all the staff of the Public Health Department for their loyalty and support throughout the year.

I remain, Ladies and Gentlemen,

Your obedient Servant,

C. R. Lill,

Public Health Inspector.

Town Hall, Matlock.

September, 1962.

## ANNUAL STATISTICAL REPORT OF PUBLIC HEALTH INSPECTOR - 1961

Operational Statistics.			
Dustbins emptied every 8 days No. of premises from which refuse collected Dustbins emptied weekly	1326 6444 5118		
Total refuse collected (test weighings) Weight per 1000 population per day (365 days to year)		tons. cwts.	
Density of refuse, Summer, cwt. per cubic yard Density of refuse, Winter, cwt. per cubic yard	4.11	and the second second	
Total Net Cost:- Per 1000 population Matlock		Country Average	U.D.C.

REFUSE COLLECTION AND DISPOSAL.

Total Net Cost :-	Per 1000 popula		2669.
	Per 1000 premis		£2,024.
	Per ton	£1.19s.4d.	£1.17s.11d.

Disposal of the whole of the Districts house and trade refuse is carried out on the Dimple Controlled Tip site, we are now using the second and third sections and part of the land recently acquiried which together should give a useful life of some ten years to the Tip.

During the year, in addition to some 6,400 tons of house refuse we have disposed of approximately 20,000 tons of contractors rubbish etc., all this giving a most useful service and preventing the eyesore of multiple dumps of rubbish in various parts of the district. These quantities could not have been **disposed of without our** Bulldozer.

The Municipal bin scheme is still in operation, as show this year again shows that bins of the painted variety are becoming worn out and are having to be replaced, although only 60 replacements in 12 years shows up the quality of the bins and the care with which they are dealt with both by the Ratepayers and the Refuse Collectors.

	Paid	On Rates	Replacements	Total
1950	63	72	10. Million 24.4 Million (44.4	135
1951	61	81	-	142
1952	55	57	- 100	112
1953	55	39	-	94
1954	45	25	-	70
1955	37	24	2	63
1956	44	34	10	88
1957	23	67	19	109
1958	62	39	12	113
1959	22	24	6	52
1960	34	20	6	60
1961	86	10	5	101
	587	492	60	1,139

#### SALVAGE

The Bonus Scheme has again proved fruitful, we have had our best year ever on waste paper and the tonnage is still rising, so fast in fact that authority to purchase a faster baling machine in the next Rate has been given. Bonus payments for 1961/62 amounted to £799 as against £774 last year.

TABLE OF	SALVAGE	INCOME

	3,926	33,602	4,374	£35,763

#### INSPECTION AND SUPERVISION OF FOOD AND MILK DISTRIBUTION.

Forms of Voluntary Surrender of Food Unfit for Human Consumption have been issued during 1961 as follows:-

Ham	53	lbs.	Cheese	21	lbs.
Fruit	7	tins.	Corned Beef	58	lbs.
Bacon	31	lbs.	Tongue	7	lbs.
Tomatoes	3	tins.	Confectionery	358	packets.

58 samples of other foods were taken by the Food and Drugs Authority, and 7 Milk samples were taken in the Matlock Urban District area during 1961. The milk samples were all genuine.

The label on a sample of Raspberry Vinegar did not satisfy the requirements of the Labelling of Food Order and representations were made to the manufacturers who agreed to amend the label.

Two samples of Port Sausages were classed as unsatisfactory, one being deficient in meat content and the other containing an excessive proportion of fat. The variations from the standards proposed in the report of the Food Standards Committee were not serious and the irregularities were dealt with by caution notice

The remaining sample all complied with current legislation and were returned as genuine.

The Food and Drugs Authority results were supplied through the courtesy of the County Analyst, R.W.Sutton, Esq., B.Sc., F.R.I.C., F.C.S.

	4 18 45 6 125 91 52 10 17 9 6

The above table is included as an indication of the amount of work involved in routine inspection of food premises for sale and preparation during the year.

#### ICE CREAM

Manufacturers of Ice Cream	1
Sale of Ice Cream	125
No. of visits to the above	105

74 samples of ice cream were taken during the year for analysis under the Methylene Blue Test and were graded as follows:-

Grade I	Grade 2	Grade 3
51	16	7

Appropriate action and resampling was carried out in all cases of unsatisfactory results and notified in all cases to Dealers and Manufacturers.

#### MARKET STALLS

The market stalls and ground have been maintained in a clean and reasonable condition and improvements carried out at several stalls to conform with the Food Hygiene Regulations. The washing and sanitary facilities to the Market are now improved by the provision of public conveniences adjoining same, although hot water, which is a prime requisite to good food hygiene has not been provided.

41 visits have been made.

#### Food Hygiene Regulations.

There has again been steady progress in improvement of food premises and shops to bring them up to the standard laid out in the Food Hygiene Regulations.

#### Bakehouses

3 inspections have been made at the 4 Bakehouses on the Register and a good standard of cleanliness has been maintained.

#### Fish and Chip Shops

17 inspections have been made at 8 shops. 7 premises have been maintained in a satisfactory manner and improvements asked for at one shop which are now in hand.

#### LICENSED PREMISES

Licensed Premises in District 46 Inspections - 6 . Licensed Clubs in District 6 Inspections - 2

Improvement of washing facilities, sanitary and general accommodation at these premises has now been completed and all licensed houses have been well maintained.

#### TENTS, VANS AND MOVEABLE DWELLINGS

We have sites for 120 vans and moveable dwellings licensed on 11 sites. The moveable dwellings are maintained in a reasonable condition. 109 inspections have been made but all conditions on Site Licenses have not yet been completed.

#### SWIMMING POOLS

We have two public swimming pools in the district which have both been well maintained during the year.

Matlock U.D.C. Lido: Indoor and Outdoor Pools.

Samples Taken: 26, of which 20 were satisfactory and 6 samples unsatisfactory.

#### Private Swimming Pool - Matlock Bath.

<u>Samples Taken</u>: 16, of which 15 were satisfactory and 1 unsatisfactory. A comparison of these results showed that the purification and chlorination processes were satisfactory, but in view of the coliform content of the outlet water it was thought advisable to increase the dose of chlorine slightly, this was done and all subsequent samples were satisfactory.

#### HOUSING

A building programme of 142 houses and flats is now well advanced; therefore during 1962 it is hoped that the majority of those persons now living in condemned property will be re-housed.

Demolition work has gone better this year, some 30 houses have been demolished.

#### SANITARY CIRCUMSTANCES OF THE DISTRICT

	table dustbins		3.	Water	Closets	5614
 emptied by	Council	6614				

2. Pail closets emptied 4. Cesspools 36 by Council 221

1	Converted since 1945	Total Earth & Pail Closets	Pails Collected by U.D.C.	PCs & ECs not Collected

1957 55	1958 28	1959 16	1960 23	1961 37							

#### VERMINOUS PREMISES

No properties were disinfected during the year, but two dirty premises were cleaned.

#### MEAT INSPECTION

We have again, with the usual friendly co-operation of the Butchers, been able to maintain a 100 % inspection of all meat killed in the District. The killing of young cattle along with the T.B. Eradication Scheme has shown very satisfactory results this year, we have a nil return of Tuberculosis Cattle for the year, the first time I have had the pleasure of reporting this in 17 yea. of my Annual Reports to you.

The Table shows that 2389 animals were slaughtered and examined at our six private slaughterhouses, entailing 532 inspections. The Slaughterhouses this year, although in various stages of alteration, have been maintained in a clean condition providing ample slaughtering facilities for the District. Work under the Slaughterhouse Act, 1958, and various Regulations and as agreed following a Report to the Ministry of Agriculture, Fisheries and Food was in the main finished by the appointed day viz. January 1st, 1962, in all our six Slaughterhouses, the items not completed were minor ones and the various owners were given an extension of time to complete these until March 31st, 1962.
