*†A. C. WALKER.

THE HEALTH DEPARTMENT, MUNICIPAL BUILDINGS, MIDDLESBROUGH,

JUNE, 1929.

TO THE CHAIRMAN (ALDERMAN A. MATTISON) AND

Members of the Sanitary Committee.

LADIES AND GENTLEMEN,

I have the honour to present for your consideration my Thirtieth Annual Report on the Health of the County Borough of Middlesbrough.

Compared with the previous year there is an increase in the Death Rate by one per 1,000 of the population, although the actual deaths registered were 28 fewer than in the previous year. The increase in the rate is due to the estimated population for the year 1928 having been reduced by the Registrar General from 133,600 in 1927 to 131,700 for 1928; this latter figure is only 630 above the Census figure of 1921.

The birth rate which has been declining during the past seven years shows a considerable increase on that of the previous year.

INFANTILE MORTALITY.—There is no unfavourable change in this year's rate which is only one per 1,000 higher than the rate for the previous year. It is very satisfactory to note that the high Infantile Mortality rates which have been prevalent in various wards, *e.g.*, Cleveland, Cannon, Newport, Ormesby, St. Hilda's and Vulcan, are at last showing signs of improvement and although still high, they are now much below the average rates in these wards for the past ten years.

INFECTIOUS DISEASES.—With the exception of Measles, Whooping Cough and Chicken-pox, there have been remarkably few notifications and the death rates from the chief notifiable diseases compare very favourably with those of the County Boroughs and Great Towns of England and Wales.

SMALLPOX.—There have been no cases of this disease notified since the beginning of September last.

HOUSING.—Under Housing Schemes, 111 houses have been erected in an area which was just outside the Borough boundary. This area is being taken into the County Borough.

The total houses erected during 1928 was 297, which approximates to the pre-war yearly increase. Twelve flats, in three blocks, each flat consisting of one living room, two bedrooms, scullery and bathroom, are being erected on the area of the Dacre Street demolition scheme. These flats are close to the works and help to meet the demand of the population of that district for house accommodation near their work.

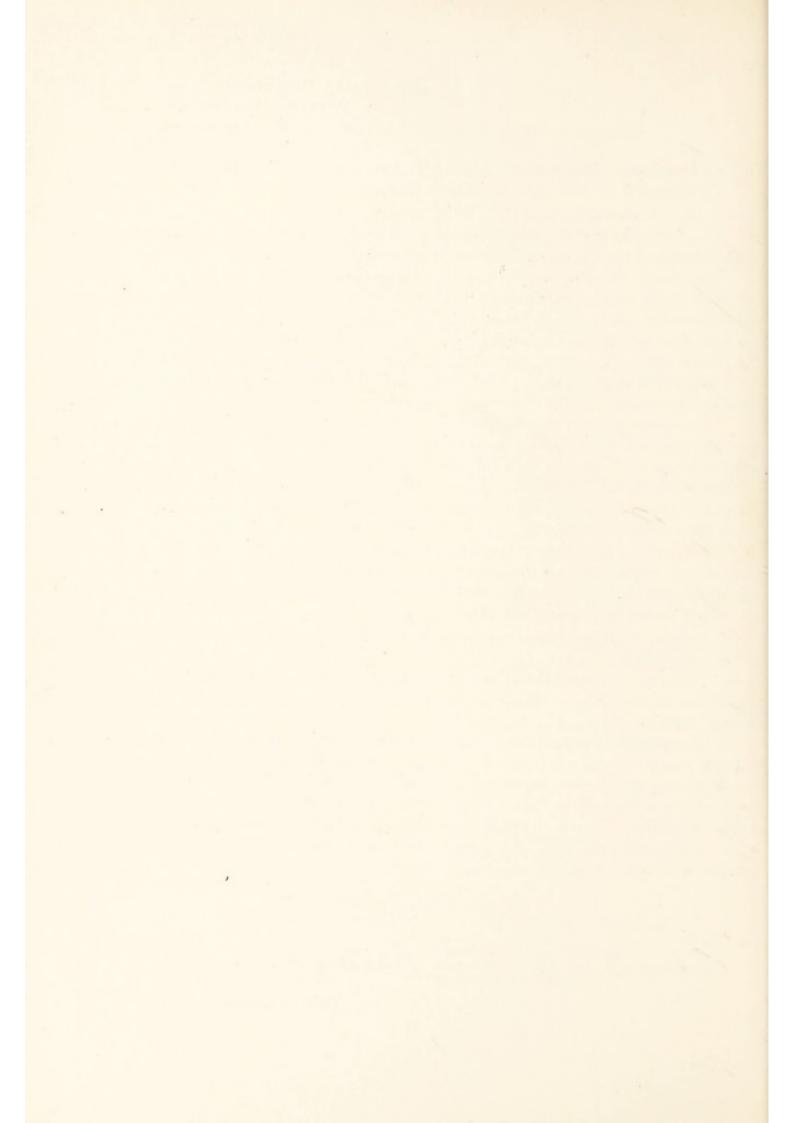

During the year 1928, there was no outstanding feature affecting the health of the Borough which continues steadily to improve.

I have the honour to be,

Your obedient servant,

Charles V. Drigle,

Medical Officer of Health.

ANNUAL REPORT of the Medical Officer of Health for 1928.

STATISTICS AND SOCIAL CONDITIONS OF THE AREA.

Area (in acres): 4,323 (including 173 acres of tidal land).
Population: (Census 1921, and estimated 1928):— Census, 1921 131,070 Estimated, 1928 131,700
Number of Inhabited Houses (1921): 25,541.
Number of Families or Separate Occupiers (1921): 27,891.
Rateable Value: £656,132 0s. 0d.
Sum represented by a penny rate: £2,285 0s. 0d.

VITAL STATISTICS.

Population.—At the Census of 1921, the population enumerated was 131,070, consisting of 66,166 males and 64,904 females. The Registrar General has estimated the population of the County Borough of Middlesbrough for 1928 at 131,700.

Births.—The number of births registered during 1928 was 3,252, the nett births being 3,219, males 1,664, females 1,555, giving a birth rate of 26.12 per 1,000 of the estimated population.

The notified births totalled 3,147, being 105 less than the registered births.

Illegitimate births numbered 157, being an increase of 12 on the previous year.

Deaths.—The number of deaths registered in the Borough during 1928 was 1,905, giving a crude death rate of 15.45 per 1,000 of the estimated population. The nett deaths of persons belonging to the district was 1,757, giving a death rate of 14.26 per 1,000. The rate for England and Wales during 1928 was 11.7 per 1,000.

The death rates per 1,000 estimated population in the various Wards of the town during 1928 were :---

| Ayresome | Ward | | | 10.16 |
|-------------|------|-----|------|-------|
| Acklam | ,, | | | 9.91 |
| Cannon | ,, | | | 16.26 |

10

HOSPITALS PROVIDED BY THE LOCAL AUTHORITY.

A. (1) FEVER: West Lane.—There are 200 beds for the usual notifiable diseases.

(2) SMALLPOX : Hemlington.—There are 100 beds.

- B. (1) TUBERCULOSIS: West Lane.—30 beds and 3 huts.
 Broomlands.—Six beds are retained for surgical tubercular cases.
 - (2) MATERNITY: Municipal Maternity Hospital, Park Road North. There are 19 beds for Maternity cases.
 - (3) CHILDREN'S HOSPITAL: Municipal Children's Hospital, Park Road North. There are 15 beds for infants under 5 years of age.
 - (4) OTHER: Children's Cripples Home. The Davison Holiday Home at Danby, supported by voluntary contributions, to which crippled children are sent. About 100 are received for three weeks each in the summer months.

INSTITUTIONAL PROVISION FOR UNMARRIED MOTHERS, &C.

There is provision for these at the Holgate (Guardians) Hospital, and at the Holy Cross Refuge. The latter is a Church of England Institution and receives a grant from the Local Authority. It provides for unmarried mothers.

- HOMELESS CHILDREN : Guardians Children's Homes, Nazareth House (R. C.), 206, Holy Rood Orphanage (C. E.) 16, and a branch of Dr. Barnardo's Homes (Undenom) 24.
- CLEANSING STATION: 52, Bridge Street West. This is a small Cleansing Station, fitted with a steam disinfector and baths, for dealing with verminous persons.

Ambulance Facilities :---

- (1) For infectious diseases there are three motor ambulances.
- (2) For non-infectious cases and accidents there are two motor ambulances provided by the Town Council.

CLINICS AND TREATMENT CENTRES.

(a) Maternity and Child Welfare Centres (Consultation and Treatment) :---

Each of the above Centres has a special Ante-Natal Clinic once each month. An Ante-Natal Clinic is also held weekly at the Maternity Hospital and another at the Poor Law Infirmary.

At all the Centres "Toddlers" from 1 to 5 years are received at each session and are examined and supervised.

These Centres have voluntary workers working under the direction of the Medical Officer for Maternity and Child Welfare and the Health Visitors.

(See Report on Maternity and Child Welfare-pages 60 to 66).

(b) Day Nurseries :--

The Middlesbrough Settlement Committee opened an experimental Day Nursery for a few months during last year. It is hoped that this school will be re-opened on a more permanent basis in the present year.

(c) School Clinic :--

This is held at 56, Grange Road, daily from 9 a.m. to 12 noon for consultations and treatment of minor ailments, and every Saturday morning for refractions.

(d) Dental Clinic :--

This also is held at 56, Grange Road, daily, and is attended by a whole-time dentist.

(e) Tuberculosis Dispensary :---

35, Grange Road. Open daily from 9 a.m. to 5 p.m. and attended by the Tuberculosis Medical Officer, who has a staff of three nurses and two clerks.

(See Tuberculosis Medical Officer's Report-pages 50 to 53).

(f) Venereal Diseases Clinic :---

7, Grange Road. Open on Mondays and Fridays at 8-30 a.m. and 5-30 p.m. for Males, and on Wednesdays at 5-30 p.m. for Females; and also every week-day morning and every week-day night (except Wednesdays and Saturdays) at 8-30 and 5-30 for irrigation of Males. Treatment is carried out by a part-time Medical Officer, one male and one female attendant and two clerks.

(See the Venereal Diseases Officer's Report-page: 54 to 59).

(g) Orthopoedic Clinic :---

A Clinic for children of school age and also for Infants up to five years of age is held once monthly. A Surgeon from Kirby Moorside Orthopoedic Hospital attends this Clinic and selects suitable cases for treatment. This Clinic is provided jointly by the Education and Maternity and Child Welfare Committees.

(h) Artificial Light Clinic :--

A Clinic is held weekly at the Maternity Hospital for Infants and young children (see report of Maternity and Child Welfare Officer). This Clinic is provided by the Maternity and Child Welfare Committee and has also been used by the Education Committee.

(i) Summer Camp (Marske) :---

Held each summer. Open for four months. 700 school children treated annually. This is provided by the Education Committee.

PROFESSIONAL NURSING IN THE HOME.

(a) General :---

This is provided by the Middlesbrough and District Nursing Association. The Association is supported by voluntary contributions, but receives grants from the Local Authority for various services, *e.g.*, home nursing of Tuberculosis, Puerperal Fever, Pneumonia, Ophthalmia Neonatorum, Expectant and Nursing Mothers, and Infants under 5 years of age, if required. These cases are referred to the Association by the Departmental Medical Officers of the Local Authority.

(b) Infectious Diseases :--

Two whole-time nurses are employed by the Local Authority to visit, and when necessary, nurse cases of Measles and Chickenpox. Temporary nurses are engaged as required.

(c) Midwives :--

There are 44 Midwives practising in the Borough, 40 of whom are trained and 4 are untrained.

LABORATORY WORK.

The Bacteriological and Pathological work is sent to the Clinical Research Association, London.

The Chemical Analyses are done by Messrs. Scholes and Jackson, of Middlesbrough.

SANITARY CONVENIENCES.

No alteration has taken place during the year. There are only 89 privy closets in existence, these being in the Nile Street Area.

INFECTIOUS DISEASES.

During the year 909 houses have been inspected incurring 3,275 re-inspections, owing to cases of Infectious Disease (including Tuberculosis), and reports made to the Medical Officer of Health.

The number of inhabited rooms disinfected owing to cases of Infectious Disease and Vermin was 2,335.

CLEANSING OF VERMINOUS PERSONS.

During the year a regular inspection has been made of the Common Lodging Houses and Houses-let-in-Lodgings within the Borough. The Registered Keepers have readily co-operated with the Department and notified the Inspector on his visits as to any Lodgers who are in a dirty or verminous condition. Nine men found to be in a verminous condition have been sent to Holgate (Guardians) Institution during the year for cleansing.

Nine school children have been dealt with at the Cleansing Station, and their homes and bedding, together with the other inmates, have been thoroughly disinfected.

REFUSE COLLECTION AND DISPOSAL.

A regular weekly collection has been made from the 28,721 houses and shops within the Borough. The collection is made by 14 horse drawn vehicles and 9 motor vehicles (consisting of 6 Ford Tonners and 3 S.D. Freighters).

During the year 27,539 loads of refuse were collected; 14,143 loads representing 16,972 tons by horse-drawn vehicles, and 12,855 loads representing 18,212 tons by motor vehicles. The motors are worked in those outlying districts where the time taken in disposing of the load is greater than the time taken by the loaders in loading the vehicle following up.

35,184 tons represent 263.55 tons per 1,000 population per annum or 14.4 cwts. per 1,000 population per day. This figure cannot be considered high, as from the recent return issued by the Ministry of Health on Public Cleansing the average for the various towns and cities with a total population of $12\frac{3}{4}$ millions is 16.5 cwts.

Considerable economy will be effected in many domestic budgets if those responsible will ensure that ashes and cinders are completely burned before being placed in the receptacle. 72,033 bags of waste paper and light refuse matter were collected free of charge from the shops within the Borough. This is disposed of chiefly at the Swimming Baths and undoubtedly it is a cheap fuel whereby the whole of the steam raising plant is fed.

Household refuse was disposed of by barging to sea and tips. Two hoppers were employed for the disposal of refuse at sea, and 79 trips were made, 20,033 tons of refuse being disposed of. 14,186 tons of refuse were disposed of at the tips and 965 tons were sold to Farmers as manure.

The costs of Collection and Disposal from the figures in the Estimates supplied by the Borough Accountant are as follows :—

| Cost of Collection | | | £14,473 |
|--------------------|------|------|-------------|
| Cost of Disposal | | | £4,549 |

The costs for Collection and Disposal are fairly stationary considering that 297 houses which have been built and inhabited during the year are situated in districts which are the farthermost points in respect to Disposal. The majority are built on the Garden City principle with no back streets, and consequently considerably more time is involved in Collection. From the Report on Public Cleansing issued by the Ministry of Health our costs compare most favourably with those of other towns and cities (with a total population as stated earlier,) the average cost per 1,000 houses for Collection and Disposal being £828 against Middlesbrough's £680. I feel sure that you will appreciate that every effort is made to combine efficiency with economy.

COLLECTION AND DISPOSAL OF ORGANIC REFUSE.

The Organic Plant has been in full work during the year and again I am pleased to report that the Plant has been successful and a profit of approximately £400 was realised on the year's working.

The undermentioned Organic Waste, &c., was dealt with :--

| Diseased Meat | | | | | $5,588\frac{1}{2}$ s | tones |
|--------------------|-------|--------|--------|------|----------------------|-------|
| Organic Waste from | a Sla | ughter | houses | | 13,386 | ,, |
| Fish Offal | | | | | $29,336\frac{1}{2}$ | ,, |
| Dead Dogs and Cat | s | | | | $1,357\frac{1}{2}$ | ,, |
| Fish Scrappings | | | | | $301\frac{1}{2}$ | ,, |

The following manufactured products were sold :--

| | | | | £ | 8. | d. |
|--------------|------------------------|------|---|-------|----|----|
| Fish Meal | 43 tons | | | 685 | 1 | 1 |
| Meat Meal | $9\frac{3}{4}$,, | | | 137 | 11 | 0 |
| Blood Meal | $1\frac{3}{4}$,, | | · | 27 | 14 | 0 |

| | Total In | come | £ | 1,446 | 0 | 2 |

RATS AND MICE (DESTRUCTION) ACT, 1919.

During the year 37 complaints have been received of Rats infesting houses, shops or warehouses within the Borough. 129 visits were paid and every advice and assistance given, and although only 48 Rats were found dead, it is impossible to estimate the total number of Rats actually destroyed as a large number must have died in their holes.

The 3 Official Rat Clubs have continued their operations against these pests with good results; 249 places have been visited and 2,616 Rats have been killed.

SANITARY CONDITIONS OF THEATRES AND MUSIC HALLS.

Inspections have been made of the Theatres, Music Halls and other places of Public Entertainment as to the sanitary conditions in accordance with the requirements of the Ministry of Health (Circular No. 120), and all were found to be satisfactory.

SHOPS ACT.

During the year the shops within the Borough have been kept under close observation, 1,322 day visits and 309 night visits having been paid.

The Shops (Hours of Closing) Act, 1928, which came into operation on the 3rd August has extended Powers to the Local Authority, whereas formerly only the Home Office could grant any alterations or deviation from the hours laid down in the Shops (Early Closing) Act, 1921. The Local Authority has now Power to sanction a petition in respect to the suspension of the general hour of closing for not more than seven days in the aggregate of any one year. This consideration was long overdue. Under Section 3 of the Act as respects the trade or business of selling tobacco and smokers' requisites, a local authority may, in their area or in any part thereof, by order, substitute for the General Closing Hours fixed by this Act, later hours, not being later than ten o'clock in the evening on the late day or half-past nine o'clock in the evening on any other day, if they are satisfied that such an Order is desired by the Occupiers of at least two-thirds in number of the shops to be affected by the Order. The Local Tobacconists readily saw the wisdom of making application, which was granted. In my opinion this is a step in the right direction, as a large number of shops combine the business of Tobacconist with that of Confectionery; and whilst one section of the trade (Confectionery) was allowed to keep open, the other section (Tobacco, &c.) must close. These shops naturally had to be kept under close observation, but since the extension the whole of the shop must close at one definite hour and supervision is much easily carried out.

Unfortunately the new Act does not control Sunday Trading, and I feel that Sunday Trading is on the increase within the Borough, which in my opinion is definitely a retrograde step.

HOUSES-LET-IN-LODGINGS.

| Number of Houses | | | | | 110 |
|------------------------|--------|----------|-------|------|-----|
| Number of Inspections | | | | | 245 |
| Number of Applications | to Re | gister | | | 22 |
| Number of Notices and | Letter | s re rep | airs, | | |
| cleanliness, etc. | | | | | 67 |

Circular letters respecting the annual cleansing are forwarded each year to the responsible Occupiers of all houses.

COMMON LODGING HOUSES.

| Number of Houses | | | | | 13 |
|-------------------------|---------|----------|--------|------|-----|
| Number of Keepers | | | | | 10 |
| Number of Inspections | | | | | 105 |
| Number of Lodgers acco | | | ightly | | 689 |
| Number closed or discon | | | | | Nil |
| Number of Notices and | Letters | s re rep | airs,. | | |
| cleanliness, etc. | | | | | 13 |

Circular letters respecting the necessary cleansing are forwarded bi-annually to all the responsible Keepers.

SLAUGHTERHOUSES.

| | | | Registered | | | d. | Licensed. |
|----------------------|-----------|-----------|------------|---------|------|----|-----------|
| December, 1920 | | | | | 39 | | 3 |
| January, 1928 | | | | | 34 | | 2 |
| December, 1928 | | | | | 29 | | 2 |
| Public Slaughterh | louse | | | | | | 1 |
| Number of Inspec | etions | | | | | | 8,907 |
| Number of Notice | es to lin | newash | | | | | 39 |

| Number of Notific | cations | of chan | ige of | occupi | er | | Nil |
| Letters re cleanline | ess, rep | airs, etc | | | | ., | 11 |
| | | | | | | | |

It will be observed that 5 registered slaughterhouses have been automatically struck off the Register during the year under section 126 of the Town Improvement Clauses Act, 1847, as applied by section 169 of the Public Health Act, 1875. This is due to the fact that slaughtering has not been carried on therein for several years.

| Number on Register | | | | 156 |
|------------------------|------|------|------|-----|
| Fried Fish Shops | | | | 133 |
| Tripe Boilers | | | | 10 |
| Tallow Melters | | | | 2 |
| Tallow Chandlers | | | | 1 |
| Gut Scrapers | | | | 3 |
| Fat Renderers | | | | 2 |

| Glue Makers | | | | 1 |
| Fellmongers | | | | 1 |
| Lubricant Makers | | | | 2 |
| Number of inspections | | | | 234 |
| Number of Notices to | vash | | | 47 |
| Number of Fried Fish | | | | 1 |
| Letters of warning for | | | | 14 |

OFFENSIVE TRADE.

Fried Fish Shops :--

In July of 1922 these businesses came within the Provisions of Section 112 of the Public Health Act, 1875, as amended by Section 51 of the Amendment Act, 1907, as

an Offensive Trade. The whole of the Fried Fish Shops within the Borough have now been brought up to a good standard; new ranges have been provided which are more satisfactory from an effluvia nuisance standpoint, and the whole generally are carried on in a most satisfactory manner.

The other Trades on the Register have been conducted satisfactorily and in no instance where any alterations or improvements have been suggested have I had anything but a ready response to carry out the same.

ICE CREAM DEALERS.

The Middlesbrough Corporation Act of 1910, Sections 38 and 39, give the Corporation power to control the manufacture of Ice Cream.

During the year all premises where Ice Cream is manufactured, stored or sold have been regularly visited and found satisfactory.

| Number manufacturing Ice Cream | | | 67 |
|---------------------------------------|-------|-------|---------|
| Number selling Ice Cream | | | 111 |
| Number discontinued during the year | | | 1 |
| Number registered during the year | | | 1 |
| Number of inspections made | | | 135 |
| Number of letters sent re minor contr | avent | ions, | |
| alterations to premises, &c. | | | 10 |

COW SHEDS.

| Number of Cowsheds | | 1 |
|---------------------------------|------|--------|
| Number of Registered Cowkeepers | | 1 |
| Number of Cows kept | | 12 |
| Number of Inspections made | | 4 |
| Number of Notices to Limewash | | 2 |
| Number discontinued during Year | | 3 |

During the Year 3 Cowsheds have been removed from the Register. This is accounted for by the absorption of land in connection with the said Farms for allotments and general main road improvements.

The requirements of the Milk and Dairies Order have been carried out in respect to the one Farm existant within the Borough. The buildings, including cow byres and dairy, have been kept in a satisfactory condition.

DAIRIES AND MILKSHOPS.

| Number on the Register | | | 138 |
|---|---------|---|-----|
| Number discontinued since January, 1928 | | | 6 |
| Number registered since January, 1928 | | | 9 |
| Number of Transfers of Licences | | | 10 |
| Number of Inspections | | | 275 |
| Number of Notices requesting Purveyors to | Registe | r | 3 |

Letters of warning for minor contraventions of the Bye-laws were sent to several Milk Purveyors, but on the whole the conduct was generally satisfactory. Legal Proceedings were instituted against 2 Registered Dairymen during the Year (see Magisterial Proceedings, Nos. 11 and 12).

ADMINISTRATION OF THE FACTORY AND WORKSHOPS ACT, 1901.

| There are 437 Work | shops | on th | ne Register, | including : | | | |
|-------------------------|-------|-------|--------------|------------------|--------|-----|--------------|
| Workshop Bakehouses | | | 53 | Tinsmiths | | | 5 |
| Factory Bakehouses | | | 25 | Watch Repairing | | | 9 |
| Boot and Shoe Repairing | | | 62 | Cabinet Making | | | 11 |
| Dressmaking | | | 32 | Laundries | | | 9 |
| Millinery | | | 12 | Cycle Making and | Repair | ing | 22 |
| Tailoring | | | 46 | Workplaces | | | 22 |
| Joinery | | | 46 | Blacksmiths | | | 10 |
| Plumbing | | | 11 | Miscellaneous | | | 59 |
| Saddlery | | | 3 | | | | |

On the whole, the Workshops, Retail Bakehouses, etc., were found to be in a satisfactory condition, and no Legal Proceedings were instituted.

Full details of the Workshops and Inspections have been placed on record in accordance with the Act.

The following is the summary of the work carried out during the Year :--

SMOKE ABATEMENT.

I am pleased to report that so far as the smoke nuisance from industrial chimneys is concerned there is little cause for complaint. During the year improvements were carried out to the furnace chimney at the Corporation Gas Works with very satisfactory results.

In Middlesbrough the household chimney is the chief cause of trouble, not only in regard to its numbers but owing to the fact that the tar oils are not consumed in a manner similar to the average steam raising furnace. Rapid strides are being made with the carbonising of coal which sooner or later will result in a smokeless fuel being placed on the Market at an economical figure. In this direction, and this direction only, must we look forward to better results in respect to the chimneys of dwelling houses, as the old British instinct of a good blaze in the firegrate still lingers.

HOUSING.

Number of New Houses Erected during the year, 1928 :

| | (a) Total (including numbers given separately under b) | | 297 | |
|----|--|---------|-------|-------|
| | (b) With State Assistance under the Housing Acts | | 260 | |
| | 1. By the Local Authority | | 111 | |
| | 2. By other Bodies or Persons | | 149 | |
| 1. | Unfit Dwelling Houses : | | | |

INSPECTION AND SUPERVISION OF FOOD.

MILK SUPPLY.

During the year 143 samples of Milk were procured and submitted for Bacteriological Examination, and a high standard of cleanliness was maintained. 26 or 18.1% were found to contain Coliform Bacilli upon first test; and 14 or 9.7% were found to contain Coliform Bacilli upon second or subsequent tests.

36 samples were examined for Tubercle Bacilli by the Inoculation Test, and all were returned "Negative."

Letters of warning, together with suggestions on "How to produce Clean Milk" are sent to all Farmers whose Milk is dirty. Letters notifying Farmers who are producing Clean Milk are also sent.

Of the 26 samples that contained Coliform Bacilli on first examination, 13 contained Coliform Bacilli in only 1/100th of a c.c., 10 in 1/1000th of a c.c., and 3 in 1/10000th of a c.c.

9 samples were returned as containing one to five million Bacteria per 1 c.c. 6 of these were definitely B. Coli., and the remaining 3 were no doubt attributed to the B. Lacticus. In each case these samples were procured during the harvest time when the responsible hands were engaged in the fields and inexperienced hands were engaged in the cow byres, they being considered good enough to carry on the work of Milk production. Serious letters of warning were sent to the Farmers concerned and an appreciably better result was obtained when the next samples were procured.

It is an added pleasure to find the hearty co-operation that is shewn by all Farmers to produce a Clean Milk, and I feel that no good purpose would be gained by taking proceedings when such heartfelt co-operation is given by those responsible.

A sample of dirty water from a churn that was supposed to have been effectively cleansed by the Dairyman before returning to the Farmer was also submitted for examination, and it was found to have a very high Bacteria Count, Coliform Bacilli being present in 1/10000th of a c.c. Proceedings were instituted against the Dairyman concerned (see Magisterial Proceedings No. 12).

REPORT OF THE ADMINISTRATION IN CONNECTION WITH THE PUBLIC HEALTH (MILK AND CREAM) REGULATIONS OF 1912, DURING THE YEAR ENDED, DECEMBER 31st, 1928.

1.-Milk and Cream Not Sold as Preserved Cream :

| | | | amined for the presence of | Number of Samples in which Preservative was reported to be present and percentage of Preservative found in each Sample. |
|-------|------|------|----------------------------|---|
| | | | | |
| Milk | | | 148 | Nil |
| Cream | | | 12 | Nil |

2.-Cream Sold as Preserved Cream :

(a) Instances in which samples have been submitted for analysis to ascertain if the statement on the label as to Preservative was correct :—

| | (1) | Correct state | ment | s ma | de | | | | Nil |
|-----|--------|---------------|-------|-------|--------|-------|---------|-----------|---------|
| | (2) | Incorrect sta | teme | nts m | nade | | | | Nil |
| (b) | Deteri | minations mad | le of | Milk | Fat in | Cream | sold as | Preserved | Cream : |
| | (1) | Above 35% | | | | | | | Nil |
| | (2) | Below 35% | | | | | | | Nil |
| | | | | | | | | | |

Preservatives :

The Public Health (Preservatives, &c. in Food) Regulations, 1926, came into operation in four parts, the whole finishing on the 1st July, 1928. Under these Regulations Sulphur Dioxide and Benzoic Acid are the only Preservatives allowed to be used, and then only in such quantities as laid down by the Regulations.

In consequence of these Regulations a great outcry was heard during the Summer months by the Manufacturers. However, it is far better to have small quantities of Cream allowed to sour than to be "doctored" to keep it fresh. Synthetic or Re-constituted Cream made from Unsalted Butter, Milk Powder and Water, came on to the markets, but made little or no headway. During the year the following samples were analysed for the presence of Preservatives but all were returned Genuine and conformed to the Regulations. :—

| Description | - | e. | | | | Number taken | |

| 277 | do. | do. | |

As will be noted from the above table, 36 samples of Milk did not comply with the Standard as laid down by the Sale of Milk Regulations, 1901, that the Fat Content shall be 3% and the Non-Fatty Content 8.5%. This large number (36), representing 24.3%, is due to the manner in which I procure the samples, *i.e.*, direct from the Farmers churns before they reach the Dairies ; as when they arrive at the Dairies they are usually mixed and seldom fall below the required Standard. The average Fatty Content of the 148 samples procured for analysis proved to be 3.25%.

The present Standard (3% Fats and 8.5% Non-Fatty Solids) is a source of trouble and worry to the Food Inspector, insofar as it is presumed in Law to be a good defence if the Farmer can prove to the satisfaction of the Court that the Milk has not been tampered with, but sold as it came from the Cow. There is a great diversity of opinion in this direction. Food, breed, atmospheric conditions, &c., all play an important part. Comparisons as to the number of samples "Not-Genuine" from other towns must not be taken seriously, unless the methods of sampling are given. It is unwise for the Inspector to procure samples of Milk from known good supplies. Large Dairies seldom, if ever, by mixing the Milk from the various farms, fall below the presumed Standard ; but the small Dairyman receiving his supplies from one farm is easily likely to cause a series of "Non-Genuine" samples. One wonders then, if the correct procedure is to procure samples from individual Farmers before the Milk is mixed, or after the Milk is mixed, and in "Course of Delivery" to the consumer. During the year I have invariably carried out the former method with the result that there is an increase of 75% in the number of "Non-Genuine samples."

Informal or Test Samples :

It will be observed from the tabulated statement, that 61 Informal and 236 Formal Samples were taken during the Year, all of which were submitted to the Public Analysts for analysis.

Informal Samples are in all cases purchased by an Agent, and if they are found to be adulterated, Formal Samples are obtained with a view to Summary Proceedings being taken. It has been found that the obtaining of Informal Samples is, on the whole, a very convenient method of estimating whether vendors are supplying genuine articles and causes no inconvenience to the shopkeepers, as when the samples are obtained formally the latter involves explanation as to why the sample has been purchased, the subsequent division of the sample into three parts and the sealing up of same, which all take a considerable time.

PUBLIC HEALTH (MEAT) REGULATIONS, 1924.

The above Regulations lay down that 3 hours Notice of intended slaughter must be given. By this means, every animal slaughtered within the Borough is inspected as to its condition before it is removed from the slaughter-house. During the Year 3,260 notifications were received in addition to 16 regular slaughterings, where operations are carried on daily.

| Speci | es. | Pu | ablic Abbattoir. | Private Slaughterhouses. |
|---------|-----|------|------------------|--------------------------|
| Bulls | | | 166 | 236 |
| Bullock | s | | 471 | 1,834 |
| Cows | | | 503 | 588 |
| Heifers | | | 472 | 1,327 |
| Calves | | | 639 | 690 |
| Sheep | | | 5,699 | 13,033 |
| Pigs | ••• | | 5,000 | 11,344 |
| | | | 12,950 | 29,052 |

Of the 42,002 animals slaughtered, 41,219 or 98.14% were found to be sound and unaffected by disease of any nature; 542 or 1.30% were found to be affected with Tuberculosis, and 241 or 0.56% were found to be affected with other diseases or conditions (see Table).

In addition, a large number of carcases that have been slaughtered outside the Borough are received into the various wholesale warehouses, and a regular inspection is made.

These warehouses are often a source where diseased meat finds its way to the consumer, as the inspection of carcases in rural areas is not carried out the same as in larger towns.

PARTICULARS OF SURRENDERS AND SEIZURES OF UNSOUND ANIMALS AND MEAT.

| Number of Voluntary Surrenders | Number of seizures (with subsequent |
|---------------------------------|--------------------------------------|
| of diseased carcases, or part | destruction) of diseased carcases or |
| carcases or internal organs, by | part carcases or internal organs |
| butchers to Chief Inspector. | by Chief Inspector. |

| | | Other | | Other | |
|-------|--------------|-------------|--------------|------------|-------|
| Year. | Tuberculosis | Conditions. | Tuberculosis | Conditions | Total |
| 1926 | 151 | 103 | 2 | 1 | 257 |
| 1927 | 358 | 153 | | | 511 |
| 1928 | 542 | 241 | | | 783 |

A notable feature is the increase in the number of animals affected, but this is chiefly due to the great increase in organs only affected, viz. :--

| | | le carcases affected. | Part carcases affected | Organs only affected |

Total

6,679 st 101 lbs.

*] Rabbit and $3\frac{1}{2}$ pounds Apples seized.

[†]17 pounds Margarine seized from a Hawker selling as Fresh Country Butter—Proceedings instituted (see Magisterial Proceedings, Case No. 7). The total weight of Butchers' Meat and other Foodstuffs surrendered and seized during the year amounted to 6,659 stones, as compared with 4,197 stones in 1927, and 3,563 stones in 1926.

Of the 4,912 stones of Butchers' meat condemned, 4,400 stones were affected with Tuberculosis.

TUBERCULOSIS ORDER, 1925.

During the year no notifications were received from Farms within the area of animals suffering or suspected of suffering, from Tuberculosis as required under this Order.

In all cases where whole or part carcases were found affected with Tuberculosis the responsible Official of the Authority from whence the animal came was notified. 73 such Notifications were sent out during the year, and in the majority of cases good results accrued.

PUBLIC MORTUARY.

The Public Mortuary is situated at the Local Board Yard in Commercial Street. It is adequately and well maintained and kept in a cleanly condition by the Caretaker. During the year 44 bodies were removed to the Mortuary.

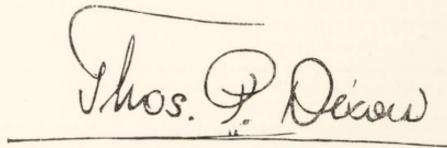

SCHOOLS—SANITARY CONDITION AND WATER SUPPLY.

During the summer vacation the drains of all Council Schools were cleansed and disinfected efficiently and all apparent defects were remedied.

The whole of the water supplies are direct form the mains of the Tees Valley Board.

RAG FLOCK ACTS, 1911 AND 1928.

No action was taken under these Acts during the past year.

Chief Sanitary Inspector.

40

PREVALENCE AND CONTROL OVER INFECTIOUS DISEASES.

During the year 1928, there were 5,366 cases of Infectious Disease notified, this being an increase of 531 cases compared with the previous year, due to the prevalence of Measles and Chickenpox both of which are notifiable.

The mortality rate from the chief Zymotic Diseases during the year 1928 was 0.31 per 1,000 of the population. The rate in the previous year was 0.01.

The death-rates per 1,000 population in the County Boroughs and Great Towns for certain diseases for 1928 were as follows :---

| | Enteric Fever | Small- pox | Measles | Scarlet Fever | Whooping Cough | Diph- theria | Influ- enza |
|---|------------------|---------------|---------|------------------|-------------------|-----------------|----------------|
| 107 County Boroughs and Great Towns | 0.01 | 0.00 | 0.15 | 0.02 | 0.09 | 0.09 | 0.17 |
| Middlesbrough | 0.01 | 0.00 | 0.25 | 0.00 | 0.024 | 0.03 | 0.36 |

Smallpox.

The epidemic of mild Smallpox, which had been prevailing since 1919, terminated in September, 1928.

There was one death from this disease in 1928, that of an aged and chronic infirm male, who contracted the disease in the Union Infirmary and died after a few hours illness.

P. H. (Infectious Disease) Regulations, 1927.

The only disease notified during 1928 under the above-mentioned Regulations was Pneumonia (Acute Primary and Influenzal). Nursing assistance was provided in 44 cases, and Pneumonia Jackets were supplied for 10 Infants.

Upon investigation it was found that overcrowding was one of the chief factors in these cases.

Vaccination.

The Medical Officer of Health performed 102 Primary Vaccinations and 66 Re-vaccinations under the Public Health (Smallpox) Regulations, 1917.

Prevention of Blindness.

No action was taken under section 66 of the Public Health Amendment Act, 1925.

SMALLPOX. 1928.

Attack and Mortality Rates per 1,000 population in the Wards from certain Infectious Diseases during the year 1928.

Report of the Medical Officer of West Lane Hospitals for the Year 1928.

There were 43 cases remaining in the Hospital at the beginning of the year 1928. 420 cases were admitted to the wards during the year, and 406 cases were discharged. Fifteen deaths occurred in the Institution giving a case mortality rate of 3.57 per cent. 83 cases came from outside districts and 337 from Middlesbrough itself. October and November mo the showed the greatest number of admissions while comparatively few cases were admitted in June and August. At the end of the year 57 cases were remaining in residence.

DIPHTHERIA.

There were 5 cases of Diphtheria in residence at the commencement of the year and the admissions to the diphtheria ward totalled 100. 1 case admitted as diphtheria was found to be suffering from measles and bronchitis. 10 cases came from outlying districts. Six deaths occurred in the wards, and of these, two were from pneumonia. Three of the deaths took place within 24 hours of admission. Further details as to the fatal cases are given below :—

| Age | Adn | nitted | Stay-in-Hospital | Cause of Death |
|---------|-----------------|------------|---------------------|---|
| 6 years | | of disease | 7 hours 24 hours | Cardiac failure and Diphtheria |
| 2 ,, | 9th | ,, | | ··· ·· ·· ·· |
| 6 ,, | $7 \mathrm{th}$ | ** | 6 hours | Cardiac failure following tracheotomy for laryngeal obstruction |
| 2 ,, | $7 \mathrm{th}$ | ,, | 9 days | Diphtheria and terminal broncho pneumonia |
| 5 ,, | 4th | ,, | 4 days | Lobar pneumonia |
| 5/12 ,, | 8th | ,, | 8 days | Broncho pneumonia |

Tracheotomy was resorted to in two cases, one collapsed and died within an hour of the operation and the other made a good recovery.

Anti-diphtheritic serum was administered to all cases in varying doses from 4,000 units to 24,000 units. The majority of cases were of a very mild nature and were

discharged after a stay of four weeks subject to two successive swabbings from the throat being returned as negative. 42 cases out of the 99 gave a positive finding of the Klebs Loeffler Bacillus from bacteriological examination of the swabs. Most of the bacteriological examinations are now undertaken at the Hospital thus enabling the taking of at least two successive negative swabs from each patient before discharge and at much less expense.

Complications included :

| Peritonsilla | r Abscess | | 2 | Cardiac Arythmia | 4 |
|--------------|-----------|------|---|-------------------|-------|
| Epistaxis | | | 2 | Broncho-Pneumonia | 3 |
| Otorrhoea | | | 3 | Rhinorhoea | 5 |
| | | | | Palatal Paralysis | 1 |

SCARLET FEVER.

At the beginning of the year there were 37 cases of Scarlet Fever remaining in Hospital. 292 cases were admitted to the wards during the year, this being an increase of 61 as compared with the admission for 1927. 66 patients came from outside areas.

| An analysis of the 292 cases sho | ws: | | |
|----------------------------------|-----|-----------------------------|---|
| Scarlet Fever | 276 | Scarlet Fever and Pertussis | 2 |
| Scarlet Fever and Measles | 9 | Scarlet Fever and Smallpox | 1 |
| Scarlet Fever and Chickenpox | 4 | | |

Among the total cases there was one death—a girl of 12 who died from encephalitis lethargica, from which she was suffering when admitted with scarlet fever. A survey of the age incidence shows the usual predominance of the 5-15 group, but there was decided increase of the cases over 15 years of age. The disease was of a very mild nature in the majority of cases and only seven were classified as septic scarlet fever. Scarlet fever anti-streptococcal serum was administered to 29 cases, the mildness of the other cases not necessitating its use. Complications occurred in two of the patients who had been treated with serum, one patient had nephritis on admission and the other developed adenitis. Operative measures were resorted to on seven occasions. Four suppurating glands of the neck were incised and drained and two peritonsillar abscesses were opened. In one case of submaxillary adenitis tubercular glands in the neighbourhood became involved and were excised.

Two other cases call for special mention, one a smallpox contact was admitted and isolated with scarlet fever, subsequently he developed smallpox and was removed to the Hemlington Smallpox Hospital. After three weeks he was returned to West Lane to finish his convalescence from scarlet fever. One woman had a miscarriage and as the delivery was complicated the foetus and placenta were removed under anaesthesia. Six "return cases" were admitted during the course of the year and these were traced to four discharged cases who had developed rhinorhoea after returning home. The return case rate for the year was 1.5 per cent. Two minor outbreaks of cross infection occurred in the scarlet fever wards due to two patients admitted with scarlet fever being in the incubation period of measles and chickenpox respectively. Four cases of measles and two of chickenpox resulted; further spread being prevented by immediate removal and isolation of the primary and subsequent cases.

Complications included :

| Rhinitis | | | 15 | Arthritis | | 5 |
|--------------|--------|-----|--------|---------------------|----|----|
| Adenitis | | | 13 | Peritonsillar Absce | ss | 4 |
| Suppurative | Adenit | tis | 5 | Epistaxis | | 5 |
| Nephritis | | | 4 | Otomboog | | 15 |
| Perforated 1 | Palate | | 1 | Miscarriage . | | 1 |

TYPHOID FEVER.

During the course of the year 9 cases were admitted to the wards and in addition, two were sent in for observation. One of the nine cases and both of the observation cases were found to be suffering from diseases other than typhoid fever. One case of paratyphoid fever was remaining in Hospital at the beginning of the year.

Three deaths from enteric fever occurred. Two of these were sisters, who together with their brother were admitted suffering from a very virulent type of the disease. The third death was that of a nurse who was attending the former cases for some eight days. The nurse died from peritonitis within three weeks.

Three cases gave a positive Widal result to typhoid, three to paratyphoid B. and the reactions of the rest were not taken or negative. Details as to the fatal cases are given below :—

| No. | Sex | Age | Widal | Stay in Hospital | Cause of Death |
|-----|-----|-----|--------------|---------------------|---|
| 1 | F. | 8 | Pos. Enteric | 7 weeks | Asthenia and cardiac failure after two relapses. |
| 2 | F. | 14 | Pos. Enteric | 5 weeks | Never rallied—died peritonitis and perforation (P.M. examination) |
| 3 | F. | 20 | Not taken | 19 days | Collapsed-died of peritonitis. |

Complications met with included otorrhoea, epistaxis, peritonitis and perforation.

OBSERVATION CASES.

Five cases were admitted during the year—one of the five being admitted as typhoid but found to be suffering from acute tubercular meningitis. Three deaths occurred among this series and further information is given in the table below. The remaining cases were classified as pleurisy and a mixed infection of measles and scarlet fever respectively.

| No. | Sex | Age | Widal | Stay in Hospital | Cause of Death |
|-----|-----|-----|-----------|---------------------|--|
| 1 | F. | 14 | Not taken | 3 days | Acute Tubercular Meningitis, confirmed lumbar puncture, P.M. |
| 2 | F. | 54 | Negative | 5 days | Broncho-pneumonia—chronic nephritis |
| 3 | F. | 14 | Negative | 6 weeks | Acute Miliary Tuberculosis— confirmed. P.M. examination and microsections. |

MISCELLANEOUS CASES.

Three smallpox contacts were isolated at the Hospital during the year. Three Lascars from the s.s. "Margha" were isolated and treated for chickenpox for the Tees Port Sanitary Authority. Seven cases of measles were received from convent schools and General Hospitals. One case of septic meningitis was admitted and died within twenty four hours; this case was notified to the Coroner and an inquest held. There was one case of erysipelas treated at the Hospital in 1928.

CASES REMOVED TO HOSPITAL FROM OUTSIDE AREAS DURING 1928.

Report of the Tuberculosis Officer for the Year 1928.

The number of persons who died of Tuberculosis in the County Borough of Middlesbrough was 199, 107 males and 92 females. Of this number, 156 died from Tuberculosis of the Lungs and 43 from Tuberculosis of other parts of the body. There were 5 more deaths from Tuberculosis this year than during 1927.

The death rate for the year was 15.10 per 10,000 of the population. The general death rate from all diseases, including Tuberculosis, was 14.26 per 1,000 of the population.

A table given at the end of this Report indicates the number of deaths in the various age groups, shewing also the distribution of Pulmonary and Non-Pulmonary mortality, according to sex.

INCIDENCE.

The number of new cases of Tuberculosis notified as occurring during the year was 471, of which 337 were cases of Tuberculosis of the Lungs, while 134 were cases of Tuberculosis of other parts of the body.

The following is a table indicating the number of notifications and deaths for the year, in each ward, with the equivalent rate per 1,000 of the population.

| WARD | No. of Notifications | No. of Deaths | Ward Population | Notification Rate per 1,000 Population | Death Rate per 1,000 Population |
|-------------|-------------------------|------------------|--------------------|--|---------------------------------------|
| Ayresome | 40 | 23 | 14,370 | 2.78 | 1.60 |
| Acklam | 29 | 14 | 10,291 | 2.81 | 1.36 |
| Cannon | 66 | 19 | 11,932 | 5.53 | 1.58 |
| Cleveland | 48 | 19 | 11,288 | 4.25 | 1.68 |
| Exchange | 17 | 9 | 8,659 | 1.96 | 1.03 |
| Grove Hill | 33 | 16 | 13,179 | 2.50 | 1.21 |
| Linthorpe | 25 | 10 | 11,831 | 2.11 | .84 |
| Newport | 62 | 24 | 12,740 | 4.86 | 1.88 |
| Ormesby | 39 | 13 | 12,709 | 3.06 | 1.02 |
| St. Hilda's | 76 | 30 | 12,712 | 5.97 | 2.35 |
| Vulcan | 36 | 22 | 11,989 | 3.002 | 1.83 |

An investigation was made to determine the mortality rate and incidence rate of Tuberculosis occurring in the houses built by the Corporation since the war, *i.e.*, in the Marton and Acklam Estates. It was found that the incidence of disease was less in these houses than in any of the wards of the town, while the mortality rate was lower than any of the wards with the exception of two wards.

DISPENSARY TREATMENT.

A considerable extension was made to the accommodation of the Dispensary by the occupation of the addition to the old rooms of that part of the building formerly tenanted by the Middlesbrough National Health Insurance Committee. The overcrowding of the waiting room and the consulting room that formerly existed has now been overcome to the great benefit of the patients and the staff of the Dispensary. The medical work was greatly facilitated and the comfort of the patient was much increased by the added accommodation.

During the year, there were 9,242 attendances at the Dispensary, while 6,918 visits were made by the Medical Officer and nurses to the homes of the sick. 471 new cases, or suspected cases of Tuberculosis attended for the first time during the year, exclusive of contacts, *i.e.*, people living in the same house as the patient. Of the 471, 403 were sent to the Dispensary by the patient's private Medical Attendant, for diagnosis before notification. This indicates that full use was made of the Dispensary by the medical practitioner as an aid to early diagnosis, which is recognised as one of the surest means of successfully coping with the disease.

Through recommendations from the Dispensary, 65 persons, mostly children, received Artificial Sunlight Treatment at the North Ormesby and Holgate Hospitals during the year.

RESIDENTIAL TREATMENT.

The total number of cases treated in West Lane Sanatorium was 196. Of these, 176 were cases of Pulmonary Tuberculosis, while 16 were treated for Non-Pulmonary Tuberculosis. 4 cases in which the diagnosis was doubtful, were admitted for observation, to enable a definite diagnosis to be made. During the year 146 patients were discharged from the Sanatorium, of whom 108 were much improved, while 38 cases shewed no material improvement. 19 patients died in West Lane Sanatorium.

In considering the results of treatment in this institution, it must be borne in mind that West Lane Sanatorium is the only local institution under the Public Authority for the treatment of Tuberculosis, and therefore patients in all degrees of advancement of the disease have to be admitted, though preference is given to those cases in the earlier stages of the disease. Many cases are therefore admitted in the later stages of the disease which are too far advanced for Sanatorium Treatment and in other areas would not be admitted to sanatorium but to hospital.

VOLUNTARY CARE COMMITTEE.

The work of the Voluntary Care Committee has been carried on as in previous years. 41 patients were sent for four weeks convalescent holiday to Barnaby Moor. In addition 12 children were sent to the Cripples Home at Danby.

The administration of Extra Nourishment was carried out by the Voluntary Care Committee during the year as in previous years. An annual report of the activities of this Committee is published separately.

Venereal Diseases Clinic-Results of Treatment-continued.

Report of the Maternity and Child Welfare Medical Officer for the Year 1928.

(1)

MIDWIVES ..

Forty-four Midwives, including four untrained, sent in their notice of intention to practise.

Of 3,273 births notified,

2,584 were by Midwives,

689 were by parents and Doctors.

As far as is known only 8 labours were conducted by handy women without a Doctor being present.

Of 2,584 births notified by Midwives, 332 were by the poor-law nurses and 309 by the Matron of the Municipal Maternity Home.

Of 1,948 births notified by private practising district midwives, medical aid was summoned 508 times, *i.e.*, in 26% of cases.

Visits of inspection to Midwives numbered 62.

| | Tot | al de | liveries | 309 |

Number of cases in which medical assistance was sought by the Midwife, 66, *i.e.*, in 21.3% of cases.

Number of cases notified as puerperal fever, 2, and as puerperal pyrexia, 4. All 6 recovered satisfactorily.

Number of cases of pemphigus, nil.

Number of cases of ophthalmia, nil.

Number of infants not entirely breast fed, 5.

Number of maternal deaths with causes, 3:

- (1) Collapse after birth of twins.
- (2) Toxaemia of pregnancy.
- (3) Eclampsia.

Number of foetal deaths, stillborn, 12.

within 10 days, 11.

Number of pupils who took their Central Midwives Board Certificate, 8.

NURSING HOMES REGISTRATION ACT.

From July to December, 1928, the number of applications for registration was 5. All 5 were registered.

The number of exemptions asked was 2.

The number of exemption certificates granted was 2.

(2) GENERAL ARRANGEMENTS MADE FOR ATTENDING THE HEALTH OF EXPECTANT AND NURSING MOTHERS AND OF CHILDREN UNDER FIVE YEARS.

Health Visitors.

| Number of visits paid : | | | | |
|-------------------------|------------------|-------|--------------|-------|
| To expectant mothers | First visits | 400 | Total visits | 1,008 |
| To infants under 1 | First visits | 3,390 | Total visits | 9,858 |
| To children 1 to 5 | Total visits | 5,307 | | |

Centres-

Average attendance of children per session :

| East Centre | | | 101 |
|-------------------------|----|---|---------|
| Grove Hill Centre | | | 66 |
| Cannon Centre | | | 152 |
| American Red Cross Cent | re | | 74 |
| Settlement Centre | | | 78 |
| North Ormesby Centre | | · | 107 |

Municipal Children's Hospital.

Number of cases admitted, 138. Average duration of stay, 32 days. Reasons for admission :---Non-thriving children 56. Rickets ... 31 Domestic reasons (e.g., Confinement of mother) 24 Convalescents from measles, etc. 9 Tubercular contacts 5 To re-institute breast feeding 3 Miscellaneous 10 138 Number of cases discharged in good health ... 95 improved 24,, ,, with no improvement 14 ,, 22 Number of Deaths with cause :--Pneumonia 3 Inanition 1 Intra cranial pressure ... 1

Ultra-Violet Irradiation.

| Indicat | ion for | Number of children treated. | | | | | |
|----------------|-----------|-----------------------------|----------|--|---|---------|--------------------|
| Rickets | | | | | | | 144 |
| Non-thriver | s | | | | | | 72 |

| Miscellaneous | | | •• | •• | 12 |

Practically every child having light treatment was taking either Ostelin or Virol at the same time.

| Number of children over | 5 years treated | 7 |
|--------------------------|-----------------|-------|
| Indication for treatment | : rickets | 7 |

The school children were also provided with Ostelin. Their bony deformities do not respond so readily to light treatment as do the deformities of children under 5.

Good results were seen in the deformities from bow legs in children under 5. The deformities from knock knee on the other hand showed poor results after treatment.

One spectacular case can be cited from among others. A.T., a boy aged 4, weighed 28 lbs. (*i.e.*, the weight of a 2 year old child) before treatment. He was bow legged and lazy in his movements. At the end of 12 weeks of treatment, he weighed 36 lbs. and was running about. He continued taking Ostelin for 6 months and is now a straight legged boy.

Orthopaedic Treatment.

| Number of children under 5 years of a | age seen | by the sur | geon | |
|---------------------------------------|----------|------------|------|----|
| from the Kirbymoorside Orth | opaedic | Hospital | | 15 |
| Number of these recommended for H | Iospital | | | 7 |
| Number already admitted | | | | 3 |

The orthopaedic surgeon holds a monthly clinic and the orthopaedic Sister a fortnightly session.

Ante-Natal Work.

| | Centre | | | | ~ | ttendance per y session. |
|--------|--------|---------|------|------|------|-----------------------------|
| East | | | | | | 12.8 |
| Grove | Hill | | | | | 7.7 |
| Canno | n | | | | | 31.2 |
| Ameri | can Re | d Cross | | | | 16.2 |
| Settle | ment | | | | | 26.0 |
| North | Ormes | by | | | | 20.0 |

Apart from ante-natal work done by the Midwives practising in the district, two other ante-natal sessions are held :—

> (1) The Matron of the Municipal Maternity Home conducts the ante-natal examinations of the patients entered for the Home.

(2) Holgate Hospital has a monthly ante-natal session for the patients entered for the maternity wards and for the patients attended by the Holgate nurses on the district.

Maternal Mortality.

| Number of Deaths | , 16. | | | | | | |
|------------------|----------|-----------|----------|---------|--------|--------|-------|
| Puerperal Se | epsis, 2 | followi | ing mis | carriag | e | | 4 |
| Eclampsia | | | | | | | 4 |
| Embolism | | | | | | | 2 |
| Collapse afte | er deliv | ery of t | twins | | | | 1 |
| Cardiac failu | re, mit | tral dise | ease | | | | 1 |
| Syncope | | | | | | | 1 |
| Shock follow | ing dif | ficult la | bour | | | | 1 |
| Shock after | Caesar | ean Sec | tion | | | | 1 |
| Shock after | necessa | ary open | ration i | for emp | otying | uterus | 1 |

The Maternal Mortality investigations are made by the Medical Officer to Maternity and Child Welfare. No copies of reports sent to the Minister of Health are kept in the Maternity and Child Welfare office. Only the initials of the patient are given. The comments made by the practitioner in charge of the case are signed by his initials.

Infantile Mortality.

88 per 1,000.

Still Births.

These numbered 126 out of 3,273 notified births.

Of the 126 stillbirths:

62 at least were intra-natal.

64 had been dead two days or longer before birth.

Of the 62 intra-natal deaths, 18 were in primiparae.

| Asce | rtainable causes were : | | | |
|------|---------------------------|------|------|--------|
| | Forceps delivery | | | 15 |
| | Prolonged second stage | | | 14 |
| | Ante-partum haemorrhage | | | 11 |
| | Difficult breech delivery | | | 6 |
| | B.B.A | | | 4 |
| | Cord round neck | | | 1 |

Of the 64 other still-births 18 were in primiparae.

Ascertainable causes were : 11 Ante-partum haemorrhage 11 Mechanical cause (fall, etc) , Psychological cause (fright, worry, etc.) Syphilis Illness during pregnancy (influenza, etc.) Albuminuria Maldevelopment (anencephaly, etc.) Inattention at birth

Post-mortem on 2 forceps deliveries showed meningeal haemorrhage.

Neo-Natal Deaths.

| Of 1 | 19 deaths investigated, the ascertainable ca | uses w | ere : | | |
|------|---|---------|---------|--------|--------|
| | Prematurity | | | | 39 |
| | Feebleness of child from unknown causes | | | | 11 |
| | Anatomical causes : | | | | |
| | Spina Bifida | | | | 6 |
| | Intestinal obstruction | | | | 5 |
| | One case operated on revealed a | " Mal | -develo | oped c | olon." |
| | Anencephaly | | | · | 3 |
| | Congenital heart | | | | 3 |
| | Meningocele | | | | 2 |
| | Umbilical hernia : death of child aft | er oper | ration | | 1 |
| | Difficult labour, all forceps | | | | 12 |
| | A post-mortem in 3 cases showed meni | ingeal | hemorr | hage. | |
| | Convulsions—cause not ascertained | | | | 9 |
| | Icterus neonatorum | | | | 3 |
| | Syphilis | | | | 3 |
| | Haematemesis and purpura | | | | 2 |
| | Sepsis by the umbilicus | | | | 1 |
| | Lysol poisoning by the umbilicus | | | | 1 |
| | Atelectasis (1 after placenta praevia, I a 1 | B.B.A. | | | 7 |
| | 1 after a maternal death from | eclam | psia). | | |
| | Bronchitis or pneumonia (1 after a mater | nal de | ath fro | m | |
| | lobar pneumonia) | | | | 6 |

Illegitimate Births.

These number 157 out of 3,219 registered births. Each baby is visited monthly.

Supply of Food and Milk.

Amount of Dried Milk given—499 packets. Amount of Cocoa and Milk given—529 packets.

(3)

INFECTIOUS DISEASES.

Puerperal Fever.

Of 24 notified cases, 4 died.

Puerperal Pyrexia.

Of 34 cases notified, all recovered satisfactorily with the exception of 2. One died on the 9th day of pulmonary embolism and the other was suffering from pulmonary tuberculosis.

Provision has been made by the Maternity and Child Welfare Committee for the institutional treatment of women suffering from Puerperal Fever and Pyrexia, at the Holgate Hospital, at the cost of two guineas per week per case. Investigations in respect of cases of Puerperal Fever and Prexia are made by the Medical Officer to Maternity and Child Welfare.

TABLE VII.-Birth-rate, Death-rate, and Analysis of Mortality during the year 1928.

1

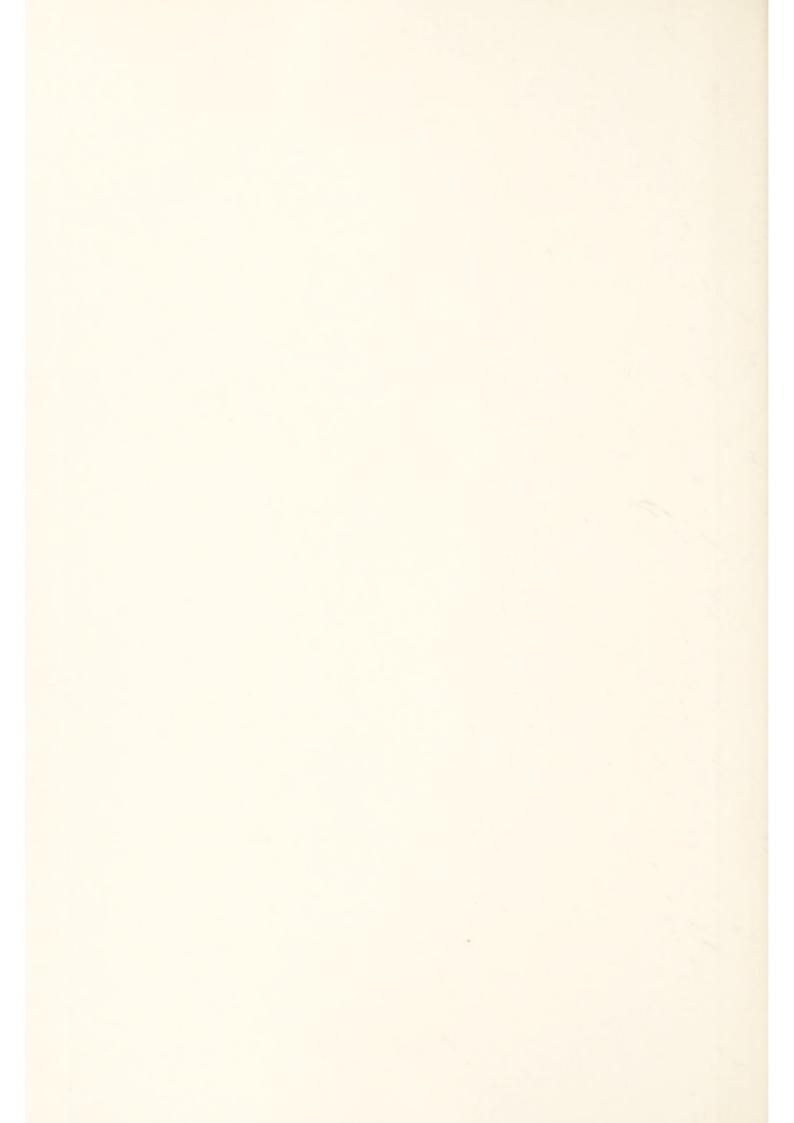

(Provisional figures. The rates for England and Wales, have been calculated on a population estimated to the middle of 1928, but those for the towns have been calculated on populations estimated to the middle of 1927. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards London and the groups of towns.)
