ANNUAL REPORT, 1945.

Public Health Department,

Municipal Buildings,

Middlesbrough.

July, 1946.

To the Chairman and Members of the Health Committee.

Mr. Chairman, and Gentlemen,

I have the honour to present to you the Annual Report on the work of the Public Health Department for the year 1945. In addition to setting out in general terms the various activities of the department during the year, attention is drawn to certain specific matters of importance.

A detailed analysis of the vital statistics will be found in the report. The birth rate for 1945 was 20.92 per thousand population, as compared with 22.58 for 1944, and although there is a substantial fall, the rate in Middlesbrough is still considerably higher than that for England and Wales which is 16.1 and for the County Boroughs and great towns which is 19.1.

The death rate of 12.7 per thousand shows a pleasing reduction as compared with 1944, and maintains the steady fall experienced since 1940. The maternal mortality rate shows a welcomed fall from 4.03 per thousand births to 2.22. A disturbing rise, however, has occurred in regard to infant mortality, the figure being 79 per thousand live births, as compared with 65 per thousand in 1943 and 1944. This increased figure is studied in detail on page 14 of the report.

There were 1,081 new cases treated at our Venereal Diseases Clinic during the year, as compared with 824 cases in 1944, showing that a steadily increasing amount of work is being carried out at this Clinic, and when it is realised that in 1940 only 333 cases attended, it will be seen that a three-fold increase has occurred in five years. The substantial moral problem referred to in my previous reports would, therefore, appear to be assuming an increasingly serious aspect, and the figures presented call for the most searching consideration on the part of those who are concerned as to the general well-being of the town.

Illegitimate births have decreased from 258 in 1944 to 223 in 1945, and this improvement is welcomed, but the figures still remain much higher than the pre-war figure of 125.

The incidence of infectious disease has not been unduly high during the year, and although the figure for Diphtheria immunisation gives grounds for satisfaction, the percentage figure of children immunised is far below the figure which we should attain before we can reduce the incidence of Diphtheria in the town to any substantial degree.

New notifications for Tuberculosis number 238 for the year, as compared with 241 for 1944 and 262 for 1943. There were 134 deaths giving a Tuberculosis death rate of 1.04 per thousand population, as compared with 131 deaths and a death rate of 1.06 per thousand in the year 1944.

The Health and Hospitals services have continued to function satisfactorily during the year, and the Department has not only carried out its regular routine duties in a satisfactory manner, but has also undertaken many additional duties which have arisen from the circumstances of war.

The year saw the official winding up of the Civil Defence Casualty Service which had been built up and administered by the Department during the war. Many calls were made upon this Service during the past five years, and I am satisfied that all the allotted tasks were carried out efficiently and expeditiously. The organisation of this Service entailed a considerable amount of work, but the service rendered to the community was worth while, especially as so much ready assistance was given by many keen, loyal and devoted volunteers.

The Town Ambulance Service remained under the control of the department after the winding up of the Civil Defence Ambulance Service and a nucleus of ambulances and cars for E.M.S. purposes has been retained and run at the request of the Ministry of Health. To co-ordinate these services with the hospital ambulance services, an Ambulance Officer was appointed to the permanent staff of the department.

Hospital improvements and developments were considered by the Hospitals Committee, who approved of recommendations contained in a memorandum which is printed as an appendix to this report.

Although under the new Government proposals for a National Health Service, the hospitals will pass away from the direct control of the Local Authority, yet the recommendations will serve as a guide for those whose task it will be to re-construct the hospital services on Tees-side.

The details outlined in this report reflect in some measure the amount of work carried out by the Public Health Department during the year, but statistics alone cannot adequately convey all that has been done to administer the health and hospitals service of the Borough, and to promote the general well-being of the community.

I should like to pay my tribute to all members of the staff for their loyal and whole-hearted co-operation during the year. To them goes the satisfaction of knowing that their efforts have contributed in no uncertain measure to the health and happiness of many of the citizens of Middlesbrough.

I also acknowledge most gratefully the interest and support of the Chairman and members of the Health Committee, and of the Chairman and members of the other Committees of the Council concerned with the work of the Health Department.

I am, Mr. Chairman and Gentlemen,

I. Land Anghey

Your obedient Servant,

Medical Officer of Health.

ANALYSIS OF VITAL STATISTICS.

- The estimated population for 1945 is 128,620, which is an increase of 1,700 on the year 1944.
- (2) Live births decreased during the year to a figure of 2,691 as compared with 2,867 for 1944. The birth rate is, therefore, 20.92 per thousand population, as compared with 22.58 for 1944, which is however still considerably higher than the average figure for England and Wales, and also for that in respect of the 126 Boroughs and Great Towns.
- (3) The death rate has decreased for 1945, the rate being 12.70 per thousand population as compared with 13.04 for 1944. There were 22 less deaths in 1945 than in 1944.
- (4) The maternal mortality rate is 2.22 per thousand births as compared with 4.03 for 1944.
- (5) The number of deaths from Cancer was 216 as compared with 190 for 1944.

(6) Infant Mortality Rate.

The infant mortality rate of 79 per 1,000 live births shows a considerable increase upon the figure for 1944 which was 65 per 1,000, and compares very unfavourably with the figure for England and Wales which is 46 per 1,000 and even with the figure for the County Boroughs and Great Towns which is 54 per 1,000. The actual causes of the deaths of infants under the age of 1 year are shown under Table V on page 90. It will be seen that there were 256 such deaths in 1945 as compared with 214 in 1944 and of these 134 were in the neo-natal period or first four weeks of life.

Prematurity again accounted for a large percentage of these neo-natal deaths, there being 60 cases in this category. This exceedingly high death rate calls for the most careful consideration and investigation and indicates the necessity for close co-operation between Obstetricians and Paediatricians.

The causes of prematurity are not fully known at the present time but there is no doubt that the increased availability of fully trained nursing staff, skilled Paediatric advice and improved accommodation for the care of premature and weakly babies would result in a considerable reduction in these figures.

Enteritis 15
Debility and Marasmus 11
Birth Injury 9

Taking the Infant mortality figures as a whole, apart from prematurity, the other two main causes of death were:—

These two groups consist of conditions which are produced by the entry of organisms either into the respiratory system or the alimentary tract of the infant.

To reduce these figures necessitates the elimination of sources of infection and increasing the infant's powers of resistance. These in turn require an improvement in the child's environment by providing good housing conditions, by mother-craft teaching as to Child Care and Infant Feeding and also by raising the economic status of the family. Until all these steps are taken we shall continue to be faced in Middlesbrough with an unnecessary toll of precious infant life. That an improvement can be secured in existing infant mortality rates, even in industrial areas and great cities is shown by the fact that New York has an infant mortality rate of 35 per 1,000 and Chicago one of 30 per 1,000 and a most desirable state of affairs is reported from New Zealand which, in 1942, had an infant mortality rate of 28 per 1,000.

MIDDLESBROUGH GENERAL HOSPITAL.

Another very successful year's work has been completed at this hospital, and further improvements and developments have taken place in spite of the difficult conditions. The Medical Staff of the hospital is recorded on page 5 and 6 from which it will be seen that during the year Mr. J. B. Reid commenced duty as Visiting Orthopaedic Surgeon and is actively building up a satisfactory Orthopaedic Service. An additional Junior Resident was also appointed in view of the increasingly heavy work entailed.

The total bed complement remains at 357 and is made up as follows:—

Men	 	 	175
Women	 	 	100
Children	 	 	82

The amount of work undertaken during the year is indicated in the statistics at the end of this report, and from these figures it will be seen that the hospital has undertaken a large amount of medical and surgical work under many difficulties and restrictions. In common with the experience of other hospitals, some difficulty was experienced in obtaining an adequate number of Nursing Staff, but the work has been continued and much praise and credit is due to the staff who have carried out the work so efficiently in spite of these difficulties.

The successes obtained by Student Nurses in the examinations of the General Nursing Council are gratifying and show that the high standard of the hospital as a Training School for Nurses is being maintained.

Although it was not possible during the year to undertake any of the major structural improvements which are badly needed, in order to bring the hospital up to the standard of a first class acute General Hospital, the Committee gave detailed consideration to a report as to the future developments which are necessary. These recommendations are printed in the Appendix on page 77 and were accepted, in principle, for implementation when the time is opportune.

Many very necessary developments are being held up owing to restrictions of material and labour.

Frequent changes have occurred in the post of Junior Assistant Resident Medical Officer, and consequently an additional burden has fallen on the other members of the staff. I would like to pay my tribute to Mr. W. Britain Jones, and Dr. J. A. Taylor, whose consistent hard work combined with medical and surgical skill have resulted in the patients at the hospital receiving every care and attention.

OPERATIONS.

The number of major surgical operations performed under general anaesthetic (excluding dental, ear, nose and throat, also ophthalmic operations) was 241. Of these, 147 were abdominal sections.

HEMLINGTON EMERGENCY HOSPITAL.

This Emergency Hospital of 480 beds is a hutted hospital built on a site adjacent to the former Smallpox Hospital which is now used for administrative purposes and to house the medical, nursing, and administrative staff.

The hospital, the building of which was completed in 1940, is fully equipped for all forms of medical and surgical treatment, having an operating theatre, X-Ray, Physiotherapy and Outpatients' Departments.

In addition to the treatment of Service patients the hospital has treated evacuated long-stay cases from London hospitals, and also cases from the waiting lists of local Voluntary Hospitals.

It will be seen from the appended figures that the volume of work undertaken during the year has been considerable, and the hospital now forms a very important and valuable addition to the hospital resources of the area.

Apart from the administrative nursing staff, the hospital is staffed by members of the Civil Nursing Reserve, but at the request of the Ministry of Health steps are being taken to establish at the hospital a Training School for the Assistant Nurse's Certificate of the General Nursing Council.

256 patients received 357 treatments.

Ear, Nose and Throat Department.

165 patients received 189 treatments.

OPHTHALMIC DEPARTMENT.

21 patients received 21 treatments.

X-RAY DEPARTMENT.

1,723 patients received attention.

2,423 Films and Screenings.

152 Screenings.

PHYSIOTHERAPY AND REHABILITATION DEPARTMENT.

907 patients received 15,235 treatments.

Group and individual exercises were given to bed patients while up-patients did graduated Physical Training exercises and played Netball and Football under the supervision of a Physical Training Instructor. The Physiotherapist carried out electrical treatments.

OCCUPATIONAL THERAPY DEPARTMENT.

This department flourished during the past year under the supervision of our physiotherapist and our Educational sergeant. Its work ranged from the making of soft toys to carpentry.

2,011 patients made 2,097 articles.

LABORATORY FACILITIES.

General pathological work is carried out in a small way at each of the local hospitals, but the more detailed work is sent to the Emergency Public Health Laboratory at Northallerton. In addition to this, all our routine milk samples are now examined at this Laboratory.

During the year the Hospitals Committee, with the consent of the Ministry of Health, agreed to the setting up of a Pathological Laboratory at the Middlesbrough General Hospital at an estimated cost of £1,200. Tenders for this work have been invited and it is hoped that the scheme will be put into operation during 1946.

Chemical analyses are carried out by the Borough Analysts,

Messrs. Jackson and Scholes.

Samples of water for bacteriological and chemical examination are carried out at the Tees Valley Water Board's Laboratories and by Dr. E. V. Suckling, of the Counties' Public Health Laboratory.

During the year the undermentioned specimens were sent to

the Emergency Public Health Laboratory :-

Milk			 	2.5	 254

TREATMENT AT SPECIAL CENTRES.

During the year arrangements were made for specialist treatment of patients as follows:—

Thoracic Surgery at the Shotley Bridge Emergency Hospital.

Cancer at the Royal Victoria Infirmary, Newcastle. Neurosurgery at the Newcastle General Hospital.

Plastic Surgery at the Royal Victoria Infirmary. Bacterial Endocarditis at the Newcastle General Hospital.

Fifty-nine applications were received from medical practitioners for their patients to receive treatment and 51 patients availed themselves of the facilities offered to them. Eight patients declined assistance from the scheme.

Details of the classes of cases dealt with are as follows :-

			Male	Female	Total
Cancer			14	14	28
Neurosurgery			 0	4	12
Thoracic Sur			 6	2	8
Bacterial En	docar	ditis	 1	2	3

	il.	il	il	

The only Nursing Home registered is that of the Ascot Nursing Home which has been inspected and found to comply with the Regulations.

Exemption from registration was granted in the case of the North Riding Infirmary, the North Ormesby Hospital and the Carter Bequest Hospital.

MENTAL DEFECTIVES.

The Middlesbrough Corporation is a partner in the Prudhoe Hall Colony Joint Board. On the 31st December, 1945, 110 Mental Defectives were in residence there. The Education Committee have a Special School for Mental Defectives at which 145 Boys and Girls are in attendance. Other mental defectives were receiving institutional treatment on the 31st December, 1945, as follows:—

Holgate Institution				
Rampton State Institu	ition			
T TT 11				
West Hartlepool Publi	c Assist	tance I	nstituti	cn
St. Joseph's Home				
Moss Side State Institu	ution			
Etloe House

INSULIN.

The scheme to supply Insulin to diabetics, who have found that the increase which has occurred in its cost since the beginning of the War is a substantial financial burden, has been applied in the case of nine patients as against only two patients during the year 1944. The Insulin is supplied through any Chemist nominated by the patient, the cost being defrayed by the Local Authority and the patient contributing according to his or her financial position.

MATERNITY AND CHILD WELFARE.

MUNICIPAL MATERNITY HOSPITAL.

The Municipal Maternity Hospital situated at Park Road North, provides the following accommodation:—

Number of Maternity	y beds	 	 50
Ante-Natal beds		 	 6
Isolation beds		 	 3

The following figures outline the work carried out at the Hospital during the year :—

Total number of Maternity	cases admitted		1,378
Ante-Natal cases admitted			126
Total number of deliveries:	Live Births Still births	1,153 73	
			1,226
(a) by Midwives:	Live births	969	
(-, -)	Still births	45	
			1,014
(b) by Doctors:	Live births	184	
	Still births	28	
			212
Average duration of stay of	cases in hospital	٠.,	$12.5 \mathrm{days}$
Number of cases notified as	Puerperal Pyrex	cia	4
Number of cases notified as	Pemphigus		2
Number of cases notified as	Ophthalmia Nec	natoru	m 4
			10

It will be seen from the figures given that the pressure on the be's at the hospital during the year has been very great. The in reased use is being made partly as the result of war-time conditions, overcrowding and insufficient facilities at home, and partly owing to the increased desire amongst mothers to have their babies in hospital.

Owing to the large number of cases seeking admission to the hospital during the year, a priority system had to be introduced, whereby cases were only admitted if they came within the following categories:—

(a) Abnormal cases.

(b) Cases requiring Caesarean or other surgical operations.

(c) Cases where home circumstances were unsatisfactory.

(d) Primiparae.

In this way the accommodation at the hospital is put to the best possible use. It has been regretted that so many cases have not been admitted, but under the circumstances it was felt that the priority system introduced was the most satisfactory one. In any case our accommodation is severely limited and we, at the present time, only take 60 booked cases per month to allow for emergencies and other abnormal cases which have to be admitted.

The long term solution of our present difficulties is, of course, to build additional accommodation at the hospital, but with present restrictions on building materials and labour, additional beds cannot as yet be provided. It is in the minds of the Authorities, however, to press on with additional building work at the hospital as soon as it becomes possible.

Ante-Natal Clinics.

Ante-Natal Clinics are held at the Maternity hospital four mornings a week. Patients booked for delivery at the hospital attend regularly throughout their pregnancy as required by the Medical Officer taking the Clinic. Women who are being attended at home for their confinements by Municipal or private Midwives are also seen in conjunction with the booked hospital cases. In the case of the latter should any medical treatment be necessary or any abnormality be diagnosed or be suspected, a note is sent advising the patient's own Midwife of the fact, and if necessary recommending the calling-in of the patient's own doctor.

Post-Natal Clinics.

A Post Natal Clinic is held at the Maternity Hospital on one afternoon per week. Patients who have been delivered at the Maternity Hospital attend this Clinic, and others are referred to it by Midwives and Health Visitors. The total number of attendances at these Post Natal Clinics during the year was 394.

In order to stimulate further attendances by mothers at Post Natal Clinics a system has been recently introduced whereby at the end of the six weeks following the date of discharge from hospital, a card is sent inviting the mother to attend the Post Natal Clinic for follow-up advice.

MIDWIFERY.

District Midwives.

The number of Midwives who notified their intention to practise in Middlesbrough in January, 1945, was 47. This number included nine employed at the Municipal Maternity Hospital and 3 at the General Hospital.

The number of births notified by Midwives was 2,669 out of a total of 2,814 notified births in the area. Medical aid was summoned by Midwives under Section 14(1) of the Midwives Act, 1918, on 523 occasions. Midwives acted as Maternity nurses in 358 cases.

Domiciliary Midwifery Service.

There are 19 Domiciliary Midwives in the Municipal Midwifery Service, and one Supervisor of Midwives. The seven areas into which the Borough has been divided for purposes of administration, were staffed as follows during the year:—

North Ormesby	and Di	ambie	es rarm			3
Central Town				midwives		3
Newport and Ca	annon			midwives		5
Ayresome				midwives		2
Linthorpe				midwives		2
Acklam				midwife		I
Grove Hill				midwives		- 3
T-4-1	of T	1			055	
Total num				1,	097	
Total num	ber of L	eliver	ies	1.	349	

Although the Domiciliary Midwifery staff was increased to 19 in 1944, in order to provide the holiday and off-duty periods laid down in the Midwives' Salaries (Rushcliffe) Committee's Report, all the Midwives have been very busily employed during the year, and the need to appoint further Midwives became apparent. More and more bookings came in to the Municipal Midwives every month, and there are still areas in the town not adequately covered by the Domiciliary Midwifery Service. This matter has been considered by the Maternity and Child Welfare Committee, and financial provision has been made for the appointment of a further three Midwives in 1946. The recruitment of Midwives has been very difficult, partly due to the general shortage of suitable candidates, but also owing to the housing position, it being found very difficult to obtain suitable accommodation for newly-appointed Midwives on the areas where the majority of cases are occurring.

Consideration will have to be given to the establishment of hostels for Midwives who have no homes of their own, where several Midwives can be accommodated under suitable conditions near their work. This suggestion has already been accepted, in principle, by the Maternity and Child Welfare Committee, and financial provision has been made in the estimates for subsequent years if a suitable building can be found.

Consideration has been given during the year to the setting up of a Part II Training School for the C.M.B. examination, in relation to the Domiciliary Midwifery Service. Visits were paid by representatives of the Central Midwives Board and discussions took place as to the steps which will have to be taken to set up such a Training School. There appears to be a sufficient number of cases available on our district for the training of Pupil Midwives in practical Midwifery, but again the question of accommodation is the main stumbling block. A hostel is to be set up as soon as a suitable building can be made available for the purpose.

WARTIME NURSERIES.

During 1945 there were five Wartime Nurseries administered by the Department, and these provided the following accommodation:

Bishopton Road	 		 60 places
Mosman Terrace,	Ormes	by	 60 places
Parkside	 		 60 places
West Lane	 		 60 places
Fleetham Place			 40 places

Full advantage of the Nurseries has been taken by mothers employed on war work, but there was some falling off in the number of cases attending and on the waiting lists towards the end of the year, coinciding with the cessation of hostilities and the return of many fathers from the Forces. Consideration was given towards the end of the year to the question of the closure of some of these Nurseries, since from the 31st March, 1946, the Nurseries would cease to be fully grant-aided by the Ministry of Health. It was ultimately decided to close the Fleetham Place Nursery and the Bishopton Road Nursery and to continue the three other Nurseries for the time being.

All the Nurseries were affiliated with the National Society of Children's Nurseries and trained candidates for the Diploma.

HEALTH VISITING.

Health Visitors.

The Staff has remained at 10 Health Visitors and one Superintendent Health Visitor.

During this year there have been the following changes on the staff. Miss A. Simpson left at the end of February and was replaced by Miss K. Hodgson who commenced duties on April 7th, Miss A. Emerson who left at the end of May and was replaced by Miss E. Armstrong who commenced duties on July 16th. It will be seen that there was an appreciable gap in each case when we had a district left without a Health Visitor and this gap probably accounts for the lower figure of home visits as compared with 1944.

Home Visiting continues to be much valued by the mothers of the town.

(a) PREMATURE BABIES. Extra visits have been paid this year to the premature babies, i.e. those with a birth weight of 5½ lbs. and under.

T	hese	numbe	red 17	9 and ar	re clas	sified a	s follow	's :	
Born	at	Home:				2.5			85
1.	(a)	Nursed	at hor	ne					73

(c) Survive	d 1 month					45
(d) Transfe	rred from M.	M.H.	to other	Autho	rities	
before o	one month					7

A special record of the environment of these babies has been kept with a report on their progress at a fortnight and at one month. Equipment in the form of rubber hot water bottles is on loan from this department and has been much appreciated.

(b) ALL CHILDREN UNDER FIVE YEARS :-

The number of Home Visits to all children under 5 years is classified below. There is a slight reduction in the figures as compared with 1944 due in the main to the reasons given above but the number is too many for efficiency in a staff of its present size. The addition of a further three Health Visitors to the staff which has been agreed by the Committee for 1946 will help considerably to this end.

Birth Enquiry or first Visits Visits to children 0—1 excluding above		$^{2,542}_{12,309}$
Total visits to children under 1 year		14,851
Visits to children 1—5 years Visits to expectant mothers Special visits and Neo-natal death enqu		20,906 45 197
Effectual Visits		21,148
Ineffectual visits	and	4,606
the aged (May only)		
Full total of visits made		40,945

In connection with home visiting the provision of suitable leather cases in which the Health Visitors can carry their day's work of cards, etc., is greatly valued.

Infant Welfare Centres.

The Seven Centres have continued to function as efficiently as possible under existing circumstances and have been aided a good deal by the addition of small pieces of equipment which have been badly needed but which until recently have been unobtainable. These include scissors, small bins for dressings,

enamel bowls for babies clothing when child is undressed for weighing, and screens. Ten sessions are held weekly.

We have also been able to obtain a much improved supply of tissue paper which enables us now to give each baby a full sheet when being weighed on the scales. This is a vast improvement on the previous arrangement of a small paper square under the buttocks, it minimises the risk of infection, and is a good object lesson for the mothers attending.

New Centre Record Cards were brought into use this year. These combine a weight chart and a section for the recording of special recommendations to other clinics, etc., and should be more useful documents ultimately than those used previously.

In connection with the Welfare Centres and Ante-natal Clinics the establishment of weekly motor transport to each one to deliver and collect laundry, medical supplies, equipment for repair etc., etc., has added considerably to the efficiency and easier running of the department as a whole.

The Whinney Banks Clinic continues to be overloaded and this is particularly unfortunate as its building is the least satisfactory from certain points of view.

The number of visits and details of the work of the centres are as follows:—

C.R. s.	101101101	
	Number of attendances of children $0-1$ $1-5$	$17,450 \\ 3,466$
	,, ,, Total	20,916

	-	45
	(d) Skin Clinic	17
	(e) Dental Clinic	19
	(f) Ear, Nose and Throat Clinic	10
	(g) Various Clinics	24

To eliminate the chances of infection and exposure the mothers of tiny babies have been encouraged to come to 47 Grange Road if weighing has been desirable and these attendances are not included in the figures given above.

There have been a certain number of mothers attending for Breast-Milk re-establishment treatment but this side of the work can be extended without much difficulty when more time can be given to individual problems.

The number of cases of Breast Abscesses reported by the Health Visitors was 31.

District Ante-Natal Clinics.

In addition to the Ante-Natal Clinics held at the Maternity Hospital there are four District Ante-Natal Clinics which are held in the following Centres:—

North Ormesby.
American Red Cross.
Grove Hill.
Cannon Street.

There are 10 sessions held per month at these Clinics, and the mothers are seen by the Senior Assistant Medical Officer for Maternity and Child Welfare, assisted by Health Visitors and the Municipal Midwives. Every Midwife is encouraged to attend with her own cases, and any abnormal cases are referred to the Maternity Hospital or to the patient's own doctor.

From the following figures it will be seen that good use is being made of the facilities provided. A further extension of the arrangements is necessary when personnel and premises permit.

Distribution Depot, Dunning Street.

The Distribution Depot is widely used and functions well. The only new product introduced during 1945 was a Vitamin B Compound Tablet (Benerva). Reasonable stocks are now more easily obtained and an adequate supply can be kept of rubber teats and valves.

ILLEGITIMATE CHILDREN.

A decrease in the number of illegitimate births is reported for the year. The following Table shows the figures for illegitimate births for the last six years:—

1940	 	 	119
1941	 	 	140
1942	 	 	125
1943	 	 	190
1944	 	 	258
1945	 	 	223

Attention was drawn by the Ministry of Health in Circular 2866 to the importance of making adequate and satisfactory arrangements for the welfare, care and supervision of illegitimate children and the Maternity and Child Welfare Committee have had this matter under active consideration and have co-operated with voluntary Moral Welfare Associations undertaking the work in the area.

There are two Hostels run by religious organisations for the single girl who is an expectant mother. These are as follows:—

Holy Cross Home, Southfield Road.—Accommodation for five mothers and one baby.

St. Teresa's Home, Borough Road.—Accommodation for five expectant mothers and one baby.

The mothers and babies are admitted pending other suitable arrangements being made. It is, however, becoming increasingly difficult to make suitable arrangements for the care of these mothers and their babies. In some cases accommodation for the expectant mother is arranged in her own home or in the home of a relative. This is very far from ideal and cases are known where the expectant girl shares a bedroom or even a bed with other members of the family. Under present conditions of over-crowding the question of receiving a mother back into the same room and bed with a young infant produces an impossible situation. It is difficult for girls to obtain suitable lodgings, and the question of a Hostel and Residential Nursery is one of some urgency.

The Maternity and Child Welfare Committee having failed to obtain the premises in Lothian Road have been actively pursuing the possibility of acquiring other premises for the purpose of a residential nursery and hostel but have hitherto failed. It is hoped, however, that suitable facilities for these mothers and babies will be provided at an early date when satisfactory accommodation can be found.

Difficulty is also experienced in finding suitable foster parents to take charge of the children in order that the mother can take some form of employment.

With regard to follow-up work, close co-operation takes place between Health Visitors, Midwives and fully trained Moral Welfare Workers who are actively employed in the town. The following members of the staff are actively concerned with this work:—

- (1) The Superintendent Health Visitor.
- (2) The Infant Life Protection Visitor.
- (3) The Almoner attached to the Department who is concerned with welfare work, particularly amongst those attending the Venereal Disease Clinic.

Infant Life Protection Report.

Number of foster parents on Register at the end of	of year	16
Number of children on Register at the end of year	r	16
Number of cases notified during the year		13

These children are visited at least once each month.

Adoption of Children.

33 children have been visited during the year, pending legal adoption. At the end of the year 8 cases were still under supervision. These children are visited at least once each month.

Boarded-out Children chargeable to the Social Welfare Committee.

There are 12 children boarded-out within the County Borough of Middlesbrough. 10 of the children are with relatives and 7 of these are chargeable to other authorities.

The children boarded-out are visited at least once each month and a record is made on the respective casepapers.

AMBULANCE SERVICE.

The Town Ambulance Service which was run by the Civil Defence personnel during the war was taken over in November, 1944, by whole time personnel employed by the Local Authority, and during 1945 consideration was given to the provisions of the Ministry of Health Circular 70/45 with regard to the future peace time Ambulance Service.

An Ambulance Officer was appointed to supervise the service and to co-ordinate the Public Ambulance Service with the Hospital Ambulance Services and to administer the E.M.S. vehicles which were run by the Department on behalf of the Ministry of Health. From January to beginning of July the Town Ambulance Service was operated by two ambulances—one a 20 h.p. Austin (1932) and one a 21 h.p. Talbot (1937). Owing to continuous mechanical trouble with the Austin vehicle two ex-Civil Defence ambulances were purchased, one being a 17 h.p. Humber and the other a 25 h.p. Morris. The two latter vehicles have been in continuous service since their purchase and have proved to have been of great value both as replacements and as supplementary service vehicles.

In addition to the ambulances a 22 h.p. Ford Saloon Car was taken over from the Civil Defence Service in July to be used as a sitting case car. This car has fully justified its acquisition and has proved particularly useful in the conveyance of patients to the special centres at Newcastle and Shotley Bridge.

The Service is staffed by 7 male Drivers and 3 male and 4 female Attendants, and 2 male and 1 female telephonists, who have performed their duties in a very capable manner. An extra male Driver and female Telephonist were engaged in a temporary capacity to replace staff on annual leave.

The following figures show the work carried out during the year by the Ambulance Service:—

Number of calls Number of Patients	s Ren	 noved		 2,697 2,659
These figures are made	un as	follows	:	
Street Accidents ar	nd Illi	nesses		 371
Works Accidents a				 398
Maternity Cases				 286
Private Řemovals				 1,519
Coroner's Cases				 58
Police Cases				 27
Total Mileage				 20,231 miles
Petrol consumed				 1,650 galls.

Outside Removals.

Patients were conveyed to and from Hospitals and Nursing Homes outside the Borough Boundary as follows:—

Royal Victoria Infirmary, Nev	wcastle		23 p	atients
Shotley Bridge E.M.S. Hospit	al		10	,,
General Hospital, Newcastle			15	,,
Other private removals to Hospita	ls and N	ursing	Hon	nes :—

SECTION C.

SANITARY CIRCUMSTANCES IN THE AREA.

WATER SUPPLY.

Mr. T. S. R. Winter, Assoc.M.Inst.C.E., A.M.Inst.W.E., Engineer and General Manager of the Tees Valley Water Board, contributes the following information concerning the Middlesbrough water supply.

The Borough of Middlesbrough is supplied with water from the Tees Valley Water Board; this supply is obtained from sources of two types:—

- (a) A Gravitation supply from Moorland Catchment Areas of 30,080 acres in Lunedale and Baldersdale, where the large dams at Grassholme, Blackton and Hury impound a total quantity of 2,655 million gallons of water.
- (b) A pumped supply extracted from the River Tees at Broken Scar Pumping Station, Darlington.

Purification at both sources is carried out by means of Slow Sand Filters and the new Sterilisation Plant which has been in use since June, 1943. The latter consists of the most modern type of Ammoniation and Chlorination Apparatus and is installed at all key points in the system to safeguard the purity of the whole of the water going into supply. With one exception, this plant is entirely automatic in operation.

112 routine samples, taken from the different zones of the distribution system, are analysed each month in the Board's Bacteriological and Chemical Laboratory, which was established in the main Office Building in 1941, and which is in charge of a qualified Bacteriologist and Chemist. In addition, a large number of samples from all sources are constantly under examination and presumptive tests are carried out in the Laboratory and at a small subsidiary laboratory at Broken Scar Pumping Station.

All parts of the area have enjoyed a good supply of pure and wholesome water from the mains of the Water Board, which is available at the taps of the dwelling houses.

The water is neutral in character and has no plumbo-solvent action on lead service pipes.

PUBLIC CLEANSING. HOUSEHOLD AND TRADE REFUSE.

Drainage and Sewerage.

During the year the following works have been carried out by the Borough Engineer's Department:—

			Private
		Corporation	Enterprise
Sewers	 	1,396 lin. yds. (approx.)	Nil.
Drains	 	1,126 lin. yds. (approx.)	

The Chief Sanitary Inspector is responsible for the following Section:—

Collection.

There are 34,855 inhabited houses and shops in the town, and a collection is made as regularly as possible. For three weeks during January and February, owing to inclement weather and the incidence of workers' absenteeism, the work of refuse collection suffered to such an extent that throughout the whole of the year, the war time collection of from 10 to 14 days, could not be improved upon until December.

The collection of household refuse is made by 18 motor and 1 electric collection vehicles.

No charge is made for the collection of any trade refuse that has a commercial value, such as paper, tins, rags, etc.

Bones.

310 receptacles have been distributed throughout the town for the reception of Bones.

Disposal.

During the year, 30,991 tons of refuse were disposed of as under:—

Method	l of Di	isposal.	Tonnage	Percentage
Separation and	Incine	ration	 25,397	81.95
Food Waste Cor	ncentra	ator	 1,128	3.64
Controlled Tippi	ing		 1,362	4.39
Barged to Sea			 298	0.96
Organic Plant			 193	0.63
Miscellaneous			 2,613	8.43
	T	otal	 30,991 tons	100.00%

Of the 1,128 tons of Kitchen Waste treated in the Food Waste Concentrator, 250 tons were brought in from other Local Authorities.

The constituents of the refuse at the Refuse Disposal Works after separation were as follows:—

			Tons	Percentage
Dust			 8,245	32.47
Cinders			 2,273	8.95
Metals			 537	2.11
Rags			 2	0.01
Bones			 4	0.02
Bottles			 111	0.44
Paper			 130	0.51
Miscella			 22	0.08
Balance			 14,073	55.41
	To	otal	 25,397 tons	100.00%

The amount and value of materials recovered, including Organic Salvage, were as follows:—

Organic Barvage,				Weight.			Va	lue	
			Tons	Cwts.	Qrs.	Lbs.	£	s.	d.
Waste Paper			373	18	3		2,493	6	0
FERROUS METAL	s:								
'Black' Ser	rap		110	2	3		219	19	9
' Destructor	, S	crap	459	7	3		970	6	7
Non-Ferrous M	ET	ALS:							
Copper Scray	р			4	3		7	2	6
Brass Scrap				17	2		14	0	0
Zine Serap				5	1		2	12	6
Lead Scrap			1	9	2		29	10	0
Textiles			5	18	1		43	8	11
Bottles, Jars, etc			96	14	2		902	2	0
Cinder Fuel			579	14			289	17	0
Stable Manure			63	16			32	1	0
Concentrated Kit	che	n Waste	590	18			2,627	18	1
Bones			5	12	2		28	12	11
Fish Meal			35	7			671	13	0
Miscellaneous				8	1		3	8	0
		Total	2,324	14	3		£8,335	18	3

The value of materials recovered shows a decrease of £2,030 compared with the total for the previous year, namely, £10,365 18s. 3d.

Since the inauguration of the Separation Plant in 1939, the amount of materials recovered is £61,737 5s. 6d.

The costs of collection and disposal for the years 1944 and 1945 from the figures in the Estimates supplied by the Borough Treasurer are as follows:—

		1944.	1945.
Cost of Collection	 	 £26,058	£31,423
Cost of Disposal	 	 £9,474	£10,784

The increase in costs is due in the main to the rise of workers' wages and the decrease in the amount received for salvage.

SANITARY INSPECTION OF AREA.

Description of Work carried out			1944.	1945.
Number of Inspections made			6,089	7,123
Number of re-inspections made			6,731	6,422

Defective coalhouse door fr	ames		3	26
Defective house doors			129	181
Absence of washing accomi		1	15	30
Miscellaneous works not cla			378	520

The above defects were satisfactorily remedied during the year.

A summary of the number of defects for which Notices have been served during the last five years is as follows:—

1941	 	 	8,794
1942	 	 	6,798
1943	 	 	5,943
1944	 	 	8,089
1945	 	 	11,116

The attention of the Borough Engineer has been called to the following defects:—

Apparently dange	erous st	ructures	 		25
Miscellaneous			 		16
				1944.	1945.
Number of Housing C	ards co	mpiled	 	41	6

In all cases where an application is made for a house on the Corporation Estates, inspection is made of the applicant's house and a report submitted to the Housing Department. 26 visits of inspection and reports have been made during the year.

1,562 visits were paid by the Housing Visitors to houses on the Corporation Estates, with good results. In May, the two Housing Visitors were transferred to the Housing Department.

Infectious Diseases.

During the year 1,254 houses have been inspected, incurring 201 re-inspections, compared with 1,412 inspections and 191 re-inspections last year, owing to cases of Infectious Disease (including Tuberculosis), and reports thereon have been made.

The number of inhabited rooms disinfected owing to cases of Infectious Disease was 1,838 as compared with 2,183 last year.

Offensive Trades.

Number on Register		 		30
Tripe Boiling .		 	6	
Fat Melting .		 	6	
Blood Drying .		 	2

alterations to premises, etc.			2

Rats and Mice Destruction Act, 1919.

During the year, 8,172 premises were visited and 34,470 visits were paid. "No-takes" of bait were reported in respect of 7,661 premises but "takes" were reported in respect of the remaining 511 premises, resulting in 8,740 rats being destroyed.

In continuance of the treatment of sewers, the whole of the intercepting chambers of dwelling houses were examined and baited with good results.

In conjunction with the Ministry of Food, one works registered under the Offensive Trade Byelaws, was treated with the undermentioned results:—

FIRST TREATMENT:

Dead rats recovered		 	769
Estimated number of rats l	killed	 	4,758

SECOND TREATMENT:

Dead rats recovered		 	5
Estimated number of rats	killed	 	547

The first treatment consisting of prebaiting for four days with Sausage Rusk, and poison baiting on the fifth day with 5% Zinc Phosphide and Sausage Rusk. The second treatment consisted of prebaiting for four days with bread, and poison baiting on the fifth day with 10% Arsenic and bread.

In addition, the Voluntary Rat Club and the Official Rat Catcher have continued their operations against these pests. 3,483 places were visited, resulting in 3,742 rats and 249 mice being destroyed.

SANITARY CONDITION OF THEATRES AND MUSIC HALLS.

There are 14 places of public entertainment within the Borough, 12 Cinemas and 2 Music Halls.

The Public Health Act empowers local authorities to inspect the sanitary condition of Cinemas, Music Halls, etc., and 19 visits were paid during the year, resulting in a good standard of cleanliness being maintained.

Rag Flock Acts.

No samples were taken under the Acts during the year.

Pharmacy and Poisons Act, 1933.

Poisons Rules, 1935.

40 premises with the persons nominated to sell poisons under the above rules are registered and 51 visits of inspection have been made during the year.

Care has been exercised in the keeping of poisons carefully stored and secure.

Public Mortuary.

The Public Mortuary is situated at the Borough Engineer's Yard in Commercial Street.

The arrangements for the care of the Mortuary outlined in the Report for 1943, have been continued, and the Mortuary has been kept in a clean condition.

The structure and accommodation provided is not entirely satisfactory, and as and when an opportunity presents itself, steps should be taken to provide an adequate up-to-date Mortuary, with proper facilities such as viewing room, post mortem room and other ancillaries.

During the year 67 bodies were removed to the Mortuary.

SECTION D.

HOUSING.

Number	of new houses completed during the year	13
Housing	Statistics :	
1. Insp	pection of dwelling houses during the year :-	
1.(a)	Total number of dwelling houses inspected for housing defects (under Public Health or Housing Acts)	7,082
(b)	Number of inspections made for the purpose	13,573
2.(a)	Number of dwelling houses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolidated Regulations, 1925 and 1932	6
(b)	Number of inspections made for the purpose	69
3.	Number of dwelling houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	297
4.	Number of dwelling houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	6,174
2. Ren	medy of defects during the year without service formal notices:—	
	Number of defective dwelling houses rendered fit in consequence of informal action by the Local Authority or their officers	5,469
3. Act	tion under Statutory Powers during the year:-	
(a)	Proceedings under Sections 9, 10 and 16 of the Housing Act, 1936:—	
	(1) Number of dwelling houses in respect of which notices were served requiring repairs	6
	(2) Number of dwelling houses which were rendered fit after service of formal notices:— (a) By owners (b) By Local Authority in default of owners	7

(b)	Pr	oceedings under Public Health Acts:—	
	(1)	Number of dwelling houses in respect of which notices were served requiring defects to be remedied	699
	(2)	Number of dwelling houses in which defects were remedied after service of formal notices:—	
		(a) By owners	699
		(b) By Local Authority in default of owners	_
(c)	Pro	occeedings under Sections 11 and 13 of the using Act, 1936:—	
	(1)	Number of dwelling houses in respect of which Demolition Orders were made	-
	(2)	Number of dwelling houses demolished in pursuance of Demolition Orders	otatani ogi_
(d)	Pro Act	ceedings under Section 12 of the Housing , 1936 :—	
	(1)	Number of separate tenements or underground rooms in respect of which Closing Orders were made	_
	(2)	Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit	_
Hou	sing	Act, 1936—Part IV—Overcrowding:—	
(a)	(i)	Number of dwellings overcrowded at the end of the year	
	(ii)	Number of families dwelling therein	_
(iii)	Number of persons dwelling therein	
(b)	Nun	aber of new cases of overcrowding reported ng the year	
(c)		Number of cases of overcrowding relieved during the year	_
(ii)	Number of persons concerned in such cases	_

4.

Owing to depletion of staff, it was impossible to compile statistics of overcrowded premises: the figures for 1945 were based upon the census of 1936 and the reduction from that time. Owing to war conditions, there has been an enormous increase of overcrowding due to marriage—there are often two families where previously there was only one.

Overcrowding.

During the year, 25 visits were made to houses known to be overcrowded.

Houses Let-in-Lodgings.

Number of Houses	 35
Number of Inspections	 53
Number registered during year	 2
Number discontinued during year	 4
Number of Notices and Letters re repairs, cleanliness, etc	 20

Circular letters respecting the necessary cleansing are forwarded annually to the responsible occupiers of all houses.

Common Lodging Houses.

SECTION E.

INSPECTION AND SUPERVISION OF FOOD.

The Chief Sanitary Inspector is mainly responsible for this Section.

Bacteriological Examination of Milk.

254 samples were procured during the year and submitted for examination. 144 or $56.69\,\%$ were found to be clean and 110 or $43.31\,\%$ dirty.

Bacteriological Test	41	2	9	12

1 unsatisfactory on account of insufficient pasteurisation.

2 unsatisfactory on account of—failed Methylene Blue test within specified periods.

11 unsatisfactory on account of excess in plate count only, two of which had a count greatly in excess of 100,000 bacteria per ml. That may be accounted for by an increase in the thermaduric and thermophyllic bacteria in the remaining nine.

Manufacture of Foodstuffs.

Sections 291 and 293 of the Middlesbrough Corporation Act, 1933, make it compulsory for all premises used or proposed to be used for the preparation of Potted, Pressed, Pickled or Preserved Meat (including Sausages), to be registered with the Local Authority.

The total number of such premises on the register is 120.

Public Health (Meat) Regulations, 1924.

The Ministry of Food took over the slaughtering and allocation of all animals slaughtered, on the 15th January, 1940.

The Public Abattoir and the Co-operative Society's Abattoir in Saltwells Road are used; a qualified Inspector is wholly employed upon inspection at each of these premises.

The following have been slaughtered and inspected before removal from the slaughterhouses:—

	Spec	ies	Public Abattoir	Saltwells Road Abattoir
Bulls			 175	43
Bullocks			 2,888	1,615

				1,077	2
				15,193	-5
	Lambs ds (Fis etc.)	Lambs	ds (Fish, Meat, Fretc.)	Lambs	

The total weight of butchers' meat and other foodstuffs surrendered during the year amounted to 15,193 stones 5 lbs. as compared with 16,979 stones 1 lb. in 1944 and 12,976 stones 1 lb. in 1943.

Of the 12,642 stones 10 lbs. of butchers' meat condemned, 8,811 stones 6 lbs. were affected with tuberculosis.

During the past five years, the incidence of tuberculosis in animals slaughtered for human consumption was as follows:—

Year.	Number of Animals Slaughtered.	Number.	Percentage.
1941	69,731	1,127	1.616
1942	72,152	806	1.116
1943	64,683	1,051	1.624
1944	51,359	1,045	2.035
1945	60,504	1,179	1.948

Adulteration.

Public Health (Preservatives, etc., in Food) Regulations, 1925-9.

During the year, 91 samples were analysed for the presence of preservatives, all being declared genuine.

Informal or Test Samples.

245 informal and 17 formal samples were taken during the year, all of which were submitted to the Public Analyst for analysis.

Margarine.

Number of Manufacturers		 _
Number of Wholesale Dealers		 24
Number of Premises Registered	1	 24

Butter.

There are three factories registered for making butter.

Staff.

The Department has again been working under extreme difficulties, similar to the report submitted for the year 1944. Only 4 qualified Assistants are available to carry out the multifarious duties necessary, including the inspection of animals slaughtered in the town, Middlesbrough being a centre for slaughtering under the Ministry of Food.

SWIMMING BATHS.

I am obliged to Mr. Sidney Fisher, the Baths Superintendent, for the following information :—

Attendances during the year 1945.

First Class Swimming Bath		 94,657
Second Class Swimming Bath		 26,942
Total		 121,599
Gents' Slipper Baths		 35,166
Turkish, Russian, Radiant He	at and	
Foam Baths		 2,914
Members of Youth Organisation	ons	 8,549
School Children		 27,684
Grand Total		 195,912

The foregoing returns have exceeded those for the year 1944 and it is anticipated that during the year 1946 all previous records will be greatly enhanced.

Baths Filtration Plant.

The new method of filtration which was installed in the Baths has proved a great success, the turnover of the swimming bath water being more frequent than when the plant was first installed, the daily tests of both baths being of a very high standard indeed, and the slight floating matter which accumulated on the surface of the water has now been eliminated.

SECTION F.

PREVALENCE OF AND CONTROL OVER INFECTIOUS AND OTHER DISEASES.

The total number of notifications received during the year was 3,340 compared with 3,973 in the previous year.

Diphtheria.

The cases notified numbered 213 against 235 in the previous year. There were 10 deaths, the mortality rate being 0.07 per 1,000 population as against 0.08 in 1944.

Scarlet Fever.

There was no further increase in the incidence of this disease during the year, 571 cases being notified as against 597 in 1944, and 368 in 1943. The individual cases, however, continued to be of a mild type. There were no deaths.

Enteric Fever.

No cases were notified during the year.

Cerebrospinal Fever.

13 cases, 6 of whom died, were notified.

Encephalitis Lethargica.

No cases were notified.

Erysipelas.

There were 30 notified cases.

Puerperal Pyrexia.

28 cases were notified.

Measles.

During the year, 1,171 notifications were received, as compared with 1,242 in 1944, and 3,516 in 1943. All cases were visited and kept under observation by Health Department Nurses. There was one death as compared with 2 in 1944.

Dysentery.

During the year 163 cases of Bacillary Dysentery were notified as compared with 72 in 1944. These cases were sporadic throughout the year. There was no epidemic. Most cases were of the Sonne type and were of a mild nature.

Chickenpox.

524 notifications were received, of whom 313 occurred in School-children. All cases were visited by Health Department Nurses.

Whooping Cough.

There were 228 cases notified during the year with 1 death, as compared with 254 notifications and 3 deaths in 1944. All cases were visited.

Ophthalmia Neonatorum.

10 cases were notified, all of which recovered with unimpaired vision.

Influenza.

There were 5 deaths from this disease, as compared with 20 in the previous year.

Influenzal Pneumonia.

2 cases were notified.

Pneumonia.

There were 148 cases notified, of which 43 died.

Smallpox.

No cases occurred during the year.

Vaccination Returns.

DIPHTHERIA IMMUNISATION.

The work of Diphtheria Immunisation carried out by the Public Health Department in the year 1945, is shown by the following figures:—

No. of children ur	der 5 y	vears o	fage	
immunised				 1,839
No. of schoolchild	ren im	munise	d	1 227

The following are the percentages of the total number of children in the town who have been immunised in the two groups:—

Percentage of children under 5 years of	
age immunised	 38.52%
Percentage of schoolchildren immunised	 70.28%

It will, therefore, be seen that a reasonable level of immunisation has been maintained during the year, but the efforts of the Department will not be relaxed until a much higher percentage of children is immunised.

Authorities are generally agreed that before any marked results can be obtained with regard to the incidence of Diphtheria, at least 75% of all the children in the town must be immunised, and if this percentage could be raised, and if we could attain the ideal such as Toronto in Canada has of 100% immunisation, we could stamp out Diphtheria from our midst. Toronto, because of the 100% immunisation, has had no case of Diphtheria since 1940. This city of some 650,000 inhabitants shows a much better state of affairs than Middlesbrough where, in the year 1945 there were 273 cases of Diphtheria admitted to our Isolation Hospital of which 11 cases died. None of these cases who died had been immunised against Diphtheria.

The best evidence of the efficacy of inoculation in reducing Diphtheria in the community comes from New York. In 1910-19 before there was any inoculation, the average annual number of cases was 14,282, and of deaths, 1,290. In 1940-44, when the population at risk was nearly fully inoculated, the average annual number of cases was 331 and of deaths 10. The mortality from

Diphtheria of children under 15 has been reduced from 86.4% to 0.4% per 100,000. The population of New York is about twice that of the County of London.

In the State of Connecticut, population 1,720,000, there were only 35 cases without a single death in 1941 (latest complete figures available).

One important point must be stressed and that is that the type of Diphtheria organism at present prevalent in Middlesbrough is the Gravis or severe type. This makes it all the more important that the children should be immunised. It is generally agreed that the child should be immunised as soon after its first birthday as possible. Immunisation should then be repeated just before the child goes to School. If the child has been immunised twice in this way, it can almost safely be stated that the child will go through its School life with a high immunity against Diphtheria.

Free facilities for immunisation are provided at all Infant Welfare Centres and School Clinics, and any further information can be readily obtained at the Health Department.

WEST LANE HOSPITAL.

The following table indicates the Admissions, Discharges, and Deaths in the Hospital during the year for the various diseases. All figures relate to actual diagnosis as established at the Hospital.

^{*} Died from Aplastic Anaemia.

Diphtheria.

During the year 273 cases of Diphtheria were admitted with 11 deaths, representing a case mortality of 4.03%. This compares with 276 cases, 11 deaths and 3.98% mortality for 1944. The prevalent infection during the year continued to be of the Gravis type. There was no great seasonal variation in the number of cases admitted.

The under-mentioned record of the cases admitted shows the

number who had been immunised.

	Remaining 31/12/44	Admitted 1945	Discharged 1945	Died 1945	Remaining 31/12/45
Immunised	 11	98	101		8
Not Immunised	 22	175	169	11	17

Scarlet Fever.

There was a very slight increase in the number of cases admitted though this remained of a mild type. During the year 670 cases were admitted with no deaths, as compared with 620 cases with 1 death in 1944. The cases continued to be kept in Hospital for the reduced time of 14 days and this has proved entirely satisfactory.

Dysentery.

There was no major outbreak of this disease but sporadic cases continued to be admitted throughout the year. Most of the cases admitted proved to be of the Sonne or mild type. In all, 57 cases were admitted with 2 deaths. In addition 111 cases of non-specific Enteritis with 34 deaths were admitted. These infections in very young babies have been rather prevalent throughout the country. Bacteriological investigations have proved entirely negative. Although the infection has caused a large number of deaths in young babies the results of treatment compare favourably with statistics published for other parts of the country.

Tuberculous Meningitis.

Five cases of this invariably fatal disease were admitted as compared with 7 cases in 1944. Bacteriological investigation showed that in all of the cases the infection was of the Human type and in none was it of Bovine origin.

Cerebro-Spinal Fever.

Sporadic cases of this infection were admitted throughout the year, all being of a severe type. Altogether 13 cases were admitted with 4 deaths as compared with 18 cases with 6 deaths in 1944. Recovered cases showed no subsequent disabilities.

Puerperal Pyrexia.

Twenty four cases were admitted with 2 deaths. This continued low mortality has been largely contributed to by the successful employment of Sulphonamide drugs and also with the use of Penicillin which has been freely available in the Hospital throughout the year.

Ophthalmia Neonatorum.

During the year there were 8 cases admitted all of which recovered with unimpaired vision. Most of these infections now respond to Penicillin treatment within a matter of hours.

Pemphigus Neonatorum.

Six cases were admitted during the year, all of whom recovered.

Pneumonia.

During the year 10 cases of Primary or Lobar Pneumonia were admitted, all of whom recovered. Here again, the use of Penicillin has greatly shortened the illness period and has been the means of saving many lives.

Miscellaneous.

Amongst the other major diseases admitted there should be noted 8 cases of Erysipelas and 23 of Measles, all of whom recovered.

SCABIES.

The work at the Municipal Scabies Treatment Centre, housed in premises adjacent to the Public Baths, has been fully maintained during the year. Facilities exist for the treatment of adults as well as schoolchildren and infants. From the following figures it will be seen that many cases take advantage of the service provided.

Record of Attendances at the Middlesbrough Scabies Clinic for the year ended December, 1945.

Adults :-				
Male				 185
Female				
			Total	 607
SCHOOL-CHILDRE	N :			
Male				 321
Female				 423
			Total	 744
Under School	Age :-			
				 161
			Total	 306
Total n	umber of	patie	ents	1,657
Total n	umber of	treat	ments	 4,186

The total number of patients treated is slightly less than the number of patients treated in 1944, which was 1,785. From this figure and from statistics obtained through the schools, there is no doubt the incidence of scabies is falling in Middlesbrough. This is largely due to the fact that the active policy, which has been pursued for the last two or three years with regard to the treatment of scabies, has eliminated the reservoirs of infection which were spreading the disease in the various areas of the town.

Great stress is placed upon the treatment of whole families where scabies exists. This is the only satisfactory method of eliminating scabies from the family and from the community. Where the adults remain untreated re-infection readily occurs of the schoolchildren and children under 5.

The work is carried out under a fully-trained Health Visitor. She is assisted by three female Nursing Auxiliaries and one Male Orderly. The Health Visitor also undertakes follow-up visits to the homes of the patients for contacts. It has not been necessary to utilise the compulsory powers contained in the Scabies Order of 1941 since patients seem only too willing to utilize the excellent facilities provided to rid themselves of a very unpleasant disease.

General practitioners make full use of the Clinic and refer a considerable number of cases.

Special sessions are held twice weekly by one of the Assistant Medical Officers for patients needing medical supervision.

GENERAL CLEANLINESS AND INFESTATION.

Unremitting attention is given to promoting health and cleanliness amongst the members of the community. No opportunity is lost by members of the Public Health Department Staff in impressing the importance of clean habits in the maintenance of good health.

The Health Visitors and School Nurses have concentrated their efforts in this direction upon those mothers of children who are known to be needful of advice in this matter.

As regards schoolchildren there has been a small but welcome decrease in the number of children found to be verminous during the year and with regard to children under 5 our problem rests not with those children who attend the Infant Welfare Centres regularly, but amongst those mothers who are not regular attenders. Home visiting is, therefore, of great importance, and the Health Visitors in their general inspection of and interest

in the pre-school child usually manage to include an inspection of the head. It will be appreciated that this necessitates the exercise of great tact and discretion. Where a verminous child is discovered the Health Visitor gives detailed instructions as to washing, cutting and cleansing of the hair. Advice is given as to the best method of cleansing the head and parents are able to obtain steel combs through our Infant Welfare Clinics or through the Food Distribution Centre.

In the first place, all our efforts are directed towards educating the mother to care for her child adequately and satisfactorily.

Prime responsibility for the child's cleanliness must rest, of course with the mother. Normally, therefore, the cleansing is not undertaken by the staff of the department. It is necessary, however, on rare occasions to remove children to our Municipal Skin Clinic when infestation is very heavy.

Full use has been made during the year of the educational material provided by the Central Council for Health Education. Films have been shown in the Clinics and posters, leaflets and pamphlets have been distributed generally. The main difficulty with regard to this form of propaganda is that it fails to reach the parents who are in the greatest need of it. There is no doubt, of course, that the unsatisfactory housing conditions under which many of our townspeople live are not conducive to methods of health and cleanliness. There are a considerable number of houses in some of the older parts of the town without baths, and under these circumstances with the present overcrowded condition of families, it is very difficult to maintain a high standard of cleanliness which could be attained on a well-planned housing estate. It is found, however, that even in these newer housing estates, mothers do require advice as to the care and cleanliness of their children. Improvement on transfer to a newer area is not dramatic, but slow and gradual as appreciation is realised of the amenities and advantages provided.

TUBERCULOSIS.

Notifications.

238 persons were notified during the year as having acquired Tuberculosis. 128 were males and 110 females, numbers almost identical with those of the previous year.

Of these 191 had Pulmonary Tuberculosis and 47 were Non-Pulmonary.

Deaths.

163 persons died of tuberculosis during the year in the area. Of these, 27 were patients belonging to outside areas and these mostly died in the General Hospital. 105 of the deaths were male and 58 female.

Pulmonary Tuberculosis accounted for 143 and Non-Pulmonary for 20 persons. Excluding the 27 outside area patients the mortality figures are very similar to those of 1944.

The following Table gives the notifications and deaths from all forms of Tuberculosis and the death-rate per 1,000 of the population for England and Wales and for Middlesbrough since 1937:—

	England and Wales	Middlesbrough.				
Year.	Death Rate.	Notifications.	Deaths.	Death Rate.		
1937	0.69	281	165	1.18		
1938 .	0.64	297	153	1.09		
1939	0.53	295	171	1.22		
1940 .	. 0.70	334	198	1.52		
1941	0.73	247	202	1.59		
1942	0.65	253	166	1.34		
1943	0.66	262	155	1.26		
1944	0.62	241	131	1.06		
1945	0.62	238	134	1.04		

The Middlesbrough Tuberculosis death-rate is much in excess of the corresponding death-rate for England and Wales.

Dispensary Treatment.

There were 5,963 attendances at the Tuberculosis Dispensary of which 607 attended for the first time. Of this number, 530 were sent by the patient's private doctor for purposes of treatment or disposal to hospital or sanatorium.

The Health Visitors made 9,007 visits to the homes of the tuberculous persons during the year. 482 pathological specimens were examined during the year. 612 artificial pneumothorax fillings were given at the Dispensary.

X-Ray Examinations.

During the year 1,313 X-ray examinations were carried out at the General Hospital of patients sent from or through the dispensary. This branch of work, so essential to the requirements of modern Tuberculosis investigations, increases in importance every year and the apparatus now employed for this purpose is highly efficient.

Tuberculosis Voluntary Care Committee.

The work of this committee continued and expanded during the year. The convalescent home at Marske, whose activities had to be suspended during the war, was re-opened for Tuberculous patients as a recuperative holiday resort. Premises were taken in Meath Street for the establishment of training in light handicraft work and it is expected to be equipped and in working order in 1946.

"Flag Day" and collections from the sale of "Christmas Seals" are organised and carried out by the committee.

Institutional Treatment.

POOLE SANATORIUM.

134 Middlesbrough patients were treated during the year in the Poole Sanatorium; 72 males and 62 females. 48 patients still remained in the sanatorium at the end of the year.

WEST LANE SANATORIUM.

73 female patients received treatment during the year. 20 patients were still under treatment on December 31st.

MIDDLESBROUGH GENERAL HOSPITAL.

123 patients, mostly male adults were treated in the Sanatorium Block of the General Hospital during the year, 38 still remaining in hospital at the end of the year.

CIRCULAR 266T.

Pulmonary Tuberculosis Patients dealt with under the Scheme of Allowances (266T), year ended 31st December, 1945.

The amount disbursed during the year ended 31st December, 1945, was £3,400 15s. 4d.

VENEREAL DISEASES.

It will be seen from the figures in the appended tables that there was a further increase during the year in the number of cases attending the Clinic for the first time, there being 1,081 for the year as compared with 824 for 1944.

The high incidence of Gonorrhoea amongst males, which was commented upon in my reports of 1943 and 1944, has been maintained, there being 327 cases in 1945 as compared with 207 for 1944. There was also a considerable increase in the number of cases of Syphilis amongst females.

The amount of work entailed at the Clinic is very great, and it will be seen that there were 10,746 attendances during the year.

Dr. J. A. Taylor, the Venereal Diseases Medical Officer is in charge of the work at the Clinic, and he is assisted by a Special Treatment Sister, a Male Orderly and an Almoner. Assistance is also given from time to time by the Nursing Staff from the General Hospital, and a certain amount of assistance is given in the medical work by other Medical Officers on the staff of the Public Health Department.

It will thus be seen that the work in this department has now grown to such dimensions as really to merit the services of a whole-time Medical Officer. Circumstances do not permit of such an appointment at the present time, but it must be remembered that Dr. J. A. Taylor is also Resident Medical Officer at the General Hospital, and in consequence his time is more than fully occupied. Further, modern developments in the prevention and treatment of Venereal Diseases, together with the detailed administration work and the Regulations associated therewith, make it essential that in a Clinic of this size, the services of a whole-time Venereal Diseases Officer should be secured at the earliest possible opportunity.

Institutional facilities for cases requiring in-patient treatment are provided at the General Hospital, and separate accommodation is provided for Venereal Diseases patients apart from the ordinary patients at the hospital. The wards used for Special Treatment cases have been suitably fitted up with additional wash-basins and sterilisers, and we are now able to admit to the hospital cases not only for special purposes but also for injections of Penicillin of which increasing use has been made during the year as more supplies were forthcoming.

Further structural alterations were carried out at the Clinic itself during the year and the department is now a very well laid out and equipped Unit. Propaganda on the prevention of Venereal Disease, and the importance of early and adequate treatment has been continued on the lines indicated in previous reports. Full use has been made of literature provided by the Central Council for Health Education, and talks to Youth Clubs, Merchant Seamen and other organisations have continued.

Regulation 33B.

The cases brought to the notice of the department under these regulations were followed up to the greatest possible extent. The following figures show the work which was undertaken during the year in this connection:—

one your in this contact the	Males	Females	Total
 (1) (a) Total number of contacts in respector of whom Form I was received (b) Number in (a) transferred from 	et 3	43	46
other areas		5	5
(2) Number of cases in (1) in which attempts were made during the current period outside the scope of the Regulation to persuade the contact to be examined before the latter had been named on a second Form 1:—	ne of ne ne		
Contacts found 41 Contacts examined or already	1	40	41
under treatment 40		40	40
(3) (a) Number of those in (1) in respect of whom two or more Forms I were			,
(b) Number included in (3) (a) in respe of whom the first Form I was pr		5	5
viously reported under (1) (c) Number included in (3) (a) tran	s-	5	5
ferred from other areas		• •	
(4) Number of those in (3) (a) who were (a) found		5	5

Form 2		4	4
(i) to attend for, and subm	it		
to medical examination (ii) to submit to and continu	ne ···	*	
treatment			
(f) transferred to other areas .			

It will be seen that the Regulation has not resulted in a large number of double notification contacts being brought to our notice. Only five cases came within the actual scope of the Regulation in this way, and all eventually attended for treatment. It was possible, however, for the Almoner to follow-up the cases notified on a single Form I and to exercise her persuasive powers to secure attendance at the Clinic.

Almoner.

Although spectacular results were not expected from the appointment of Almoner, it has been made abundantly clear that the services of such an Almoner are now indispensable to run the Venereal Diseases Clinic efficiently, and from the following report it will be seen that a large amount of useful and very necessary social work has been carried out.

Almoner's Report.

The work of the Almoner during 1945, has continued to be an active and interesting piece of social service. The general welfare of the patients still continues to be of primary importance. This means following up of attendances and helping patients to overcome their various difficulties, thus enabling them to complete their treatment.

In the case of female patients the need of a sympathetic ear and an understanding mind to which troubles and difficulties and fears can be told in confidence does much to relieve the mental worry and strain of the patient. The Almoner must be ready to receive these confidences and to give the helping hand which may be needed.

During the year, about 600 visits were made and over 700 letters were sent. This persistent persuasion by letter and personal interview, does much to encourage patients to continue their treatment.

Information concerning 78 contacts comprising 71 females and 7 males, was obtained at the Centre, notifications made and action taken, thus bringing under treatment a large number who would otherwise have drifted.

Notifications under Regulation 33B.

	Males	Females
Notifications received	 3	43
Number of contacts traced	 1	40
Number of contacts examined	 	40

The ages of the above range from 16 to 45 years of age.

Since persons named on Form I under Regulation 33B cannot be compelled to attend, but only advised, it will be seen that our efforts in this aspect have met with considerable success.

During 1945 children of infected parents have also been examined. Of the 19 examined 11 were found to be free from disease and 8 are now under treatment.

APPENDIX.

COUNTY BOROUGH OF MIDDLESBROUGH PUBLIC HEALTH DEPARTMENT.

CAPITAL EXPENDITURE PROGRAMME 5 and 10 Years.

MIDDLESBROUGH GENERAL HOSPITAL.

FUTURE DEVELOPMENTS.

The following matters are those which ultimately, should all receive attention at the Middlesbrough General Hospital, in order to bring it up to the standard required of a first-class General Hospital. It is difficult to lay down a hard and fast priority scheme, as to the improvements to be undertaken first, but I have grouped the proposals into a reasonable system of priority.

1. (a) Modernisation of Wards and Corridors.

A scheme was included in the previous 5 year plan of £8,400 for this purpose. The following modernisation, however, is necessary now:—

- (i) Provision of Sanitary Annexe, Day Room, side ward, dressing room and duty room, as on wards 1 and 7, in remainder of wards, with similar additional kitchen accommodation as has already been provided in wards 1 and 7.
- (ii) Provision of a number of small side wards, adapting existing theatre block for ward purposes, including the addition of a sanitary annexe here also.
- (iii) Re-laying ward floors, modernisation of old stone staircase and tiling of corridor to 5 feet.

(b) Extensions to Nurses Home to provide for additional Nursing Staff.

The present accommodation in the Nurses Home provides 86 beds in 59 rooms. Future developments at the hospital with the shortening of hours and the possible introduction of the Block System of training, indicate that accommodation would have to be provided for at least 150 Nurses, which means the addition of accommodation for another 64 Nurses in single rooms.

(c) Provision of Medical Superintendent's house, and Resident Medical Officer's quarters, to provide for a minimum of six Resident Medical Officers.

(d) Extension to Maids Hostel.

Including the provision of Sewing room and Linen stores. A scheme for this purpose, costing £800 (Scheme No. 47) was in the previous 5 year plan. The present accommodation provides 21 beds in 9 rooms. For the future it is anticipated that a total of 50 beds will be required, giving extra accommodation for 29 members of the Domestic Staff.

(e) Mortuary and Post Mortem Room.

A Scheme was included in the previous 5 year programme to cost £1,000. This was Scheme No. 46. The present Scheme visualises the provision of an adequate building for mortuary purposes for a minimum of 12 bodies with Post Mortem room, Viewing room, Visitors' room and Chapel.

2. (a) Reconstruction of Centre Block.

This proposal was included in the Corporation's 1937-1942 5 year programme, and was Scheme No. 44, costing £12,600. In 1936 the Scheme visualised the taking down of the doctors' quarters and the erection of a new two-storey building with entrance hall, lavatory and cloak-room accommodation, ladies' room, residents' dining room, kitchen, Visiting Staff room, Consulting room, Committee room and various other rooms all on the ground floor. On the first floor was to be provided the Resident Medical Officer's sitting room, bedroom, bathroom and linen store, together with duty rooms, ward kitchens, surgical stores, operating theatre, anaesthetic room, sterilising room, and recovery rooms. It is suggested that this Centre Block should be re-constructed in the future, but this should provide as follows:—

GROUND FLOOR :-

Entrance hall, cloak-room and lavatories, Visiting Staff room, Committee room, offices for general clerical staff, Medical Superintendent, Matron, Chief Clerk and Steward.

SECOND FLOOR :-

Twin operating theatre block with anaesthetic rooms, doctors' and nurses' changing rooms, sterilising rooms and recovery wards.

(b) Erection of a new Children's Block on modern lines, to accommodate 100 children.

The design to be on the separate small ward system with glass partitions.

(e) Provision of central kitchen facilities.

A small scheme, Scheme 48, costing £300 was included in the 1937-42 plan. This only visualised extending the larder and stores and providing a refrigerator. Building a new kitchen block is now visualised, with the usual appurtenances, dining room, mess rooms, etc.

(d) Additions to X-ray Department and provision of new Physiotherapy Department.

- 1. X-RAY DEPARTMENT.
 - (a) Diagnostic Department:

All the existing department to be taken over as a Diagnostic Unit, and the following additional facilities provided:—

- (i) Staff Room.
- (ii) Dark Room facilities.
- (iii) Waiting Room facilities.
- (iv) Screening Room to be provided in present Deep Therapy Room.

(b) Therapy Department :-

New accommodation for Therapy work will be required. This will include :—

- Waiting Room and dressing cubicles.
- (ii) Room for superficial Therapy.
- (iii) Room for Deep Therapy.

It is suggested that these developments can take place on or near the existing site of the X-ray Department, since it is very necessary to have the X-ray department in close proximity to the Outpatients' Department. If possible a covered way or corridor should be provided to connect the X-ray Department to the main hospital block.

2. Physiotherapy Department.

New accommodation for Physiotherapy work is urgently required, and in addition to Massage facilities, facilities will have to be provided for Artificial Sunlight treatment, Short-wave Therapy, etc. The minimum requirements will be as follows:—

- (a) A large room for Therapy purposes, including re-habilitation.
- (b) Several medium-sized rooms for Sunlight, etc.
- (c) Dressing cubicles, and waiting rooms.
- (d) Staff room.

3. Demolition of Block 17 and building new ward pavilions.

Scheme 51, costing £11,250 in 1937 included demolition of the two end wings of Block 17, and building new ward pavilions of one storey, these being capable of being raised to two storeys. This work will have to be done at some future date, leaving the centre portion as the X-ray and Out-patients' Department.

WEST LANE ISOLATION HOSPITAL.

The future developments at the West Lane Isolation Hospital will depend upon two fundamental considerations:—

- The area and population which the Hospital might ultimately have to serve under the new National Health Service.
- The future policy of the Corporation with regard to the treatment of Tuberculous cases not at present considered suitable for Sanatorium treatment at Poole Sanatorium.

Apart from the necessity to increase accommodation which might be required under a new Regional Scheme, it is not contemplated that for the next five years any immediate developments at West Lane Hospital would be possible. The following provisions, however, will ultimately have to be considered in chronological order of priority:—

- (a) Erection of a New Cubicle Block of 30 beds. It is suggested that this should be erected on the site of the present Ward 4 (hutted ward) and this will include the usual Theatre, Sunlight rooms and Annexes.
 - (b) Provision of Additional Accommodation for Nurses. It is not possible at present to accommodate many more nurses at the hospital. The present Nurses' Home only possesses 26 bedrooms, and many nurses are now housed in old cubicles in the old main administrative block, which are out-of-date. There are 45 nurses accommodated at the hospital at the present time, and with the possibility of the introduction of a block system of training and the reduction in the hours of duty, a minimum of 65 will be necessary in the not too distant future. Thereafter, to deal with the additional beds to be provided, a minimum of 100 nurses will have to be accommodated. The following suggestions are submitted to meet this position:—
 - (i) Erection of a Night Nurses' Home to accommodate 26 nurses. This could be erected on the site of the present Ward 5 (hutted ward), and could include a large hall for lectures, etc.
 - (ii) A further Nurses' Home on the site of the old laundry and stables, and this would accommodate 50 nurses.
 - (c) Provision of Additional Accommodation for Domestic Staff by conversion of the present cubicle beds in the old administrative block into rooms for members of the Domestic Staff.

- 2. Minor alterations and improvements to existing wards. Certain small amendments and improvements to existing wards would materially help in the working of the hospital. These are as follows:—
 - (a) Erimus Ward to have an outside staircase provided to separate the upper and lower floors, to allow separate diseases being nursed.
 - (b) Present cubicle block—covering of verandah.
 - (c) Wards 1 and 2—exits at extreme ends of wards. These would be of great assistance in the ingress of laundry, to obviate it coming through wards as at the present time.
- 3. Provision of office accommodation by converting present lecture room and Matron's present office, for this purpose.
- 4. Provision of larger mortuary with Post Mortem room.
- 5. Extending garage accommodation and provision of workshops.
- New Doctors' quarters to be provided to accommodate two Residents, and by this arrangement the existing Doctors' flat could be converted to quarters for the Deputy Matron.

The foregoing represent the steps which might be taken within the next 10 years to bring the hospital up to the size and standard which would be desirable for a large Regional Fever Hospital, and further developments which thereafter might be considered are as follows:—

- (a) Additional ward blocks to accommodate a further 50 patients.
- (b) Future developments at the Tuberculosis Ward. If as has been indicated, further provision is made elsewhere for the type of case now admitted to West Lane, then the new ward pavilions for fever cases could be erected on the site of the present Tuberculosis Ward, but if it is desired to accommodate a certain type of Tuberculous case still in the West Lane Hospital, the existing Tuberculosis Ward will hardly stand up to more than another 10 years use, and consideration would have to be given to building a suitable Ward on this site for this purpose.

HEMLINGTON FARMS.

After consulting with the Farm Bailiff, the following proposals are submitted as a desirable future policy. We have had in mind that prior to the war, the Committee considered the possibility of setting up a T.T. Certified herd of cattle at the farm, in order to bring the milk production into line with what is desirable from a health point of view.

 New house for the Farm Bailiff. The Committee will remember that in the previous 5 years programme in 1939, provision was made for a new house for the Farm Bailiff, and the cost at that time was £475.

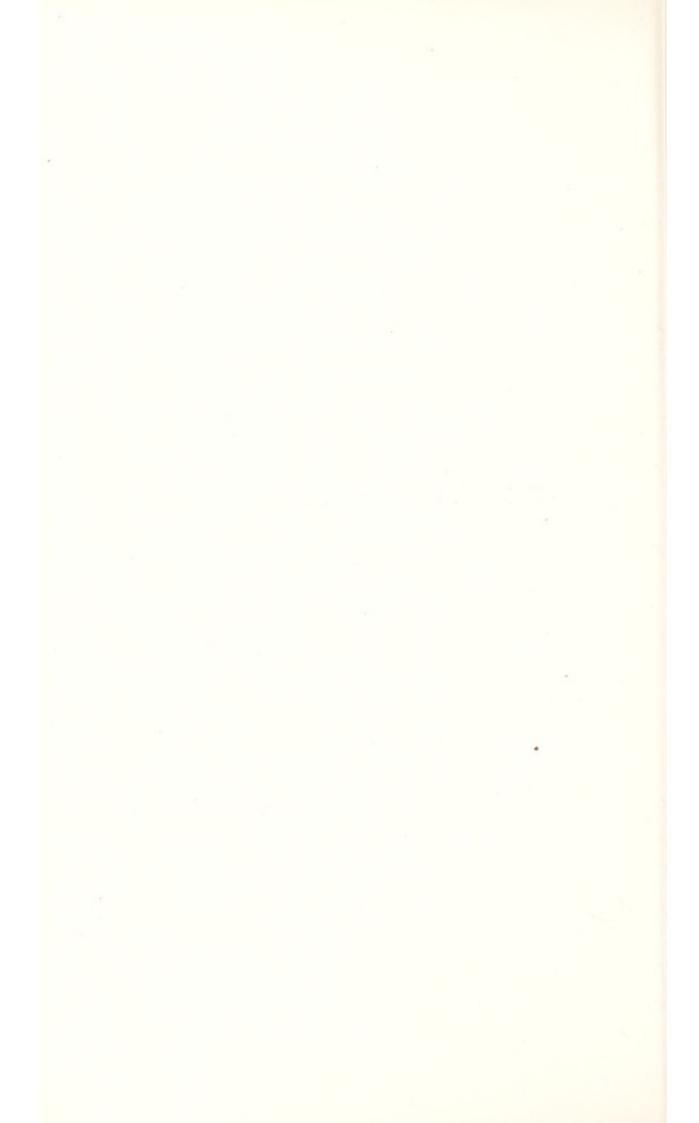

2. Belle Vue Farm:

- (a) New cow byre to accommodate 20 cows.
- (b) Conversion of old cow byre into piggeries.
- (c) Provision of implement shed to house tractor and other implements with a granary on the first floor.
- (d) Laying on of electricity to (a) house (b) milking machine(c) corn grinding machine.
- (e) Additional Dutch barn for corn.

3. Hemlington Grange Farm:

- (a) The future of this farm house will have to be determined by the Committee as a matter of policy. It would not appear that the house is in a suitable condition for reconditioning and it is recommended that consideration be given to demolishing the house and that at some time in the future, two workmen's cottages should be built.
- (b) General repairs to farm buildings, and the provision of an adequate fold yard.
- (c) Provision of electricity to cottages and other buildings.
- (d) Repairs to the roadway leading to the farm.
