^{*}Part-time Officer.

HEALTH CENTRE,

DURNFORD STREET,

MIDDLETON,

September, 1949.

To the Chairman and Members of the Health and Maternity and Child Welfare Committee.

Mr. Chairman, Ladies and Gentlemen,

I beg to submit the Annual Report on the health of the Borough for 1948.

It gives a complete survey of the work of the department.

I wish to express my thanks to Miss Howarth for the compilation of the report and to the Members of the Health Committee for their kindness and consideration.

I am,

Ladies and Gentlemen,

Your obedient Servant,

JAMES BROOKS,
Acting Medical Officer of Health.

POPULATION.

The Registrar-General's estimate of population for the year 1948 is 32,190, which is 1,520 in excess of the estimated population for 1947, and 3,002 more than the Census population for 1931.

BIRTHS.

557 live births were assigned to the Borough, representing an annual birth rate of 18.2 per 1,000 of the population, compared with the figure of 17.9 for England and Wales and 19.2 for the 148 smaller towns. The annual birth rates for the past 41 years are shown in Table IV.

DEATHS.

The number of deaths for Middleton during 1948 was 404, giving a crude death rate of 12.5 per 1,000 of the population, compared with 10.8 for England and Wales and 10.7 for the 148 smaller towns.

The age and ward incidence are shown in Table III.

TABLE III.

Age and Ward Incidence of Deaths occurring in 1948.

Total	23	2	I	3	7	30	114	106	118	404

The zymotic death rate was 0.09 per 1,000 of the population compared with 0.16 for 1947.

One maternal death occurred during 1948. The maternal mortality rate was 1.66 per 1,000 (live and still) births compared with nil in 1947.

Infant mortality showed 39 per 1,000 live births as compared with 54 in 1947. The comparative rate for England and Wales is 34 and for the 148 smaller towns 32.

The cancer death rate of 2.14 remains high, whilst the tuberculosis death rate was 0.40 as compared with 0.49 in 1947.

Comparative death rates for various diseases for the past 41 years are shown in Table IV and the classified causes of death in 1948 are given in Table V.

TABLE V. Causes of Death, 1948.

	Causes	of Dea	ath,	1948.			
				Males	Females		Total
Typhoid and Paratyp	hoid Fe	vers					-
Cerebro-spinal Fever				-			
Scarlet Fever							
Whooping Cough				1000			_
Diphtheria							
Tuberculosis of Respir	ratory S	System		4	7		II
Other forms of Tubero	culosis			I	I		2
Syphilitic Diseases				2			2
Influenza				_	_		
Measles				I	-		I
Acute Poliomyelitis an	d Polio	-enceph	alit	is —			_
Acute Infectious Ence	ephalitis	3					
Cancer				32	37		69
Diabetes				_	2		2

GENERAL PROVISION OF HEALTH SERVICES FOR THE AREA.

1. STAFF.

Full details of the Staff of the department are given at the beginning of this report.

2. LABORATORY FACILITIES.

The complete facilities of the University of Manchester Department of Bacteriology and Preventive Medicine, at the Public Health Laboratory were available and were fully utilized.

On and after 29th November, 1948, specimens were sent to the new Public Health Laboratory (directed by the Medical Research Council on behalf of the Ministry of Health) at Monsall Hospital, Manchester.

During 1948 the following specimens were submitted for examination:—

	TAB	LE VI.				
Throat Swabs						48
Blood for Wasserma	ann					4
Faeces						I
Milk samples :— (a) Methylene l (b) Guinea Pig	Blue inocu	 lation–	 –B. Tu	berc.	33 26 —	59
						II2

3. AMBULANCE FACILITIES.

Two ambulances were provided by the Borough Council for the removal of non-infectious cases, medical, maternity or accident. The control and supervision of the ambulance service was transferred to the Lancashire County Council on the 1st December, 1948.

During the period 1-1-48 to 30-11-48 the following cases were conveyed by the above vehicles:—

Accident cases	 	 	 146
Medical cases	 	 	 945
Deaths	 	 	 22
Sudden illness	 	 	 75
Maternity cases	 	 	 7
Removals	 	 	 13
Mental cases	 	 	 10
	Total	 	 1218

During the year arrangements were made for the transport of all cases of infectious disease to hospital by the Rochdale County Borough infectious disease ambulance.

4. HOSPITAL ARRANGEMENTS.

There are no hospitals situated within this Borough, which is, however, well served by numerous institutions in the surrounding areas. General medical and surgical cases receive attention at the Voluntary Hospitals in Manchester, Oldham and Rochdale, and also at Boundary Park General Hospital, Oldham. Maternity cases are admitted to Boundary Park Hospital, Oldham, St. Mary's Hospital and North Manchester Maternity Home, Manchester. Arrangements for hospital treatment are usually made by the patient's own doctor, but the Local Authority has made financial arrangements for the treatment of approved admissions for confinement to St. Mary's Hospitals, Manchester which terminated on July 4th, 1948.

5. HOME AND DOMESTIC HELP SERVICE.

Four part-time helps were employed during the period up to 4-7-48, 26 homes being attended for varying intervals.

MATERNITY AND CHILD WELFARE.

Notification of Births.

Under Section 203 of the Public Health Act, 1936, 297 live births and 9 still-births were notified from 1-1-48 to 4-7-48.

Midwifery and Maternity Services.

The liaison established in 1943 between these services continued until the 4th July when the control of the services passed to the Lancashire County Council.

One maternal death occurred during 1948.

Ante-Natal Service.

Between I-I-48 and 4-7-48 I62 women made 625 attendances at the ante-natal clinic, of whom I6 were referred to St. Mary's Hospitals, Manchester, and Boundary Park Hospital, Oldham, and where eight were subsequently confined.

Post-Natal Service.

No "ad hoc" clinic has been established but 4 women made 4 attendances at the ante-natal clinic and received advice and treatment.

Infant Welfare.

The clinic services continue to give evidence of appreciation on the part of the mothers using them, the number of infants making their first attendance at the centres represented 72% of the total births for the period being an increase of 6% over the year 1947.

Infant deaths, classified according to age and cause of death are shown in Table VIII.

Table VII records the work of the Health Visitors at the centres and in the homes.

SPECIAL TREATMENT CLINICS up to 4th July, 1948.

Sunlight Therapy.

This clinic continues to be held thrice weekly. 37 school children and 26 pre-school children made 887 attendances during the period.

Orthopaedic Clinic.

A consultative session attended by Dr. Johnstone was held every second month, when 57 school children and 46 pre-school children made 105 attendances. In addition, two remedial sessions are held weekly by the orthopædic nurse. Small classes are held at Durnford Street Clinic at which the orthopædic nurse gives group instruction in exercises devised to remedy minor postural and foot defects.

73 children made a total of 415 attendances at the Orthopædic Clinic.

Ophthalmic Clinic.

Eleven pre-school children and 79 school children attended the fortnightly Ophthalmic Clinic, making 368 attendances in all.

Dental Clinic.

Thirteen pre-school children made 15 attendances for advice and treatment. Eleven expectant or nursing mothers attended for advice and treatment, making 17 attendances.

GENERAL HEALTH SERVICES.

Scabies Treatment Clinic.

During the year the incidence of Scabies further decreased but the facilities at the Health Centre continued to be used.

Affected persons, including all family contacts, are offered treatment at the Health Centre, and a good response has been obtained. Where adequate bathing facilities are available at home, suitable preparations and instructions in their use are supplied, and the patients are kept under supervision. Where home facilities are unsatisfactory, the treatment is carried out by the Health Visitors at the Health Centre. The local Medical Practitioners have co-operated and have referred cases to the Clinic for treatment. Details of the number of individuals, including family contacts, treated are as follows:—

TABLE IX.

	_		_	
Total	. 8	29	I	38

The preparations used are Ascabiol and Sulphur.

Verminous Conditions.

Attention to louse infestation has continued throughout the year. Most of these cases are discovered amongst the school population, and wherever possible adult and pre-school contacts are also examined and advised regarding treatment. During the year the following cases were dealt with at the Health Centre:—

SANITARY CIRCUMSTANCES OF THE AREA, ETC.

SEWAGE DISPOSAL.

The Sewage from this Borough is treated by Manchester Corporation.

WATER SUPPLY.

The town is supplied with water by the Heywood and Middleton Joint Water Board. The supply is upland surface water, of good quality. Details of the catchment area and reservoir installations have been given in previous reports.

1,566 yards of mains were laid during the year for housing development.

No. of houses supplied by the Joint Board ... 10,942 No. of baths in Borough ... 5,966

During the year the following examinations were made, and the results were satisfactory in all cases.

(a) Raw Water—Bacteriological 22

Chemical 23

(b) Water going into supply where treatment is installed—

Bacteriological 17

Chemical 17

Chlorination of the water is in operation, the dosage being o.2 parts per million.

Precautions taken to prevent contamination by lead include, addition of chalk to saturation point in raw water, followed by sedimentation, filtration and further addition of Soda Ash.

A small number of outlying farms have independent water supplies from wells.

SANITARY SERVICES.

Closet Accommodation.

The following is a list of the types of closets existing in the Borough at the end of the year:—

TABLE XI. Privy middens 63 Pail closets 2,873 Waste-water closets 6,698

Refuse Collection and Disposal.

The weight of refuse collected during the year was 7,780 tons. Of this 6,416 tons were dealt with by the Separation and Salvage Plant and 1,364 tons were disposed of by Controlled Tipping.

On Sunday 7th November, the Separation Plant and buildings were extensively damaged by fire which has been attributed to children trespassing on the Plant and setting alight bales of waste paper. The estimated cost of repairing the damage is £2,000.

From the 7th November until the 31st December, all the refuse

was dealt with by Controlled Tipping.

Refuse Collection.

The number of vehicles engaged on this work is five, viz.: three "S & D" Freighters and two "Karrier Bantams". All the vehicles are fitted with steel sliding shutters to the bodies to minimise nuisance from dust.

There are approximately 7,287 moveable ashbins, 1,338 ashpits 348 wall-type dustbins and 195 pail closets in the Borough. Ashbins and pail closets are emptied weekly and ashpits fortnightly.

The majority of the pail closets are in connection with premises

in the villages of Bowlee and Birch which are not sewered.

The net cost of Refuse Collection for the financial year ended 31st March, 1949, was £8,150.

Refuse Disposal.

Of the refuse collected, 6,416 tons was dealt with at the Separation and Salvage Plant and 1,364 tons was dealt with by tipping.

The cost of Refuse Disposal for the year amounted to figir.

Scarlet Fever.

Nineteen cases of scarlet fever were notified. The cases were scattered over the whole of the borough and over the whole of the year and the disease generally was mild in character. No death occurred.

Diphtheria.

One case of diphtheria occurred during the year.

The responsibility for the control of the immunisation scheme was transferred to the Lancashire County Council on 5th July, 1948. 358 children were immunised through the local authority's scheme whilst a further 116 children were known to have been immunised by private practitioners. In addition, 211 children immunised some years previously received a re-inforcing inoculation during the year.

It is estimated that at the end of 1948, 55.18 per cent. of children under 5 years of age and 79.77 per cent. of children between the ages of 5 and 15 years were immunised against diphtheria. Table XXI shows the progress of the scheme since its inception.

Whooping Cough.

285 cases occurred during the year. The whole of the borough was involved, the cases occurring during the month March to November. No death occurred.

Measles.

341 cases of measles occurred during the year. 71.26 percent. of the cases were children under 5 years of age. The wholl of the borough was involved. 3 cases were admitted to hospital for treatment and one child died in hospital.
