Public Health Department,
21 Carr Road,
NELSON

29th June, 1972.

To the Chairman and Members of the Health Committee

Mr. Chairman, Ladies and Gentlemen,

I have the honour to present my Annual Report on the Health and Sanitary conditions of the Borough for the year ending 31st December, 1971. The layout follows the usual pattern and the contents include all items requested by the Department of Health and Social Security.

The Registrar-General's estimate of population shows a considerable increase over 1970, although the 1971 Census would indicate that this may be slightly optimistic. In any case, the decline in population of recent years would appear to have been arrested.

The vital statistics for the town are very satisfactory with death rate down, infant mortality down and still births at a record low level. Infectious disease was well controlled apart from our usual above-average incidence for Tuberculosis, but even this figure of 22 notified cases was 7 less than the previous year. Following the pattern of previous years, in 1971 all but 3 of the notified cases of Tuberculosis were Asian Immigrants.

Progress is also being made in the environmental improvements to the town, which is so important to the health and well being of its citizens. The relatively small number of unfit houses are gradually being cleared, while the large stock of otherwise good houses which lack modern amenities are being brought up to standard with the assistance of generous grants. The town should be 100% smokeless by July, 1973, and people will come to expect clean air as much as a pure water supply.

I hope that members will find something of interest in the pages which follow. A report such as this is largely statistical, and figures do not make easy reading. Its value lies largely in the future as a record of the health of the town for the year 1971, to be compared and contrasted with progress yet to be made; in fact, a historical document.

I would like to thank the Chairman and Members of the Health Committee for their interest and support of the work of the Department during the year, and all members of the Health Department for the efficient and helpful way in which they have carried out their duties.

I have the honour to be, Ladies and
Gentlemen,

Your obedient Servant,

P. G. HOLT,

Medical Officer of Health.

Public Health Department,
25 West Bond,
WILSON

25th June, 1972

To the Chairman and Members of the Health Committee

Mr. Chairman, Ladies and Gentlemen,

I have the honour to present my Annual Report to the Health and Sanitary Committee of the Borough for the year ending 31st December, 1971. The Report follows the usual pattern and the contents include all items requested by the Department of Health and Social Security.

The Registrar-General's estimate of population shows a considerable increase over 1970, although the 1971 Census would indicate that this may be slightly optimistic. In any case, the decline in population of recent years would appear to have been arrested.

The vital statistics for the town are very satisfactory with death rates down, infant mortality down and still births at a record low level. Infectious diseases are well controlled apart from one usual above-average incidence for tuberculosis, but even this figure of 22 notified cases was 7 less than the previous year. Following the pattern of previous years, in 1971 all but 3 of the notified cases of tuberculosis were under investigation.

Progress is also being made in the environmental improvements to the town which are reported in the Report and will bring of the situation. The relatively small number of built houses are gradually being cleared, with the large stock of dilapidated ground houses which lack modern amenities are being brought up to standard with the assistance of generous grants. The town should be well serviced by July, 1973, and people will soon be expected clean air as much as a pure water supply.

I hope that members will find something of interest in the pages which follow. A report such as this is largely statistical, and figures do not make easy reading. The value lies largely in the future as a record of the health of the town for the year 1971, to be compared and contrasted with progress yet to be made. In fact, a historical document.

I would like to thank the Chairman and Members of the Health Committee for their interest and support of the work of the Department during the year, and all members of the Health Department for the efficient and helpful way in which they have carried out their duties.

I have the honour to be, Ladies and Gentlemen,

Yours obedient servant,

J. A. WAT

Medical Officer of Health

ACKNOWLEDGEMENT

As in former years some information given in this report has been supplied by other corporation departments and also from external sources. This continued co-operation is greatly appreciated and I express my grateful thanks to the following officials for their kindness.

Mr. H. Barton,	Director of Public Cleansing, Nelson
Mr. J. Buckley,	Housing Superintendent
Dr. J. I. Capper,	Medical Director, Mass Radiography Unit, 13B, Eaves Lane Hospital, Chorley.
Dr. C. H. T. Wade,	County Medical Officer of Health, County Offices, Preston.
Mr. W. Knight,	Borough Treasurer, Nelson
Registrar General,	General Register Office, Somerset House, London, W.C.2.
Mr. E. Robinson,	Borough Engineer and Surveyor, Nelson
Mr. C. D. Barnes,	Engineer, North Calder Water Board, Nelson
Mr. T. H. Slater,	Manager, Department of Employment and Productivity, Nelson.

ACKNOWLEDGMENT

As in former years more information given in this report has been supplied by other departments and also from external sources. This continued co-operation is greatly appreciated and I express my grateful thanks to the following officials for their kindness.

Mr. H. Barton,	Director of Public Cleansing, Nelson
Mr. J. Baskin,	Housing Superintendent
Dr. E. I. Capper,	Medical Director, New Radiography Unit, 125, X-ray Lane Hospital, Chorley.
Dr. C. H. T. Wood,	County Medical Officer of Health, County Office, Preston.
Mr. W. Knight,	Borough Treasurer, Nelson
Registrar General,	General Registrar Office, Somerset House, London, W.C.2
Mr. E. Robinson,	Borough Engineer and Surveyor, Nelson
Mr. C. D. Barnes,	Engineer, North Calder Water Board, Nelson
Mr. T. E. Slater,	Manager, Department of Employment and Productivity, Nelson.

Other Birmingham	21,500
Other Birmingham	21,500
Area represented by a 1971 Census, 1971/72	21,500

The estimated cost of the local health service for the financial year 1971/72 was £1,500 which is equivalent to a rate of 1.5% on the £.

The Registrar General's estimate of the 1951 population was 197 and an increase of 700 on the estimate for the previous year.

STATISTICS AND SOCIAL CONDITIONS

The chief industries are the manufacture of paper, pulp, and allied products, and the extraction of oil, gas, and coal. The area is also a center for the textile and engineering industries.

Details of the area are provided particularly by the 1971 Census and the 1971/72 Census. The area is a center for the textile and engineering industries.

- Number uninhabited at:	
End of 1971 according to Rate Books	477
Census, 1961	364
Census, 1951	222
Rateable Value at 31st December, 1971	£903,368
General Rate, 1971/72 (p. in the £) -	Dwellinghouses 80p.
	Mixed Hereditaments 85p.
	Other Hereditaments 89½p.
Sum represented by a penny rate, 1971/72	£8,220

The estimated cost of the Local Health Service for the financial year 1971/72 was £41,320 which is equivalent to a rate of 5.03p. in the £.

The Registrar General's estimate of the home population for mid-1971 was an increase of 760 on the estimate for the previous year.

SOCIAL AND INDUSTRIAL CONDITIONS

The chief industries are the manufacture of cotton, rayon, silk, surgical dressings, furniture, packing cases and cartons, light engineering and distributive trades.

Employment for women was provided particularly by many of the new firms and working hours have been adjusted, including evening shifts to attract and suit those who are married.

Throughout 1970 unemployment was at a high level, reaching a peak of 5.5% in August, although there was a decrease towards the end of the year because of the engagement of seasonal workers, particularly by a mail order firm which had moved into the area earlier during the year.

Five firms completely closed-down during the year, four of which were in textiles. Two fairly large redundancies and several smaller ones occurred and a few firms were on regular short-time.

Apart from the mail order firm already mentioned, two other firms started-up in the area, a small weaving firm and a firm of reinforced fibre-glass manufacturers.

Unemployment rose again after Christmas and a forecast of further contraction in textiles was made. However, several firms showed interest in the "Advance Factories" being built on the White Walls Estate and a few existing firms have plans for expansion during 1972.

CLIMATOLOGICAL CONDITIONS

Observations are taken daily at 09.00 hours G.M.T. at the Climatological Station, Walton Lane, Nelson. Comments on the weather conditions and statistical information apertaining thereto are submitted as follows

January

It was a mild, dry month. The first five days were cold with day temperatures 6-7°F. below normal. A considerable change occurred on the 6th, when the maximum temperature rose some 15° into the fifties and remained there for five days. On the 11th it dropped again to normal limits and remained around average, or a little above, until month-end. Night temperatures showed a similar graph pattern.

In spite of this, air and ground frost was recorded for the first six days and again on a few other days.

The maximum and minimum mean temperatures were around 3°F. above average for the month.

There was only 60% of average rainfall but the amount of bright sunshine recorded was 16% short of average.

February

It was another rather dull, mild and reasonably dry month with temperatures generally above average. There were a couple of cold days at the start of the month, and another cold spell 15th - 17th. Both the mean maximum and minimum temperatures were 2°F. above average.

Although there were 18 days without measurable rainfall there was a wet spell about the middle of the month, one day having a little over an inch of rainfall, so that the total for the month was almost 90% of average.

There were two or three sunny days, but bright sunshine was recorded on only 14 days, the total for the month being 85% of average.

Excluding last year when no records were available, it was the dullest February since 1966 and the wettest since 1967.

March

The first week was very cold, particularly from the 3rd - 6th, the day and night temperatures were well below average. Improvement followed and day temperatures were then around average, but night temperatures fluctuated. The air minimum temperature was below 32°F. on 13 days and the grass minimum below that level on 17 days. The mean maximum and mean minimum temperatures were 1.8°F. and 1.2°F. below average respectively.

There were four or five quite sunny days and only nine days without bright sunshine, but the total recorded was only 79.7% of average.

Although there were 16 days without rain, the total for the month exceeded the average by a fifth, a quarter of the total having fallen in one day, the 24th.

April

Although there were two rather cold periods from the 1st - 5th and 24th - 27th, there were several warm days. On the 11th and 15th the maximum temperature rose to 60°F., and there was a warm period 20th - 23rd, the maximum temperature reaching the 60°F. again on the 21st and 22nd. In spite of this, the mean maximum temperatures were a degree or so below average. Ground frost was recorded on 13 days and air frost on 4.

Until the 22nd there were only two days, the 15th and 16th with any rainfall, and that was negligible. From then until month-end 1.76" was measured but that was only 63% of normal. Excluding last year when records were not available, it was the driest April since 1967.

Only three days had no sunshine, and there were nine or ten quite sunny days, especially the 25th when 10.9 hours was recorded, but the total for the month was a few hours below average.

May

During the first half it was comparatively warm, day temperatures being generally above average by 8°-9°F. some days, but from the 15th onwards, apart from two days, the 21st and 22nd, day temperatures were often below average. Night temperatures followed a similar pattern. However, both the maximum and minimum mean temperatures for the month were a little above normal.

It was a very bright month, there were only two days without bright sunshine and eleven days with ten or more hours, so that the total for the month was 49 hours or 28%, in excess of average.

June

This was a cool, dull, but dry month. The first couple of days were warm, there being over 14 hours of bright sunshine and a maximum temperature of 67°F. recorded on the 2nd, but temperatures fell on the 3rd and remained sub-normal generally around the middle fifties, until the 23rd.

During this period the minimum (night) temperature on two nights dropped to the upper thirties, and one of those nights (10th) the grass minimum thermometer recorded 31.6°F. The mean maximum and minimum temperatures were 4.6°F. and 2.4°F. below normal respectively, and it was the coolest June for many years.

There were few really sunny days so that the total bright sunshine recorded was short of 84% of average. However, the rainfall also was short of average for the month by 15%.

July

The first fortnight was really summer weather, fine, very bright and most days extremely warm, in fact on five days the maximum temperature was in the upper seventies and one day (the 8th) reached 80.9°F. Following this period, day temperatures remained around average until the last few days when there were again readings of from 4° - 12°F. above average. The mean maximum temperature for the month was 4°F. above average, although the mean minimum was normal.

Until the 22nd there was no measurable rainfall, but it then rained every day except two (28th and 29th) until month-end, almost one inch being recorded on the 23rd. The total for the month was only 0.37" less than normal.

Most remarkable was the amount of bright sunshine. On thirteen days the daily amount was into double figures, ranging from 10.3 to 14.1 hours, and the total for the month was as much as 50.8% above average. Excluding last year, for which unfortunately figures were not available, it was the sunniest July since 1955.

August

During the first two weeks there was rain every day except three (2nd, 7th and 11th) and several days were very wet, particularly the 10th and 13th with almost an inch each day. Actually 80% of the total rainfall for the month fell during this period. Apart from a trace on the 21st, there was then no measurable rainfall until the 26th, then it rained each day until the 30th. The total for the month was 7% above average and it was the wettest August since 1967.

There were only four really sunny days (2nd, 17th, 20th and 25th with 10½ - 11 hours) and the total for the month was less than 92% of average. It was the dullest August since 1967.

From the 17th - 20th and again on the 25th and 26th, it was quite warm with temperatures around the 70°F. mark, but these were offset by several quite cool days and nights, so that the mean maximum (day) and minimum (night) temperatures were each a little below average.

September

This was a very dry, warm, sunny month.

The maximum temperature was above average on all but nine days, and on four days, the 6th, 7th, 8th and 22nd, it was 70°F. or a little above, so that the mean for the month was 2.6°F. above average. Although the minimum temperature was a few degrees above average several nights, there were as many occasions when it was as far below, so that the mean for the month was less than 1°F. above normal. It was the warmest September for 10 years.

Bright sunshine was recorded on all but three days. From the 4th-12th inclusive was a very sunny period, there being 8 to 10½ hours each day. The monthly total was 145% of average, the sunniest September since 1959.

Although rainfall was recorded on eleven days, on half of those occasions it was little more than a trace. There was no really wet day and the total for the month was only 26% of average. It was the driest September since 1959.

October

The first eleven days were quite warm with day and night temperatures generally well above normal, and four days were quite sunny. From the 13th-16th inclusive was much cooler with subnormal temperatures and some ground frost and air frost on the 14th and ground frost again on the 15th. An improvement followed and on the 22nd and 23rd the day temperatures were in the middle sixties but settled to around average for the remainder of the month. During this latter period there were several comparatively cold nights, in fact on two occasions, the 25th and 26th, a touch of ground frost was recorded again. The mean maximum and minimum temperatures for the month were each a little above normal, by 1.7°F. and 1.2°F. respectively.

Although there were many very sunny days and the total bright sunshine recorded was 31.3% above average, the total rainfall measured was 11.5% above normal, but almost half of the total measured fell during one day, the 18th with 1.79", so that apart from that day it was quite a dry month.

November

The first five days were quite warm with temperatures above average by several degrees, particularly on the 2nd when the maximum temperature rose to 59.8°F., almost 12°F. above average.

Day temperatures for the month showed three periods with daily temperatures average or above, 1st-7th, 11th-17th and 24th-27th, and these were alternated with cold periods 8th-10th, 18th-23rd and 28th-30th. During the latter periods many of the days were quite cold with temperatures anything from 6°- 11°F. below average, and night temperatures followed a similar pattern. Ground frost was recorded on 16 days and air frost on 15.

In spite of the cooler periods, the mean maximum temperature for the month was less than 1°F. below normal, although the mean minimum (night) temperature was 3°F. below normal.

There were three days with a rainfall of between 0.8" and 1.0" and although rain fell on 14 other days the total for the month was almost 3.0% less than average.

Bright sunshine was recorded on 21 days and many of these were quite sunny, particularly the 13th with a total of 7.4 hours. The total for the month was almost 168% of average.

December

This was a comparatively mild month, although with rather less than average sunshine.

After the first two days the maximum daily temperature remained above normal until the 26th, by as many as 8°- 10°F. on three or four days, and by 13°F. on the 20th when the reading was 56.0°F. Although the 3rd and 4th were cold nights with air frost, the minimum temperature each night from the 3rd to the 27th (with one exception the 23rd) was well above normal by anything from 4°- 13°F. From the 28th until month-end both the maximum and minimum readings were around average.

Whilst rain was measured on 17 days, there were no really wet days (the wettest being the 19th and 23rd with less than 4/10th inch) and the total for the month was less than 21% of average.

In spite of this there was less than average bright sunshine, 13.3 hours against an average of 17.0 hours.

The warmest day of the year was 8th July when the maximum temperature in the shade reached 80.9°F., and the coldest days were the 3rd and 4th January when the minimum shade temperature each day was 20.6°F. The lowest temperature on the grass was 15.6°F. on the 20th November.

Bright sunshine was recorded on 277 days and the total was 1,303.0 hours, which was 12% more than average and gave a mean daily amount of 3.5 hours. The sunniest month was July with a total of 228.9 hours and the sunniest days were 2nd June and 13th July with 14.1 hours each.

Rainfall, or some form of precipitation, occurred on 179 days and the total measured during the year was 34.55 inches, or 78.8% of average. The wettest day was the 18th October when 1.79 inches was measured, and the wettest months August with 5.05 inches and November with 4.25 inches. The driest months were December and September with only 1.04 inches and 1.07 inches respectively.

COMMENTS ON STATISTICSPopulation

The Registrar General's estimate of the population of the Borough for mid-year 1971 was 31,560. This was an increase of 760 or 2.40% on the figure supplied the previous year. It was also the highest estimate for any year since 1963. Since then there have been six estimated decreases, 1964 - 1967 inclusive, 1969 and 1970 giving a total decrease of 1,970, but this has been offset by two increases, in 1968 and 1971, totalling 1,530, so that the net decrease in population over the last eight years has only been 440 or 1.37%.

The estimated population of Health Division No.6 at mid-year 1971 was 93,470, an increase of 3,500 or 3.89%. Increases were shown by individual authorities as follows:

Nelson M.B.	760 or 2.40%
Colne M.B.	80 or 0.42%
Padiham U.D.	130 or 1.29%
Brierfield U.D.	240 or 3.27%
Barrowford U.D.	490 or 10.42%
Burnley R.D.	1930 or 11.89%

the remaining authority, Trawden U.D., had a decrease of 130 or 6.47%. A small decrease of 480 or 0.63% was also estimated for the Burnley C.B.

Live Births

There were 505 live births registered, 36 fewer than in the previous year but only 14 short of the annual average over the previous ten years.

The Crude Live Birth Rate was 16.0 per 1,000 population or 1.6 per 1,000 less than the previous year, but identical to the 1969 rate. The average rate for the previous ten years being 16.5 per 1,000.

With the area comparability factor remaining the same at 1.14 the Adjusted Live Birth Rate was 18.2 per 1,000, a reduction of 1.9 per 1,000 on the rate for the previous year, but identical to that for 1969. The average rate for the previous ten years being 18.6 per 1,000 population.

Comparison of these rates with those of other authorities in Health Division No. 6 is given in the Table on Page 34.

The Live Birth Rate for England and Wales as a whole was 16.0 per 1,000 population, the same as in 1970, and this was 2.2 per 1,000 less than the Nelson adjusted rate which is used for external comparison purposes. For the eleventh successive year this Nelson rate has exceeded the National birth rate and the average yearly excess is 1.33 per 1,000 population.

A marked reduction occurred in the number of illegitimate live births registered, there being only 24 or 4.7% of the total live births compared with 44 or 8.1% in 1970. This was the smallest number of illegitimate live births registered in any year since 1960, the annual average 1961 - 1969 inclusive being 47.

The Illegitimate Live Birth Rates were 0.76 per 1,000 population and 47.5 per 1,000 live births, reductions of 0.67 and 33.8 respectively, the former rate being the smallest since 1960 and the latter the smallest since 1956.

Again there were fewer live births actually occurring in the borough. In 1971 there were only 36 or 7.1% of the total, all domiciliary, a reduction of 1.0%. This change in recent years whereby most of the Nelson children are born out of the borough, usually in the Edith Watson Maternity Unit at the General Hospital, Burnley, is shown as follows:

<u>Year</u>	<u>% of Inward Transferable Births</u>
1971	92.9%
1970	91.9%
1969	81.6%
1968	42.0%
1967	37.3%
1966	37.1%

Still Births

Only three still births were registered, the smallest number on record for the borough, and represented 0.59% of the total births registered compared with 0.7% in 1970. The average per year over the previous five years was 6.

The Still Birth Rates were 5.9 per 1,000 total births and 0.09 per 1,000 estimated population, decreases of 1.4 and 0.04 respectively on the 1970 rates, and the smallest recorded for the borough.

Reductions of 0.8 per 1,000 total births and 0.01 per 1,000 estimated population were shown in the Still Birth Rates for England and Wales as a whole, but those rates at 12.4 per 1,000 total births and 0.20 per 1,000 total population exceeded the corresponding rates for Nelson by 6.5 and 0.11 respectively.

Deaths

Only 477 deaths were registered, 8 fewer than in 1970 and the smallest number since 1967. The average for the previous quinquennial period was 492. The Crude Death Rate was, therefore, 15.1 per 1,000 estimated population, a reduction of 0.6 per 1,000 on the rate for 1970 and the smallest since 1967. The average for the period 1966 - 70 inclusive was 15.9 per 1,000.

With the Comparability Factor unaltered at 0.88 the Adjusted Death Rate, used for external comparative purposes, was 13.3 per 1,000 estimated population, a reduction of 0.5 per 1,000 on 1970 and the smallest since 1967. It exceeded the death rate for England and Wales as a whole by 1.7 per 1,000 population against 2.1 per 1,000 in 1970. Over the previous 5 years (1966 - 70 inclusive) this excess ranged from 1.6 to 3.2 per 1,000 with an average of 2.42 per 1,000, whereas in the 5 years (1960 - 65 inclusive) the excess ranged from 1.8 to 4.6 per 1,000 with an average of 3.8.

For comparison, these death rates for authorities within Health Division No. 6 are shown in the Table on page 34.

Diseases of the Heart and Circulation accounted for almost 55% of the total deaths which is about average. Deaths from cancer totalled 86, was 11 less than in 1970 and represented 18% of the total deaths against 20% last year. The death rate from this cause was 2.72 per 1,000 population, a reduction of 0.43 and 0.64 per 1,000 respectively on the two previous years, but still 0.04 and 0.33 per 1,000 population higher than the death rates for this disease for each of the successive two previous quinquennial periods. The National cancer death rate at 2.39 per 1,000 population was the same as in 1970.

January, February and March had the highest monthly death rates and that quarter had almost 34% of the total deaths during the year compared with 23% 20% and 23% for each of the successive quarters.

Tables showing summaries of the ages at death are given on pages 41 and 42. The highest percentage of deaths normally occurs in the age groups 65-84 years and this section usually has something over 60% of the total deaths, around 65% on occasions, but the last four years have shown a downward trend being 65.24%, 63.61%, 62.27% and in 1971 it was 59.33%. On the other hand deaths of persons 85 years and over shows an upward trend from around 12% in recent years to 13.83% in 1971. In the 90-95 years age group the average yearly percentage of the total deaths in the period 1961-65 was 1.78% and the following period 1966-70 was 2.78% whereas in 1970 it was 3.50% and in 1971 it was 4.19% of the total deaths.

In 1971 the deaths occurring out of the borough was 53.2% of the total deaths, an increase of 3.3% on the previous year. This progressive increase is shown in the Table on page 44. Most of these inward transferable deaths, 95.7%, occurred in hospitals or nursing homes. This is the usual proportion. Of the total deaths assigned to Nelson 55.8% died in hospitals or nursing homes, an increase of 0.8% on the previous year. This percentage is slowly increasing each year, the average figure for each of the previous quinquennial periods 1966-70, 1961-65, and 1956-60 being 49.6%, 44.9% and 38.5% respectively.

Infant Mortality

Only 6 deaths occurred of infants under the age of twelve months, an improvement of 3 on the previous year and the least number since 1955. Classification of the deaths according to causes and ages is given in the Table on page 38. As 3 of these were infants under the age of four weeks and 3 under the age of one week the Infant Mortality Rates were as follows:

Infant Mortality (under 12 months)	12 per 1,000 live births
Neo-Natal Mortality (under 4 weeks)	6 "
Early neo-natal Mortality (under 1 week)	6 "

these rates were 5, 7 and 5 per 1,000 respectively less than those for the previous year and 6, 6 and 4 per 1,000 live births respectively less than the national rates for 1971.

There were 10 peri-natal deaths (4 still births and 6 under the age of 4 weeks) which gave a Peri-natal Mortality Rate of 12 per 1,000 total births compared with 18 per 1,000 in 1970. The corresponding National Rate was 22 per 1,000 total births compared with 23 per 1,000 in each of the two previous years.

Maternal Mortality

No maternal death occurred during the year.

The National Maternal Mortality Rates were as follows:

Total	0.17 per 1,000 total (live and still births)
Excluding Abortion	0.13 " "
Due to Abortion	0.03 " "

Particulars of the staff of the Health Department are given on page 2 of this report.

In subsequent sections, full details will be given relating to infectious diseases and environmental health services which are the responsibility of the Council.

The present section relates to those health services which are the personal health and welfare of the individual citizen for public health and the community.

Linkages between County Council Services and Hospital Services are facilitated by the fact that your Medical Officer of Health is also Borough Medical Officer and Municipal Medical Officer.

HOSPITALS

The Hospital Services for the Borough are provided by the Dudley and District Hospital Management Committee of the Sandwell, Westwood, General Hospital Board and action is taken by them to secure adequate hospital treatment for the varying needs of the people.

Hospitals in the Borough District available to General Practitioners are as follows:-

Dudley Memorial Hospital, Dudley

St. James Hospital, St. James, Dudley

Berley Hospital

St. Paul Hospital, Dudley

St. James Hospital, St. James, Dudley

General Hospital, Dudley

SECTION B

GENERAL PROVISION OF

HEALTH SERVICES

Patients are admitted to the various hospitals in the Borough as follows:-

FOR THE AREA

GENERAL SERVICES - SPECIAL TREATMENT DEPT.

This service is provided by the Dudley and District Hospital Management Committee at the out-patient Department of the General Hospital, Dudley. Services are held twice weekly, Tuesday and Friday, when a medical officer is in attendance. There are no fees and no appointments necessary.

LABORATORY SERVICES

The facilities of the Public Health Laboratory, Sandwell, are available for the use of your authority.

Samples of water, milk, food, etc., are submitted for examination and the results are given in the appropriate sections of this report.

Particulars of the staff of the Health Department are given on page 7 of this report.

In subsequent sections, full details will be found relating to infectious diseases and environmental health services within the Borough for which the Council is directly responsible.

The present section relates to those health services which concern more the personal health and welfare of the individual rather than public health and the community.

Liaison between County Council Services and Borough Council Services is facilitated by the fact that your Medical Officer of Health is also Schools Medical Officer and Divisional Medical Officer.

HOSPITALS

The Hospital Services for the Borough are provided by the Burnley and District Hospital Management Committee of the Manchester Regional Hospital Board and action is taken by them to secure adequate hospital treatment for the varying needs of the people.

Hospitals in the Burnley district available to Nelson residents are as follows:-

Reedyford Memorial Hospital, Nelson

Grove House Recovery Home, Barrowford

Hartley Hospital, Colne

Bank Hall Hospital, Burnley

Edith Watson Maternity Unit, General Hospital, Burnley

General Hospital, Burnley

Marsden Hospital, Burnley

Victoria Hospital, Burnley

Patients suffering from infectious diseases are, when necessary, admitted to Marsden Hospital, Burnley.

VENEREAL DISEASES - SPECIAL TREATMENT CENTRE

This service is also provided by the Burnley and District Hospital Management Committee at the Out-Patient Department of the General Hospital, Burnley. Sessions are held twice weekly, Tuesdays and Fridays, when a medical officer is in attendance. These are for both male and female patients and no appointment is necessary.

LABORATORY FACILITIES

The facilities of the Public Health Laboratory, Royal Infirmary, Meadow Street, Preston, are available for the use of your Authority.

Samples of water, milk, ice-cream, etc., were submitted for examination and the results are given in the appropriate sections of this report.

WELFARE OF THE AGED

The responsibility for the care of the aged in their own homes belongs to the Lancashire County Council as the Health Authority for the Borough. Under the Divisional scheme the specially appointed Welfare Organiser co-operates with representatives and officers of all statutory and voluntary bodies and organisations concerned with this aspect of public health.

For many years your Council has provided a Welfare Service for the Aged which is supplementary to the County Council Services. This is organised by the local authority and the Mayor's Welfare Fund. Voluntary subscriptions and efforts maintain this fund and it is supplemented by a voluntary contributory scheme in local places of employment etc., with the co-operation of employers and trade unions.

The fund finances the employment of welfare workers of which eleven were employed at the end of the year. By an arrangement with the Barrowford Urban District one of these was assigned to their area. The work is organised from the Public Information Centre and the welfare workers regularly visit aged persons in their own homes. Their duties include odd jobs in the home, shopping, collecting pensions, lighting fires, making drinks and giving friendly assistance to the old people generally. During the year they made a total of 49,853 visits, of which 5,291 were in the Barrowford area.

The Meals on Wheels Service inaugurated in 1966 continues to distribute 32 meals each day on Tuesdays, Wednesdays and Fridays. This is done by the Mayor's Welfare Section in co-operation with the local branch of the Women's Royal Voluntary Services and assisted twice a week by two senior children from local Secondary Modern Schools.

A Luncheon Club for the aged is held on Thursdays in the Civic Theatre, Stanley Street, Nelson, when approximately 85 persons are provided with a lunch at a cost to themselves of 10p. each.

Also in the Borough are six Social Clubs for Aged Persons, five of which are provided by the Council. All persons of retirement age have access to the amenities of these clubs, but membership, which entails the payment of a small subscription, qualifies the person to additional privileges such as free trips to the seaside and social occasions such as Christmas parties. The membership of these Clubs exceeds 2,500.

NATIONAL ASSISTANCE ACTS, 1948 AND 1951 (SECTION 47)

No applications for orders for the removal to suitable premises of persons in need of care and attention were made during the year.

TUBERCULOSIS SERVICE

The Chest Clinic for the area is situate at the Marsden Hospital, Burnley, to which known, and suspected, cases of tuberculosis are referred by medical practitioners. Patients are also visited in their own homes by Health Visitors employed by the Lancashire County Council Health Division No.6. These Health Visitors work in co-operation with the Chest Clinic and advise on the care and after-care of patients.

NATIONAL ASSISTANCE ACT, 1948 (SECTION 50)

It is the duty of the Local Authority to arrange for the burial of the body of a person who has died or been found dead in their area where it appears that no suitable arrangements for the disposal of the body are being made.

One such case was dealt with during the year.

OTHER SERVICES

The Borough of Nelson forms part of the Lancashire County Council Health Division No.6 and the following is a summary of the services provided by the County Council and administered from the Divisional Health Office, Oakleigh, Reedley, Nr. Burnley.

- Ambulance Service
- Care of Mothers and Young Children
 - Ante-natal Clinics
 - Child Health Clinics
 - Day Nurseries
 - Family Planning
 - Nurseries and Child Minders Regulations
 - Problem Families
 - Relaxation Classes
 - Unmarried Mothers
- Health Visiting
- Home Nursing
- Immunisation and Vaccination
 - Measles, Diphtheria, Whooping Cough, Tetanus, Poliomylitis, Smallpox, Tuberculosis (BCG) and Rubella
- Medical Examinations
- Mental Health
 - Mental Illness and Subnormality
 - Training Centres
 - Hostels
- Midwifery Service
- Prevention of Illness - Care and After-Care
 - Cervical Cytology
 - Chiropody
 - Convalescence
 - Health Education
 - Laundry Service
 - Loan of Nursing Equipment
 - Home Help Service
 - Night and Evening Help Service
 - Tuberculosis
- Welfare Services for the Aged
 - Day Care
 - Registration of Private Homes
 - Residential Accommodation
 - Short-stay Accommodation
- Welfare Service for Handicapped Persons
 - Blind and Partially Sighted
 - Deaf and Dumb
 - Physically Handicapped (General Classes)
 - Social Centres

Information regarding these services are given in my report as Divisional Medical Officer.

On 17 notifications were received which had 75% of the total in 1970 but which averaged less the alternative rate, was also using the responsible factor.

There were some lower cases of tuberculosis giving a total of 32 of which 15 (47%) males and 17 females; 10 (31%) were aged 15-44, 7 (22%) 45-64 and 15 (47%) other ages. With the exception of 1 case, 31 (97%) of the remainder were all Commonwealth immigrants. Although the number of notifications of this disease was less than the two previous years, with these women there is not the highest annual total since 1961. The male incidence rates were respiratory 0.47% and non-respiratory 0.10% per 1000 population which exceed the comparable rates for the total and women as a whole by 0.25% and 0.45% per 1000 population respectively. No deaths occurred from this disease during the year.

Altogether 21 new cases were added to the tuberculosis register during 1971, the 10 new notifications and 4 transfers from other areas, two of the latter being Commonwealth immigrants. There were 2 cases deleted from the register, 1 patient having died, 1 had recovered and 1 had moved from the town. At year end there were 157 patients on the register, 111 respiratory cases and 46 others.

The Manchester Regional Hospital Chest Radiography Unit 75% carried out an industrial survey in the hospital from the 10th - 12th May. Due to the limited time available only a proportion of the 1000 workers visited were x-rayed or had sputum, blood and urine tests. Cases of tuberculosis were discovered on the previous survey were included.

Altogether 1,200 persons employed in the hospital were employed in industry or offices were checked. SECTION C of the findings are as follows:-

Abnormalities discovered		Total		
Tuberculosis				
Respiratory				
Bronchitis				
Cardiovascular disease				
Fractures				
Neoplasms				
Pulmonary tuberculosis				
Pleural thickening				
Abnormalities of sputum				
Sarcoid				
Total		37	10	47
% of total checked		3.0%	1.7%	2.4%

I am indebted to Dr. J. J. Epper, F.R.C., M.D., the Medical Director of the Unit for the information supplied.

Five isolated cases of food poisoning were notified, but in no case was the responsible organism or other responsible agent identified.

SECTION 2

PREVALENCE OF AND CONTROL OVER
INFECTIOUS AND OTHER DISEASES

INFECTIOUS AND OTHER NOTIFIABLE DISEASES

Only 92 notifications were received which was 41% of the total in 1970 but about average for the alternate year, measles being the responsible factor.

There were seven fewer cases of tuberculosis giving a total of 22 of which 15 (11 males and 4 females) were respiratory cases and 7 (4 males and 3 females) other cases. With the exception of 3 respiratory cases the remainder were all Commonwealth Immigrants. Although the total number of notifications of this disease was less than the two previous years, with those exceptions it was the highest annual total since 1962. The case incidence rates were Respiratory 0.475 and Non-respiratory 0.222 per 1000 population which exceed the comparable rates for England and Wales as a whole by 0.288 and 0.169 per 1000 population respectively. No deaths occurred from this disease during the year.

Altogether 26 new cases were added to the tuberculosis register during 1971, the 22 new notifications and 4 transfers from other areas, two of the latter being Commonwealth Immigrants. There were 9 names deleted from the register, 1 patient having died, 4 had recovered and 4 had removed from the town. At year end there were 167 patients on the register, 113 respiratory cases and 65 others.

The Manchester Regional Hospital Board Mass Radiography Unit 13B carried out an Industrial Survey in the borough from the 10th - 19th May. Due to the limited time available only a proportion of the firms usually visited were x-rayed on this occasion, but all firms where cases of tuberculosis were discovered on the previous survey were included.

Altogether 1,830 persons (779 males and 1,051 females) employed in industry or offices were examined and a summary of the findings is as follows:-

<u>Abnormalities discovered</u>	<u>Males</u>	<u>Females</u>	<u>Total</u>
Tuberculosis requiring treatment	3	1	4
Tuberculosis requiring supervision	1	-	1
Healed tuberculosis	12	7	19
Bronchial carcinoma	-	1	1
Cardio vascular lesion, acquired	5	4	9

Emphysema	2	-	2
Pulmonary fibrositis	1	1	2
Pleural thickening	4	1	5
Abnormalities of diaphragm	-	1	1
Sarcoid	2	-	2
	<hr/>	<hr/>	<hr/>
Totals	31	18	49
	<hr/>	<hr/>	<hr/>
% of total examined	3.98%	1.71%	2.68%
	<hr/>	<hr/>	<hr/>

I am indebted to Dr. J. I. Capper, M.B., Ch.B., the Medical Director of the Unit for the information supplied.

Five isolated cases of food poisoning were notified, but in no case was the causative organism or other responsible agent identified.

HOSPITAL ACCOMMODATION FOR INFECTIOUS DISEASES

This is provided by the Burnley and District Hospital Management Committee at Marsden Hospital, Burnley, when required, for all infectious diseases with the exception of smallpox. If on occasions, accommodation thereat is not available, arrangements are then made through the Bed Bureau for admission of the patient to an isolation hospital under the control of a neighbouring Hospital Management Committee.

PUBLIC HEALTH ACT, 1936 - SECTION 172

It was not found necessary to invoke the provisions of this Section for the removal to hospital of any infectious person suffering from tuberculosis of the respiratory tract.

DISINFECTION AFTER INFECTIOUS DISEASES

Generally the disinfection of rooms, bedding and personal clothing is no longer recommended except in cases of smallpox and some cases of tuberculosis. Experience has shown that cleansing with soap and water and the use of a disinfectant together with efficient ventilation of rooms is adequate, but disinfection is still carried out if specially requested. There were no such requests during the year.

Scabies is not a notifiable disease, but occasionally cases are discovered through the school medical service and referred to this Department for treatment. This is carried out on our behalf by the County Borough of Burnley on a payment basis, as and when required. The steam disinfection of personal clothing and bedding, etc., forms part of the treatment.

The following Tables give detailed information relative to:-

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in submitting my Annual Report on the environmental services provided by this Department.

AIR CONTROL

As stated elsewhere in the Report, the confirmation of the last South Central Order was received in November. When this order becomes operative on 1st July, 1975, all the urban area of the Borough will be smokeless. Already the benefits arising from the reduction of atmospheric pollution are obvious in that the pall of smoke which used to hang over the valley on a still day is no longer to be seen.

The speed at which this programme has been implemented is a remarkable achievement both for the Council and the staff of the Health Department. This is more fully appreciated when one considers that the first Order was confirmed early in 1966 and that in eight years almost 12,000 dwellings will have been converted to burn smokeless fuel.

HOUSING

The removal of poor housing is a national problem and Solihull is no exception.

During October confirmation of the Grove Street and Southfield Street Gaspiersy Parishes Order was received. This is the first stage of a programme to rid four of the five streets of the Borough.

ANNUAL REPORT

OF THE

SENIOR PUBLIC HEALTH INSPECTOR

FOR THE YEAR ENDED

31st DECEMBER, 1971

During the year the Health Department staff have been active throughout the year, striving to improve the environment of the inhabitants of the Borough. I offer my thanks for the speedy and efficient manner that these were dealt with.

As can be seen in the Report the Health Department staff have been active throughout the year, striving to improve the environment of the inhabitants of the Borough.

I am grateful for the backing given to me by the Chairman and Members of the Health Committee and the goodwill of other Chief Officers, as when I offer my thanks.

I send the report to Mr. Chairman and Gentlemen,

Yours obedient servant,

R. WILKINSON

Senior Public Health Inspector.

ANNUAL REPORT
OF THE
SENATOR PUBLIC HEALTH INSPECTOR
FOR THE YEAR ENDING
JANUARY 1, 1901

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in submitting my Annual Report on the environmental services provided by this Department.

SMOKE CONTROL

As stated elsewhere in the Report, the confirmation of the last Smoke Control Order was received in November. When this order becomes operative on 1st July, 1973, all the urban area of the Borough will be smokeless. Already the benefits arising from the reduction of atmospheric pollution are obvious in that the pall of smoke which used to hang over the valley on a still day is no longer to be seen.

The speed at which this programme has been implemented is a remarkable achievement both for the Council and the staff of the Health Department. This is more easily appreciated when one considers that the first Order was confirmed early in 1966 and that in eight years almost 12,500 dwellings will have been converted to burn smokeless fuel.

HOUSING

The removal of poor housing is a national problem and Nelson is no exception.

During October confirmation of the Grove Street and Southfield Street Compulsory Purchase Order was received. This is the first stage of a programme to rid four areas of sub-standard housing from the Borough.

ACCUMULATIONS OF RUBBISH

Vacant houses, which are subjected to vandalism and become derelict, continue to be a problem. This is especially so as the yards provide an ideal site for dumping old mattresses, furniture and other general rubbish. During the year the staff of the Cleansing Department removed many such accumulations in appalling conditions at the request of the Health Department, and I offer my thanks for the speedy and efficient manner that these were dealt with.

As can be seen in the Report the Health Department staff have been active throughout the year, striving to improve the environment of the inhabitants of the Borough.

I am grateful for the backing given to me by the Chairman and Members of the Health Committee and the goodwill of other Chief Officials, to whom I offer my thanks.

I have the honour to be, Ladies and Gentlemen,

Your obedient Servant,

F. GRINDROD

Senior Public Health Inspector.

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in submitting my Annual Report on the environmental services provided by this Department.

HOUSEWORK

As stated elsewhere in this Report, the implementation of the first Housework Order was completed in November. When this order became operative on 1st July, 1977, all the areas of the Borough will be completed. Already the benefits resulting from the reduction of atmospheric pollution are obvious in that the bill of smoke which used to hang over the valley on a still day is no longer to be seen.

The speed at which this programme has been implemented is a remarkable achievement both for the Council and the staff of the Health Department. This is more easily appreciated when one considers that the first Order was completed early in 1960 and that in eight years almost 15,000 dwellings will have been converted to burn smokeless fuel.

HOUSING

The removal of poor housing is a national problem and Nelson is no exception.

During October completion of the Grove Street and Southfield Street Council House Order was completed. This is the first stage of a programme to rid four areas of sub-standard housing from the Borough.

ACCUMULATION OF RUBBISH

Recent houses, which are subjected to vandalism and broken bottles, continue to be a problem. This is especially so in the yards provide an ideal site for dumping old motorcars, furniture and other general rubbish. During the year the staff of the Housing Department worked many such accumulations in appalling conditions at the request of the Health Department and I offer my thanks for the speedy and efficient manner that these were dealt with.

As can be seen in the Report the Health Department itself have been active throughout the year, striving to improve the environment of the inhabitants of the Borough.

I am grateful for the backing given to me by the Chairman and Members of the Health Committee and the grateful of other Councillors, as well as other my thanks.

I have the honour to be, Ladies and Gentlemen,

Yours obedient servant,

F. ORMEROD

Senior Public Health Inspector

SECTION C

The water supply for the Borough is the South Eastern Water Board. This was established in 1907 and under various conditions of supply was continued to the Borough in 1914 and 1921. The water supply is now under the control of the South Eastern Water Board and the water supply is now under the control of the South Eastern Water Board.

The water supply for the Borough is the South Eastern Water Board. This was established in 1907 and under various conditions of supply was continued to the Borough in 1914 and 1921. The water supply is now under the control of the South Eastern Water Board and the water supply is now under the control of the South Eastern Water Board.

SECTION E

The Lancashire Water Board is the authority responsible for water supply within the Borough.

SECTION 2

SAFETY RECORDS OF THE AREA

WATER SUPPLY

The water undertaking for the Borough is the North Calder Water Board. This was constituted in 1960 and under normal conditions supplies an area comprised of the Boroughs of Nelson and Colne, the Urban Districts of Barrowford, Brierfield and Trawden and the eastern part of Burnley Rural District.

The moorland gathering grounds are situated on either side of the area supplied and cover 5,000 acres. Total storage capacity of the Board is 554.3m. gallons, comprised of five storage reservoirs (410.3m.), three compensation reservoirs (131m.) and six service reservoirs (13m.). The other sources of supply include springs and two boreholes, having a potential yield of 1,650,000 gallons per day.

Before going into supply, all raw water is filtered and chlorinated. In order to utilise the available head from service reservoirs, the area of supply is divided according to locality and altitude. Pumping Stations are used in three areas outside the Borough.

Throughout the year the water supplied has been satisfactory in both quality and quantity. Forty-six samples of raw water were submitted for bacteriological examination and two samples were submitted for chemical analysis, all giving satisfactory results. One hundred and ninety nine samples of treated water were submitted for bacteriological examination, when eleven samples gave an unsatisfactory result. Eleven samples were submitted for chemical analyses and one sample was reported as unsatisfactory. The natural fluoride content of the supply varies from 0.08 to 0.16 p.p.m. according to source and there is no tendency to plumbo-solvency.

Twenty-three houses in the rural area remote from the mains supply are served by private water supplies, the remaining houses in the Borough are supplied by mains water. Eighty-five new dwellings were connected to the mains supply during the year when 1,095 yards of new mains were laid. Extensions of water mains to existing dwellings totalled 205 yards and mains extension to industrial development totalled a further 208 yards.

DRAINAGE AND SEWERAGE

Except for isolated properties in the remote rural areas, the whole of the urban part of the Borough is drained and sewered. The Borough Engineer and Surveyor controls the sewage works at Lindred just outside the Borough boundary. The estimated sewage per head of population per day is 54.6 gallons with a daily dry weather flow of 1.75m. gallons.

The treatment of the sewage is by screening, settlement in detritus tanks, sedimentation tanks, percolating filters and humus tanks. In dry weather part of the final effluent is recirculated. Storm water is discharged into Pendle Water after passing through settlement tanks. The final effluent is discharged either into Pendle Water or, by agreement with the Central Electricity Authority, may be pumped into the Leeds and Liverpool Canal to serve as compensation water to replace that withdrawn from the Canal at Huncoat Electricity Generating Station. During the winter months liquid sludge is pumped onto surrounding agricultural land, but during summer months is stored in digestion tanks and made available for horticultural and agricultural use.

Eighty-eight new dwellings were connected to the sewerage system during the year and three existing dwellings in rural areas, were connected to septic tanks installations.

RIVERS AND STREAMS

The Lancashire Rivers Board is the authority responsible for water courses within the Borough.

SANITARY ACCOMMODATION

No. of privy middens	3
No. of closets attached to these middens	3
No. of pail closets	9
No. of movable dustbins, etc	14,145
No. of waste water closets	2,197
No. of fresh water closets	11,164

Conversions during 1971:-

No. of privy closets to fresh water closets	Nil
No. of privy closets to pails	Nil
No. of pail closets to fresh water closets	3
No. of waste water closets to fresh water closets	140
No. of premises at which movable dustbins, etc. were substituted for fixed receptacles	63

The above figures relate to sanitary accommodation at all premises at the end of the year.

There were 12 dwellings not on the water carriage system.

PUBLIC CLEANSING

A separate department under the control of the Director of Cleansing, the Cleansing Department is responsible for the collection and disposal of household and trade refuse, street cleaning, cleansing of and repairs to drainage and the maintenance of public conveniences. In addition, the Cleansing Department provide and maintain the Council's transport fleet and have provided a vehicle testing station approved by the Ministry of Transport.

The collection of household refuse is maintained at weekly intervals as far as circumstances permit. The composition of household refuse has altered over the past few years with a tendency towards lighter, more bulky refuse. This is accounted for by the increased use of gas and electric heating in houses affected by the Council's Smoke Control programme and the increasing use of packaging of consumer goods and food. Greater use of compression type collection vehicles has enabled this increased volume of refuse to be collected without increasing the number of vehicles or the manpower involved.

Trade refuse is collected weekly and putrescible refuse is collected twice weekly, both collections being charged for. Traders may also deliver refuse direct to the Tip, being charged 10p. per ton for this facility.

Unwanted furniture and household effects are removed free of charge. This service is widely used but indiscriminate dumping of such items still occurs.

All refuse is disposed of by controlled tipping at Waidhouse Quarry, together with refuse from Brierfield and Padiham Urban Districts and part of Burnley Rural District.

PUBLIC HEALTH INSPECTIONS

5,136 premises were visited for various reasons during the year, the total number of visits made being 8,038. These figures show a 36% decrease over the previous year, although the number of defects discovered was, at 707, a 43% increase on the number found in 1970. Similarly, the number of defects remedied was, at 387, a 76% increase on the previous year.

Informal Notices were served on 228 occasions and Statutory Notices were issued in respect of 130 cases. Of the Statutory Notices issued, 62 were in respect of blocked or leaking drainage. No legal proceedings were instituted during the year.

The following table classifies the visits made to the various types of premises during year.

	<u>INSPECTIONS</u>	<u>RE-INSPECTIONS</u>

OFFICES, SHOPS AND RAILWAY PREMISES ACT, 1963

Thirty-seven new registrations of premises under the above Act were received during the year, but 30 premises ceased, for various reasons, to be registrable. There was thus a net increase of 7 premises subject to the provisions of the Act, making a total of 273 premises on the register at year end. The number of visits and inspections made during the year was 388.

REGISTRATIONS AND GENERAL INSPECTIONS

Class of premises	Number of premises registered during the year	Total number of registered premises at year end	Number of registered premises receiving a general inspection during the year
Offices	13	70	26
Retail Shops	15	165	46
Wholesale shops and warehouses	3	17	4
Catering establishments and canteens	6	21	46
Fuel storage depots	-	-	-
Totals	37	273	122

Number of visits of all kinds by Inspector to registered premises - 388

No applications for exemption from certain of the provisions of the Act were received during the year.

The following table shows the nature of the 97 defects found and the 19 defects remedied during 1971.

Section	Contraventions		
		Found	Remedied
4	Cleanliness	5	-
5	Overcrowding	-	-
6	Temperature	20	3
7	Ventilation	-	-
8	Lighting	2	1
9	Sanitary Conveniences	12	3
10	Washing Facilities	1	1
16	Floors, Passages, and Stairs	6	3
24	First Aid	22	3
50	Information for employees	29	5

No prosecutions under the Act were found necessary during the year.

Five accidents, all non-fatal, were reported during the year. Two of the accidents were caused by employees cutting themselves whilst boning meat, and two accidents were caused by employees slipping. In the remaining case, the employee strained herself in moving packaged goods.

ATMOSPHERIC POLLUTION

For the first three months of the year, the Smoke Control Programme was temporarily suspended due to the shortage of solid smokeless fuel which occurred in the Autumn of the previous year. In spite of this set-back to their programme, the Council made the No.7 Smoke Control Order in June and confirmation for this Order was received in November. The date of operation of this Order is 1st July, 1973, when all the urban area of the Borough will be covered by operative smoke control orders.

Smoke Control Area No.	Date Confirmed	Date Effective	Industrial Premises	Commercial Premises	Private Dwellings	L.A. Dwellings	Other Premises	Total Premises	Acreage
1	25. 3.66	1.10.66	-	1	200	382	8	591	147

6	23.10.70	1. 7.72	23	34	2972	120	21	3,170	411
7	9.11.71	1. 7.73	4	6	561	839	2	1,412	454
1-7 inc.	Totals		166	585	10,780	1,654	143	13,328	2,056

On the industrial front, pollution has been further reduced by the replacement of two under-loaded Lancashire boilers which emitted large amounts of dark smoke by two smaller, oil-fired package boilers. With the changing pattern of industry in the Borough and the swing away from textiles, large boilers are no longer required to supply steam for factory heating and process work. In order that emissions of smoke are kept to a minimum, industrialists are being pressed to replace existing obsolete boiler plants with modern, efficient, steam-raising units.

SWIMMING BATHS AND POOLS

The three public swimming baths and pools in the district are all owned by the Corporation. The open air pool is situated in Marsden Park and proves very popular during the summer season. The Public Baths in Bradley Road contain two plunge baths, one 75 feet by 30 feet, and one 50 feet by 20 feet. Additional facilities at the Public Baths include Sauna baths, 18 slipper baths and a Cafe.

Town mains water supply is used in both premises with filtration plant in continuous use giving a six-hourly cycle at the Open Air Pool and a three-hour cycle at the Public Baths for the large pool, with a one-hour cycle for the small pool.

Seventy samples of swimming bath water were submitted for bacteriological examination when all but six samples returned a satisfactory result.

DISINFESTATION

As has been the pattern for several years, the number of premises treated for bedbugs or fleas, remained at a low level. However, the number of houses treated for household pests such as cockroaches, silver fish and wasps nests increased. Twenty houses, nine of them Council houses, were treated for bugs or fleas and 95 houses and 11 schools were disinfested of pests such as cockroaches.

One pattern which emerged during the year was the rise in the number of cockroach infestations in private houses. These were mainly in terraced houses in which central heating had been installed.

The disinfestation service undertaken by the Department is free of charge to householders.

RODENT CONTROL

One full-time rodent operative is employed by the Public Health Department, and the following table shows the work undertaken in this connection during the year.

	Type of Property	
	Non-agricultural	Agricultural
No. of properties in district	15,973	68
No. of properties inspected	536	4
No. of properties inspected which were found to be infested by:		
Rats	134	4
Mice	402	-
Total number of properties inspected for rats and/or mice for reasons other than notification	-	-
No. of properties infested by:		
Rats	-	-
Mice	-	-

SCHOOLS

Conditions at the 25 schools remained satisfactory.

OFFENSIVE TRADES

There are no offensive trades established within the district.

FACTORIES ACT, 1961

1. Inspections for the purposes of provisions as to health.

Premises	Number of Premises	Number of		
		Inspections	Written Notices	Occupiers Prosecuted
(i) Factories in which Sections 1,2,3,4, and 6 are to be enforced by Local Authorities...	11	10	-	-
(ii) Factories not included in (i) in which section 7 is enforced by the Local Authority	101	97	13	-
(iii) Other premises in which Section 7 is enforced by the Local Authority (excluding out-workers' premises)	-	-	-	-
Totals	112	107	13	-

2. Cases in which defects were found.

Particulars	Number of cases in which defects were found				Number of cases in which prosecutions were instituted
	Found	Remedied	To H. M. Inspector	By H. M. Inspector	
Want of cleanliness (S.1).....	-	-	-	-	-

(a) Insufficient	1	-	-	-	-
(b) Unsuitable or defective ..	13	6	-	3	-
(c) Not separate for sexes ...	-	-	-	-	-
Other offences against the Act (not including offences relating to out-work)	2	2	-	-	-
Totals	16	8	-	3	-

No notifications of outworkers were received during the year.

COMMON LODGING HOUSES AND HOUSES LET IN LODGINGS

There are no such premises within the district.

RAG FLOCK AND OTHER FILLING MATERIALS ACT, 1951

Two premises are registered under the Act.

CHIEF SANITARY REQUIREMENTS OF THE DISTRICT

As in previous years, the improvement of ablution facilities in the poorer type of properties, together with the abolition of the obsolete waste water closets, still remain the chief sanitary requirements of the district.

The increased financial aid now being offered under Improvement Grant schemes for the provision of bathrooms and the improvement of properties has been well received by the householders in the Borough. This has been reflected in the number of applications received for grant and is perhaps, the sign of the affluent society trying to rid itself of the "convenience" in the rear yard.

Number of properties in which improvements were in- progress	Improvements carried out in the year				Total

Housing

174 dwellings were reported as defective during the year and 127 were found to be defective by the Housing Department. In the year 1954, a total of 274 dwellings were reported as defective during the year, 211 being defective and 63 of these reported to be defective. The total number of dwellings reported as defective during the year was 127.

174 applications for improvement grants in respect of defective dwellings were submitted and 127 of these were approved. Improvement grants in respect of 117 local authority dwellings were submitted to the Ministry, approved being given on 107 and work completed in 25 cases. Standard grant applications were made on 274 and in 274 cases work was completed.

25 new houses were erected during the year by the Local authority and 25 houses were built by private builders.

Following a Public Inquiry in June, official confirmation of the House Street and Southfield Road and 111 Clearance Area was received in October.

The following table shows the number of dwellings reported as defective during the year 1954.

	Found During 1954	Reported During 1954	Total in 1954 Reported in 1954
--	----------------------	-------------------------	-----------------------------------

Roofs, etc.

The provisions of subchapter were amended during the year.

CHURCH LENDING HOUSES AND HOUSES FOR THE POOR

There are no such provisions within the district.

THE PLACE AND DATE OF THE NEXT MEETING

The meeting is held under the act.

THE ASSISTANT COMMISSIONERS OF THE DISTRICT

As in previous years, the improvement of education facilities in the district is the main object of the committee. The committee will continue to work for the improvement of the district, still within the limits of the district.

The increased financial aid now being offered under the Government Grant scheme for the provision of housing and the improvement of property, has been well received by the committee. This has been reflected in the number of applications received for grants and in the number of the committee's efforts to help the "poor" in the district.

SECTION 2

HOUSING

HOUSING

174 dwellings were inspected for housing defects during the year when 129 were found to be not reasonably fit for human habitation by reason of the 438 defects found. In this connection, a total of 274 notices were served during the year, 130 being Statutory notices and 60 of these related to drainage defects. The total number of visits made during the year for housing purposes was 657.

159 applications for improvement grant in respect of private houses were submitted and 158 of these were approved. Improvement schemes in respect of 117 Local Authority owned dwellings were submitted to the Ministry, approval being given on 107 and work completed in 31 cases. Standard grant applications numbered 279 and in 178 cases work was completed.

65 new houses were erected during the year by the Local Authority and 23 houses were built by private builders.

Following a Public Inquiry in June, official confirmation of the Grove Street and Southfield Street (No.12) Clearance Area was received in October.

The following table shows defects found and remedied in dwellings during the period under review.

	<u>Found : Remedied</u>		<u>Found in 1970</u>

SUFFICIENCY OF SUPPLY OF HOUSES

At the end of the year the Rate Book showed that 477 houses were unoccupied, an increase of 130 on the figure for the previous year. These were mainly of the older stone-built terrace type property, the more modern properties being fully occupied.

The number of Council-owned dwellings at year end showed a net increase of 70 over the previous year's figure, bringing the figure to 1,770. At the commencement of the year there were 472 applications for tenancies of various types of dwellings, and at year end the number of viable applications had reduced to 407.

The following table shows the requirements of applicants for Council dwellings:-

	<u>At commencement of</u> <u>1971</u>	<u>At end of</u> <u>1971</u>
Number of applications	472	407
<u>Type of house required</u>		
(a) Two bedroomed type	114 (24%)	108 (27%)
(b) Three bedroomed type	141 (30%)	74 (18%)
(c) Four bedroomed type	-	-
(d) Old Folks' bungalows	154 (33%)	150 (37%)
(e) Flats	38 (8%)	37 (9%)
(f) Others	25 (5%)	38 (9%)

OVERCROWDING

No cases of statutory overcrowding were encountered during the year.

At the end of the year the Book showed that 477 houses were unoccupied, an increase of 130 on the figure for the previous year. These were mainly of the older stone-built terrace type property, the more modern properties being fully occupied. The number of Council-owned dwellings at year end showed a net increase of 70 over the previous year's figure, bringing the figure to 4,770. At the commencement of the year there were 475 applications for tenancies of various types of dwellings, and at year end the number of applications had reduced to 407.

THE FOLLOWING TABLES SET OUT THE REQUIREMENTS OF APPLICANTS FOR COUNCIL DWELLINGS

	At end of 1937	At commencement of 1937	At end of 1937	At commencement of 1937
Number of applications	407	475	407	475
Type of houses required				
(a) Two bedrooms	100	100	100	100
(b) Three bedrooms	100	100	100	100

Type of cases		
(a) Statutory	100	100
(b) Non-statutory	100	100

DATA SUMMARY

The samples of milk were taken during the year for analysis and examination and the statutory tests. In addition to samples of milk, all of which proved satisfactory, were taken by members of the Leominster County Council for chemical analysis. The reports on milk samples taken by the Department are shown below.

Total no. of samples submitted for Biological examination	Results		
	Satisfactory	Unsatisfactory	Refused
(i) Bacteriological Examination	4	2	2
(ii) Bacteriological - Ring Test	40	10	1
(iii) Bacteriological - Outline Test	3	1	2
(iv) Bacteriological - Biological Test	41	2	1

Samples submitted for Statutory Tests	No. of samples	Results

(iii) Turbidity Test	-	-	-	-
(iv) Colony Count Test	-	-	-	-

SECTION F

FOOD INSPECTION

INSPECTION AND SUPERVISION

Food which had lost its quality for the majority of these establishments. It would appear that strong measures are being taken on the appropriate rotation of perishable foods are meeting with limited success.

In all cases, the vendor and manufacturer were interviewed.

Further inspection of foodstuffs showed the following quantities to be unfit for human consumption. All were surrendered voluntarily.

Type of Food	Containers	Total	Qty.	Wt.	Val.
Fish	104	3	2	25	5
Fruit	112	1	1	2	2
Meat	107	102	2	2	10
Vegetables	66	3	1	2	20
Miscellaneous	15	6	0	15	10
Totals	379	1	3	5	27

SECTION I

INSPECTION AND SUPERVISION

OF FOOD

MILK SUPPLY

356 samples of milk were taken during the year for biological examination and the statutory tests. In addition 50 samples of milk, all of which proved satisfactory, were taken by Officers of the Lancashire County Council for chemical analysis. The reports on milk samples taken by the Department are shown below.

Total no. of samples submitted for Biological examination 356	Results		
	Positive	Negative	No result
(i) Tuberculosis	-	24	2
(ii) Brucellosis - Ring Test	49	287	14
(iii) Brucellosis - Culture Test...	31	7	2
(iv) Brucellosis - Biological Test	21	2	4

Samples submitted for Statutory Tests	No. of samples	Results		
		Satisfactory	Unsatisfactory	Void
Raw Milk:-				
(i) Methylene Blue Test	9	7	2	-
Heat Treated Milk:-				
(i) Methylene Blue Test	-	-	-	-
(ii) Phosphatase Test	-	-	-	-
(iii) Turbidity Test	-	-	-	-
(iv) Colony Count Test	-	-	-	-

FOOD INSPECTION

During the year twenty-three complaints in respect of food were made. Foods which had lost condition accounted for the majority of these complaints. It would appear that attempts to educate shopkeepers on the systematic rotation of perishable foods are meeting with limited success.

In all cases, the vendor and manufacturers were interviewed.

Routine inspection of foodstuffs showed the following commodities to be unfit for human consumption. All were surrendered voluntarily.

<u>Type of Food</u>	<u>Containers</u>	<u>Tons</u>	<u>Cwts.</u>	<u>Qtrs.</u>	<u>Lbs.</u>	<u>Ozs.</u>
Fish	1041		3	2	25	8
Fruit	118		1	1	24	6
Meat	1093		12	2	13	4 $\frac{1}{2}$
Vegetables	696		3	3	9	5 $\frac{1}{2}$
Miscellaneous	331		6	0	15	15
Totals	3279	1	7	3	4	7

MEAT INSPECTION

The private slaughterhouse continued in operation during 1971, when all the 2,697 animals slaughtered were subjected to inspection. Throughput showed a decrease of 30%, with a small corresponding decrease in income for meat inspection services to £119.07.

	Cattle excl. Cows	Cows	Calves	Sheep and Lambs	Pigs
Number killed	145	15	2	2571	261
Number inspected	145	15	2	2571	261
ALL DISEASES EXCEPT TUBERCULOSIS AND CYSTICERCI:					
Whole carcasses condemned	-	-	-	4	-
Carcasses of which some part or organ was condemned	70	9	-	954	14
Percentage of number inspected affected with diseases other than Tuberculosis and Cysticerci	47.3%	60.0%	-	37.3%	5.4%
TUBERCULOSIS ONLY:					
Whole carcasses condemned	-	-	-	-	-
Carcasses of which some part or organ was condemned	-	-	-	1	-

FOOD AND DRUGS ACT, 1955

I am indebted to Dr. C. H. T. Wade, County Medical Officer of Health, for the following particulars of samples obtained under the provisions of the Act by officers of the Lancashire County Council.

A total of 97 samples was obtained comprising 50 milks (4 of which were Channel Island milk) and 47 others as follows:-

1 Apple Juice	1 Slimming Biscuits
1 Cider Vinegar	1 Slimming Chocolate
1 Herring Roes, canned	1 Potato & Meat Pie
1 Tomato Paste	1 Almonds
1 Prawns canned	1 Milk Dessert canned
1 Liver Paste canned	1 Custard canned
1 Butozolidin Tablets	1 Blackcurrants canned
1 Cough mixture	1 Beans & Hamburgers canned
1 Extract of Sarsaparilla	1 Lemonade Shandy
1 Honey & Yeast Tablets	1 Christmas Pudding
1 Baby Food	1 Almond & Marzipan
1 Large Sliced Loaf	1 Rum Flavouring
2 Cream Soda	1 Laxative Pills
1 Part Bag of Sugar	1 Oatcakes
1 Portion of Bilberry tart	1 Milk Shake Flavouring
1 Tomato juice canned	1 Aspiring Tablets B.P.
1 Grape juice bottle	1 Epsom Salts B.P.
1 Pea Soup with Smoked Ham, canned	1 Analgesic Powders
1 Icing Sugar	1 Seasoning
1 Chutney Sauce	1 Stem Ginger
1 Aspirin Tablets	1 Consomme Madrilene
1 Apple Squash concentrate	1 Ice Lolly Syrup
1 Dried Peas	1 Trifle

I give below details of those samples on which the County Analyst gave adverse reports:-

<u>Sample</u>	<u>Result of Analysis</u>	<u>Action Taken</u>
Extract of Sarsaparilla	The statement "makes four pints of concentrated medicine" constitutes a recommendation as a medicine. The statement of ingredients should therefore include quantitative indications of the amounts present as required by the Pharmacy and Medicines Act 1941 (i.e. either in percentages or in amounts present).	Manufacturer communicated with
Baby Food	Contained 9 milligrams of partially melted polythene film having titanium dioxide filling, forming an irregular shaped "splash". No evidence of any transfer of extractives into the food.	Complainant informed and manufacturer cautioned.
Large Sliced Loaf	Contained 13½ grammes of brown flour which itself had picked up approximately 2½% of an oil consisting of about two thirds edible oil and one third clean mineral oil, (i.e. approx. 0.11 grammes of mineral oil in the brown flour and about 0.015% mineral oil in the loaf.	Complainant and Bakery informed.
Part bag of Sugar	Contained 27% of table salt.	Complainant informed.
Trifle	Contained one dead female warehouse moth) (Ephestia Elutella) measuring 8 mls. in) length and weighing 2 milligrams).)	Manufacturer cautioned complainants informed.
Portion of Bilberry Tart	Containing one dead worker wasp weighing) 86 mlgr. and measuring 11.5 mls. in length)	
Potato & Meat Pie	Contained a sliver from a piece of above ground potato stem measuring 6½ cms. in length and weighing 65 mgms.	Bakery cautioned complainant informed.
Laxative Pills	Total magnesium (as light magnesium carbonate) 5.7 mgms. per pill compared with declared 2.5 mgms. per pill.	No Action
Informal Milk	Contained 0.3 I.U. Pencillin per ml.	Formal sample obtained.
Consomme Madrilene	Consisted of a clear vegetable soup yet labelled CONSOMME MADRILENE. Code of practice for canned soups and Food Standards Committee Report on Soups (1968) (Appendix 1 para.4) states that the name Consomme should have meat or meat extract as the principle single ingredient and that the name should not be used for clear vegetable soup.	Remainder of stock withdrawn.
Ice Lolly Syrup	Sample label bore no list of ingredients. Ice Lolly syrups are not classified as Soft Drinks and should therefore bear a list of ingredients.	Manufacturer communicated with.

ICE CREAM

Twenty samples of locally manufactured ice-cream were taken which returned thirteen grade 1, one grade 2, two grade 3, and four grade 4 results.

EGG PASTEURISATION PLANTS

There are no such premises in the district, and no samples of liquid egg were obtained during the year.
