DISLEY,

September 1947.

To the Chairman and Members of the:  
New Mills Urban District Council.

-----

Gentlemen,

I have pleasure in submitting my report for the year 1946:-

SECTION A - STATISTICS AND SOCIAL CONDITIONS OF THE AREA.

Area (in acres) - 5,242.

Registrar General's estimate of residential population mid-year  
1946 - 8,070.

ANNUAL REPORT

of the

MEDICAL OFFICE OF HEALTH

for the Year 1946

.....

Medical Officer of Health:

R. B. FITZGERALD, M.D., Ch.B., D.P.H. (Vice)

Sanitary and Sanitary Inspector:

D. G. WILLIAMS

Health Inspector:

C. S. HILL, M.R.C.V.S.

.....

NEW MILLS

September 1946

To the Chairman and Members of the  
New Mills Urban District Council.

Gentlemen,

I have pleasure in submitting my report for the year 1946:-

SECTION A - STATISTICS AND SOCIAL CONDITIONS OF THE AREA

Area (in acres) - 5,242.

Health Officer's estimate of residential population mid-year

1946 - 2,070.

Number of inhabited houses (end of 1946)	-	2,572.
Rateable Value	-	£44,475.
Sum represented by a penny rate	-	£173. 16s. 7d.

The chief occupations of the inhabitants are textile, weaving and calico printing, paper making, metal working and confectionery.

Extracts from Vital Statistics of the Year.

		<u>Total:</u>	<u>M:</u>	<u>F:</u>
Live Births	( Legitimate.....	124	60	64
	( Illegitimate.....	7	4	3

Birth rate per 1,000 of estimated resident population (mid 1946)-16.233.

		<u>Total:</u>	<u>M:</u>	<u>F:</u>
Still Births	( Legitimate.....	5	3	2
	( Illegitimate.....	0	0	0
Rate per 1,000 total (live and still) births..... 36.76				
Rate per 1,000 estimated resident population..... 0.62				

DEATHS.

Death Rate per 1,000 of estimated population.....	13.135
Deaths from Puerperal Causes.....	0
Rate per 1,000 total (live and still) Births.....	0

DEATH RATE OF INFANTS UNDER ONE YEAR OF AGE.

All infants per 1,000 live births.....	22.9
Legitimate infants per 1,000 legitimate live births.....	22.9
Illegitimate infants per 1,000 illegitimate live births.....	0
Deaths from Cancer (all ages).....	22
Deaths from Measles (all ages).....	0
Deaths from Whooping Cough (all ages).....	0
Deaths from Diarrhoea (under 2 years of age).....	0

Comparison of the above figures for the year 1945 (7,614) shows a considerably higher estimated population for the year 1946 namely 8,070. The birth rate is higher than last year (15.760) though not as high as in 1943 (17.790) and in 1944 (18.446). The death rate is lower than in 1945 (17.670) though not as low as in 1944 (12.036). The death rate of infants under one year is lower than last year (25.00) and is the lowest for several years.

Number of inhabited houses (end of 1945) - 2,572.  
 Possible Value - 24,472.  
 Sum represented by a penny rate - 2175.166. 74.

The chief occupations of the inhabitants are textile, weaving and  
 allied printing, paper making, metal working and confectionery.

Statistics from Vital Statistics of the Year.

Rate	Per 1,000	Total
Birth rate	20	184
Infant mortality	4	7

Birth rate per 1,000 of estimated resident population (mid 1945)-18.272.

Rate	Per 1,000	Total
Infant mortality	0	0
Still births	0	0

Digitized by the Internet Archive  
 in 2018 with funding from  
 Wellcome Library

Death rate per 1,000 of estimated resident population (mid 1945)-13.155.

Deaths from infectious diseases..... 0

Rate per 1,000 total (live and still) Births..... 0

Rate	Per 1,000	Total
All infants per 1,000 live births.....	23.9	23.9
Legitimate infants per 1,000 legitimate live births.....	22.8	22.8
Illegitimate infants per 1,000 illegitimate live births.....	0	0
Deaths from Gonorrh (all ages).....	22	22
Deaths from Kiasias (all ages).....	0	0
Deaths from Whooping Cough (all ages).....	0	0
Deaths from Mumps (under 5 years of age).....	0	0

Comparison of the above figures for the year 1945 (V. 214) shows a  
 considerably higher estimated population for the year 1945 namely 2,572.  
 The birth rate is higher than last year (18.700) though not as high as  
 in 1943 (17.700) and in 1942 (18.440). The death rate is lower than  
 in 1945 (17.870) though not as low as in 1944 (18.025). The death rate

The still birth rate of 36.76 has continued to decrease as compared with 49.10 (1945) and 53.691 (1944).

A comparison of the vital statistics with those of England and Wales is as follows:-

	<u>Birth Rate:</u>	<u>General Death Rate:</u>	<u>Infantile Death Rate:</u>
England and Wales.....	19.1	11.5	43
New Mills.....	16.233	13.135	22.9

=====

SECTION B - GENERAL PROVISIONS OF HEALTH SERVICES FOR THE AREA.

Laboratory facilities are available at the Laboratories of the Derbyshire County Council at Derby.

AMBULANCE FACILITIES.

Infectious Diseases.

One Ambulance provided by the Isolation Hospital at Chinley.

Non-Infectious Cases and Maternity Cases.

Two Ambulance vehicles and one driver maintained by Voluntary Public Subscription.

=====

SECTION C - SANITARY CIRCUMSTANCES OF THE AREA.

WATER.

(1) The water supply to the area has been on the whole satisfactory as regards quality, during the year, but there has been some unevenness and even failure on two occasions in the supply in parts of the St. Mary's Ward.

(2) The results of bacteriological examinations of both the raw and treated water are given in the table appended. During the year 19 samples were taken for bacteriological examination and 8 samples for chemical examination. With the exception of Hague Bar, the results of the bacteriological examinations have been better than the previous years and show that the filters have been working satisfactorily. All samples taken at the outlets of the filters have been good.

The results of the chemical analysis are also good but show that the filters have no action in diminishing the hardness of the water which remains the same after filtration, as at the source of supply at the Gow Hole Adit. There is still considerable action on lead in the Moorlands supply, more especially in wet periods when there is a good supply of soft upland surface water. The addition of a softening plant in the treatment of the water is very much needed. The treatment of the water by sedimentation and filtration is effective in removing the small amount of iron which appears, both in the results of the analysis and to the naked eye in suspension at the adit.

The still birth rate of 28.76 has continued to decrease as compared with 40.10 (1912) and 55.91(1911).

A comparison of the vital statistics with those of England and Wales is as follows:

<u>Infants</u> <u>per 1000</u>	<u>General</u> <u>Death Rate</u>	<u>Birth Rate</u>	
28	11.8	19.1	England and Wales.....
28.8	12.138	18.233	New Mills.....

SECTION B - GENERAL PROVISIONS OF HEALTH SERVICES FOR THE AREA.

Laboratory facilities are available at the Laboratories of the Tyneside County Council at Tyneside.

IMMUNIZATION ACTIVITIES.

Polio Vaccines.  
One vaccine provided by the Tyneside Hospital at Tyneside.  
Non-Infected Cases and  
Infected Cases.  
Two Infected Vaccines and one not yet maintained by Voluntary Public Subscriptions.

SECTION C - SANITARY DISBURSERS OF THE AREA.

Water.  
(1) The water supply to the area has been on the whole satisfactory as regards quality, during the year, but there has been some movement and even failure on two occasions in the supply in the area of the St. Mary's Ward.  
(2) The results of bacteriological examinations of both the raw and treated water from the river in the area appended. During the year 10 samples were taken for bacteriological examination and 8 samples for chemical examination. With the exception of three for the previous year the bacteriological examinations have been better than the previous year and none of the filters have been working satisfactorily. All samples taken at the outlet of the filters have been good.  
The results of the chemical analysis are also good but show that the filters have no action in eliminating the hardness of the water which remains the same as at filtration, as at the source of supply at the New Mills. There is still considerable iron in the water and this is especially so at periods when there is a good supply of soft water surface water. The addition of a softening plant to the treatment of the water is very much needed. The treatment of the water by chlorination and filtration is effective in removing the germ count of the water supply, both in the results of the analysis and in the actual eye inspection of the water.

(3) Plumbo solvency occurred in the Moorlands supply and therefore was not prevented by the periodic pumping of water from Ballbeard into this supply. It would be advisable for householders on the Moorlands supply to run the water from the pipes in the morning after it has been standing all night, before using it for drinking and cooking purposes. This is a usual precaution in supplies from upland surfaces.

(4) Chlorination of both the Ballbeard and the Lowlighton Filters is carried out at the Filter House but the Moorlands supply, which supplies the Birch Vale area (being less than 1,000 of a population) is not chlorinated.

(5)(a) There are no stand-pipes.

(b) 89% of the dwellinghouses and 89% of the population of the district are supplied from the public water mains direct to each house.

-----  
DRAINAGE AND SEWAGE.

No alterations or extensions have taken place during the year.

-----  
RIVERS AND STREAMS.

Pollution is controlled by the appropriate Authorities.

SWIMMING BATHS AND POOLS.

There are no Swimming Baths in the area.

CLOSET ACCOMMODATION.

Number of closets of each type remaining at the end of the year 1946:-

Water Closets.....	1,351
Waste Water Closets.....	518
Pail Closets.....	36
Privvy-middens.....	21

(3) Fluctuation in the amount of water supply and therefore was not covered by the periodic pumping of water from the main supply. It would be desirable for the Board to consider the possibility of increasing the water supply to the main supply to run the pipes in the morning after it has been examined all night, before using it for drinking and cooking purposes. This is a usual precaution in supplies from spring sources.

(4) Distribution of both the Ballisard and the Lovelockton filters is carried out at the Filter House but the amount of water which supplies the Birch Vale area (being less than 1,000 of a population) is not distributed.

(5)(a) There are no stand-pipes.

(b) 60% of the dwellings and 80% of the population of the district are supplied from the public water mains direct to each house.

WATER AND SEWERAGE.

No alterations or extensions have taken place during the year.

WORKS AND REVENUE.

Revenue is controlled by the appropriate Authorities.

WORKING BATHS AND TOILETS.

There are no working Baths in the area.

TOILET ACCOMMODATION.

Number of closets of each type remaining at the end of the year

Water Closets.....	1,381
Waste Water Closets.....	818
Ball Closets.....	38
Privy-closets.....	81

SANITARY INSPECTOR'S REPORT.

SANITARY INSPECTION OF THE AREA.

The Sanitary Inspector's Report is appended.

- (a) 479 inspections were made of dairies, houses, slaughter-houses, sanitary arrangements, water supplies etc.
- (b) 30 informal Notices were served.
- (c) 402 nuisances were abated with or without Notices.

SCHOOLS.

The Sanitary condition of the Schools was satisfactory.

=====

SECTION D - HOUSING.

This is in abeyance.

ADMINISTRATION OF FACTORIES ACT, 1937.

Various inspections have been made during the year.

=====

SECTION E - INSPECTION AND SUPERVISION OF FOOD.

MILK.

23 samples of milk sent for bacteriological examination for the presence of tubercle bacilli were all negative.

MEAT.

The Meat Inspector reports as follows:-

During the year, the following carcasses were killed in the Slaughterhouse at New Mills.

	<u>Cattle including Cows:</u>	<u>Calves:</u>	<u>Sheep and Lambs:</u>	<u>Pigs:</u>
Number killed.....	1440	1293	2638	16
Number inspected.....	1440	1293	2638	16
<u>TUBERCULOSIS:</u>				
Whole carcasses condemned.....	40			
Carcasses of which some part or organ was condemned.....	292			
Percentage of the number inspected infected with Tuberculosis.....	23.06			

SANITARY INSPECTOR'S REPORT.

SANITARY INSPECTION OF MILK AREA.

The Sanitary Inspector's Report is appended.

(a) 478 inspections were made of dairies, houses, slaughter-houses, sanitary arrangements, water supplies etc.

(b) 30 Informal Notices were served.

(c) 402 dairies were visited with or without Notices.

SCHOOLS.

The sanitary condition of the Schools was satisfactory.

.....

SECTION D - INSURING.

This is in abeyance.

ADMINISTRATION OF MATRICK ACT, 1937.

Various inspections have been made during the year.

.....

SECTION E - INSPECTION AND SUPERVISION OF FOOD.

MILK.

83 samples of milk sent for bacteriological examination for the presence of tubercle bacilli were all negative.

MEAT.

The Meat Inspector reports as follows:-

During the year, the following carcasses were killed in the Slaughterhouse at New Mills.

	<u>Cattle</u> <u>including</u> <u>Goats</u>	<u>Calves</u>	<u>Sheep</u> <u>and</u> <u>Lambs</u>	<u>Pigs</u>
under killed.....	140	120	200	10
under inspected.....	140	120	200	10
<u>TOTAL:</u>	280	240	400	20
percentage of the number inspected included with Tuberculosis.....	22.00			

This report only covers the inspections made by Mr. Hall and would constitute about half the total killings for twelve months. The other part was inspected on behalf of Chapel-en-le-Frith and Buxton by Mr. Howe, M.R.C.V.S. of Buxton.

The slaughterhouse is the central slaughterhouse for the Rural District of Chapel-en-le-Frith, the Urban Districts of Whaley Bridge and New Mills and the Borough of Glossop.

-----

OTHER FOODS.

3 cwts. 7 lbs. of various foods were condemned by the Sanitary Inspector. The slaughterhouses, bakehouses etc. were duly inspected.

=====

SECTION F - PREVALENCE OF, AND CONTROL OVER, INFECTIOUS AND OTHER DISEASES.

The numbers of notifiable infectious diseases reported during the year have not been exceptional. The number of measles cases notified was very small, namely 4 as compared with 66 in 1945. Only one case of Diphtheria was notified and this was in a child who had been immunised 9 years before. In connection with this, it should be pointed out that it is now considered advisable that all children immunised in their first or second year, should have reinforcing doses at about the ages of 5 and 10.

DIPHTHERIA IMMUNISATION.

During the year 1946 a total of 87 children was immunised comprising 70 children under 5 years of age and 17 children of the ages 5 to 14. 13 children who had been immunised during previous years received reinforcing doses. Of the present child population of New Mills at the end of 1946 approximately 1,600 children, 870 children are immunised.

From these figures it is apparent that there are more than 50% of the children immunised. It is again necessary to emphasise that all children who have attained the age of one year, should be protected by immunisation and efforts are being made by personal contact to attain this. Birthday cards, as reminders to the parents are being sent to all children as they reach the age of one year. Parents are also informed that this service is provided, free of cost by the Council and is carried out either at the High Lee Hall Clinic on the second Tuesday of every month, or by their own medical attendant if they wish.

This report only covers the inspections made by Mr. Hall and would  
comprise about half the total findings for twelve months. The other  
part was inspected on behalf of Chapel-in-Whitby and Buxton by Mr.  
Lowe, M.B.O.V.S. of Buxton.

The neighbourhood is the central neighbourhood for the Rural  
District of Chapel-in-Whitby, the Urban District of Wharfedale and  
New Mills and the Borough of Giggleswick.

OTHER FOODS

3 cwt. of various foods were examined by the Sanitary  
Inspector. The neighbourhood, bakeries etc. were duly inspected.

SECTION 2 - PREVENTION OF AND CONTROL OVER INFECTIOUS AND  
OTHER DISEASES

The number of notifiable infectious diseases reported during the  
year have not been exceptional. The number of cases notified  
was very small, namely 4 as compared with 22 in 1925. Only one case of  
Diphtheria was notified and this was in a child who had been immunised  
6 years before. In connection with this, it should be pointed out that  
it is now considered advisable that all children immunised in their  
first or second year, should have reinforced doses at about the ages of  
5 and 10.

DEPARTMENT OF IMMUNISATION

During the year 1926 a total of 67 children was immunised comprising  
50 children under 5 years of age and 17 children of the ages 5 to 14.  
13 children who had been immunised during previous years received  
reinforcing doses. Of the present child population of New Mills of the  
order of 1926 approximately 1,500 children, 870 children are immunised.

From these figures it is apparent that there are more than 50% of  
the children immunised. It is quite necessary to emphasize that all  
children who have obtained the age of one year, should be protected by  
immunisation and efforts are being made by personal contact to attain  
this. Birthday cards, as reminders to the parents are being sent to  
all children as they reach the age of one year. Parents are also  
informed that this service is provided, free of cost by the Council and  
is carried out either at the High Lee Hall Clinic on the second Tuesday  
of every month, or by their own medical attendant if they wish.
