1906.

URBAN DISTRICT OF NEWMARKET, SUFFOLK.

-----oOo-----

ANNUAL REPORT OF THE MEDICAL OFFICER OF HEALTH ON THE
HEALTH AND SANITARY CONDITION OF THE URBAN DISTRICT OF
NEWMARKET, SUFFOLK, DURING THE TWELVE MONTHS ENDING 31st.
DECEMBER 1906.

Population of Urban District according to Census 1901
was 10,686.

Area.- 5640 Acres. Rateable Value.- £78,595.

To
The Chairman and Members of the
Newmarket Urban District Council.

Gentlemen,

I beg to hand you my Report on the Sanitary
Condition of the Town for the year 1906.

I. BIRTHS.- There were in the Newmarket Urban District
247 births registered, 142 being males and 105 females; this
gives a birth rate of 21.48 per thousand. In 1905 the birth
rate was 22 ; in 1904, 24.6 ; and in 1903, 26.76. Since 1903
the birth rate has shown a steady decrease.

II.- DEATHS.- The number of deaths from all causes during
the year amount to 156. Of this number 38 occurred
among people not belonging to the district ; this leaves a
total of 118 which is equivalent to a death rate of 10.2 per
thousand. In 1905 it was 8.9 per thousand ; in 1904 the death
rate was 15.06, and in 1903, 11.5.

THE PRINCIPAL ZYMOTIC DISEASES were responsible for ten deaths - one from Measles, three from Whooping Cough, two from Typhoid Fever, three from Diarrhoea and one from Puerperal Fever.

Zymotic Deaths.	Small Pox.	Scarlet Fever.	Diphtheria.	Group.	Typhoid Fever.	Measles	Whooping Cough.	Diarrhoea.	Influenza.	Puerperal Fever.
1897	0	0	0	0	0	0	0	6	0	0
1898	0	0	0	0	0	9	0	6	0	0
1899	0	0	2	0	0	0	1	4	0	0
1900	0	0	0	0	2	0	2	1	0	0
1901	0	1	0	0	1	0	3	16	0	0
1902	0	1	1	0	1	7	0	4	0	0
1903	0	3	1	0	0	0	1	3	0	0
1904	0	1	3	0	1	0	6	12	2	1
1905	0	0	3	2	0	0	0	6	1	2
1906	0	0	0	0	2	1	3	3	0	1

There were 18 deaths from Phthisis giving a death rate of 1.5 per thousand. In 1905 there were 15 deaths and in 1904, 20. Other tubercular diseases accounted for 6 deaths. Seven deaths were due to Cancer - last year these were 8.

III. INFECTIOUS DISEASES NOTIFICATION ACT.- 20 cases were notified during the year as against 44 in 1905 ; 85 in 1904, and 135 in 1903, viz:- Diphtheria 4, Erysipelas 2, Scarlet Fever 3, Typhoid Fever 9, and Puerperal Fever 2.

Cases Notified.	Small Pox.	Scarlet Fever.	Diphtheria.	Membranous Group.	Typhoid Fever.	Puerperal Fever.	Erysipelas.	Chicken Pox.
1897	0	12	4	0	1	1	5	0
1898	0	16	2	0	3	0	4	0
1899	0	10	6	0	4	0	5	0
1900	0	7	0	0	11	0	3	0
1901	0	10	0	0	6	0	1	0
1902	0	50	4	0	1	0	6	0
1903	3	85	6	0	7	0	5	29
1904	0	65	5	0	4	1	1	8
1905	0	21	11	1	2	5	4	0
1906	0	3	4	0	9	2	2	0

SCARLET FEVER.- Of the three cases two occurred in one house, one case being removed to the Infectious Hospital, the second case could not be removed owing to want of space. The third case was removed to the Hospital. One case occurred in April, one in July, and one in August. The case treated at home was well isolated.

DIPHTHERIA.- The four cases which were notified all occurred in Exning Ward, one case being an inmate of the Infectious Hospital. Two

cases were treated at home and one was removed to Isolation Hospital.

ENTERIC FEVER.- Nine cases were notified - one in April, three in May, one in June, two in July, one in October, and one in December. Attempts were made to trace the source of the infection, the well water in three cases being analysed and found pure. One case was thought to be connected with sewage contamination and two cases suggested infection by ice cream. In each case the sanitary tins for dejecta and disinfectants were provided, the tins being removed each morning and the contents burnt in the Council's Destructor.

PUERPERAL FEVER.- Two cases were notified with one death. In each case the bedding and clothing were destroyed and rooms thoroughly disinfected. The nurses attending the cases were prohibited from attending maternity cases until their clothing &c. had been disinfected. Five cases were notified last year with ^{two} ~~one~~ deaths.

DIARRHOEA.- Three cases were notified, all being under one year of age.

BAKEHOUSES & SLAUGHTERHOUSES.- These have been regularly visited. One underground bakehouse exists in Newmarket, but it is kept clean and well ventilated, therefore the Council has been advised to grant a renewal of the certificate for a further twelve months. The slaughterhouses were generally found to be in a good sanitary condition, limewashing and cleansing has been carried out at frequent intervals according to instructions.

PHYSICAL FEATURES & GENERAL CHARACTER OF DISTRICT.- The Urban District is, at its lowest level, viz :- at Exning, about 50 feet above sea level ; the lowest point of the town proper, viz:- at the Post Office, High Street, is 90 feet above sea level, its highest point being about 120 feet. The character of the sub-soil of the town, generally, is chalk and is wholly

[Faint, illegible text visible through the paper, likely bleed-through from the reverse side. The text appears to be organized into several paragraphs.]

residential. The surrounding country is open and flat.

HOUSE ACCOMMODATION.- The working classes mainly consist of stablemen and are housed in brick cottages of 5 to 7 rooms costing from £150 to £200 to erect and commanding a rental of six to seven shillings a week ; these are now built under Bye-laws similar to those of the Model Bye-laws of the Local Government Board. The older part of the town, known as the "Rookery", consists of chalk-flint houses (back to back) lath and plaster, and brick ; these were erected prior to the formation of the old Local Board of Health and consequently little or no provision was made for open space round the buildings.

REFUSE DESTROYER.- House refuse is collected weekly in the district by the Council's carts, the total number of loads destroyed during the year being 2,339 of house refuse and 174 loads of trade, shop, and from old refuse heaps, - total 2,513 loads.

The Steam Disinfector has been constantly used for disinfecting articles of bedding, clothing, &c., from houses where infectious disease has taken place (chiefly Scarlet Fever) with very good results.

WATER SUPPLY.- The water supply is derived from deep wells sunk in the chalk and is at present in the hands of a private company ; it is a high pressure supply. There are also a few private wells, but these are condemned when pollution is detected.

SEWERAGE & SEWAGE DISPOSAL.- The Main Sewerage and Sewage Disposal Scheme is completed; the sewage is treated first in sedimentation tanks and subsequently in Bacteria Beds - coarse and fine - the effluent finally discharging over land, the result giving a high degree of purification as shewn by analysis. At Exning, only a few house drains remain to be connected to the public sewers ; these are undertaken and the old privies are abolished from time to time as circumstances permit.

COWSHEDS.- These have been visited at various times. In one only, some overcrowding existed and this was rectified. On the whole the cows were well kept and clean; the sheds are whitewashed once or twice yearly.

FACTORIES & WORKSHOP ACTS.- Among these the Dairies, Ice cream and Sweet Shops, Bakehouses and other food purveyory shops, have been visited and the sanitary condition investigated & found good.

A list of outworkers was asked for from the makers of wearing apparel, and from the replies received it was found that the work of these shops is done on the premises, no out-work being given with the exception of one or two odd jobs at very busy times. Various Laundries have been visited, no alteration being found necessary.

RAINFALL.- During the year 23.23 inches of rainfall has been recorded at the Sewage Works, as under :-

January.	2.91	July.	1.02
February.	1.96	August.	1.06
March.	1.74	September.	.73
April.	.71	October.	3.02
May.	1.42	November.	3.56
June.	3.32	December.	1.78
		Total.	<u>23.23</u>

I have the honour to be

Your obedient Servant,

(Signed) JOHN H. MAUND.

Medical Officer of Health.

Newmarket,

31st January 1907.
