#### BOROUGH OF NUNEATON

Health Department, Council House, Nuneaton. 19th May, 1949.

#### To the Chairman and Members of the Health Committee, Nuneaton

Mr. Chairman, Lady and Gentlemen,

I have the honour of submitting my Annual Statistical Report on the health conditions of the Borough for the year, 1948.

The outstanding event of the year, which affected the organisation of the Health Department, was the coming into force of the National Health Service Act, 1946, on 5th July, 1948. This meant that many changes had to take place, amongst them being the transference to the Warwickshire County Council of the Maternity and Child Welfare Services, which have been under your direct administration for many years.

The County Council has divided the County into seven Health Areas, Nuneaton being the headquarters of the North Eastern Division, and comprises the Borough of Nuneaton, the Urban District of Bedworth and Atherstone. The total population of this area is approximately 100,250.

The bringing in of such a gigantic scheme as envisaged by the National Health Service Act is bound to take a considerable time before one can say that it is working quite smoothly in all aspects. It is my opinion that eventually the scheme will be of benefit to the population.

Part 3 of the Act, which deals with the Local Health Authority, is the only section of the Act with which the Area Office has to directly concern itself, although it will have to be linked up with other sections relating to hospitals, practitioner services, etc., before the Health Service Scheme is being administered to the best advantage.

The bringing into force of this area administration half way through the year caused no alteration in the running of our existing clinics, or the benefits afforded to the people of the Borough.

The Act gave a certain advantage to the Borough in that we obtained the services of additional health visiting staff. As you are aware, the position as regards health visiting staff has been very bad for some years, and, although we are definitely still understaffed, one can say that in this respect we are slightly better off under the new regime than we were prior to the 5th July, 1948. The new area organisation has given considerable powers of delegation to the Local Area Sub-Committee to which representatives are appointed by the Borough Council.

When the general scheme of area administration had been decided upon by the County Council, in conjunction with the Local Councils one had a certain amount of misgiving as to the taking over of the enlarged area.

I would like to record that the smooth working of the scheme was due largely to the great co-operation and assistance I received from your Town Clerk, Mr. T. Oldroyd, and the Clerk to the County Council, including his staff, for which help and guidance I am very grateful.

The day-to-day administration, for which this Area Office is now responsible, will be quite satisfactory, I think, in future years. This has been made possible by the good will and understanding I have received from the County Medical Officer of Health and his staff, who have at all times been most helpful on all matters appertaining to the health organisation for this area.

On 5th July, 1948, Bramcote Isolation Hospital was transferred to the Regional Hospital Board. During the year under review this hospital continued to be used for the treatment of infectious diseases but it has been decided by the Regional Hospital Board to equip the hospital, in the near future, for the treatment of children. When the change over takes place all cases of infectious disease occurring in the Borough and requiring hospital treatment, will be admitted to the Coventry Isolation Hospital. The exact date of change of user has not yet been definitely settled.

The vital statistics for the Borough showed no outstanding increase or decrease compared with the previous year.

The infantile mortality rate for 1948 is 48.8 as against 48.0 for the year 1947. Of the 53 deaths recorded, 29 died under the age of one week, and, with the exception of one, the deaths were due to congenital defects, prematurity, and birth injuries.

No deaths were recorded from scarlet fever.

Unfortunately, there were three deaths from diphtheria out of a total of 28 notified cases. In each case the child was not immunised. We are still getting the parent who is adverse to immunisation, and some taking the attitude that "some time will do."

Of the three deaths recorded, in two cases immunisation had been refused and in one it had been put off until it was too late.

The Corporation is contemplating obtaining water by bulk supply from the City of Birmingham. The proposed scheme is as follows—the water to be supplied is to be obtained from the Whitacre Waterworks of the Birmingham Corporation and will be derived mainly from the River Blythe. It will be treated by filtration, etc., before being pumped to a new reservoir to be constructed on the site of Oldbury Hall. A branch pipe from the principal pumping main will be laid for Church End and thence through Ansley village to supply the Stockingford, Galley Common areas of Nuneaton and the districts of Bedworth, Arley, and Astley. From Oldbury a main will be laid to Tuttle Hill Reservoir, and from this, connections will be made to supply the Camp Hill area. The additional water coming to Tuttle Hill Reservoir will enable supplies to be afforded to villages in the Market Bosworth Rural District and new supplies to Burton Hastings, Wolvey, and Copston Magna in the Rugby Rural District. It is expected that the undertaking's existing well supplies, including Whittleford, will be needed as reserves only.

The housing position in the Borough still remains far from satisfactory. During the year under review, however, progress was made, 296 new houses being erected, but at the present rate of building it will take a considerable time before the needs of the people are satisfied. The applications for housing accommodation were reviewed by the Housing Department and the total number of genuine applications now stands at approx. 2,077. As in the past, the Health Department maintained the closest co-operation with the Housing Department who have always given sympathetic consideration to cases affecting the health of the applicants.

The year, 1948, necessitated a great deal of extra work by the clerical staff of the Health Department caused by the transfer of a certain amount of work to the County Council and the taking over of additional work in connection with the new Health Area. I would like to pay a very sincere tribute to all members of my staff who have worked with great loyalty under very trying conditions. The task which has been undertaken could not have been carried out without their good will, and for this I thank them.

To Mr. F. W. Mortimer and the Assistant Sanitary Inspectors I would like to express my thanks for their help and co-operation in the work of the Health Department.

The functions of the Health Committee at the beginning of 1948, were obviously very different from those at the close of the year. I would like to thank the Chairman and Members of the Committee for their help and consideration in all matters dealing with the Public Health of the town and for the way in which they dealt with the transfer of their powers to the County Council.

I am,

Mr. Chairman, Lady and Gentlemen,

Your obedient servant,

P. G. HORSBURGH.

Medical Officer of Health.

#### FOOD POISONING

One case of bacterial food poisoning, caused by an organism of the Salmonella group, was reported during the year. Upon inquiries it was ascertained the patient had been away on holiday and no satisfactory origin of the cause was forthcoming.

The Borough came within the sphere of enquiries into two paratyphoid outbreaks occurring within the neighbouring county of Leicestershire. In the first instance an employee of a Leicester firm of ice cream manufacturers was taken ill whilst retailing ice cream in this Borough. This man was subsequently found positive for paratyphoid. The local medical practitioners were at once warned of the occurrence. Fortunately no case developed within the Borough.

In the second instance synthetic cream sent into Leicestershire from the Borough, was alleged to have been implicated in a case of paratyphoid. Samples of this cream and other commodities used were obtained from the firm concerned and examined pathologically without revealing the presence of the causative agent. In a further effort to trace the origin of the contamination all the personnel engaged in the business were subjected to blood, fæces and urine tests over an extended period, with negative results.

#### ANTE-NATAL CLINICS

The table given below shows the number of cases seen by F. Selby Tait, Esq., M.B., Ch.B., at the Ante-Natal Clinics:

## FOOD AND DRUGS ACT, 1938

One hundred and fifteen samples were obtained under the above Act. These were as follows:

Milk				33
Ice Cream Powder				23
Sausage				22
Baking Powder				2
Cake Mixtures				2
Pudding Mixtures				1
Coffee				3
Lemonade Crystals				2
White Pepper				2
Dried Thyme				3
Sweetening Tablets				2
Barley Flour				1
Dehydrated Sliced C				2
Essence of Rennet				2
Ground Ginger				2
Ground Cinnamon				1
Milk Powder				1
Salmon Paste				1
Crab Paste				1
Meat Paste			2.2.2	2
Norwegian Spread				1
Tomato Paste				1
Sauce				5
Flavouring Essences				3
Orange Crush				1
Grange Grussi	•••	•••		1
				115
				115

Of these samples one hundred and ten were informal and five formal.

Analyses yielded the following r	esults:	
Unsatisfactory 23	Satisfactory	92
The unsatisfactory samples were	e:	
Sample No. 564, (Informal). 34% of meat.	Pork Sausage.	Deficient of
Sample No. 566, (Informal). 72% of meat.	Beef sausage.	Deficient of
Sample No. 567, (Formal). 67.8% of meat.	Beef sausage.	Deficient of
Sample No. 568, (Formal). 35.6% of meat.	Beef sausage.	Deficient of

- Sample No. 609, (Informal). Pork sausage. Deficient of 28% of meat.
- Sample No. 669, (Informal). Tomato paste. Contained 55 parts per million of Copper.

The vendor of Samples Nos. 571, 580-588, 590-596, was advised of their condition, and the product was withheld and subsequently destroyed.

Magisterial proceedings were instituted against the vendors of Samples Nos. 567, 568, and resulted in a fine of £10 and costs in the first instance and £5 and costs in the second.

#### PUBLIC CLEANSING

The approximate weight of refuse collected during the year was 12,210 tons, 19 cwts.

The weight dealt with by the destructor plant was 10,399 tons, 17 cwt., which was an increase of 1,259 tons, 12 cwts. on the previous year.

The plant for the disposal of offals, condemned meat, fish, etc., for the production of fertilizers and feeding stuffs, etc., has been working satisfactorily and has produced the following during the year.

			Tons	cwts.	qrs.
No. 1 Fertilizer		 	 22	10	0
Bone Meal		 	 1	14	2
Meat Meal		 	 9	2	2
Dried Blood		 	 2	6	1

School Medical Department, Council House, Nuneaton. 5th May, 1949.

To The Chairman and Members of the Committee for Education, Nuneaton

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in submitting my Annual Report on the work of the School Medical Service for the year 1948.

The year under review showed certain alterations in the general administration of this service, which has, for many years, dealt with the health of the school children in the Borough.

The National Health Service Act, 1946, came into operation on the 5th July, 1948, and under the Act we took over the School Health Services of the Atherstone and Bedworth districts. This involved the school medical records of 7,605 children being transferred by the Warwickshire County Council to the Local Area Office and the re-organisation of the existing School Medical Department here. It also meant that additional clerical staff had to be appointed in order to cope with the increased number of children who had to be dealt with at school medical inspections, minor ailment clinics, eye clinics, etc. This area office is now dealing with approximately 15,678 children for school medical purposes. To simplify the keeping of records we changed over some of our previous methods and brought them into line with those kept by the County Council. I mention this re-organisation in order that you will appreciate the fact that the staff of the School Medical Department not only deal with the services in the Borough, of which you are actually responsible, but also carry out the work in connection with the two additional districts.

The arrangements for the running of the School Clinics and those for medical inspections have remained unaltered.

I am happy to report that the general health of the school children in Nuneaton was again found to be satisfactory.

During the year 1,537 children were medically inspected at the schools in the Borough, and these were classified into three groups, namely, A., B. and C. according to the state of the child's health at the time of the examination. (A=above average; B=normal; C=below normal.) The normal group gave a percentage of 95.9 and the sub-normal 3.25. The parents of the children in the sub-normal group are advised regarding appropriate treatment, whether it be medical or surgical and the children are kept under observation until we are satisfied that the treatment is being carried out.

The children attending schools in the Borough were regularly inspected for uncleanliness and verminous conditions, and during the year each school was visited on an average of four times. The total number of children inspected was 23,795 and of this number 575 were found to show signs of vermin. Many of these children were, however, very slightly affected and were readily cleansed. In the past it was quite a common occurrence to find all children in the same family in a verminous condition, now, I am glad to say, this is quite a rarity. Over a number of years the School Nurses have done a very great service in reducing uncleanliness among the school population. It is interesting to note that in 1919, after the first World War, the number of children inspected was 1,247 and the number recorded as unclean was 77, which gives a percentage of 6.1 as against 2.4 per cent. for 1948.

As you are aware, we have a special clinic for the purpose of dealing with ear, nose and throat infections, the Specialist being Mr. Ogilvy Reid, F.R.C.S., who attends on one morning a week. This Consultative Clinic deals with children living in the Atherstone and Bedworth districts, in addition to the Borough children, and although the clinic is run very efficiently, we cannot cope with the amount of work which is required to be During the year Mr. Reid examined 600 cases but carried out. we still had the names of 268 children on our waiting list at the In view of the fact that the maximum number end of the year. of patients per session is fifteen, it means that the waiting time is four months from the date on which the case was first referred. In a case of emergency we do, of course, call up the patient at the earliest opportunity. Cases requiring orperative treatment are referred to the Manor Hospital, which is now under the control of the Regional Hospital Board. At the end of the year under review the number of children who received operative treatment was 160, still leaving 326 cases on the list waiting operation. This unsatisfactory state of affairs has been reported to the County Authority and efforts have been made to rectify the position, but no solution under the present circumstances can be foreseen.

The Orthopædic Clinic continues to do very fine work in the prevention of crippling defects in the pre-school and school child. This clinic is linked up with St. Gerard's Hospital, Coleshill, and three members of the Nursing Staff attend the Nuneaton Clinic on three half days a week to carry out remedial exercises, electrical treatment, etc. Before the war a Surgeon visited the clinic once a month to see new and re-examine old During the war years he was unable to continue this, cases. owing to pressure of work, and attended once every three months. Unfortunately, the attendance of a Surgeon once a month has not been re-established, but it is to be hoped that the Regional Hospital Board, who is the responsible authority for Specialist Services in the area will be able to arrange for the Surgeon to again visit this important clinic each month.

The Eye Clinic in the Borough, prior to the new Act coming into force, was held twice, and when necessary three times, a week in order to keep up-to-date with the cases referred for examination. Owing to the increased amount of work Ophthalmic Surgeons are required to carry out under the National Health Service it has become impossible for our Ophthalmic Specialist to attend our clinic so frequently. In view of this we concentrated on the calling up of new cases, and I am pleased to say we had very few outstanding new cases on our list at the end of the year. This meant, however, that we had neglected the cases for re-examination, and in this respect we were very much behind-hand. It is hoped that we shall be able to re-establish the additional session per week in the near future.

My thanks are due to you, Mr. Chairman, and to the members of your Committee, for the sympathetic and helpful way in which you have dealt with all matters appertaining to the health of the school child during the year under review. This interest shown by the Committee makes for a contented and hard working staff, as they know they have the backing of a responsible committee in the work which they are doing, being in this case an endeavour to maintain and improve the health of the school children in our town.

My personal thanks are due to all members of the staff for the loyal and willing way they have carried out their duties during the year.

I am,

Mr. Chairman, Ladies and Gentlemen, Your obedient servant,

> P. G. HORSBURGH, Area Medical Officer.

## REPORT BY DR. SYLVIA REID ON THE WORK AT THE CHILD GUIDANCE, RIVERSLEY PARK, CLINIC

During the year 1948 our total attendances at this clinic numbered 315. These children present a good variety of emotional disorder, e.g., enuretics, behaviour difficulties (including delinquency), various nervous and mental disturbances, and M.D. or very dull and backward children.

The chief method of treatment is individual playtherapy by the Clinic Psychologist, Miss E. A. Eattell and by the Psychiatrist. The general playroom is used for free play methods and it is found that a number of the enuretics respond very well to free play with sand and water, and here it might be said that it would be of great assistance if further facilities were available for this type of play.

It is found that the elder group of children is not so suitable for this method of treatment and our greatest difficulty is to give them the adequate individual time which they require.

One of the most important points of the Child Guidance Clinic is the interviewing of parents. This is done by the Clinic Social Worker who makes home visits (53 visits were made during the year 1948), and in addition the mothers are frequently seen at Riversley Park, when the child's difficulties are discussed and advice given.

Occasionally it is found that the mother herself is nervous and strained and in such instances the mother is referred to the Psychiatric Clinic at the Manor Hospital for further guidance.

The impression is gained that the clinic is being used more freely by local doctors as well as schools.

I would again like to pay tribute to the kindly co-operation which we receive from the staff of Riversley Park Clinic.

Record of cases treated at the Child Guidance Clinic:

Continued treatment from 1947	18
Bedwetting	7
Behaviour disorders	12
Nervous and mental disorders	9
Mental defectives	
Number discharged as recovered	
Number discharged as improved
