All the Members of the Committee.

### To the Mayor, Aldermen, and Councillors of the Oldham Borough Council.

#### GENTLEMEN,

I beg to submit my Annual Report for your consideration. It contains a summary of the work of the Health Department during the year 1913, together with statistics relating to the incidence of disease, and the mortality from various causes.

The Birth Rate, Death Rate, and Infantile Mortality Rate all show a slight increase above the rates for the previous year. The high Death Rate is largely due to Bronchitis, Heart Disease, and Pneumonia.

It is much to be regretted that a complete scheme for dealing with Tuberculosis has not yet been established in the Borough, as, though a considerable amount of work has been done under the temporary arrangements, the cases cannot at present be sought out and properly dealt with.

The great majority of the patients who have been reported as suffering from this disease are, when they come under notice, in a more or less advanced stage.

There is every indication that proper measures will in a few years lead to a considerable reduction in the mortality from this cause. A list of Midwives practising in the Borough is included in the Report.

A Report of the Medical Inspection of the School Children, and the measures taken to ameliorate the various defective conditions found has already been presented to you.

In conclusion, I beg to tender my thanks to the members of the Health Committee for their general support and confidence, and to my staff for their willing assistance and co-operation.

I have the honour to remain,

Your obedient Servant,

JAMES B. WILKINSON,

MEDICAL OFFICER OF HEALTH.

## Annual Report.

In last year's Report the General Regulations respecting the Annual Report of the Medical Officer of Health were enumerated in detail, and it is unnecessary to recapitulate them.

The Report has been compiled according to the arrangement suggested by the Local Government Board in their Memorandum,

Several of the items may locally seem superfluous.

# Natural and Social Conditions of the District.

— A. —

The town of Oldham is mainly situated on the southwestern slopes of offshoots from the Yorkshire range of hills, the height of the surface varying from about 1,200 feet above the sea level at the highest point, to 360 feet in the lower part of the town. The Old Market Place (the centre of the town) is 696 feet above the sea level.

The subsoil is chiefly rock, or shale overlying the coal measures, and in the lower part of the town there are areas of clay with occasional sand pockets.

The country to the west and south-west is open to the sea, which is about 50 or 60 miles distant, and the prevailing wind is from the south-west. The situation of the town is thus naturally an exposed one, with a heavy rainfall.

The consequent damp atmosphere, when combined with the smoke and dust of a large manufacturing town, is certainly not beneficial to those subject to lung affections, and the cold and damp have a tendency to induce rheumatic affections, and the high death-rates from Bronchial and Heart Diseases are largely attributable to these conditions.

On the other hand the damp atmosphere is most beneficial to the staple trade of the town, viz., that of cotton spinning, and conduces to its prosperity. The population of the town is chiefly industrial, and the purely residential class is gradually decreasing. The main industry of the town is cotton spinning. There are also large engineering works, chiefly for cotton machinery, weaving mills, boiler works, gas meter works, and coal mines, &c.

Generally speaking, those industrially employed are in a prosperous condition; the various industries of the town finding employment for all members of a family, after leaving school, except those domestically engaged, and wages generally are high. The total income in many families is in consequence large, extending up to four, five, six, or even more pounds per week when several members of a family are in full work. A considerable proportion of the industrial class own their own houses, purchased through the Co-operative Stores or the Building Societies.

The manufacturing trades have generally during the past year been fairly busy, while building and dependant industries have been more prosperous than in the previous year.

#### HOSPITALS.

The Guardians have large Hospital Wards, and an excellent Operating Theatre, &c.

The Oldham Royal Infirmary is a large Institution with a staff of 15 medical men, in addition to the three house surgeons.

It is thoroughly equipped, and during the year 1,494 In-Patients and 7,388 Out-Patients were treated, making a total of 8,882 for the year.

# Sanitary Circumstances of the District.

– B. –

#### WATER SUPPLY.

The water supply is from upland gathering grounds, either owned or under the control of the Corporation. It is of great purity, and very soft, but in the upper portions of the gathering area, there is a considerable amount of peaty soil, and water from this area contains acid, and has a tendency to dissolve the lead in the service pipes. To counteract this, the water is collected from the land as rapidly as possible, and before being distributed is treated with carbonate of lime to neutralise the acid.

This treatment is apparently effectual, as no complaints of lead poisoning have been received for some years.

With the exception of storage to allow sedimentation and subsequent decantation no other treatment is necessary.

An additional supply has been obtained by utilising the water pumped from a disused portion of a colliery not far distant from the present reservoirs. The amount obtained at present from this source averages about three-quarters of a million gallons per day, and as other workings become disused it is expected that this amount will be considerably increased. The average daily consumption of water in the supply area in the past three years was as follows :—

| 1911 | - | - | - | - | - | 6,511,025 | gallons. |
|------|---|---|---|---|---|-----------|----------|
| 1912 | - | - | - | - | - | 5,884,059 | ,,       |
| 1913 | - | - | - | - | - | 6,250,347 | ,,       |

The daily quantity of compensation water required was 2,605,216 gallons during the year.

The estimated population which is supplied is about 234,444 people, and the average consumption per day slightly exceeds  $26\frac{1}{2}$  gallons per head.

The total storage capacity of all the reservoirs is 1,976,000,000 gallons, of which 1,364,000,000 gallons are available for the domestic supply.

Work is proceeding for increasing the Domestic supply by the mechanical filtration of water from reservoirs, now used for compensation purposes only.

In proportion to the population supplied, Oldham has a large storage capacity but limited gathering grounds. As a consequence one dry year does not limit the supply, while a succession of dry seasons would have a very serious effect.

At the close of the year the Reservoirs contained 1,295,960,000 gallons, or 18 weeks' supply, compared with 1,962,560,000 gallons, and  $27\frac{1}{4}$  weeks' supply at the close of the year 1912.

#### RIVERS AND STREAMS.

There is no river passing through the town, though the Medlock and the Beal have both their origin within the town, and practically the whole of the streams have been sewerized, and except in the time of a heavy rainfall the contents are intercepted and conveyed to the Sewage Works for treatment.

#### SEWERAGE AND DRAINAGE.

There is a complete system of sewerage in the town, the greater proportion of which consists of properly constructed sewers and pipe drains. There are, however, a considerable number of stone drains still in existence. These, when the opportunity allows, are gradually being converted to a more satisfactory type. On two sides of the town there are main intercepting sewers, which pick up the sewers and streams, and convey the sewage to the Sewage Works. Except in one small portion of the town, this sewage finds its way by natural gravitation to the works. From this lower portion the sewage is lifted to a higher level by a Shone's Ejector, the air being automatically compressed by the sewage coming from the higher levels. The combined system of drainage is in vogue.

Practically all house drains are efficiently trapped, but the greater proportion of the street grids are untrapped and ventilate at the surface level, and the majority of the rainwater pipes are connected. Where frequent complaints have been received of the smells arising from the untrapped grids, traps have been put in and ventilating shafts added.

#### SEWAGE WORKS.

The system for treating the Oldham Sewage consists of the following arrangement :—

(1) Two Detritus Tanks, with coarse and fine screens, each fitted with revolving rakes, chains, and buckets for removing the detritus deposited in these tanks. These tanks are emptied and all the sediment removed once a week, in addition to the daily partial emptying by the chain and buckets. (2) Three Circular Tanks, on the Dortmund principle, which have a total capacity of about 900,000 gallons. These tanks have not been used lately owing to better results obtained by the Sedimentation Tanks; and the difficulty of dealing with the very liquid sludge from them. All the sewage reaching the Works has either to pass through these tanks or the Sedimentation Tanks before it reaches either the filter beds or the stream.

(3) Twelve Sedimentation Tanks, nine of which are 128 feet long by 36 wide and 6 feet deep, each having a capacity of about 180,000 gallons, or a total capacity of 1,620,000 gallons. The other three tanks are of the same area, but rather deeper, and are used for the reception of storm water, and have a capacity of about 600,000 gallons.

(4) Forty Filters or Bacterial Contact Beds, of an area of 14.56 acres, and having a total capacity when empty of 8,000,000 gallons. The older beds were filled with screened mill ashes, but by far the larger number with Destructor Clinker.

(5) A system of fourteen continuous or sprinkler Filters for Second Contact (Adams Hydraulic Company). Eight of them are filled with Destructor Clinker and Broken Stone, and the six most recently constructed are filled with slag specially prepared to render it more porous. This alteration in filling was not due to the Clinker proving unsatisfactory but in order to comply with the requirements of the River's Board who insisted that the Filters should be at once filled. The latter have only been in use a few months and are not yet in full working order. The four oldest Contact Beds, constructed in 1897, have during the past 18 months been entirely renewed. They have been deepened, enlarged and constructed with concrete sides and bottom and filled with clinker from the destructors. The Rectangular Tanks are worked on the continuous principle and run from 4 to 8 weeks or more before they are emptied for sludging. An alteration made about 3 or 4 years ago to allow the sewage to enter at the deeper end has not been found to be satisfactory and the flow has been reverted to the original method during the past year.

Precipitants are being used on the days and hours when the sewage is at its worst, at other times simple Sedimentation is the method.

The method of using the Contact Filters is as follows : they are filled consecutively, allowed to remain full usually for 3 hours, emptied gradually and remain empty until again required. The beds taking the weaker sewage in the early part of the day are used a second time for the stronger sewage in the afternoon and evening.

The effluent from the Contact Beds when the sewage is strong is, as far as the construction will allow, sent on to the Percolating Filters for second contact, and when the Contact Beds are full the tank effluent is sent on to the Percolating Filters, so that practically all the sewage may be treated by filtration before being discharged into the brook.

The following figures give the average results during the year in terms of Oxygen consumed.

Sewage ... 5.15 grains of Oxygen per gall. Tank Effluent ... 3.90

Filtrate (contact filters) 1.54

,,

. ,,

Percentage purification from Tank effluent to filtrate 60.5.

" Sewage

70.0.

,,

,,

#### PERCOLATING FILTERS.

Area of Filters, 12,886 square yards (not including B and C Percolating Filter) and nine feet deep.

The more recently constructed have not been in use long enough to get the full results, and as these filters are used for, at various times, either tank effluent alone or more frequently a mixture of tank effluent and filter effluent it is not possible to estimate the result of their working. The following is the result of the average daily samples.

Sewage ... ... 4.79 grains per gallon. Tank Effluent ... 3.04 ,, ,, Effluent from Percolating Filters 1.04 ,, ,, Percentage purification 78<sup>1</sup>/<sub>3</sub>.

Sixty-one samples of the filtrate from the Percolating Filters have been incubated for periods of seven days and all have remained good.

The four older beds have now been entirely renewed and several of the others are practically sludged up and require similarly to be dealt with. It cannot be expected that filter beds will work for 14 or 15 years as these have done without either renewal or washing of the medium.

#### SLUDGE.

The disposal of the sludge is the greatest difficulty which has to be met. There is practically no agricultural land in the district on which it can be disposed, and the valley which served for so many years is rapidly being filled. The conversion of the pail closets to the water system has caused an ever increasing quantity of sludge to come down to the works. The method of disposal up to the last year has been by filter pressing after mixing the sludge with lime. The limited number of presses and the liability of the sludge to become very septic, when pressing was difficult, rendered it impossible to keep the tanks in a proper condition, and even when pressed the available means for disposal were both limited and expensive. The sludge, which remains in the tanks after the surface water is drawn off, contains from 5 to 15 per cent. of solids and it is estimated that somewhere about 40,000 tons of this wet sludge has to be dealt with It is dealt with by three methods. (1) The annually. thinner sludge is pumped into lagoons or tanks where it is allowed to settle and the surface water is drawn off from time to time until the sludge becomes solid enough to tip. (2) A certain proportion still has to be pressed in the filter presses. (3) The more solid portion is dealt with by a patent process designed by Dr. Grossmann, of Manchester. This consists in settling the sludge in specially designed tanks from which the water is drawn off as it separates from the sludge. The sludge, thus concentrated to about 18 to 20 per cent. of solids, is conveyed to the dryers which are heated by furnaces and flues. The greater part of the water is driven off and the dried sludge, which contains a considerable quantity of grease, burns readily under the furnaces when mixed with about a third of its weight of slack coal and can be thus used to heat the dryers.

The plant however is designed to further treat the dried sludge in Retorts through which superheated steam is passed. This steam carries over the grease in the sludge leaving a dry residue, which forms a useful manure. The grease is a valuable product and the sale of the manure and grease will reduce the cost of dealing with the sludge. In addition to this sludge there is a considerable amount of humus deposited in the tanks erected in connection with the Percolating Filters. This material will also have to be disposed of. The average daily flow of sewage in dry weather which has to be dealt with is about 4,000,000 gallons and on wet days, 20 million gallons or more may come to the works.

#### CLOSET ACCOMMODATION.

In the year 1900 an Act of Parliament was obtained empowering the Corporation to undertake the conversion of all the pan closets in the town to the water carriage system.

In that year the number of sanitary pans in the Borough was 23,610, while the total number of water closets was 5,005.

The Corporation, except where insanitary conditions exist, pay the whole cost of conversion. Mainly with a view to saving the water supply, the Committee, undertaking the work of conversion, have adopted the waste water system instead of the more sanitary clean water closet, and though the slop water system is an improvement over the pan system, it does not give the same freedom from obnoxious conditions as the clean water closet.

Practically every other large town has discarded this form of closet as insanitary, and in some places they are being taken out and clean water closets substituted.

In the past year blockages or repairs were required in about 21.2 per cent. of these closets.

Men are also employed to scrape and wash the interior of the pedestals and pipes, which in many instances become coated with excreta.

During the year under review 421 pan closets have been converted to the water closet type. The various types of closets in the town at the close of the years 1912 and 1913 is as follows :—

|                     |      | Dec., 1912 | Dec., 1913 | Increase | D'crease |
|---------------------|------|------------|------------|----------|----------|
| Water Closets       | <br> | 5,720      | 6,178      | 458      | _        |
| Waste Water Closets | <br> | 22,488     | 23,282     | 794      | —        |
| Latrines            | <br> | 2,774      | 2,825      | 51       | _        |
| Pan Closets         | <br> | 4,460      | 4,003      |          | 457      |
| Total               | <br> | 35,442     | 36,288     | 1,303    | 457      |

Net Increase of Water Closets-846.

There are no privy vaults in the town.

The contents of the remaining pans are collected at night by a staff of men employed by the Corporation, and removed to the depôt, and then mixed with shoddy dust and sold as manure, for which there is a great demand, and about 4,788 tons were sold during the year.

Offal from butchers, fishmongers, &c., is collected at frequent intervals, a small charge being made.

About three years ago a Resolution was passed by the Council that, wherever it is possible, each house in the Borough should have separate closet accommodation, and that less than this should be deemed insufficient accommodation. This Resolution is being gradually carried into effect, and during the past year 376 new closets have been built for this reason, making a total of 1,426 additional closets erected since the above instructions were given.

All new houses are required to have a separate closet on the water or waste water system.

#### SCAVENGING.

The removal of ashes and house refuse is undertaken by a Department of the Local Authority and is generally efficiently performed—any notice respecting the removal of refuse being at once attended to.

A local Act of Parliament obtained in 1909, gave the Corporation power to require the demolition of ash-pits and the substitution of ash-cans on paying not less than one half the cost of the alteration, and new ash-pits are not allowed.

Since the above date 5,265 ash-pits have been demolished and 14,040 ash-cans substituted. In the past year 1,765 ash-pits were demolished, and 4,049 galvanised iron ashcans supplied in their place, at a cost to the Corporation in the Financial Year of  $\pounds$ 1,569.

It is to be regretted that the Council have this year reduced the sum to be spent during the year to  $\pounds$ 500. The removal of the ash-pits is, from a health point of view, one, if not the most, important measure taken by the Council during late years. They are the breeding places of flies and other disease carriers, and infantile mortality is very closely associated with the prevalence of these receptacles.

The alteration was first instituted in the most crowded parts of the town, in courts and common yards, and in many of these places a great transformation for the better has been effected.

Mumps Ward is now entirely free of ash-pits, and Coldhurst, St. Mary's and St. Peter's Wards have only 28 left in the three Wards. The paving or otherwise rendering the surfaces of the back yards impervious to pollution and easy to be kept clean is another measure which would naturally assist the sanitation of the Borough.

At the close of the year there were in the Borough 2,837 ash-pits, and 25,959 ash-cans, compared with 4,642 and 21,689 at the close of the year 1912.

The ash-cans are emptied weekly or oftener, and the ash-pits at various intervals as required.

The Ashpit and Ash-can Refuse, when collected, is mostly taken to the destructors and burnt, 23,535 loads being so dealt with and about 6,247 loads of ashes have also been taken to various tips. There are three destructors in the Borough, all of the Horsfall type, The steam generated at each place is utilised for power, and at one also for heating the bath water at the adjoining public baths. The resulting clinker is used for sewage filter beds, for conversion to mortar, for making artificial paving flags, and other purposes. At two of the destructors, crushing and grading machines have been erected, and at one an hydraulic plant, by Messrs. Fielding & Co., of Gloucester, is kept in full work, making paving flags, which are used entirely for paving the footways in the town.

#### SANITARY INSPECTION OF DISTRICT.

Particulars of the amount of work in this direction will be found in Section C and in the Summary of the Inspector's work at the end of the Report.

# Premises and Occupations which can be controlled by Bye-Laws and Regulations.

#### COMMON LODGING HOUSES.

Bye-laws for the control and regulation of these premises are in force, and the houses are supervised by a Special Officer of the Police Force, and are under the control of the Watch Committee. The accommodation is as follows :---

| No. of Registered Lodging Houses - | - | - | 16      |
|------------------------------------|---|---|---------|
| Total accommodation at night       | - | - | 1,264   |
| Number of Persons occupying them-  | - | - | 294,872 |
| Average occupation per night       | - | - | 808     |

All Common Lodging Houses are now annually licensed, and there are four less than in the previous year, the licenses of four of the older lodging houses being refused on account of their insanitary condition.

The largest Lodging House has accommodation for 285 persons, all males.

Eight Lodging Houses have accommodation for females, of which two take only females. These two Lodging Houses have together about 40 beds.

In addition to the Common Lodging Houses, there are two other classes of Houses of a similar nature. (a) Houses let as lodgings which are supposed to be occupied by weekly tenants only; and (b) Furnished Rooms. Bye-laws are in force for the control of these premises, and there is power to compel the owner to register them. The owner is, however, only required to register his house when requested to do so by the local authority. What is necessary in order to have complete control is—1st, the necessity of registration before they can be used for this purpose; and 2nd, the power to refuse registration unless they are in satisfactory order and are kept so.

Arrangements have recently been instituted which will secure the registration of the majority, and their inspection at least monthly.

A Summary of the work carried out in connection with the Houses let as lodgings will be found in the Tables under the Inspector's Report. This Summary gives the Houses registered, the visits paid, and the defects found.

#### CELLAR DWELLINGS.

There are very few of these dwellings in the town, only 19 in all, and six of these are unoccupied. Some of those occupied are allowed to remain so on the understanding that they are not to be let to persons having young children.

#### OFFENSIVE TRADES.

For the size of the town there are comparatively few of these Premises in the Borough, and, with the exception of one or two tripe dressing establishments, a grease works, and a hide depôt, are mostly small places. They are as a rule kept in a fair condition and free from nuisance. During the year 430 visits were paid to these places, and it was only necessary to issue three notices for the removal of various defects, one of which was complied with at the close of the year. The following is a list of these trades in the Borough. Two tripe boiling places have become disused, and there is one new gut-scraping depôt :---

| Tripe Boilers | -    | -   | - | - | - | 13 |
|---------------|------|-----|---|---|---|----|
| Marine Stores | -    | -   | - | - | - | 10 |
| Grease Works  | -    | -   | - | - | - | 6  |
| Gut Scrapers  | -    | -   | - | - | - | 6  |
| Fat Sorters   | -    | -   | - | - | - | 1  |
| Hide and Skin | Depá | òts | - | - | - | 2  |
| Soap Boilers  | -    | -   | - | - | - | 1  |
| Fat Boiler    | -    | -   | - | - | - | 1  |
|               |      |     |   |   |   | —  |
|               |      |     |   |   |   | 40 |

#### SCHOOLS.

The Medical Officer of Health is also Superintendent Schools Medical Officer, and a separate report on the work in connection with the Schools has been prepared, and a copy accompanies this Report.

Besides the Medical Officer of Health, the School Medical Staff consisted of a Lady Assistant Medical Officer, and in the latter part of the year an additional Medical Officer (male) was appointed. There are also three School Nurses.

The work may be briefly summarised as follows :---

- Every School in the Borough has been systematically inspected.
- 2.—The children entering the Schools have been medically examined.

- 3.—The children leaving School have been medically examined.
- 4.—All the children in the five Special Schools (Deaf, Blind, Physical and Mental Defective, and Stammerers) have been examined.
- 5.—The work of the School Clinic, which is open five afternoons a week.
- 6.—The Teachers report weekly, cases of minor Infectious Disease among the scholars, which are followed up by the School Nurse or Health Visitors.

The effort made to free the schools from verminous children has been continued, and it is now only occasionally that children are found who are affected with vermin.

#### FOOD.

#### (a) MILK SUPPLY.

There were 107 Cowsheds and 57 Farm Dairies in the Borough at the close of the year, the same number as in the previous year, one Cowshed having become disused and one new one registered.

These premises are under the supervision of the Food Inspector, and 446 visits have been paid to them; 38 notices have been served for various defects, and 35 of these had been complied with at the close of the year.

There are now only 22 (about 20 per cent.) with an air space of less than 600 cubic feet per head, compared with 37 in the previous year. There has been no outbreak of disease attributable to the milk supply. There is one Depôt in the Borough where the milk is sterilized, cleansed and cooled before it is distributed to the consumers.

During the year 24 new retail milkshops have been registered, and 11 discontinued, making a total of 533 in the Borough. About 175 visits have been paid to them, and only one defect was found which required a notice to be served.

In addition to the visits to these shops, 112 visits have been made to the premises where Ice Cream is being manufactured. No defects were found in connection with them.

#### (b) BAKEHOUSES.

In Table 26 are tabulated the statistics in connection with these premises. The use of 6 has been discontinued during the year, and 6 new ones have been registered, thus leaving the total unchanged. The number on the Register is 379. About 360 visits have been made in connection with these premises, and it was found necessary to serve 13 notices for the removal of defects, 7 of which have been complied with. Four of the defective conditions not remedied are due to defective chimneys. There are 26 registered cellar bakehouses in the Borough.

About one half of the bakehouses are in connection with small shops, and the baking is done in the living room or kitchen of the house.

#### SLAUGHTER-HOUSES.

At the end of 1912 there were 50 slaughter-houses in the Borough, which are all annually licensed. One license has lapsed during the year, leaving 49 on the Register at the close of the year under review. Each year before the license is renewed they are inspected by the Medical Officer of Health, and the Chiet Inspector and the Assistant Food Inspector pay frequent visits. The total visits paid during the year was 3,029, equal to an average of about 60 visits to each slaughterhouse. Twenty-two notices were served for various defective conditions, all of which were complied with.

It was not necessary to institute any legal proceedings, or even to seize any diseased meat, all defective food being voluntarily surrendered.

The Inspector reports that he has found fewer tubercular animals—viz., 115 cases, compared with 156 in the previous year.

There is no public abattoir in the town.

In addition to the visits to the Slaughter-houses, Bakehouses, and Dairies, the following visits have been made to the various food shops in the town :—

| Visits to | Meat Shops                | 10,446 |
|-----------|---------------------------|--------|
| ,,        | Fish Shops                | 3,489  |
| ,,        | Fruit and Vegetable Shops | 6,376  |
| ,,        | Ice Cream Vendors         | 112    |

The total weight of unsound food destroyed, particulars of which are summarised under the Food Inspector's Report, was 10 tons 7 cwts, compared with 13 tons in the previous year.

The diseased conditions necessitating destruction are also given in the same Report.

#### SALE OF FOODS AND DRUGS ACT.

During the past year 264 samples of food have been purchased for analysis, one informal sample was also purchased. Of the total number, 8 were found, on analysis, not to be genuine. Five of the 106 milk samples, taken formally, were certified by the analyst to be not genuine. The Vendors of three of these samples were summoned before the magistrates and the other two were dealt with by the Health Committee The particulars of the samples which were certified as not genuine are as follows :—

No. 63.—Milk which contained 9.4 per cent. of added water and

No. 64.—Purchased at the same time from the same farmer contained 8 per cent. of added water. Summonses were taken out against the Vendor of these samples and the magistrates merged both cases into one and inflicted a fine of 5/- and costs including the analyst's fee.

The farmer endeavoured to explain the result of the analysis by saying that the fodder he had bought was of a very poor quality.

No. 65.—Milk deficient in fat to the extent of 16 per cent. The farmer was summoned to appear before the Health Committee and on offering to pay the analyst's fee of 10/6 was cautioned.

No. 106.—Milk which contained 4.7 per cent. of added water. The Vendor was summoned before the magistrates, who dismissed the case giving as a reason that the deficiency was only very slight.

No. 111.—Irish Butter which contained  $23\frac{1}{2}$  per cent. of water. The Vendor was cautioned by the Health Committee and paid the analyst's fee.

No. 123.—A sample of Irish Butter containing 20 per cent. of water. The Vendor was cautioned by letter.

No. 202.—A sample of Milk which contained  $9\frac{1}{2}$  per cent. of water and was deficient in fat to the extent of  $13\frac{1}{2}$  per cent.

Proceedings were not commenced in time and were thus allowed to lapse.

No. 211.—Butter containing 20 per cent. of water. This was labelled Irish Butter.

The following is a summary of the various samples purchased :—

SUMMARY OF SAMPLES OF FOOD ANALYSED DURING 1913.

| New                | Description of             |          | N               |    | Sum     | moned b |                       |
|--------------------|----------------------------|----------|-----------------|----|---------|---------|-----------------------|

32

#### HOUSING.

In comparison with other manufacturing towns, the artizan population of the town may be said to be well housed. There is very little slum property, and this confined to small blocks or rows of houses. Even when the dwelling houses are not in the condition they should be, it is more often due to the general neglect of generations of occupiers than to any structural defects of the buildings themselves.

In a few instances the poverty of the owners, who have been unable to spend money on repairs or alterations, has prevented the necessary improvements.

The newer houses in the town are of a larger type, and owing to this and the greatly increased cost of building the rents are beyond the means of the poorer class of workers, tending to cause overcrowding.

The great majority of the houses in the town are of the four-roomed type. It is estimated there are between 200 and 300 back to back houses still remaining, and there are 19 cellar dwellings, 6 of which are unoccupied.

What in my opinion is greatly needed is a house consisting of a living room, with one or two bedrooms and scullery, suitable for families consisting of two or three persons with a small income. These families now go to reside with relatives and cause overcrowding, moral if not actual.

Every case of overcrowding, as it becomes known to the Department, is dealt with. 74 cases have had the usual notice, and 66 had taken measures to remedy the condition at the close of the year.
House to house inspections are being carried on, and 4,527 were thoroughly examined under this heading. In addition 608 houses have been inspected on complaint; 465 houses have been put in proper repair.

A Record Card is kept of  $\epsilon$  ach house inspected, and entries are also made on the card of every case of nuisance or insanitary condition, and each case of Phthisis, or major infectious disease, and also of every death which occurs. The card index system is used, and in course of time the Sanitary history of every house in the Borough will thus be recorded.

The erection of new buildings is under the control of the Surveyor's Department. All new erections require plans to be submitted and passed by the New Streets and Buildings' Committee of the Corporation, and their erection is supervised by the Buildings Inspector. Except in the case of premises which require to be registered, the Health Department has nothing to do with new buildings

The total number of new houses erected during the financial year was 283, and 37 houses were closed, thus giving a net increase for the Borough of 246. At the average rate per house this gives an increased accommodation for about 1050 persons. The natural increase in the population was 935, and the estimated increase 1,108.

The increase of housing accommodation thus about keeps pace with the natural increase, and makes no allowance for increase by immigration.

Under the heading of the Inspector's Report will be found details of the work carried out under the supervision of the Chief Inspector in connection with house property, etc., during the year. In this report it will be seen that 5,039 notices have been served upon owners and others for the removal of various nuisances. These notices required, for the purposes of inspection and re-inspection, about 13,000 visits. 669 notices, which were not complied with on service of the Inspector's notice, were reported to the Health Committee, who invariably instructed the legal notice to be served, and out of this number, 569 orders of the Committee were complied with by the close of the year, leaving only 100 to be complied with.

The various defects and conditions for which these notices were served are tabulated on a later page.

During the year 50 houses were represented to the Council as unfit for human habitation, and were dealt with as follows: 12 were voluntarily closed, 14 were compulsorily closed, and 24 were made suitable for habitation. Six of those voluntarily closed were demolished in order to make the necessary improvement to the adjoining houses. Nine other houses were closed for the reconstruction of premises.

The following is a Summary of the houses which were closed as dwellings during the year 1913 :---

| Total<br>Number<br>Closed. | NATU    | RE OF H | OUSE.              |   |

#### ADDRESSES OF PROPERTY CLOSED :--

24, 25, 26, 28, Cheetham Street.

1, Cannon Street,

8 and 10, Back Booth Street.

3, Hilton Street.

1, under 5, Back Hope Street.

17, 19, 21, 23, 25, under 17, Ripponden Road.

The houses in Cheetham Street, Cannon Street, and Back Booth Street, have for years been used as Common Lodging Houses.

#### FACTORIES AND WORKSHOPS ACTS.

FACTORIES.—With regard to the factories, attention is given to the mill reservoirs by the District Inspectors, who are constantly visiting these premises, in the endeavour to keep them free from nuisance. About 2,009 visits have been paid for this purpose, and 5 notices to improve the existing conditions were served, 4 of which were complied with. The engines in the mills are almost entirely condensing engines, and the water in the reservoirs is used over and over again, until it, in many instances, becomes very foul, especially where the water is to any extent obtained from the sewerised streams. The smoke observations are taken by the Smoke Inspector, and the sanitary conveniences and fire escapes are looked after, where any complaint has been received, by the special Inspector detailed for this duty.

WORKSHOPS.— As regards the workshops, these are visited by both male and female Inspectors, and during the year 632 visits were paid for this purpose. At the close of the year there were on the register 536 Workshops, being a decrease of 9 from the previous year; 24 new ones have been registered, and the use of 33 discontinued.

In Table 25 will be found details of the various defects for which notices have been served on the owners or occupiers of workshops.

The following is a list of the workshops which are registered in the Borough :---

| Bakers                 | 8  |
|------------------------|----|
| Blacksmiths            | 6  |
| Blind Manufacturers    | 2  |
| Blind Women's Industry | 1  |
| Bookbinders            | 2  |
| Bottlers (Beer)        | 2  |
| Brush Makers           | 2  |
| Cabinet Makers         | 5  |
| Cane Workers           | 1  |
| Carriage Builders      | 1  |
| Cloggers               | 54 |
| Coffin Makers          | 2  |
| Confectioners          | 44 |
| Coopers                | 2  |
| Cotton Waste Dealers   | 17 |
| Curriers               | 2  |
| Cycle Makers           | 3  |
| Drapers (Underwear and |    |
| Skirts)                | 5  |
|                        |    |

| Dress Makers                | 89 |
|-----------------------------|----|
| Dyers                       | 2  |
| Drysalters (Chemists)       | 5  |

| Upholsterers              | 2  |
| Watch Makers              | 5  |
| Wire Workers              | 1  |
| Wheelwrights              | 5  |
| Wood Carvers              | 1  |
| Wringing Machine Manufac- |    |
| turers                    | 1  |

#### SHOP HOURS ACT.

242 visits have been made by the Inspector under the provisions of this Act. 9 notices were served and complied with and four firms were prosecuted. Three of the firms were charged with not allowing an employee the necessary dinner hour. In one case the man in charge came into the shop to attend to a customer actually eating his dinner, and in the other two cases the representatives came into court prepared to admit the offence. After the Inspector had given his evidence the magistrates decided that there was no evidence to show that the employees had not had a proper dinner hour and dismissed all three cases. After this decision it was considered useless to bring further cases into court unless the employee could be brought to give evidence against his employer, in which case he would most probably lose his employment. With regard to the Shop Seats Act, no visits have been made. The Act simply compels the provision of seats; there is no compulsion to allow the assistants to use them. The other case was against a shopkeeper for not exhibiting the necessary card respecting the hours during which young persons might be employed. He was fined 2/6.

# Sanitary Administration of the District.

- C. -

#### STAFF.

On the following page is a list of the Staff of the Health Department and of the School Medical Department, which is so closely allied.

The Medical Officer of Health is also Superintendent School Medical Officer, but the other members of the Staff devote themselves exclusively to the work of their respective departments. Dr. Wood, after 5 years of most able and loyal service as assistant Medical Officer, was in August appointed M. O. H. of the adjoining Urban District of Chadderton and was succeeded by Dr. A. Dykes. I must express my great appreciation of Dr. Wood's careful work during these years and trust that he will be equally successful in his new appointment.

The Chief Inspector is also the Inspector under the Contagious Diseases and Animals Acts, and Inspector of Fertilisers, &c.

The other Inspectors consist of four District Inspectors; one Smoke Inspector; one Inspector who deals specially with the Workshops, Factories, Bakehouses, and also makes visits under the Shop Hours' Acts; one Assistant Meat Inspector; one Inspector under the Housing and Town Planning Act, and two Women Inspectors, who are assisted by a Nurse as Health Visitor.

The Staff of the Department is as follows :----

| Chief Inspector of Nuisances—  |
|--|
| <b>†</b> *George Winterbottom.   |
| Assistant Meat Inspector—  |
| George T. Winterbottom.  |
| Sanitary Inspectors and their Districts—   |
| NAPOLEON BRIERLEY-St. Peter's (part of), Clarksfield and   |
| Waterhead Wards.   |
| W. A. HOPKINSON—Werneth, Hollinwood, St. Paul's, and<br>St. Peter's (part of) Wards.   |
| JAMES BURNETT-Hartford, Westwood, and Coldhurst Wards.   |
| *WILLIAM CLARKE-St. Mary's, Mumps, and St. James's<br>Wards.   |
| Smoke Inspector-   |
| Elson Jackson.   |
| Inspector for the Factories, Workshops, Bakehouses, &c<br>*WM. G. WRIGHT.  |
| Inspector Housing and Town Planning Act—   |
| +*Frank Taylor.  |
| Lady Inspectors for Shop Seats, Shop Hours, Female Workshops, &c   |

## REPORT OF THE CHIEF INSPECTOR FOR THE YEAR 1913.

TO THE MEDICAL OFFICER OF HEALTH.

SIR,

I have pleasure in presenting to you my report of the work done during the year.

There have been five cases of Parasitic Mange, four horses and one ass being found affected. The horses recovered but the ass died and was destroyed. All the premises were disinfected and cleansed in accordance with the Regulations.

No other form of contagious disease has occurred amongst animals during the year.

The food supply has been carefully inspected, over twentyfive thousand visits having been paid to premises where food is prepared or deposited for the purpose of sale.

The amount of diseased or unsound food destroyed is below the average and nearly nine tons of this has been surrendered by the butchers. In no case has it been necessary to seize foods during the year.

I have to report a further decrease in the number of cases of Tuberculosis in animals, viz :—115 cases this year, whilst last year we had 156 cases.

We began the year with 50 Slaughter-houses on the Register, one was lapsed voluntarily during the year, leaving 49 on the Register. It has been necessary to serve 22 notices for the remedying of various defects, which have all been complied with. The improvement of Cowsheds is steadily progressing. During the year 15 Cowsheds have been improved. The number of Cowsheds with less than 600 cubic feet per head has decreased from 109 in the year 1906 to 22 at the present time, whilst the number of Cowsheds with over 600 cubic feet per head has increased from 23 to 85 in the same period.

During the year 264 samples of foods and drugs have been purchased under the Food and Drugs Acts, and one sample of food has been purchased informally, a total of 265 samples which were submitted to the Borough Analyst. The number of smoke observations amounted to 1,575 as compared with 1,547 in the previous year. The Smoke Inspector (along with the Meat Inspector) has also been engaged in the purchasing of samples of food for analysis.

The inspection of the various districts for the purpose of ascertaining whether any nuisances existed has been well carried out, with the result 3,465 notices for the abatement of nuisances have been served. In addition 1574 notices have been served for the substitution of dustbins in lieu of ashpits.

In connection with these notices 11,819 re-visits were paid.

During the year 376 additional closets have been provided for houses which previously had not sufficient accommodation.

In the past five years 1,426 additional closets have been provided to houses which previously had insufficient.

The number of houses inspected is much greater than in any previous year, numbering 4,527, 616 of which were found in a dirty state. The usual notice to cleanse and limewash was served upon these 616 householders and 609 had complied with the notice at the end of the year. Of the houses inspected 698 were found to be more or less structurally defective, for which notices were served upon the owners to remedy, and which with the exception of 49 have been complied with.

The Table relating to Houses let in Lodgings shows that 112 houses containing 430 rooms were registered during the year, 10 of these houses containing 33 rooms were afterwards lapsed for the following reasons—viz.:—

One house containing 5 rooms demolished for the purpose of building a bakehouse on the site. Three houses containing 12 rooms were closed under the Town Planning Act, 1909, as unfit for habitation, and 6 houses containing 16 rooms were closed voluntarily by the owner, he having agreed with the Health Committee to let them as store rooms only in the future.

It was found necessary to serve 95 notices for the abatement of various nuisances, of which 93 were complied with.

The substitution of dustbins in lieu of ashpits is still proceeding very favourably. During the year 1,765 ashpits have been abolished, and 4,049 dustbins substituted. This is an increase over the year 1912, when 1,454 ashpits were abolished and 3,864 dustbins substituted in lieu of them.

The visits to Infectious Diseases amounts to 1,889, an increase of 787 visits over last year, and the visits to Phthisis number 177, as compared with 256 last year.

In conclusion, I wish to express my thanks for the great assistance I have received from the members of the staff, and also to yourself, sir, for your confidence and support.

> I beg to remain, Yours respectfully, GEORGE WINTERBOTTOM, CHIEF SANITARY INSPECTOR.

#### SMOKE NUISANCES.

One Inspector devotes practically his whole time to taking observations of the amount of smoke emitted from the mill chimneys in the Borough.

The scale of black smoke below which no proceedings are taken is a very liberal one, and is as follows :—

- When one or two boilers are working, 2 minutes' black smoke in the half-hour.
- When three boilers are working, 3 minutes' black smoke in the half-hour.
- When four or more boilers are working, 4 minutes' black smoke in the half-hour.

The observations are of a half-hour's duration.

All cases where these limits are exceeded are reported to the Health Committee for them to deal with, notice being sent to the offending firm, so that a Representative can be sent if desired. Generally a Representative has attended and submitted some excuse.

During the past year 1,575 observations have been taken of chimneys in the Borough, compared with 1,547 in the previous year.

The following table shows a comparison of the number of observations, &c., during the past 10 years :---

| Year. | No. of<br>Obser-<br>vations | Obser- No Black Une |       | Under Minutes Over 4<br>Minutes Minutes |      |    | Pro-<br>secutions | Per cent.<br>of Pro-<br>secutions |
|-------|-----------------------------|---------------------|-------|---|------|----|-------------------|-----------------------------------|
| 1904  | 368                         | 24.70               | 41.00 | 31.70                                   | 2.40 | 9  | 2                 | 22                                |
| 1905  | 909                         | 19.80               | 45.54 | 32.89                                   | 1.76 | 16 | 7                 | 44                                |
| 1906  | 1255                        | 26.13               | 46.68 | 25.50                                   | 1.67 | 29 | 16                | 55                                |
| 1907  | 1256                        | 46.09               | 38.05 | 13.93                                   | 1.91 | 36 | 18                | 50                                |

#### PERCENTAGE OF BLACK SMOKE.

\* In five other cases the Representatives agreed to be dealt with by the Health Committee and were fined  $\pounds 1$  in each case.

Thirty-one firms were reported to the Committee, their names being given in Table No. 30.

In five cases it was the first offence, and the usual statutory notice to abate the nuisance was served on the offending firm. In thirteen cases, the emission of black smoke not being very excessive, or some reasonable excuse being given, a letter of caution was sent to the firm by the Town Clerk, and in the remaining thirteen cases the firm was summoned before the Magistrates. One case was dismissed, and in one the firm paid the costs of the summons and the case was withdrawn by consent. In the other eleven cases the fines were as follows:—One 5/- and costs, one 10/- and costs, seven 20/- and costs, one 40/-, and one 60/- and costs. One of the firms fined 20/- had been prosecuted nine times previously.

#### MEAT AND FOOD INSPECTOR.

A summary of the work of this Inspector will be found in the Tables at the end of this Report and details under the Reports respecting the Various Foods.

#### WOMEN INSPECTORS.

In Table 24 will be found a summary of the work carried out during the past year by the five Women Inspectors. From this Table it will be seen that 3,584 visits have been paid to those houses at which births have occurred, 556 of these having been paid for the purposes of re-inspection.

The Notification of Births Act has been in force in the Borough since January, 1908. A Table under the head of Infantile Deaths shows the relation of Infantile Deaths to the work of the Women Inspectors, and these statistics indicate a very considerable fall in the number of deaths from specified causes. Out of the total number of births about 95 per cent. were notified either by the parent, midwife, or doctor. When the doctor notifies the house is not visited for a fortnight or so, as it is understood he will give all necessary directions.

Folding cards are supplied to the medical men and midwives.

A small booklet on "The Care of the Baby" is left at houses where necessary.

The Inspectors also visit the Workshops where females are employed, Infantile Deaths, and a great portion of their time is taken up in visiting houses at which some minor (?) infectious disease has been reported from one of the schools. Over 1,600 cases of infectious disease of this nature were visited. Forty-seven defective conditions were found by them in the houses visited, and reported to the Chief Inspector.

#### PUBLIC ACTS AND BYELAWS

There are several local Acts of Parliament in force, several of which contain Sanitary Enactments.

Parts ii., iii., and v. of the Public Health Acts (Amendment) Act, 1890, have been adopted; and also the Notification of Births Act.

There are Byelaws for—

New Streets and Buildings, Slaughter-Houses, Common Lodging Houses, Houses Let in Lodgings, Cowsheds, Dairies and Milk Shops, Tripe Boilers and Offensive Trades, Public Baths, Tents, Vans, Sheds, &c.

In October the following Byelaws in relation to spitting, &c., were adopted by the Council, and are in force within the Borough :—

 No person shall spit upon the paved footway of any public street.

This Byelaw shall cease to be in force after the 31st day of December, 1915, unless a Byelaw confirming and continuing its provisions has been duly made and come into force before that date.

(2) No person shall spit on the floor, side, or wall of any public carriage, or of any public hall, public waiting room or place of public entertainment, whether admission thereto be obtained upon payment or not.

- (3) No person shall in any street or public place throw or leave any orange peel, banana skin or other dangerous substance on any footway.
- (4) No person shall throw, place, or leave any bottle or any broken glass or other sharp substance (not being road material) on or in any street or public place in such a position as to be likely to cause injury to passengers or damage to property.
- (5) Any person offending against any of the foregoing Byelaws shall be liable to a penalty not exceeding Five Pounds.

Ophthalmia Neonatorium, Cerebro Spinal Meningitis, and Infantile Paralysis are compulsorily notifiable. Measles ceased to be notifiable in November.

Particulars of Bacteriological Work and Hospital Accommodation are given under the head of Infectious Disease.

Notified during the year 1913.

# Prevalence and Control over Acute Infectious Diseases.

- D. -

In addition to the usual Infectious Diseases mentioned in the Notification Act, Measles was compulsorily notifiable under an Order dated December 1st, 1908, and remained in force until December 1st. Tuberculosis of the Lung has also been compulsorily notifiable since November 1st, 1909, under a Local Act, the provision being subsequently extended by a Provisional Order.

During the current year all forms of Tubercular Disease became compulsorily notifiable under the Public Health (Tuberculosis) Regulations.

Ophthalmia Neonatorum became notifiable in the Borough on April 1st, 1912, and Cerebro Spinal Meningitis and Poliomyelitis Anterior Acuta (Infantile Paralysis) on February 1st, 1912.

The following Table gives the number of cases of Infectious Disease notified and the deaths from each disease :—

| DI               | SEAS  | Е.     |   | NOTI | FICATI | ONS.  | DEATHS. |
|------------------|-------|--------|---|------|--------|-------|---------|
| Smallpox         |       |        |   | <br> | 8      |       | 0       |
| Scarlet Fever    |       |        |   | <br> | 922    |       | 19      |
| Erysipelas       |       |        |   | <br> | 125    |       | 3       |
| Diphtheria       |       |        |   | <br> | 91     |       | 19      |
| Enteric Fever    |       |        |   |      |        |       | 3       |

| Infantile Paraly | sis   |        |   | <br> | 1      |       | 0       |
| Ophthalmia Ne    | onato | orum   |   | <br> | 22     | ••••• | 0       |

The total number of Deaths from the seven principal Zymotic Diseases—viz., Smallpox, Scarlet Fever, Enteric Fever, Diphtheria, Measles, Whooping Cough, and Diarrhœa, during the year were 219, which is equal to a death rate of 1.46 per 1,000 of the population. Out of the above total 104, or nearly one-half, were due to Diarrhœa.

The following table gives the number of deaths and death rates from the principal Zymotic Diseases in the several wards :—

|                       | Diarrhea |      | Measles |      | Whooping<br>Cough |      | Scarlet<br>Fever |      | diphtheria |      | Typhoid |      | Total |
|-----------------------|----------|------|---------|------|-------------------|------|------------------|------|------------|------|---------|------|-------|
|                       | De'ths   | Rate | De'ths  | Rate | De'ths            | Rate | De'ths           | Rate | De'ths     | Rate | D'ths   | Rate | Ra te |

| St. James's           | 17       | 1.5  | 8       | .70  | 5                 | •44  | 2                | .17  | 1          | ·08  |         |      | 2.9   |
| Waterhead             | 10       | .71  | 16      | 1.1  |                   |      | 4                | .28  |            |      | 1       | .02  | 2.5   |
| Totals                | 104      | -69  | 38      | -25  | 36                | -24  | 19               | -12  | 19         | .12  | 3       | .05  | 1.4   |
| 96 Gt. Towns.         |          |      |         | ·34  |                   | ·17  |                  | .02  |            | .13  |         | .04  |       |
| England<br>and Wales. |          |      |         | -28  |                   | .14  |                  | ·06  |            | .12  |         | ·04  |       |

The perusal of this Table shows that there was a very high Death-rate from Diarrhœa in St. James's, Mumps, and St. Mary's Wards. Measles caused a high rate in Waterhead and St. James's Wards, Whooping Cough in Hollinwood and Coldhurst. The rate for Diphtheria is high in St. Paul's and Hartford Wards, and for Scarlet Fever in St. Peter's, Waterhead, and Werneth.

In Table No. 11 will be found the number of deaths which have occurred each year since 1878.

The following Table gives the attack-rate or number of cases per 1,000 people, in certain specified areas, of the principal Epidemic Diseases :—

|              |      |       |      | Scarlet<br>Fever, | Diph-<br>theria. | Enteric<br>Fever. | Puerperal<br>Fever. | Erysi-<br>pelas. |

#### SMALLPOX.

Eight cases were reported during the year. The first case was reported at the end of March—the patient was a girl who worked in the cardroom of a cotton mill. The most careful inquiries failed to elicit any local source of infection. The girl had not been out of Oldham or in any place where she was likely to meet with strangers. The only connection which could be traced in any way with Smallpox was that the cotton came from a district in the United States where Smallpox was understood to be prevalent. The girl was unvaccinated, and the case was a comparatively mild one. Every contact was kept under observation until the incubation period had elapsed. One secondary case occurred also in a young unvaccinated girl, and in a somewhat more severe form. Both cases were removed to Cinder Hill Hospital. No further cases were heard of until July 1st, from which date to August 13th six cases were reported. Two of these were isolated cases, and both going daily into the neighbouring District of Royton. where there were some cases of the disease at the time. Three of the other cases were notified in one house on August 13th, and the other, a friend of these, notified on August 18th.

In this house one of the other inmates had had some spots on her face and arms during the previous fortnight, and was doubtless the cause of the four cases. This family lived on the borders of Royton, and were in intimate association with persons from that District.

All the cases were removed to Cinder Hill Hospital, and the usual precautionary measures were adopted. None of the persons affected had been previously vaccinated. One case was of a severe type, the others were not of a dangerous form.

#### SCARLET FEVER.

Throughout the year this disease has been very prevalent, and this prevalence increased towards the close of the year. During the year no less than 922 cases were notified, a larger number than in any year since 1905.

The type of the disease has been generally of a very mild form. In several instances children were found attending school with the skin peeling, and these children had seldom been absent from school more than a day or half a day, and the initial illness was mistaken for a cold or an attack of influenza.

Eighteen children out of the 922 died, giving a percentage death rate of only 1.95.

Out of the above number 438, or 47 per cent., were removed to Hospital for treatment.

One child, which was reported in the previous year, also died in the current year, making a total of 19 deaths, giving a death-rate for the Borough of '12 per 1,000. The death-rate for England was '06, and for the 96 large towns '07 per 1,000.

In addition to cases of Scarlet Fever removed to Westhulme from the Oldham District 71 cases were removed from the Out-Townships. Nine Oldham cases and one case from an outside district died in hospital, giving a percentage death-rate of 1.96.

#### DIPHTHERIA.

The total number of cases notified during the year was 91, compared with 49 and 87 in the previous two years, and 18 of these terminated fatally. Nine of these deaths were in children under the age of 5 years, and the percentage of deaths was 19.78, rather less than in the previous year. During the year, however, 19 deaths from this disease were registered, which is equal to a death rate for the whole town of 0.12 per 1,000.

The death rate from this disease in England and Wales was 0.12, and in the 96 large towns 0.13.

Fourteen Oldham cases were removed to hospital, 6 of which died, and 8 cases were received from the outdistricts, 3 of which terminated fatally.

Arrangements are in force with the Public Health Laboratory of Manchester University for the examination of Swabs. During the year, 36 Swabs were sent for examination, and of these 25 gave a negative result. and 11 were positive. In addition to these 49 specimens were examined in the Health Office Laboratory.

In November and December a small epidemic occurred in connection with two or three schools in the Borough, and Swabs taken from the throats of several children giving some positive results, it was deemed advisable to close one of the schools for the Christmas Holidays a couple of weeks earlier than usual.

#### ENTERIC FEVER.

In the year 1912 only 18 cases of this disease were reported, and there were no deaths registered from it. This was the smallest number reported in one year since any records have been kept. In the year under review only 12 cases were reported but three of them died.

The above numbers give an attack rate for the Borough of '05, compared with '5 for Lancashire, and '22 for the whole of England, and a death rate of '02, compared with '04 for England and for the 96 large towns.

54

Five of the cases were removed to Westhulme Hospital and one of them terminated fatally.

Three of the above cases were reported from the Union Hospital.

In none of the other cases was there more than one case in each house affected. There was no evidence to show that any of the cases were connected or associated in any way.

Twenty-two specimens of blood were sent for examination, and 6 of these give a positive reaction, and 16 a negative.

#### PUERPERAL FEVER.

Thirteen cases were notified and 5 of them died, compared with 10 and 3 in the previous year.

Six cases were attended by midwives in their confinement, and 7 by medical practitioners. None of the cases seemed to be associated.

The cases are all carefully enquired into by one of the Women Inspectors, and if a midwife is in attendance, the necessary measures are taken to secure the disinfection of her clothing and appliances before she is again allowed to resume her employment.

#### ERYSIPELAS.

One hundred and twenty-five cases were notified, as compared with 122 in the previous year, and three of these died.

The age and part of the body affected in the fatal cases are as follows :—

| 1. | Woman, | aged | 42. | Head. |
|----|--------|------|-----|-------|
| 2. | Man,   | ,,   | 40. | Head. |
| 3. | Woman, | ,,   | 49. | Face. |

A large proportion of the cases were very mild and of a trivial nature, and bearing in mind the little risk of infection to others and the few public precautions which can be taken, the value of retaining this disease among those notifiable seems very doubtful.

Two cases occurred in children under one year of age, but in neither was vaccination associated.

#### CHICKEN POX.

During the year about 370 cases of Chicken Pox came under notice, and the majority of them were notified by the school teachers of the various schools.

This disease is not notifiable, and except for causing inconvenience to the patients, and considerable interference with the school attendance, is not of great importance. In some of the infant schools there were considerable epidemics.

#### MEASLES.

Measles has been compulsorily notifiable in the Borough since December 1st, 1908. The Order rendering it notifiable was to remain in force for a period of five years—viz., until December 1st, 1913.

Before the close of this period statistics were prepared, with the view of ascertaining the effect of notification on the disease. As would necessarily be the case a larger number came to the knowledge of the Department, even though a system of notification from the schools had been in vogue for some years, but as regards the number of deaths which occurred from the disease, there is not a great difference between the average number of deaths for the five years previous to notification and the five years when it was in force, though there is a reduction.

Deaths from Bronchitis and Broncho-Pneumonia, so often associated with Measles, also show a tendency to decrease. These decreased numbers, however, are only similar to the decrease in the number of deaths from other diseases, such as Whooping Cough and Scarlet Fever, and in my opinion may fairly be attributed to the improvement in social conditions and the improved housing conditions. The cost of notification averaged about £120 per annum.

The infection from Measles also is greatest before the eruptive stage, and thus by the time the notification is received it is probable that the contacts have been infected. As an educational measure, notification is probably beneficial, but I was unable to satisfy myself that the benefits resulting were worth the cost they entailed. In consequence, I was unable to recommend the continuance of the Order, and the Council decided not to apply for an extension of the period of notification.

The following Table gives statistics relating to the investigation :---

| Year | Cases of<br>Measles<br>known. | Deaths<br>from<br>Measles. | Deaths<br>under 5 from<br>Respiratory<br>Diseases. | Deaths<br>from<br>Bronchitis<br>under 5 years | Whooping<br>Cough<br>Deaths | SCARLET FEVER |        |
|------|-------------------------------|----------------------------|--|---|-----------------------------|---------------|--------|
|      |                               |                            |  |   |                             | Cases         | Deaths |
| 1904 | 1029                          | 70                         | 195  | 107   | 37                          | 638           | 17     |
| 1905 | 1133                          | 65                         | 169  | 78  | 57                          | 969           | 45     |
| 1906 | 1663                          | 125                        | 149  | 63  | 41                          | 794           | 33     |
| 1907 | 333                           | 35                         | 238  | 113   | 66                          | 522           | 17     |
| 1908 | 1907                          | 83                         | 206  | 93  | 54                          | 598           | 24     |
| 1909 | 1276                          | 48                         | 181  | 77  | 15                          | 522           | 16     |
| 1910 | 2304                          | 84                         | 186  | 84  | 77                          | 217           | 4      |
| 1911 | 1556                          | 64                         | 158  | 68  | 13                          | 447           | 5      |
| 1912 | 2500                          | 65                         | 147  | 83  | 65                          | 366           | 5      |
| 1913 | 1111                          | 38                         | 191  | 437   | 36                          | 922           | 19     |

During the current year 1,111 cases came to the knowledge of the Department either through notification by doctors or parents, or through the schools.

The deaths attributed to this disease were 38, 24 of which were in children under 2 years of age, and all except one in children under 5 years.

The Death-rate from this disease in England and Wales was 0.28, for the 96 large towns 0.34, and for Oldham 0.25 per 1,000.

The attendance at several of the infant schools was seriously affected by outbreaks of this disease, and the loss of grant for children excluded from school for infectious disease is, without doubt, a strong temptation for teachers to keep children in the school as long as possible, and, as the infection from Measles is most virulent before the appearance of the rash, with frequent disastrous results.

A leaflet is distributed to all houses where Measles occur, and the cases are visited, and exclusion from school both for contacts and patient arranged for in accordance with the Memorandum issued by the Board of Education.

#### WHOOPING COUGH.

There were fewer cases of this disease reported than in the previous year—242 cases with 36 deaths, compared with 400 cases and 65 deaths in 1912.

Twenty-one deaths were in infants under one year of age, and 35 under the age of 5 years.

This number of deaths gives a rate of '24 per 1,000, compared with '14 for England and '17 for the 96 large towns.

#### SKIN DISEASE.

Infectious forms of Skin Disease are also reported from some of the schools and are visited, and if not under treatment, measures taken to secure treatment either by a private practitioner or at the school clinics. The figures in the subsequent Table do not indicate the relative prevalence in the various schools, as some teachers never report cases of Skin Disease.

The prevalence of Eczema Capitis and Pediculosis has been greatly reduced in the schools, and comparatively few cases are now found. Whenever a verminous child is found in school, the case is followed home, and measures taken to secure proper cleansing under the Children's Act.

#### OPHTHALMIA NEONATORUM.

Twenty-three cases came to the knowledge of the Authority. The cases are visited by one of the Medical Officers in order to ascertain if under medical treatment. Strict instructions are given to the midwives that the regulations as to reporting the cases and the summoning of medical must be carried out.

#### INFANTILE PARALYSIS (POLIOMYELITIS).

Only one case was reported during the year. The disease did not terminate fatally but resulted in partial paralysis.

#### CEREBRO SPINAL MENINGITIS.

Two cases were reported during the year; one in March and the other in August. One was at one end of the town and the other case near the other end. Neither ended fatally.

## MEASURES ADOPTED FOR THE PREVENTION OF THE SPREAD OF INFECTIOUS DISEASE.

There is a General Infectious Hospital in the Borough containing about 100 beds, and a Temporary Hospital formerly used for Smallpox but now used as a Sanatorium. Smallpox cases are now sent to the Chadderton, Royton and Crompton Joint Hospital.

WESTHULME HOSPITAL.—During the year 438 cases of Scarlet Fever, 14 cases of Diphtheria, 5 cases of Typhoid, 1 case of Erysipelas, and 4 cases of Chicken Pox were removed from the Borough to this Hospital for isolation and treatment, and in addition, 8 cases of Diphtheria, 71 cases of Scarlet Fever, and 5 of Typhoid have been received from the adjoining Townships. No complaints were received either in regard to the care or treatment of the patients, but on the contrary several letters of appreciation.

The nominal accommodation at the Hospital is :--

Scarlet Fever (4 wards) 40 beds for adults. Isolation Block (4 wards) 10 ,, Typhoid Block (4 wards) 48 ,,

During the latter three years two wards in the Isolation Block have been quite sufficient for the Typhoid cases, and two of the wards in the Typhoid Block have been used for advanced cases of Phthisis having been made suitable for this purpose, and the two upper wards, which can be entirely shut off from the lower wards, have only been occasionally used and in emergencies.

There are seven beds for males and seven for females in the Tuberculosis wards.

During the year 35 men and 25 women have been under treatment.

At the close of the year a New Pavilion containing 30 beds for Tuberculosis cases was in course of erection and has since been completed.

STRINESDALE HOSPITAL.—This Hospital, containing nominally 66 beds, has, as far as one portion is concerned, been used since August, 1909, as a sanatorium for early cases of Phthisis.

Thirty beds have been arranged for, and during the year 123 men and women have been under treatment. Only early cases of Tuberculosis are, as far as possible, admitted.

62

Smallpox is now sent to Cinderhill (Chadderton, &c., Joint Board) Hospital.

DISINFECTION.—During the year 1,055 houses (or 2,614 rooms) have been disinfected.

Disinfection of the rooms after infectious disease is carried out by burning sulphur, by formalin lamps, or by spraying with a formalin solution, as the case may require.

For the disinfection of schools the formalin spray is used.

When Phthisis has existed, and in some other cases, the walls, &c., of the rooms are all sprayed with a solution of formalin, and the walls stripped if considered necessary.

Bedding, clothing, &c., are removed and disinfected by steam at the Central Depot, and over 8,809 articles have been either disinfected or destroyed during the year.

Disinfectants in the form of Izal, Sanitas, Carbolic Powder, and Soap are distributed to those houses where infectious disease exists, and Carbolic Powder where insanitary conditions are reported.

The drains of houses in which Typhoid, Diphtheria, or Puerperal Fever may occur, are tested where possible by the smoke machine, and any defects found are remedied.

With the exception of Measles, every case of infectious disease notified is visited and the necessary enquiries made. Particulars of the home, family, and possible sources of the disease are recorded. If not removed to Hospital, the house is visited by the Male Inspectors at more or less frequent intervals to ensure, as far as possible, isolation, and disinfection is insisted upon on the termination of the case. One of the Medical Officers visit all cases of Smallpox, and keeps under observation all contacts. Where special investigation for the discovery of minor cases of other infectious diseases, or whenever a visit seems desirable, the Medical Officer also visits.

The Women Inspectors also undertake the visiting and supervision of cases of Puerperal Fever.

A supply of Antitoxin has been kept for urgent or night cases of Diphtheria, and it is also stocked by a local firm of chemists.

A supply of Antitetanic Serum is also kept in stock and renewed as required.

Facilities for the examination of specimens of Sputum, Diphtheria Swabs and blood for the Typhoid tests are available for all Medical Practitioners in the town without charge, and during the year the following specimens were examined :—

| Diphtheria Swabs     | 85  |
|----------------------|-----|
| Typhoid Tests        | 22  |
| Sputum               | 236 |
| Hairs for Ringworm   | 79  |

# Prevalence of and Control over Tuberculosis.

- E -

The total number of deaths from Tuberculosis of the Lung during the year was 186, fifteen less than in the previous year. In addition to this number, 77 deaths occurred from other forms of Tubercular Disease, making a total of 263 deaths from Tuberculosis; in 1912 the total number was 257, and in 1910, 227.

The death rate from Tuberculosis of the Lung was 1.2 per 1,000, which is slightly lower than in the previous year.

The highest death rate from this disease is in Coldhurst Ward with 2.5 per 1,000, while in St. James's Ward it was only 0.1 and in St. Paul's 0.4 per 1,000.

Tuberculosis of the Lung became compulsorily notifiable in the town on November 1st, 1909.

On February 1st, 1913, all forms of Tuberculosis became notifiable by an Order of the Local Government Board.

As many of the notified cases, as time permits, are visited by one of the Medical officers and the necessary enquiries &c., made, but though a great proportion of the cases of Tuberculosis of the Lung were visited, it was impossible to follow up the cases in a proper manner. Only occasionally was it possible to examine other members of an infected household or to keep the cases under proper observations.

Directions as to the necessary means for prevention are issued, and Disinfectants are supplied where necessary. Rooms or houses where cases have occurred are disinfected if considered advisable. The microscopic examination of Sputum is available for all medical men in the Borough, without charge.

Apart from visitation of cases and Disinfection of the houses, the following measures have been taken in connection with the disease :—

1.—Since the Insurance Act came into force, and pending the establishment of a Tuberculosis Dispensary for the town, the Health Office has been temporarily sanctioned for this purpose, and the Medical Officer of Health has acted as Medical Adviser to the Insurance Committee. Besides examining and testing patients, making the neces sary enquiries, and advising as to institutional or domiciliary treatment, a number of persons have been under treatment by Tuberculin. Some of them have been insured persons and others were non-insured, whose treatment had been arranged with the private practitioner.

2.—Strinesdale Smallpox Hospital has been used as a Sanatorium for early cases of the disease. There are two large sleeping wards and one smaller one, giving a total accommodation for 18 males and 12 females. There are also two day rooms, with the necessary conveniences and bathrooms. During the year 103 Oldham patients and 7 from outside districts were admitted, and 13 cases were under treatment at the commencement of the year, making a total of 123 who have received treatment there during the year. Only one death occurred in the Sanatorium.

The average stay of each patient is about three months, and the majority have improved considerably. The elevated position (1,060 feet above sea level), the absence of smoke, and the bracing air have more than compensated for the inconvenience of the arrangements. Forty four of the patients were females and 79 males.

Though it was decided a year and a half ago that these premises should be used as the Sanatorium for the borough, the alterations which are necessary to render the place suitable are still under consideration.

3.—Two wards at the General Infectious Hospital were rendered suitable for the reception of more advanced and observation cases. These will accommodate 9 males and 7 females.

Fourteen patients were in the hospital at the commencement of the year, and 60 were admitted during the year; 25 of them were females and 35 males.

The duration of stay varies very considerably, some patients being in for many months and others only for a very short time. Naturally the fatal cases are somewhat numerous. Both the above institutions and wards have been temporarily sanctioned by the Local Government Board for the reception of insured persons.

At the close of the year a new pavilion containing 30 beds was in course of erection, and at the end of March in the present year was completed and occupied.
With regard to the treatment of Surgical Tuberculosis and other forms of this disease in children nothing further has been done, though the question of the establishment of both an Open-Air Day School and a Residential School for such cases is under discussion. There is a Holiday Home for children supported by charitable contributions to which delicate children or incipient cases can be sent.

In considering the treatment of Tuberculosis under the Insurance Act, there is one criticism which I should like to advance, viz., that the method of payment for the treatment of the cases is not conducive to the best results, and does not tend to careful examination and the early discovery of the disease. The uniform payment of sixpence per panel patient, whether the doctor has a Tubercular patient or not does not seem a satisfactory arrangement. For example, two medical practitioners, each having about an equally large number of panel patients, receive about an equal sum for domiciliary treatment. The doctor having the somewhat smaller panel has reported and has under his care eleven tubercular patients; his neighbour, with a similar class of patients, has only reported two. The distribution of the amount of money available under this head in proportion to the number of patients and duration of the treatment, in my opinion, would lead to much earlier detection of the disease in many cases.

Cases which did not come under the Insurance Act were chiefly visited by Dr. Dykes, who gives the following brief report :--

The total number of primary notifications during the year was 717, and in addition to these about 377 duplicate notifications were received from various sources.

138 of the patients when notified were attending the various hospitals, and 135 were inmates of the Poor Law Infirmary.

Of the Pulmonary cases 170 were visited at their homes and particulars were obtained, especially as regards (a) the history of the illness, (b) possible sources of infection, (c) any insanitary conditions, such as overcrowding, bad ventilation, and lack of cleanliness. Advice was given as to how  $(\alpha)$  to prevent as far as possible the spread of infection to others, (b) to protect the patient from further infection.

In 38 cases (or 22.3%) a history of Tuberculosis affecting other members of the household was obtained.

Twenty-six Medical Practitioners sent in 236 specimens. of Sputum to be examined for the presence of tubercle bacilli. The bacillus was found in 60 (or 25.4%), the remaining 176 being negative.

The following list shows the occupation of those who died during the year from Phthisis :--

| Cardroom h  | ands   |       |     | <br>11  |                   |

## RESPIRATORY DISEASES.

The Death rates were 2.0 for Bronchitis and 1.3 for Pneumonia, and a total respiratory death rate of 3.5. This rate is slightly higher than in the year 1912, when the rate was 3.4. The number of deaths from Bronchitis was the cause of the higher rate.

#### HEART DISEASE.

The deaths this year from various heart affections is rather more than in 1912—viz., 235, compared with 226. Rheumatic affections, the principal cause of Heart Disease, also caused a larger number of deaths.

#### DIARRHŒA.

There were 104 deaths due to this disease, 61 of which were in infants under the age of one year, and 88 under the age of two years. Four of these deaths were in persons over 65 years of age.

In addition to these 29 infants under the age of one year died from Enteritis and Gastritis. The Death rate from Diarrhœa was '7 per 1,000, and St. James's, Mumps, and St. Mary's Wards have high rates, each being 1.4 per 1,000.

### CANCER.

During the year 146 deaths were attributed to this cause, compared with 133 in 1912 and 145 in 1911. All except 13 of these deaths were in persons over the age of 45, and 56 were of persons over 65 years of age.

Except for the distribution of information respecting the symptoms of the disease in its early stages, and while yet in a curable form, no preventive measures are available.

#### AGE.

571 deaths, or about 22 per cent., were in persons over the age of 65 years, and 483, or 18 per cent., were in children under one year of age. Nearly 30 per cent. of the deaths were in children under the age of five years.

### INQUESTS.

Particulars of the various Inquests held in the Borough during the year have been kindly supplied to me by the Coroner (Dr. Carson).

Twenty-nine Inquests have been held on children who have died under the age of one year, and a total number of 199, an increase of 23 from the previous year.

In the list of causes to which death was attributed are :--Suicides, 19; Accidents, 45; Natural Causes, 41; Excessive Drinking, 3; Murder, 1; and Open Verdicts, 85.

The percentage of the uncertified deaths in Oldham is very low.

# Means for Preventing Mortality in Child Birth and in Infancy.

- G. -

### INFANTILE DEATHS.

There has been an increase this year in the number of deaths of children under the age of one year, viz., 483 instead of 400. This number gives an infantile mortality rate of 139 per 1,000 births. Though lower than the average rate for the previous 37 years, 139 deaths out of 1,000 children born cannot be considered satisfactory.

The following indicates the infantile mortalities of certain specified districts for comparison :---

| England and V | Vale | s | <br>109 per | 1,000 births. |

The Notification of Births Act has been in force since January 8th, 1908, and a large part of the work of the two Women Inspectors consists in visiting the houses where births have taken place. The following Table compares the Death rate in infants from certain classes of disease during the six years previous to the employment of Women Inspectors, during the six years after their employment, and during the six years in which the Notification of Births has been in force, with the percentage increase or decrease. This Table shows that in those deaths which are largely due to preventable causes, there is in most cases a considerable reduction in the number, while in those due to antenatal conditions there is an increase.

|  | 179.42   | 150.42   | 136.95   | - 23 %                                  |
| Excluding Premature Births<br>and Congenital Defects | 158.6  | 123.5  | 110.75   | - 30 %                                  |

There were 166 illegitimate births registered, which is rather under five per cent. of the total, and the death rate among the illegitimates is 301 per 1,000 compared with 131 per 1,000 among the legitimate. The principal causes of death in infants were :--Premature Birth 77, Diarrhœa 61, Bronchitis 56, Pneumonia 55, and Whooping Cough 21.

With the view of instructing mothers in the care and management of children there are five small "Schools for Mothers" in the town, one of which is under the direction of the Health Department.

The following extracts from the Annual Report of the Hollinwood School for Mothers will indicate the work done there :---

"The School has now been opened since March, 1910, and is carried on under the supervision of the Public Health Department of the town.

Miss Rothwell, one of the Women Inspectors, and two voluntary helpers attend at each meeting. The former lectures to the mothers, and the babies are weighed once a fortnight.

Tea, consisting of a cup of tea, bread and butter and a biscuit is provided for the mothers, for which they pay 1d. for themselves and  $\frac{1}{2}$ d. for each of their children, this charge more than covering the cost of the tea. The provisions for tea are brought each week by one of the mothers, who bakes the bread herself, and only charges for the provisions actually used.

The necessary apparatus for weighing the babies, stationery, and the hire of the room, are provided by the Public Health Department. A Savings Club is held in connection with the Yorkshire Penny Bank.

During the past year 74 mothers have attended the School against 68 in the previous year, and the average attendance has increased from 21 to 26. Meetings are held on Thursday afternoon from 3 to 4-30. Thirty-seven Lectures have been given during the year, the series for the year being :—

- (1) Care of the Child.
- (2) Infectious Disease.
- (3) General Hygiene.
- (4) Motherhood.

The Lectures for the latter were given by one of the School Nurses, who is also a trained Midwife, and included practical lessons in Nursing and Bandaging."

The attendance for the past year is as follows :---

| Number on Books.       | Attendance. | Average. |  |
|------------------------|-------------|----------|--|
| Mothers 74             | 944         | 26       |  |
| Babies under 1 year 12 | 250         | 7 -      |  |
| Babies over 1 year. 25 | 327         | 9        |  |

There is also a Day Nursery in the Borough, carried on by voluntary subscriptions. It is situated in one of the poorest districts of the town, and one of the Schools for Mothers is held on the same premises.

Table II., which corresponds with Table IV. of the Local Government Board, details the causes of infantile deaths, and

Table III. tabulates the manner in which these infants were fed, and the occupation of the mother.

Mumps, Waterhead and St. James's Wards have the highest Infantile Mortality rate. The influence of Infectious Disease on these high rates is referred to in the section devoted to these diseases.

### THE MIDWIVES' ACT.

As in the previous year, all the Midwives practising in the Borough have been visited during the year, and their bags, instruments, and books inspected. Some of the older Midwives, though still on the list, have almost ceased practising. The younger generation of Midwives, in addition to having a proper training in Midwifery, are much better educated generally than the older ones, and are able to keep their records more correctly.

The supervision of the Midwives is almost entirely carried out by the Assistant Medical Officer, who reports :--

### MIDWIVES' ACT.

During the year one Midwife left the District, two discontinued practice on account of infirmity, and one died. Two new Midwives commenced practice in the Borough.

At the close of the year there were 65 Midwives on the Oldham list, this number being two less than the previous year.

Of the total number of Midwives, 33 have sent in notices of medical aid; 134 of these notices were received, which is slightly less than last year.

105 of the total number of still-births notified during the year were received from Midwives.

The chief defects found on visiting the Midwives were as follows :---

| Lining of bag dirty         |     |      |   |
|-----------------------------|-----|------|---|
| No washable lining to bag   |     |      |   |
| No thermometer              |     |      |   |
| Case-book not correctly fil |     |      |   |
| No disinfectant in bag      |     |      |   |
| No brush in bag             | ••• | <br> | 1 |

There are still a few amongst the older Midwives who do not record the pulse and temperature of their patients correctly, and whose professional knowledge leaves much to be desired. The more recent ones, especially those who commenced practice since The Midwives' Act, are well up in their work, and keep correct records.

### LIST OF MIDWIVES-CONTINUED.

(1) Holds the Certificate of St. Mary's Hospital, Manchester.

(2) Holds the Certificate of the London Obstetric Society.

(3) Holds the Certificate of the Southern Hospital, Manchester.

(4) Passed the Examination of the Central Midwives' Board.

# — **H**. —

# **Vital Statistics** of the District.

The estimated population of the Borough in the middle of the year was 149,936, and it is on this number that the various rates are based. The natural increase during the year was 913 persons, being the increase of births over the deaths, and the estimated increase 1,096.

It is probable that the estimated population is not far wrong from the actual population of the Borough.

### BIRTHS.

The total number of Births registered in the Borough during the year was 3,465, of which the males numbered 1,780, and the females 1,685. This number is an increase of 46 compared with the year 1912, and is equal to a rate of 23.2 per 1,000 of the population. This is a low rate, and with the exception of 1912, when it was only 22.9, it is the lowest recorded.

The average Birth rate for England and Wales during the year was 23.9, and for the 96 large towns 25.1.

The Birth rates of the large Lancashire towns are as follows:—Bolton 21.6, Blackburn 21.7, Burnley 22.9, Oldham 23.2, Preston 23.9, Manchester 25.9, Salford 26.7, Liverpool 30.0. As regards the variations of the Birth rate in the Borough, St. Peter's Ward has a Birth rate of only 15.6, and Werneth, St. Paul's and Waterhead have rates below 22 per 1,000. The highest rates are in St. Mary's 28.8, Hollinwood 26.7, and Coldhurst 25.5.

### DEATHS.

The total number of Deaths registered in the Borough during the year was 2,690, giving a crude rate of 18.0 per 1,000. From this total number 191 deaths of non-residents which occurred in the various institutions in the town must be deducted, and the deaths of 53 persons belonging to Oldham, but who died in other towns, must be added, making a net total for Oldham of 2,552. This number gives a corrected rate of 17.1 against 16.3 for the previous year. The non-residents were chiefly persons who died in the Workhouse and Infirmary.

The following Table gives the number of deaths from certain specified diseases during the previous five years for comparison with the year 1913 :—

|                              | 1908 | 1909 | 1910 | 1911 | 1912 | 1913 | Aver'ge |

# NUMBER OF DEATHS FROM CERTAIN DISEASES DURING THE LAST SIX YEARS, &C.

The average death-rate for England and Wales was 13.7 per 1,000; for the 96 large towns 14.3 per 1,000; and for the large Lancashire towns as follows: - Manchester, 15.6; Bolton, 15.7; Salford, 15.8; Blackburn, 15.8; Burnley, 16.5; Preston, 17.0; Oldham, 17.1; and Liverpool, 17.9.

As regards the Wards in the Borough, Mumps has a death-rate of 22.9, and both Coldhurst and St. James's have rates of over 20 per 1,000.

The lowest rates are in St. Paul's and Werneth, both having a rate of 13.9.

# Meteorological Report.

The Observatory is in the Oldham Park on the south east side of the town. The records are taken daily at 10-0 a.m. In addition to the instruments at this place, a raingauge, maximum and minimum thermometer, and a sunshine recorder have been installed at the Strinesdale Sanatorium. A Summary of the Observations will be found in Table 12.

JANUARY.—The mean barometric pressure was 28.97 and the mean temperature 39. The maximum in the sun was 49 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 41 to 44 degrees. Rain fell on 16 days out of 28, the total rainfall amounting to 3.70 inches.

FEBRUARY.—The mean barometric pressure was 29.79, and the mean temperature 39. The minimum temperature recorded on the grass was 26 degrees, and the maximum in the sun 61 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 41 to 42 degrees. Rail fell on 16 days, the total rainfall for the month amounting to 2.46 inches.

MARCH.—The mean barometric pressure was 29.47 inches, and the mean temperature 40 degrees. The minimum temperature on the grass was 25 degrees, and the maximum temperature in the sun was 54 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 41 to 43 degrees. Rain fell on 26 days, the total rainfall being 4.37 inches. APRIL.—The mean barometric pressure was 29.55 inches, and the mean temperature 45 degrees. The minimum temperature on the grass was 27 degrees, and the maximum temperature in the sun was 69 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 42 to 48 degrees. Rain fell on 19 days, the total rainfall amounting to 3.18 inches.

MAY.—The mean barometric pressure was 29.56 inches, and the mean temperature 51 degrees. The minimum temperature recorded on the grass was 31 degrees, and the maximum in the sun 77 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 44 to 48 degrees. Rain fell on 24 days, the total rainfall amounting to 6.10 inches.

JUNE.—The mean barometric pressure was 29.75 inches, and the mean temperature 56 degrees. The minimum temperature recorded on the grass was 38 degrees, and the maximum in the sun 83 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 50 to 56 degrees. Rain fell on 17 days, the total rainfall amounting to 2.94 inches.

JULY.—The mean barometric pressure was 29.80 inches, and the mean temperature 56 degrees. The minimum temperature recorded on the grass was 39 degrees, and the maximum in the sun 76 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 52 to 57 degrees. Rain fell on 15 days, the total rainfall amounting to 1.15 inches.

August.—The mean barometric pressure was 29.79 inches, and the mean temperature 58 degrees. The

minimum temperature recorded on the grass was 35 degrees, and the maximum in the sun 83 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 55 to 57 degrees. Rain fell on 11 days, the total rainfall amounting to 2.32 inches.

SEPTEMBER.—The mean barometric pressure was 29.74 inches, and the mean temperature 58 degrees. The maximum in the sun 84 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 54 to 55 degrees. Rain fell on 12 days, and the total rainfall amounted to 1.97 inches.

OCTOBER.—The mean barometric pressure was 29.64 inches, and the mean temperature 53 degrees. The maximum temperature recorded in the sun was 79 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 51 to 54 degrees. Rain fell on 15 days, and the total rainfall amounted to 1.46 inches.

NOVEMBER.—The mean barometric pressure was 29.44 inches, and the mean temperature 47 degrees. The maximum temperature recorded in the sun was 63 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 46 to 49 degrees. Rain fell on 30 days, and the total rainfall amounted to 4.31 inches.

DECEMBER.—The mean barometric pressure was 29.81 inches, and the mean temperature was 42 degrees. The minimum temperature on the grass was 31 degrees, and the maximum in the sun 50 degrees. The temperature recorded by the thermometer 4 feet below the surface ranged from 44 to 47 degrees. Rain fell on 21 days out of 28, and the total rainfall amounted to 2.85 inches. The following table gives the hours of sunshine recorded each month at Strinesdale and other places :—

# VITAL STATISTICS, 1913.

## SUMMARY.

| Population estimated by the Registrar General to<br>the middle of the year 149,936                       |
|--|
| Births registered in the 52 weeks ending December  |
| 27th, 1913 Males $1,780$<br>Females $1,685$ 3,465  |
| Deaths registered in the 52 weeks ending December  |
| $\begin{array}{cccccccccccccccccccccccccccccccccccc$   |
| Deaths from the seven principal Zymotic diseases 214   |
| Deaths under 1 per 1,000 Births 139  |
| Annual Rate of Births per 1,000 living population. 23.2  |
| Annual Rate of Mortality from all causes per 1,000<br>living population 17.1                             |
| Annual Rate of Mortality per 1,000 living popula-<br>tion from the seven principal Zymotic diseases. 1.4 |

Of the 2,552 deaths registered during the year 1913, 742 or 29.0 per cent., were those of children under 5 years of age.

### PRINCIPAL CAUSES OF DEATHS.
