#### BOROUGH OF OSWESTRY

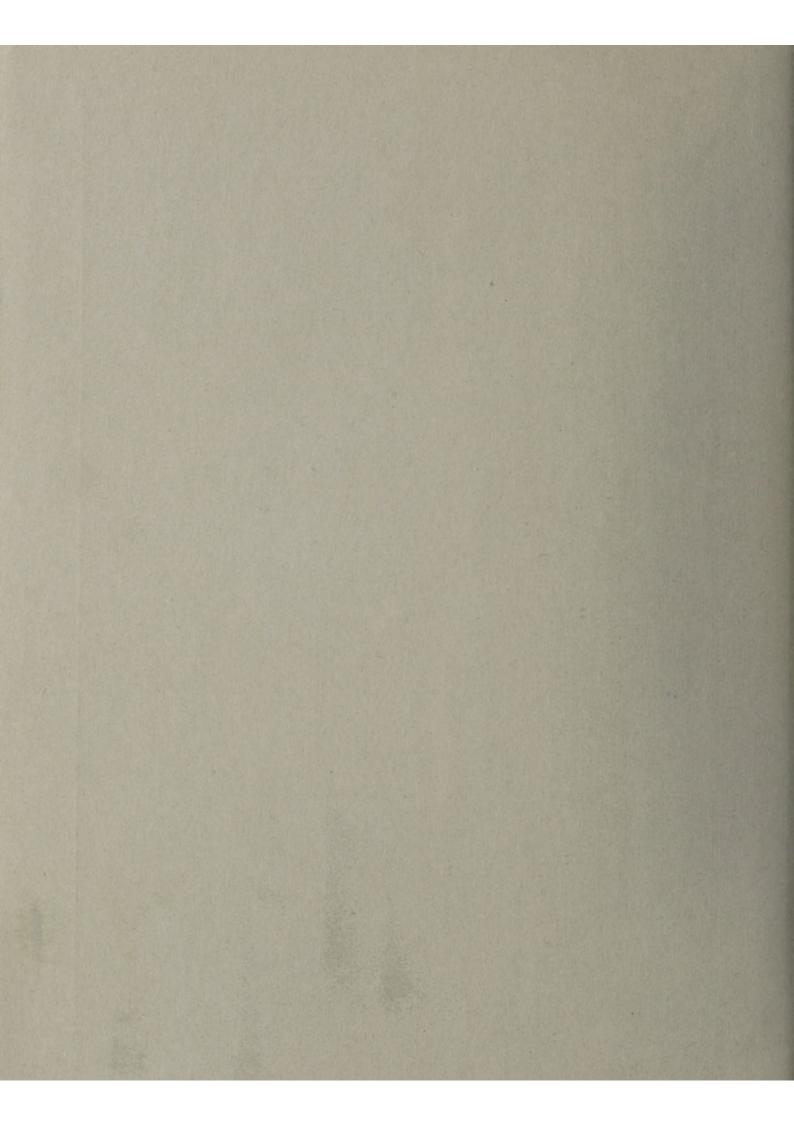

# ANNUAL REPORT

ON THE WORK OF THE

Public Health Department

FOR THE YEAR

1957

OSWESTRY BOROUGH AND RURAL HEALTH DISTRICTS.

With the Compliments of the Medical Officer of Health

Health Department, 8, Oswald Road, Oswestry.

Telephone 388.

Digitized by the Internet Archive in 2018 with funding from Wellcome Library

#### OSWESTRY

Oswestry is an ancient market town situated very close to the Welsh Border, and is a shopping centre serving a population of 40,000-50,000; Welsh is widely spoken in the town. The Smithfield is one of the leading stock markets in the country. Some light industry is developing in the town, and in the past the advent of the railways brought a little of the Industrial Revolution, but in the main Oswestry retains its long-developed character of a market town in the Border Country.

Secretary to come

## TO THE MAYOR, ALDERMEN, AND COUNCILLORS OF THE OSWESTRY BOROUGH COUNCIL

00000

Mr. Mayor, Aldermen, and Councillors,

I have the honour to present for your perusal my Annual Report on the work of the Public Health Department for the year 1957.

The contents include the information requested by the Minister of Health.

Our town has grown during the past year, building of both private and council houses continues.

Unfortunately many families still live in overcrowded conditions and substandard houses and it is a matter of regret that the first Clearance Area under the Compulsory Purchase Order confirmed by the Minister of Housing and Local Government in August 1957, has not as yet advanced beyond the planning stage. The raising of the Bank Rate curtailed the progress of building, but not the rate at which dilapidation continues.

It is heartening to see the improved living conditions, and the pride taken in their homes and gardens by many who have left substandard houses.

1957 has seen two epidemics affect our town. It was a year when measles was expected, nor did we escape the Asian Influenza epidemic which, originating in the wilds of China, gave rise to many cases (almost all the children were affected) during September and October.

An outbreak of Sonne Pysentery gave the Health Department four very

busy months before the last case was closed. Invaluable help was given by Dr. Alun Jones and the staff of the Royal Salop Infirmary Laboratory in examining and reporting on the many pathological specimens collected.

The incidence of other cases of infectious disease remained at a low level. The increase in deaths due to pneumonia is largely due to influenza in elderly persons.

Protection against infectious disease has been extended by the provision of poliomyelitis vaccination (the first small group of children being vaccinated in 1956), and B.C.G. vaccination of 13 year old children against tuberculosis. Immunisation against Diphtheria, Whooping Cough, and Smallpox continues to be given. The response by parents accepting all offers of vaccination and immunisation for their children has been very good.

Clean food is our great concern - and it should be a matter of concern to all housewives and customers.

The Health Department are constantly observing all premises where food is prepared or sold, and endeavour to instil a sense of pride and responsibility in all who work there. It is very satisfactory to note the improvements made in so many of these premises.

Public Conveniences. It has long been our wish to see these places as well constructed and maintained as the W.Cs. in our own homes. Unfortunately, in the absence of constant supervision, certain of our irresponsible citizens from time to time damage fittings. Consequently we have not yet been able to provide the Town with conveniences which would conform to good modern standards and enable those who use them to wash their hands before leaving.

Our water supply remains very satisfactory and adequate.

Sudden heavy rainfall taxes the capacity of the sewers in certain parts of the town beyond their capability, and on occasion has led to temporary floodings. Then proposed extensions to the sewage disposal system are carried out these conditions should no longer arise.

The Clean Air Act has come into operation, and in the Health
Department daily measurement of air pollution is being made. Where
factories in the town emit undue quantities of smoke, faulty and therefore wasteful consumption of fuel is taking place. Advice from the Chief
Public Health Inspector, and sometimes consultation with the Solid Fuels
Advisory Board help to improve efficiency in fuel consumption.

Health Education Displays have been staged in the Office window and have attracted much attention.

In this connection I would like to thank the Editor of the Border Counties Advertizer for publishing the paragraphs on health topic particularly during times when infectious illness has been prevalent.

In conclusion I wish to thank my colleagues in all departments of the Council for the help they have so willingly given throughout the year and for the sections they have contributed to this report. All members of the Public Health Department have given constant and valuable assistance which I have pleasure in acknowledging.

I have the honour to remain,
Your obedient Servant,

C. B. McARTHUR,

Medical Officer of Health.

Public Health Office, 8, Oswald Road, Oswestry. September, 1958.

This disease has been dreaded by so many because of the heavy mortality which occurred when at last a sufferer plucked up courage to consult the surgeon and have his fears confirmed.

Early diagnosis and treatment can effect cure, and now there are many amongst us who got rid of their cancers completely because they had treatment as soon as the first symptoms were noticed.

The approach to cancer research is from many angles, and makes fascinating reading. Some of the discoveries are surprising - others are perhaps unpalatable, and many arguments against some findings are raised by people who find that their habits would be classed as risky.

The Ministry of Health has asked Local Authorities to bring to the notice of the public the proved connection between cancer of the lung and cigarette smoking - that the more cigarettes smoked the greater the risk of contracting cancer, and also that reduction of smoking or change to pipe smoking reduces the risk.

Your Medical Officer of Health will continue to advise teenagers in school that it is inadvisable to start smoking.

A proportion of the pupils come from Oswestry Rural District. Discrepancies in figures in columns marked \* are due to absentees.

# VACCINATION AGAINST POLICHYELITIS

| 65   | OSTESTAY M.B. |
|--|---------------|
| Children born in the years<br>1947 - 1956 (inclusive). | District      |

#### INFECTIOUS DISEASE AND VACCINATION

Apart from an isolated case of Diphtheria in 1952 this disease has vanished from Oswestry since immunisation was introduced nearly 20 years ago. The percentage of children immunised is satisfactory, but I find that some parents put off asking for immunisation until the children start school.

Immunisation of these infants against Whooping Cough is asked for by most mothers, and in many cases protection against Tetanus is also sought. The request for vaccination against Poliomyelitis has been good (about 70 % of all children in the County), and it is hoped that the results will be a great reduction in the incidence of paralysis.

I am glad to see that the proportion of infants vaccinated against Smallpox is slowly increasing. As with diphtheria immunisation a booster dose is desirable at an interval of 4 - 7 years. At present the public only ask for revaccination when emigration authorities insist on it.

#### TUBERCULOSIS

This is one of the common infectious diseases which has shown a marked fall in incidence since health education has become widespread, and through the ceaseless search for contacts carried on by all engaged in Public Health work.

I am glad to find on talking to the schoolchildren that they realise that tuberculosis is infectious, and also that so many of the parents are willing for the 13 year old group of children to undergo the B.C.G. test for tuberculosis followed by protective vaccination should it be required.

Those children showing a positive reaction to B.C.G. are X-rayed and every effort made to determine how they became infected. I have been impressed by the absence of cases of tuberculous infection of glands in the neck since so much of our milk has been pasteurised before consumption.

Now that Shropshire has become a Specially Designated area we hope that it will not be long before it can be classed as an Attested area, one where the cattle are free from Tuberculosis.

#### Mass X-ray.

The Mass X-ray Unit based at Stoke-on-Trent visited Oswestry during May, 1957. The Director, Dr. E. Posner, reported that 3,774 persons attended for X-ray, which was a larger number of adults than on the previous visit in 1954. It is gratifying to note from the results

obtained that very few cases of active pulmonary tuberculosis were discovered among those who came for screening.

If all who attended were residents in the Borough (which was not the case) this would represent two fifths of the adult population. To get a valid estimate of the incidence of undiscovered chest disease at least 90 % attendance is desirable.

Aberdeen holds the record for attendance at a Mass X-ray Survey with 87 %.

Better housing and living conditions have made their contribution towards the prevention of tuberculosis, but the importance of including adequate amounts of milk, milk products, neat and vegetables in the diet and ensuring that young people aged 15 - 30 still keep to early hours of retiring to bed. The lure pf T.V. keeps many young (and not-so-young) people confined to semi dark rooms at times when they should be enjoying fresh air and exercise or else be asleep in bed. The price they pay is a chronic weariness and lack of resistance to infections.

Education is given at the Chest Clinics and Sanatoria by doctors and nurses in the hope of preventing further cases arising in the patient's family or visiting friends. Unfortunately where the patient cannot have a bedroom to himself, passage of infection becomes more probable.

B.C.G. vaccination to protect young children and infants where there is a family history of tuberculosis is being used in certain cases under the carc of the Chest Physician; and the disease itself is being treated by the drugs introduced during the past 10 years.

#### CLINICS AND HOSPITALS IN THE DISTRICT

TUBERCULOSIS: The Physician attends at:-

The Clinic, Upper Brook Street, Oswestry, every Friday from 1.30 p.m. to 4 p.m.

The Chest Clinic, Copthorne Hospital, Shrewsbury every
Wednesday from 2 p.m. to 4 p.m.

VENEREAL DISEASES: Facilities for treatment .- Clinics.

No.1 Belmont, Shrewsbury, as follows :-

Females : Mondays - 3.30 p.m. to 5.30 p.m. Thursdays - 5. 0 p.m. to 7. 0 p.m.

Males : Tuesdays }- 6. 0 p.m. to 8.0 p.m.

The aforementioned clinics and the following hospitals are administered by the Birmingham Regional Hospital Board which was constituted in accordance with the National Health Service Act.

Oswestry and District Hospital.

Copthorne Hospital, Shrewsbury, treats cases of Enteric Fever, Meningitis, Acute Poliomyelitis or Acute Encephalitis.

Monkmoor Hospital, Shrewsbury, admits other cases of Infectious

Disease such as Scarlet Fever, Diphtheria, Heasles, Whooping Cough etc.

Other hospitals which provide accommodation are :-

The County Council Hospital, Cross Houses, Shrewsbury.

The Royal Salop Infirmary, Shrewsbury.

The Eye, Ear, and Throat Hospital, Shrewsbury.

The Robert Jones & Agnes Hunt Orthopaedic Hospital, Oswestry.

#### AMBULANCE SERVICES

Under the National Health Service Act it became the duty of the County Council, the Local Health Authority under the Act, to make provisions for securing that ambulances and other means of transport are available for the conveyance of persons suffering from illness or mental defectiveness and expectant mothers or nursing mothers, from places in their area to places in or outside their area.

#### LABORATORY FACILITIES

Laboratory facilities are available at the Public Health Laboratory, Royal Salop Infirmary, Shrewsbury. Telephone: Shrewsbury 4389.

The Bacteriologist is Dr. A. C. Jones, and the Pathologist is Dr. G. Grant.

This Service undertakes work for Local Authorities free of charge in so far as it is relevant to diagnosis. It is invaluable particularly in the expeditious dealing with the bacteriological examination of food samples.

#### NATIONAL BLOOD TRANSFUSION SERVICE

The National Blood Transfusion Service Unit based on Birmingham visits Oswestry twice each year when a large number of public spirited citizens attend.

New volunteers are constantly required to take the place of those leaving the district or reaching 'retiring age', and to keep pace with the ever increasing demand for blood transfusion as a part of Hospital treatment.

The Shrewsbury Office has kindly supplied the following figures:-

|          | Liden |  |  | 1.5 |  |   | Attended | Bled |
|----------|-------|--|--|-----|--|---|----------|------|
| Oswestry | 1957  |  |  |     |  | • | 207      | 194  |

This includes donors resident in the Rural District.

Those of us who have received blood transfusions for ourselves or a member of our family owe a debt of gratitude which no money can repay to these donors.

#### SANITARY CIRCUMSTANCES OF THE AREA

#### WATER SUPPLY

I am indebted to the Water Engineer for the following notes on water supply, etc.

Rainfall at the Penygwely Reservoirs for the year was 43.61 inches.

Consumption for the year155,709,100 gallons.

During July, August and September, the Rainfall was 20.93 inches compared with the average of 9.24 inches.

- (1) Number of premises supplied from public water: 3,834
  - (2) Number of population supplied from public mains: 10,935
  - (a) direct to premises (1) . . . . . . . . 3,834
    - (2) . . . . . . 10,870
  - (b) by means of stand pipes (1) .... 17
    - (2) . . . . 65

Nature of supplies to remaining premises:

- 13 houses supplied by private systems
  - 10 houses supplied by wells
    - 4 houses supplied by Liverpool supply
      - 1 house supplied by Rural District supply

The houses supplied by wells are isolated dwellings on the outskirts of the town some considerable distance from the mains. The Water has been satisfactory both in quality and in quantity. The Corporation gathering grounds and impounding reservoir at Penygwely, together with the storage reservoirs at Mount Road do not normally provide a sufficient supply for the requirements of the town, but it is possible to augment this by drawing 250,000 gallons per day from the Liverpool Corporation Lake Vyrnwy Aqueduct, this latter supply being obtained under powers granted by an Act of Parliament.

The treatment given consists of an average period of seven days storage followed by rapid filtration with the prior addition of lime and coagulant, lime and calgon after filtration, and chlorination by the Chloramine system.

The water supply to all parts of the town is constant and more than 99 % of all dwelling-houses have direct supplies or stand pipes within easy reach.

#### REPORTS OF ANALYSIS

#### Ref.M/NH/99 (Raw Water).

#### CHEMICAL RESULTS IN PARTS PER MILLION

Appearance: Slight opalescence with a flocculent deposit.

Microscopical examination: Mineral and organic matter; chlorophyceae and protozoa.

Turbidity: 5

Colour: filtered: 15 Odour: Very faint vegetable

pH: 7.1 Free Carbon Dioxide: Trace

Electric Conductivity: 88 Dissolved solids dried at 180°C: 60

Chlorine present as Chloride: 7 Alkalinity as Calcium Carbonate: 11

Hardness: Total: 30 Carbonate: 11 Non-carbonate: 19

Nitrate Nitrogen: 0.0 Nitrite Nitrogen: Less than 0.01

Ammoniacal Nitrogen: 0.12 Oxygen Absorbed: 1.8

Albuminoid Nitrogen: 0.12 Residual Chlorine: ...

Metals: Iron: 0.10, Manganese: 0.03, other metals absent.

#### BACTERIOLOGICAL RESULTS

Number of Colonies { 1 day at 37°C. 2 days at 37°C. 3 days at 20°C. developing on Agar { 5 per ml. 11 per ml. 170 per ml. Presumptive Coli- { Present in Absent from Probable number. aerogenes Reaction { 10\* ml. 1 ml. 50 per 100 ml. Bact. coli. (Type I) 10 ml. 1 ml. 25 per 100 ml. Cl. welchii Reaction 100 ml. 10 ml.

\*Intermediate Type I.

This sample shows only slight opalescence and deposit, the turbidity

being noticeable but not marked. The water is neutral in reaction, soft in character, has a comparatively low content of mineral constituents in solution and it is free from metals apart from minute traces of iron and manganese. It is of satisfactory organic quality for this raw water and bacterial impurity indicative of contamination by matters of excremental origin is limited to a very moderate number of organisms of the Coliaerogenes group, including Bact. coli. No exceptional difficulty would be expected in the treatment of this water for the production of a public supply.

This sample is reasonably clear and bright in appearance, just on the alkaline side of neutrality and free from metals apart from negligible traces of iron and manganese. The water is soft in character and has a comparatively low content of mineral constituents in solution. It is free from noticeable colour, of very satisfactory organic quality and of the highest standard of bacterial purity.

These results are indicative of a pure and wholesome water suitable for drinking and domestic purposes.

25th July, 1957.

|   |
|   |

Your Worship, Aldermen, Councillors,

I beg to present my Report for 1957, various items of those duties performed by public health inspectors being given. A great deal of the year was taken up with dealing with the Dysentery outbreak, and daily routine connected with this disrupting the normal duties of office and outside staff for five months.

The inspection of licensed houses was carried out during the year, this last being done by my predecessor just after the war. I was forced to comment in my report on the licensed houses that it was a pity that brewery companies were not as keen to stipulate to their tenants what they should clean the glasses with as they were to stipulate what should be sold in the glasses. One brewery operating in this area supplies its managed houses with automatic dispensers and a detergent sterilizer recommended for the licensed trade but allows its tenants to use what they like regardless of the effect on the beer-head or of the sterilizing quality.

Staffing problems arose again during the year when Mr. Wade a qualified inspector of considerable experience joined the department as Additional Inspector in January 1957 and resigned to take up another post in August 1957. It was then two-and-a-half years since the Council agreed to the appointment of an additional inspector and for fifteen months or half of the time the post had been filled, the remainder of the time being taken up with seeking staff. In view of this most

unsatisfactory position it was decided to take on a pupil in order to try to achieve some continuity.

I must express to the Health Committee and the Council my appreciation of their support at all times.

I remain, Sirs,

Your obedient Servant,

R. J. LEWIS,

.... ...

Public Health Inspector.

### HOUSING

### CLEARANCE AREA NO.1.

The Compulsory Purchase Order was confirmed by the Minister in August, 1957. One Pink property was cross-hatched yellow.

The Department was pleased to have had this first Area confirmed with little amendment.

# INFECTIOUS DISEASE

# Dysentery (Shigella Sonnei).

The outbreak which lasted during the late spring and summer created a great deal of work for the Public Health Inspectors and the Clerical staff, and of course, the Public Health Laboratory. Daily specimens were despatched to Shrewsbury, results recorded and patients advised of results. The extent of the work can be judged from the following figures

| GA  | ocii | 0 01 01 | ic wol | TIESO A. | De Jui  | 18cd 11 | OII OII | e ioiio#1 | THE TIENTED |       |      |

### SHOPS ACTS

In addition to the 114 food shops listed in the food section there are 169 other shops on the office registers. There is no official hal day for closing, and though most of the shops close on a Thursday many of the street corner general stores make use of the exemption clauses in the Shops Acts to stay open every day. These clauses and anomalies of the Act, which are really a conglomeration of legislation much of which was passed in other days, make strict enforcement impossible, even if this seemed really necessary. When Joint Council hours for adult shop assistants are less than those legally stated for 16-18 year olds, and when bottles of lemonade but not a packet of tea can be bought on a Sunday, the law is very near to becoming the 'ass' it is sometimes called.

### FOOD HYGIENE

The work of improving food premises continues steadily, and I must place on record the continuing cooperation of food traders. The Department assisted the local press in the production of a second annual "Food Hygiene" supplement to the weekly newspaper during the summer. The list of the various food premises is as follows :- I am all all and a second

- 9 Bakehouses
- 19 Cafe's
  - 9 Fish Friers
  - 4 Wet Fish Shops

17 Greengrocers

custom from people working in the town

- 20 Sweet Shops
- 52 Grocers
  - 2 Wholesale Premises
- 39 Licensed Houses 21 Butchers Shops

te better. Forther improvements were made in several premises.

# FOOD HYGIENE (Cont.)

During the year shops and other food premises were inspected and the following notices were served. (Licensed houses excluded). -

| to | provide washing facilities             | 5  |
|----|--|----|
| to | increase or improve washing facilities | 10 |
| to | carry out structural improvements      | 5  |
| to | carry out structural repairs           | 8  |
| to | carry out redecoration                 | 13 |
| to | increase or improve toilet facilities  | 8  |

# Bakehouses.

5 of the bakehouses produce bread, 3 producing confectionery only.

Catering premises.

Most of the cafe's are family businesses and rely on regular custom from people working in the town, or country folk shopping; this factor is conducive to well ordered premises. Modernisation of premises and equipment is steadily progressive, even though floor area available is often limited. Sterilisation of crockery by double-unit sinks, washing machines or chemicals is generally practised. Refrigerated storage is available in all of them, and was so before Regulations made it essential.

# Butchers Manufacturing premises.

As food poisoning organisms can so easily be spread by manufactured meats these premises can never be too good, and so, of course, can always be better. Further improvements were made in several premises.

# FOOD HYGIENE (Cont.)

# Licensed Houses.

During the year a survey of licensed houses was carried out, a report being presented to the Health Committee and the Magistrates at the beginning of 1958.

The survey can be summarised as follows:-Number of houses ...... Number with hot water and sinks for glass washing .... 38 Number with unsatisfactory ventilation ...... 25 Number with unsatisfactory living accommodation ..... 12 Number with unsatisfactory toilet accommodation ..... 30 The licensees were most co-operative during the survey. Grocery Premises.

During 1957, one old grocery premises was completely gutted and converted to self service, a major improvement to the premises and the hygiene standard possible. In a walk around store a proper room for handling cooked meat and bacon was provided within the main stock-room.

A "neighbourhood" corner shop was strikingly modernised, and yet maintains its 'small shop' atmosphere.

35

# FOOD HYGIENE (Cont.)

# Ice Cream.

The only manufacturing premises (Cold Mix) ceased production.

45 premises are registered for the sale of ice cream.

# Wet Fish Shops.

Three wet fish shops have refrigerated covered units for display, the fourth has a full glass window. There are no traditional wet fish slabs in shops or in the market.

# Market Hall.

The Council and the Market Superintendent have been co-operative in raising the standard. All butchers are in a tiled butchers' market, with a sink with hot and cold water. Counters have a screen that rises vertically and then goes backward at a rising angle. Butter and cheese are sold behind similar screens. Only fruit and vegetables are sold on the open market, all other foods being inside. Markets on a Wednesday and Saturday are regularly visited.

# Magisterial Proceedings.

A prosecution was taken by the Council against a national grocery company for

- (1) Failure to protect bacon from contamination by flies;
- (2) Exposing for sale bacon which was unfit for human consumption, being maggotted.

The cases were found proved and fines of £30 levied on each charge, a total of £60.

# FACTORIES ACTS, 1937 & 1948

# PART I OF THE ACT

1.- INSPECTIONS for purposes of provisions as to health (including inspections made by Public Health Inspectors)

### CLEAN AIR

As a first step in explaining the amount of pollution that occurs even in a market town like Oswestry, a daily filter apparatus was installed in May, 1957. This runs for 24 hours a day, 5 days a week, and filters an average of 90 cu. ft. in 24 hours.

The results are interesting in that the density of the stain on the filter paper varies almost directly as air temperature, and is not affected greatly by wind direction (e.g.) from the railway or towards the railway.

Of course, Oswestry has not the problem that faces the industrial towns and cities, but I feel that as we have a shorter distance to travel to 'Clean Air' then we should be determined to make the journey more quickly than the 'black areas'.

The following figures are the monthly averages of readings taken from the air filter apparatus during 1957.

| May      | 8.9  | milligramms | per  | 100 | cu.  | metres. |
|----------|------|-------------|------|-----|------|---------|
| June     | 6.5  | Man " hold  | 11   | 11  | - 11 | "       |
| July     | 11.2 | begge "     | .11  | 11  | 11   | "       |
| October  | 13.1 | 11          | - 11 | !!  | - 11 |         |
| November | 22.2 | "           | 11   | 11  | 11   | "       |
| December | 27.2 | . "         | "    | 11  | 11   | 11      |

These figures indicate the direct relationship between the average temperature and the rate of pollution, suggesting an association between smoke pollution and the heating of homes and offices.

Smoke haze over Oswestry.

Bovis Cyst in wall of bullock's heart.

Bovis Cyst in muscle of bullock cheek.

# MEAT INSPECTION

The table on page forty-three gives details of the number of animals slaughtered for human consumption in the Borough. Premises at Willow Street are operated by a Company formed by local butchers, and the Oswestry Rural District Council through its Chief Public Health Inspector continues to share meat inspection duties, for which I am most grateful. Two other premises operate in the Borough, and the total figure is made up as follows:-

Animals killed at Willow Street and inspected by R.D.C.:615 Cattle, 13 Cows, 62 Calves, 4,333 Sheep, 1,164 Pigs.

Animals killed at Willow Street and inspected by Borough:635 Cattle, 17 Cows, 61 Calves, 4,482 Sheep, 2,828 Pigs.

Animals killed at two other premises and inspected by Borough:384 Cattle, 92 Calves, 2,793 Sheep, 144 Pigs.

The main slaughtering centre is operated by the Oswestry Wholesale Butchers' Supply Company, and at the latter end of 1957, plans were laid by them for the improvement and modernisation of their premises, in view of the possibility of the Government sanctioning a municipal abattoir seeming remote in the near future.

A feature of 1957 meat inspection was a sharp rise in the incidence of Cysticercus Bovis, which caused some concern to the butchers and the Inspectors. Carcases affected with a localised condition were discovered and were sent to Chester for cold storage treatment. At a cost of £20 per carcase to the butchers for treatment and loss, this was a serious

matter. Our investigations showed that there was in many cases a close link between infected cattle and sewage works outfalls. In one period of 10 days, 7 out of 27 cattle inspected were found to be affected, and this tested to the extreme the confidence of the butchers in the Inspectors, but I am happy to report that relations remained amicable. In the first half of 1958, much less Cysticercus Bovis has been found.

Slaughtering hours still extend beyond office hours considerably, and meat inspection has often to be done in the evenings and early mornings, and some Sundays. In many authorities this commomly means office hours plus ......

### RODENT CONTROL

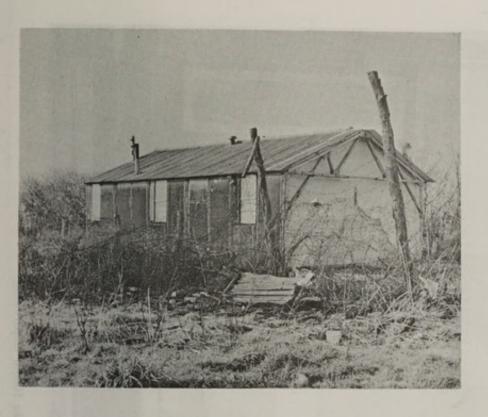

The Borough Council and Rural District Council continue to operate a joint committee for carrying out duties under the Prevention of Damage by Pests Act, 1949. Two operatives are employed by the Committee and are available for work in either district as indicated by the Public Health Inspectors; although generally work in the Borough is carried out by the one operator. Contracts are held with the Committee, the fee for a financial year being based on the number of hours worked at a premises during the previous calendar year.

The Refuse Tip is treated regularly and infestations kept to the minimum under the conditions prevailing.

Generally speaking, rat infestations are low and complaints are few. Mice are reported more frequently and at premises under contract most treatments are for these smaller but none the less destructive and unhygienic pests.

### VERMINOUS PREMISES

Once again it is pleasing to report that these are conspicuous by their absence. Occasionally infestations of cockroaches occur in various parts of the town but perseverance and modern insecticides will safely eliminate these and all other vermin - except the humble ant.

Huts at Mile End Camp. Occupied by Squatters at the end of the War, the occupants have been rehoused and the huts demolished.

Display in the window of the Health Department.

### CINEMAS

The Cinemas had their annual inspection and certificates were issued for the guidance of the licensing magistrates.

As in past years the Cinema management have at all times been most co-operative and helpful, and continue to assist keeping health education in the public eye by showing slides.

### HEALTH EDUCATION

The Health Department is still housed in converted shop premises, and the window remains useful for the Health Education displays, with the opportunity to interest the public in one subject at a time. In addition, seasonal matters such as measles control in the spring, food hygiene in the early summer etc., can be dealt with at the right time. Various Government Departments have quite good set displays suitable for placing in show windows.

## PETROLEUM ACTS

Forty premises are licensed for the storage of a total of 111,210 gallons of petrol. Five premises are licensed for the storage of petroleum mixtures (i.e. Cellulose) and three for the storage of calcium carbide.
