OSWESTRY RURAL DISTRICT COUNCIL

Public Health Office,

8, Oswald Road,

OSWESTRY,

Shropshire.

To the Chairman and Councillors,

Mr. Chairman and Gentlemen.

I beg to present for your perusal the Annual Report for 1959.

The contents include the information required by the Minister of Health.

Total births numbered 289 (7 stillborn), and 250 deaths were registered.

	(Oswestry R.D).	(England and Wales)
The Birth Rate was	14.66	16.5
The Death Rate was	12.5	11.6
The Infant Mortality Rate was	27.3	22.0
The Still Birth Rate was	23.3	20.7

Prematurity, birth injury and malformations were the chief causes of the infant deaths, three quarters of which occurred during the first 2 or 3 days of life.

More than half of the adult deaths (127 out of 250) were due to lesions of the circulatory system. Cancer took second place, cancer of the lung and bronchus showing an increase.

During the year we experienced the anticipated measles epidemic (304 cases notified), and a localised outbreak of a mild form of Scarlet Fever (50 cases), but otherwise there was little notifiable infectious disease.

New homes have been built at Weston Rhyn (6) and West Felton (12) during the year. The subject of Old People's Bungalows has been discussed. I was very favourably impressed by the happy atmosphere of such a scheme developed by Shrewsbury Borough Council.

The last of the wartime hutments at Brookside Camp, Kinnerley are now no longer in use as dwellings.

The comprehensive scheme to bring water from Ruyton-X1-Towns to Pentre, Edgerley, Melverley and the southern area of the district has been started. The Crickheath and Llanymynech water scheme has been put into operation.

Work on the sewerage scheme for Weston Rhyn is in progress, and schemes for Llanymynech and Ruyton-Xl-Towns are being planned.

The Chief Public Health Officer and Engineer have contributed sections to this report on the sanitary circumstances and water supply of the district.

I wish to thank all those who have at all times so willingly assisted me in the discharge of my duties, and in the preparation of this report.

As I now come to the end of my term of office as Medical Officer of Health to the Oswestry Rural District Council I take this opportunity of thanking the many Councillors both past and present for courtesy, help, and support which has been extended to me. My years of service in this beautiful county, first solely on the County Public Health Staff and now for nearly seven years also as your M.O.H have been very interesting and happy ones, as I have watched "my" babies and school children grow up and settle in homes with families of their own.

It is satisfactory to note how during these years health, and living conditions have improved.

I have the honour to be, Your obedient Servant,

C. B. McARTHUR,

Medical Officer of Health.

June, 1960.

GENERAL STATISTICS

1959

The following are the General Statistics for the Oswestry Rural Health Districts:-

Area in acres	61,524.
Population figure given by the Registrar General	19,990
No. of inhabited houses on Rate Book at end of 1958	5,148
Rateable value	£153,614
Sum represented by a penny rate	£561 7s. 6d.

CANCER

The two main causes of death are diseases of the circulatory system and cancer.

Unfortunately in both cases more deaths at an age earlier than in former years are being recorded. In the first case this may well be due to the increased pace of living and richer diets now consumed, in the other the earlier deaths (chiefly in men aged 45-60) are most often due to that form of cancer of which a very potent cause has been discovered by the study of statistics.

For any given patient it matters little whether a factor has contributed to or caused his disease (or demise). The elimination of this factor will lead to a reduction of the incidence of the disease. In this sense smoking, and especially cigarette smoking, is to be regarded as the most important factor in the development of lung cancer.

Present date indicate that 80% of all lung cancer occurring in males today would not have occurred were it not for tobacco smoking, and that about 10% of males over the age of 25 who smoke in excess of 20 cigarettes daily will develop lung cancer by the age of 75.

Last year 13 cases of cancer of the lung and bronchus occurred in our district.

INFECTIOUS DISEASE AND VACCINATION

The great majority of school children and many under school age have been immunised against diphtheria, whooping cough and against policyelitis, including the administration of the booster dose.

The response of the 15-25 year group to poliomyelitis vaccination has been poor, and many of those who came for vaccination did so only as a result of personal persuasion or in fear after the death from poliomyelitis of a prominent footballer.

B.C.G. vaccination to protect against tuberculosis is offered to all school children aged 13 and to contacts of tuberculosis in every case where immunity has not already been developed. It is expected that the B.C.G vaccination will shortly be made available for all older school children and students. Most Hospitals insist on this protection for all their students on or before starting training.

TUBERCULOSIS

During the past 10 years the incidence of this disease has fallen dramatically to almost half the 1948 figures. The anti-biotic drugs by this rapid conquest over the tubercle bacilli have so shortened the period of hospitalisation for most cases of tuberculosis that newly discovered patients can be admitted within days of diagnosis, thus enabling them to be treated in the early stages of their illness and preventing infection of those with whom they are in contact.

Figures published by the Registrar General show that whereas women formerly suffered the greatest incidence of tuberculosis in the 15-25 and 25-35 age groups, now the proportion of men and women at this age is equal, and in all the older age groups the men are now two, four or five times more frequently affected. It is therefore among the middle-aged and elderly that we must search for the unrecognised disseminators of tuberculosis, the broken-down lesion of their youth now masquerading as a "smoker's cough".

CLINICS AND HOSPITALS IN THE DISTRICT

TUBERCULOSIS

The Physician attends at:-

OSWESTRY: The Clinic, Upper Brook Street,

Every Friday from 1.30 p.m. to 4 p.m.

SHREWSBURY: The Chest Clinic, Copthorne Hospital,

Every Wednesday from 2 p.m. to 4 p.m.

VENEREAL DISEASES

Facilities for treatment:- Clinics.

Clinics are administered by the Regional Hospital Board and the one available for this area is given below, the Medical Officer attending on the days and at the hours given.

SHREWSBURY: 1, Belmont.

Tuesdays and Fridays: Men - 6 p.m. to 8 p.m. Thursdays: Women - 5 p.m. to 7 p.m.

Mondays: Women - 3.30 p.m. to 5-30 p.m.

HOSPITALS

Oswestry and District Hospital.

Copthorne Hospital, Shrewsbury, treats cases of Enteric Fever, Menigitis, Acute Poliomyelitis or Acute Encephalitis.

Monkmoor Hospital, Shrewsbury, admits other cases of Infectious Disease such as Scarlet Fever, Diphtheria, Measles, Whooping Cough, etc.,

Other hospitals which provide accommodation for the district are:

The County Council Hospital, Cross Houses, Shrewsbury.

The Royal Salop Infirmary, Shrewsbury.

The Eye, Ear and Throat Hospital, Shrewsbury.

The Robert Jones and Agnes Hunt Orthopaedic Hospital, Oswestry.

All these hospitals are administered by the Birmingham Regional Hospital Board which was constituted in accordance with the National Health Service Act.

AMBULANCE SERVICES

Under the National Health Service Act it became the duty of the County Council, the Local Health Authority under the Act, to make provisions for securing that ambulance and other means of transport are available for the conveyance of persons suffering from illness or mental defectiveness and expectant mothers or nursing mothers, from places in their area to places in or outside their area.

LABORATORY FACILITIES

These are available at the Public Health Laboratory, Royal Salop Infirmary, Shrewsbury. Telephone: Shrewsbury 4684.

The Bacteriologist is Dr. A. C. Jones, and the Pathologist Dr. G. Grant.

This service is based on the Royal Salop Infirmary and undertakes the

work for local authorities free of charge in so far as it is relevant to

diagnosis. It is invaluable particularly in the expeditious dealing with

the bacteriological examination of food samples.

BLOOD TRANSFUSION SERVICE

For very many people during the course of serious illness, blood transfusion is a life saving treatment. Anaemia, loss of blood in accidents, childbirth or operation and severe burns all call for the transfusion of blood.

The National Blood Transfusion Service Unit based on Birmingham visits Oswestry twice each year when a large number of public-spirited citizens from the Borough and Rural District attend to give blood.

New volunteers are constantly required to take the place of those leaving the district or reaching "retiring age".

The Shrewsbury Office has kindly supplied the following figures:OSWESTRY1959

Attended Bled 265 242

A proportion of the donors come from the Borough.

Under the National Health Council to booms the duty of the County Council, the Local Health Authority under the Act, to ente proyieldes for succeiving that ambalance and other modes of transport are
available for the conveyance of purchas successful from illness of worth!

PUBLIC WATER SUPPLIES

Progress on water supplies has been satisfactory during the year. The Crickheath Hill area, Dummy's Wood and Blodwel Bank have all been supplied with mains, and construction of head works and laying of mains from Ruyton-Xl-Towns through to Pentre, Edgerley and Kinnerley have been in progress during the year. There has also been an extension from St. Martins to Penybryn and Glyn Morlas. When these areas are completed the most urgent places requiring water will be West Felton, Queens Head, Rednal and Frankton. These remaining areas are being considered by the Council and it is hoped that the village of Frankton will be able to receive a supply from mains serving the Rural District of Ellesmere.

It is hoped also that during 1960 work will be commenced on the Reservoir at Mardy. This will afford greater storage which at the moment is down to a minimum.

PRIVATE WATER SUPPLIES

41 samples of water have been taken from various private supplies. 14 have been found to be unsatisfactory and 27 satisfactory. Many of the unsatisfactory supplies are from shallow wells and the preclusion of pollution creates difficult problems but it has been found that often the installation of a small filter does provide quite a satisfactory solution so far as drinking supplies are concerned. Where such a remedy is not practicable consumers are advised to boil water before using for domestic consumption and the preparation of food.

SEWERAGE WORKS

The joint sewerage scheme between Ceiriog R.D.C. and Oswestry R.D.C. has progressed during the year but unfortunately not completed. The scheme has presented difficulties, but nevertheless the slow progress made has been very disappointing particularly in view of the good weather experienced during the year.

It is now anticipated that the actual work on the new sewerage scheme to serve Pant and Llanymynech will be commenced during the spring of 1960.

HOUSE FURCHASE AND HOUSING ACT, 1959

The Council have decided to re-introduce the giving of Discretionary Grants in respect of improvements to houses and it is expected that applications for this and the Standard Grants will increase as water and sewerage schemes are completed. Many owners who have been willing to improve their property have been prevented doing so by the lack of unsatisfactory water supplies. 31 applications in respect of Discretionary Grants were received and 31 approved. 14 applications were received in respect of Standard Grants and 14 approved.

FILTHY AND VERMINOUS PREMISES

One house only has been found to be in a filthy condition and as this was a Council House the Council took action immediately and served Notice to Quit on the occupier. This has seemed to have had a very desirable effect on the tenant who immediately took steps to have the premises cleaned and further inspections revealed a better standard of cleanliness. The Council therefore suspended further action so far as eviction was concerned.

REFUSE AND SALVAGE: COLLECTION AND DISPOSAL

Refuse is collected and disposed of by direct labour. The number of men employed is nine. The vehicles comprise one-7 cu.yd., one 10 cu.yd., and one - 16/18 cu.yd., Total of three.

The greatest problem is finding suitable sites for disposal. It was hoped that tipping might have been commenced at the old Sewerage Works at Weston Rhyn but the slow progress made on the new works has caused delay and therefore necessitated haulage to more remote sites, thereby increasing the cost of collection.

Salvage is still collected and although the amount is small it does of course save useful tipping space.

ATMOSPHERIC POLLUTION

Probably the most serious nuisance in the district at the moment is caused by the emission of dust from a dolomite quarry in the area. This matter has been discussed with the Company during the year and I am informed that as there is a comparatively small amount of dolomite in the area, the Company have been forced to consider future plans and it is felt that the nuisance will not exist very much longer when the plans, now being considered, are implemented.

MOVEABLE DWEILINGS

ll Licences were granted during the year. All have been in respect of families requiring permanent living accommodation.

Out't on the occupiers

PUBLIC CONVENIENCES

The Council have decided to proceed with the erection of public conveniences at the Racecourse which is a favourite spot for visitors at weekends. They have also under consideration the erection of similar conveniences at Gobowen and Llanymynech. Those at Llanymynech, it is hoped, will be provided jointly with the Llanfyllin Rural District Council.

PREVENTION OF DAMAGE BY PESTS

men employed is nine. The vehicles comprise one- 7 cu.yd., one 10 cu.yd.,

Oswestry Borough and the Rural District Council of Oswestry still continue to operate a joint scheme controlled by a Joint Committee.

The greatest problem is tinding suitable sites for discount will

The work over the past years in the inspection and treatment of premises is now evident by the far less numbers of major infestations in the district and it is hoped that co-operation between the public and the Local Authority in the work of rodent eradication will continue.
