Oundle & Thrapston Rural District

Population 18,112

Mr. Chairman,

The Registrar General gives the mid-year 1964 population as 4,680. At the census of 1961 the population was 4,595, made up as:-

	Males	Females
Total	2198	2397
0 - 4 years	156	147
4 - 15 " " ...	331	322
15 - 45 " " ...	814	796
44 - 65 " " ...	644	718
65 and over	253	414

Age Groups

The tables below give a further dissection of population of comparative districts. A whole is certainly the sum of its parts, but the parts can be very dissimilar. England and Wales are made up of very dissimilar counties and counties are made up of very dissimilar sanitary authorities. The four periods of life that demand most from sanitary authorities and county authorities are -

- (a) 0 - 4 years as infants
- (b) 5 - 14 " compulsory school age
- (c) 15 - 44 " females - child bearing age
- (d) 65 and over retired up to senility

The remainder, if not personally disabled, can look after themselves and are the workers and the maintainers of the society. Consideration of the numbers in each group can give a reasonable picture of the background of a community.

Numbers per 1,000 total population by sex and age periods

	Age	0-4	5-14	15-24	25-44	45-65	Over 65
Northampton Administrative County Population 292,584		M 42	82	65	133	123	49

England & Wales	381		256	125		

Expectation of Life

Census figures 1841-1961 show a progressive increase, from 1911, of years of life expectation. The table below gives the relative numbers of the over 65 years per 1,000 of total population and by sex.

	<u>Over 65 years per 1,000</u>											
	1841	1851	1861	1871	1881	1891	1901	1911	1921	1931	1951	1961
Total Population	43	46	46	47	46	47	47	52	60	94	110	119
Male "	42	43	43	44	42	43	42	46	54	66	94	94
Female "	47	50	50	50	50	51	51	57	66	81	126	143

Note. There was no census in 1941 - a war year. The marked improvement in the expectation of life is a comparison in time and has its origin in improved social conditions. It is due to prevention of disease and not to cure of disease.

From the tables given Raunds has a high over 65 rate and a low 15-44 female rate; two factors against good statistical records. Although the Oundle and Thrapston Rural District has a population almost four times that of Raunds, yet in the thirty years of existence of the two local authorities the natural increase in Oundle and Thrapston (Births - Deaths) was 2,901, Raunds 262.

Raunds and Oundle Urban Districts are too small to act as independent sanitary authorities. Public health inspection is becoming more and more onerous in an age of female workers, processed tinned foods and jerry buildings. No doubt the surveying work of the Councils is also increasing and becoming more complicated. Both these districts are enclosed within the Rural district geographically and their independent existence does not make sense functionally or economically. The review of local government boundaries should have been tackled by the authority legally expected to tackle it. The County Council preferred to go back to 1935 instead of dealing with 1965.

Birth Rate

For Raunds the comparability factor for 1961 and 1962 was 1.16 and for 1963 and 1964 it was 1.2. This relatively high comparability factor suggests a population above the average in age. The birth rate is only 73% of the county rate and 76% of the national rate.

Live Births

TOTAL LIVE BIRTHS in Raunds Urban District:-

	1961		1962		1963		1964

Peri-Natal Mortality (Still Births and Deaths under 1 Week)

Rate per 1,000 of Total Live and Still Births	1963	1964
Raunds Urban District	...	48.0
England and Wales	...	29.3
Northamptonshire	...	25.09

Maternal Mortality

	1961	1962	1963	1964
	0	0	0	0

Rate per 1,000 Live and Still Births:-

Raunds Urban District	...	0.0	0.0	0.0	0.0
England and Wales	...	0.33		0.28	0.25
Administrative County	...	0.55		0.20	0.17

There has been no maternal death since 1935, the date of the inclusion of Stanwick in the district.

Death Rate

A classification of the causes of death with sex and age is given in tables at the end of the report.

Number of Deaths

		1961	1962	1963	1964
Males	...	23	27	34	28
Females	...	35	37	38	34
		58	64	72	62

DEATH RATE:-

		1961	1962	1963	1964
Raunds Urban District - Crude	...	12.7	13.88	15.6	13.25
Standard		10.53	11.8	13.1	11.13
England and Wales	...	12.0	11.9	12.2	11.3
Administrative County	...	11.18		11.2	10.56
Comparability Factor	1958 = 0.85				
" "	1959 = 0.84				
" "	1960 = 0.86				
" "	1961 = 0.83				
" "	1962 = 0.85				
" "	1963 = 0.84				
" "	1964 = 0.84				

These comparability factors indicate a more aged population than the average of England and Wales.

The total Death returns of a public health district are made up of (1) Residents who die in the district and (2) Residents who die outside the district and their death transferred inwardly to the home district. Below are two tables for periods of 10 and 12 years each, (1) After the National Health Service Act and (2) Before the inception of the Act. Although the figures involved are small there is consistent evidence that people are living longer and also that the number of inwardly transferable deaths is increasing in proportion to the total deaths. Most of those inward transfers are of elderly people dying in institutions outside the district. This increase in the proportion of transferable deaths suggests that the family as the basis of social life is giving way to that of the community. The old people are without doubt well treated in the State institutions but nevertheless there is a severance of a link.

Year	After N.H.S.					Before N.H.S.					
	Total Deaths	No. over 70	Rate	Inward Transfers	Rate	Year	Total Deaths	No. over 65	Rate	Inward Transfers	Rate
1953	41	26	63%	16	39%	1916	48	18	37%	7	16%
1954	44	30	70%	19	43%	1917	41	18	44%	4	10%
1955	81	45	60%	23	28%	1918	54	17	31%	7	13%
1956	56	39	70%	24	43%	1919	40	26	50%	5	12.5%
1957	52	33	63%	12	23%	1920	45	22	50%	8	18%
1958	52	34	65%	20	39%	1921	39	21	54%	4	10%
1959	62	34	55%	17	28%	1922	34	12	35%	0	0%
1960	56	30	54%	18	32%	1923	46	20	44%	4	9%
1961	58	39	67%	23	40%	1924	41	18	44%	7	17%
1962	64	43	67%	32	50%	1925	32	14	44%	11	30%
1963	72	44	61%	33	45.8%						
1964	62	37	60%	33	53.2%						

It is to be noted that from 1953 the number is over 70 years and from 1916 the number is over 65 years. The expectation of life is distinctly better from 1953 and this table also shows distinctly more inward transfers.

2nd June, 1964.

WATER SUPPLY

Raunds is supplied with water by the Nene and Ouse Water Board. The Council has accepted the principle of the Fluoridation of water supplies and so has the County Council. The County Council is the authority for Fluoridation, no doubt because it does not possess and never did possess a water supply. A Water Board is placed in an impossible position when of the local authorities receiving its supply, some are for and some against Fluoridation. The only solution is for the Ministry of Health to make Fluoridation a national policy. By virtue of the Water Act 1945 the Ministry has the power to compel all water authorities to conform to a national policy.

The water in supply is very hard; some degree of softening would make the housewife's work a lot easier.

Sample of water labelled "Raw Water Raunds" received on the 20th May, 1964 from Mr. H.B. Wilson, Nene & Ouse Water Board.

Physical Examination

Clear and bright, odourless and colourless (Hazen less than 5.0).

General Chemical Examination

Reaction ..	pH 7.1	Parts per 100,000
Free Carbon Dioxide (CO_2)	...	1.65
Ammoniacal Nitrogen (N) ² (Free and Saline)	...	nil
Albuminoid Nitrogen (N)	...	0.0050
Nitrous Nitrogen (Nitrites)	...	absent
Nitric Nitrogen (N) (Nitrates)	...	0.55
Hardness (CaCO_3 , Clark)	...	42.0
Temporary	...	19.6
Permanent	...	22.4
Oxygen absorbed in 3 hrs. at 37°C	...	0.0663
Alkalinity	...	29.25
Total Solids	...	86.2
Poisonous Metals	...	absent

<u>Mineral Analysis</u>						<u>Parts per 100,000</u>
Calcium (Ca)	18.48
Magnesium (Mg)	1.30
Carbonate (CO_3^2-)	16.5
Chloride (Cl^-)	10.25
Sulphate (SO_4^{2-})	10.28
Nitrate (NO_3^-)	2.43
Iron	trace
Sodium (Na)	12.2

Microscopical Examination of Deposit ... None.

Plumbo-Solvency - No action on lead in 3 days at 21°C .

Bacteriological Examination

Coliform organisms absent in 100 mls.

Number of microorganisms per ml developing at 37°C = nil

Number of microorganisms per ml developing at 21°C = 2

Remarks

The results obtained on the analysis of this sample indicate a hard water containing little organic matter and few bacteria.

I am of opinion that this water as evidenced by the sample is fit for drinking purposes.

S. GREENBURGH

Public Analyst.

2nd June, 1964.

Results expressed as parts per 100,000.

The following analysis was taken by reason of a scare at Stanwick. The analysis would suggest that the amount of Chlorine in the water was the basis of the scare. I understand that the Water Board had to pump some water from the river into the supply. Although there is more organic matter in the water than is usual for a deep well supply, there is no more than is commonly present in a surface soft water supply.

Sample of water labelled "Treated Water from Stanwick (Ringstead Source)" received on the 10th December 1964.

Physical Characters	Good
Reaction	pH 7.0
The sample contained:-	<u>Parts per 100,000</u>
Chloride	10.25
Ammonia (free & saline)	0.0344
Ammonia (albuminoid)	0.0134
Oxygen absorbed in 3 hours at 37°C	0.1155
Nitrate	0.20
Nitrite	absent
Poisonous Metals	absent
Total Hardness	35.6

Bacteriological Examination

Coliform organisms absent in 100 mls.

No. of microorganisms per ml at 37°C = nil

No. of microorganisms per ml at 21°C = nil

Microscopical Examination of Deposit

None

Remarks

The results obtained on the analysis of this sample indicate a hard water containing an appreciable amount of organic matter though free from bacterial contamination.

I am of opinion that this water, as evidenced by this sample, is fit for drinking purposes. It is to be recommended however that the supply be kept under close observation.

The odour and taste of this water may be due to free chlorine.

S. GREENBURGH

Public Analyst.

15th December, 1964.

A. McINNES

Medical Officer of Health.

STATISTICAL TABLES

Table No. 1.

CAUSES OF DEATH

There were no deaths in the years 5-15, 25-35, 35-45 and between 4 weeks and 1 year.

Causes of Death	Sex	Total	Under	Age in Years				
		All Ages	4 weeks	1 - 4	15 - 24	45 - 54	55 - 64	65 - 74 and over

Interest to be paid in arrears and capital paid each year.

Interest to be paid in advance and capital paid each year.

The table below tells its own story, but it would be a delusion to conclude that cancer is on the increase. The apparent increase is due to more exact diagnosis. The Infantile death rate and the Tuberculosis death rate are related to social and hygenic conditions:-

	Mortality Under 1 Year		Mortality Pulm.Tuberu.		Mortality Cancer	
	Total No.	Rate per 1000 Births	Total No.	Rate per 1000 Pop.	Total No.	Rate per 1000 Pop.
