MEDICAL OFFICER'S REPORT.

In presenting the Annual Report of the Ringwood Rural
Sanitary District for the past year I have to state that the
general health of the District compares very favourably with
the previous year. The death rate was 17.2 per thousand, excluding
those who died at the Sanatorium, 16.7 - as compared with 14.3 in

The deaths are distributed as follows : -.

Ringwood. 78.

Burley. 15.

Broomy. 4. (Sanatorium).

Ellingham. 4.

Harbridge. 2.

Ibsley. 3.

Workhouse. 6.

There were 18 deaths under one year and 48 of 65 years and upwards.

DISEASES.

Amongst infectious diseases there were 2 deaths due to enteric fever, and these were imported cases, one from Newcastle-on-Tyne, and the other from Bournemouth. The number of cases notified for the year were as follows: - Typhoid 3, Scarlet fever 7, Diphtheria 4, Erysipelas 4.

EPIDEMICS.

During the year there were epidemics of measles, chicken pox, whooping cough, and influenza in different parts of the District, the epidemic of measles being so severe in the town it was considered necessary to close, at different times, the British and National Schools for a fortnight each.

GENERAL SANITARY CONDITIONS. The sewerage and drainage are good, and precautions have been taken to prevent stappages. The earth closet system is still in vogue, and arrangements for carrying away the soil have been satisfactorily carried out.

WATER SUPPLY.

The supply of water is very good. The waters of several new wells have been tested and found to be satisfactory. So far to my knowledge no disease has come under my notice caused by insufficient or impure water.

&C.,

Systematic inspections with the Inspector of Nuisances have been made of slaughter houses, dairies, cow-sheds, milk shops, and factories. With the exception of a few trivial discrepancies to meet the requirements of the Public Health Act, and which were pointed out and readily remidied, there has been nothing to complain of.

PUBLIC SCHOOLS.

During the year I was called on by the District Council to examine and report on the Offices and drainage of the various Schools in the District, when many suggestions & improvements were made and subsequently carried out by the Managers, except in two cases, that of Burley, and the British School which are still under consideration by the respective authorities.

INSPECTION OF HOUSES.

During the past year whilst carrying out a systematic inspection, always accompanied by the Inspector of Nuisances, 270 houses have been visited, besides many special visits made to houses and premises, which were considered necessary by the District Council. Many notices have been served, upon owners and others, to abate nuisances and carry out sanitary improvements, most of which have been complied with.

ISOLATION HOSPITAL. I am pleased to report that there is a movement on foot to erect a long felt requirement of an Isolation Hospital for

this District. My predecessors have always supported the acquirement of such an Institution for the benefit and safety of the inhabitants in case of any serious epidemic.
