CITY OF ROCHESTER

'eport as to Urban District

SAYE HOUSE 2 CASTLE HILL

ROCHESTER

21st May, 1934

TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE NTLEMEN,

I beg to lay before you the following Report as to the Sanitary Condition of your trict for the year 1933.

This Report is an "Ordinary Report" and is drawn up in the form and sequence ired by the Ministry of Health, and gives information on all matters which have n dealt with, or come under observation, during the year.

I am, Gentlemen,

Your obedient servant, S. PRITCHETT, Medical Officer of Health

STAFF

Medical Officer of Health

S. PRITCHETT, M.R.C.S. (Eng.), L.R.C.P. (Lond.), D.P.H. (Eng. Conj.)

Chief Sanitary Inspector

* THOMAS TOPPING, F.R. SAN. I., C.R.S.I., C.M.I., C.L.S.I.B.,

Medallist Final Honours Hygiene.

Sanitary Inspectors

* E. W. BARTON, C.R.S.I., C.M.I.

* A. H. W. CHAPMAN, C.S.I.E.B., C.M.I.

Veterinary Inspector (part time)

ELMER EBBETTS, M.R.C.V.S.

Health Visitors

**flt*Miss H. G. TOD

††**ℑ||§+*Miss C. J. GEELEHER

Clerk

Miss W. JONES

Indicates officials to whose salaries contributions are made under the Public Health Acts or by Exchequer Grants.

Also District Nursing Certificate.

Certificate of Central Midwives Board.

Four years General Training, S.R.N.

Royal Sanitary Institute, Certificate for Health Visitors.

., Sanitary Inspectors.

Infectious Diseases Certificate. Hygiene Diploma and Tropical Nursing.

SOCIAL CONDITIONS

The prosperity of Rochester continues to depend mostly on its River Trac (now shewing signs of improvement), on the Cement Industry, on Agriculture (connection with which there is a Cattle Market), on various Industrial Worl and on the proximity of the Royal Dockyard at Chatham. The conditions general prevailing have improved since last year's Report and shew signs of still furth improvement.

There is no evidence of any occupational influence on the health of the inhabitan The population is both Residential and Working Class, the latter greatly p dominating.

B. GENERAL PROVISIONS OF HEALTH SERVICES IN THE AREA

1. PUBLIC HEALTH OFFICERS OF THE AUTHORITY

A list of these is given on page 3.

2. (a.) LABORATORY FACILITIES

These are unchanged. The various results appear in other parts of the Report

(b.) AMBULANCE FACILITIES These are unchanged and continue to be satisfactory.

(c.) NURSING IN THE HOME

The arrangements for this are unchanged.

(d.) CLINICS AND TREATMENT CENTRES

These are unchanged.

(e.) HOSPITALS

There is no change in these except that cases of Small Pox arising in the Dista may now be sent to the Hospital of the London County Council at Joyce Green.

3. MATERNITY AND CHILD WELFARE

There are no changes except that the Corporation will now pay the Midwives in in cases which have run out of Maternity Benefit and are otherwise in p circumstances, and will pay for "Home Helps" in necessitous cases.

MATERNITY AND NURSING HOMES

There are two of these in the District. They are visited from time to t by the Medical Officer of Health and by the Health Visitors. They o no ground for further comment.

C. SANITARY CIRCUMSTANCES OF THE AREA

1. WATER

Information as to the sources of supply was given in last year's Report, and b quality and quantity continued to be satisfactory during 1933. The monthly chem and bacteriological tests of the supply from the Corporation Waterworks at Str were maintained, as well as the quarterly control analysis by Dr. Spitta. The test all cases revealed that the water as supplied from the works was almost sterile B. Coli was never present.

RAINFALL

The Rainfall for the year, registered at Strood Waterworks, was 18.60 inches compared with 18.68 inches in 1932, 22.01 in 1931, 26.38 in 1930, 21.03 in 1927.29 in 1928 and 31.84 inches in 1927.

2. DRAINAGE AND SEWERAGE

Progress in the abolition of cesspools in the city, and the connection of he drains to the new sewerage system continued during 1933, and the total number houses in the City connected up at the end of the year was 5790. This work has a been going on for the past 6 years, and the immense sanitary improvement so effec has not been confined solely to the abolition of the thousands of soak-away cessp which formerly existed. Throughout there has been co-operation between the (Surveyor and Chief Sanitary Inspector with the result that all defective house dra and insanitary fittings have been dealt with at the same time as the sewer connection

6

s makes it possible to say that the house drainage and general sanitation of the are now in a more perfect condition than they have previously been at any time in history. Pressure is being exerted to secure the connecting up of the remaining set still on cesspools.

RIVERS AND STREAMS

The pollution of the River Medway is undergoing some automatic dimunition as a houses become connected with the system of main drainage.

Pollution from shipping, both Admiralty and Mercantile, is not likely to grow There are no streams in the District.

CLOSET ACCOMMODATION

Prior to the new sewerage system, persistent and successful efforts had been made ecure the substitution of water closets for a large number of the privies which then ted, and since the sewers have been available this work of conversion has been all but pleted. The closet accommodation in general is of the pedestal wash-down type with hing apparatus and water supply, only a small percentage of the houses having box enclosures.

PUBLIC CLEANSING

Scavenging and house refuse collection and disposal are carried out under the ction of the City Surveyor, and there has been no change of procedure during the tyear.

In this, my last Annual Report before retirement as Medical Officer of Health, ish once more to emphasise the insanitary and generally unsatisfactory methods of nestic house refuse storage. For 20 years I have called attention at least annually his, but although the Council have a commendably progressive record in all other itary matters, there has been continuous hesitation in making the decision that every se in the City must be provided with a suitable sanitary dustbin. Iu 1928 I made subject one for special Report, and although it was well discussed no formal dution as to definite action was passed. In the case of individual houses under ice for sanitary defects, a requirement for the provision of sanitary dustbins is ays included, but naturally owners resist this because all around are other perties where the tenants are using old pails, boxes, etc. As my final word on the ject I cannot do better than quote from my Annual Report of 20 years ago, "This matter which stands in urgent need of attention."

CHIEF SANITARY INSPECTOR'S ANNUAL REPORT

I beg to submit my 26th Annual Report on the various branches of work in contion with the sanitary inspection of the City.

HOUSING ACT INSPECTIONS

In addition to 495 other premises dealt with for sanitary defects or unsatisfactory litions, 102 houses were formally inspected and reported upon under the Housing s, 1925 and 1930. They were situated as follows :---

, and root, ru	og nere	DEDUCTOR COLLE	5 10110 11 5 1

7

Total 102

Of the above-mentioned properties, the following 27 houses were subjected Demolition Orders:—Nos. 2, 4, 6, 6a, 32, 34, 5, 7, 9, 11 and 13 Five Bells Lane, N 41, 41a, 41b and 41c Corporation Street; Nos. 68, 114, 116 and 118 King Street; N 3 and 4 Kettles Court, King Street, and Nos. 1, 3, 5, 7, 7a and 9 Star Hill. 12 oth in the above list, Nos. 1 to 10 Ship Lane, and Nos. 8 and 8a Five Bells Lane w under consideration as to Demolition Order procedure at the end of the year.

In addition, 4 houses were permanently closed as dwellings by formal undertake of the owners under Sec. 19 of the Housing Act, 1930. These were No. 1 Blue Bo Lane, No. 26 Roebuck Road, and Nos. 2 and 3 Ross's Alley, High Street. One hou No. 2 Windmill Cottages, Frindsbury, was voluntarily closed by the owner as a sequento representation as to serious and extensive dampness.

15 houses were demolished during the year, viz. :Nos. 4, 5 and 6, Ruby Cottag Nos. 6, 7, 8 and 9, Benster's Court, King Street, Nos. 68 and 70 King Street, No. Pump Yard, No. 1, Church Path, Nos. 11 and 12, Dunnings Lane, No. 20, Edwa Street, and Cottage, Ross's Alley. With the exception of the 2 last mentioned, all we under Housing Act Demolition Orders. The said two were demolished after inform representation to the owners as to their condition. The cottage in Ross's Alley h not been occupied as a dwelling for a long time past.

At the close of the year 25 houses under Demolition Orders were still stand owing to 21 of them being tenanted. The decision of the Council to build houses the tenants to be displaced will undoubtedly quicken the vacating and demolition condemned dwellings.

The Strood Square improvement continued during the year after the removal the tenants had made possible the demolition of No. 1, Pump Yard and No. 1, Chur Path. The four back-to-back dwellings in North Street and Pump Yard were converted into two through-ventilated dwellings, and all the space formerly occupied the 15 demolished houses and outbuildings has been thoroughly cleared of all rubbin and foundations and converted into gardens for the remaining houses. The interwork in Nos. 2 to 9, Church Path will next be done.

Since the passing of the Housing Act, 1930, much time has been given to t properties in worst condition and to negotiations with their owners. The total numb of Demolition Orders made under the new Act up to the end of 1933 was 75, and am pleased to be able to record that in no instance has there been a dispute or appe In all cases owners are supplied with full details as to the condition of propert before the latter are made the subject of report for Demolition Order procedure, a preliminary discussions have had the satisfactory result above mentioned.

Systematic house-to-house inspections under the Housing Acts have be restricted by attention to houses calling for demolition and by the demand of oth branches of work, but as soon as circumstances permit, more exercise will be given the Repairs Section of the Housing Act, 1930. There are a number of streets in t City where systematic inspection of all the houses is desirable.

COMPLAINTS.

333 complaints were received as to matters calling for Health Department action and were attended ito without delay. The number given is an increase of 92 ov that for the previous year, and indicates either that tenants of houses are less will than formerly to submit to conditions for which the law provides a remedy, or the the department is becoming increasingly recognised as the municipal help against us healthy conditions.

SANITARY IMPROVEMENTS.

During the past year 5018 insanitary conditions and housing defects were remeas the result of action by the Council's Sanitary Inspectors. In only 51 of the premises dealt with during the year was it necessary to proceed by report to the cil. The many calls for considerable expenditure by property owners are always out in the first instance in the form of letter communications, with accompanying lules of defects, etc. For many years this procedure has been sufficient to secure equired remedies in nearly all cases, but there was a noticeable tendency on the of some owners during the past year to disregard such informal intimations, and lay executing work until further pressure. The owners concerned have been ed that continuance of such attitude will lead to the abandonment of informal nunications.

The following tabulated list of nuisances abated and improvements effected ates to some extent the time given to this section of the Public Health rtment work as, in addition to the initial action, supervision of work during ress was necessary.

SUMMARY OF SANITARY IMPROVEMENTS DRAINAGE AND SANITARY FITTINGS

Houses re-drained		118

Total 5018

VERMINOUS DWELLINGS

82 houses and a total of 255 rooms were treated for vermin infestation during past year. 19 of the houses were Council property. The last mentioned figures s a satisfactory reduction of the corresponding figures for the previous year, when Council houses had to be disinfested. The increase in verminous privately-ow houses from 17 to 63 not only shows that tenants are desirous of having their ho cleared of bugs, but also indicates that the Council is undertaking this work thro the Health Department at the nominal charge of 2/6 per room, (done where the householder is unemployed), are meeting a hygienic need. The Ministr Health and local authorities all over the country are giving increasing consideratio the problem of verminous pests in dwellings, but Rochester was amongst the 1 where practical assistance was provided for tenants of infested houses. At least as as Council houses are concerned, it is desirable that the infestation should be preven and that would involve treatment of tenants' furniture and bedding before removal f an infested house.

CESSPOOL AND PRIVY EMPTYING

3463 loads of sewage were pumped from cesspools during the year, as compawith 3756 in 1932. The cesspools now requiring periodic attention are mostly th in outlying parts of the City area that are not sewered. One exception is a large we but at the time of writing this report, drainage of considerable sections of the sanit accommodation to the sewer had been commenced.

577 loads of sewage sludge were removed from cesspools by the night gang, compared with 601 loads the previous year. The work now is barely sufficient to k the night gang regularly employed.

FOOD INSPECTION

There are 156 premises in the City which are on the various registers as being ler legislative control with respect to the production, preparation, storage or sale of d and a total of 1428 visits were made in the course of the year. Visits to slaughter uses accounted for the greater part of that total. The number of carcases, etc., of mals examined at the time of slaughter was 7594, and the following list of food ademned records the results of systematic inspections:-

2 carcases, etc., of cows	(Tuberculosis)
2 do. steers	do.
2 do. heifers	do.
Forequarters and offal of 3 steers	do.
1 carcase, etc., of a calf	do.
32 carcases, etc., of pigs	(24 Tuberculosis, 2 Dropsy & Emaciation,
of carcases, etc., or pigs	1 Jaundice, 1 Peritonitis, 1 Heat Apoplexy, 1 Uræmia, 1 Fevered, 1 Tuberculosis and Dropsy)
41 carcases, etc., of sheep and lamb	os (35 Dropsy and Emaciation, 3 Decomposition, 1 Peritonitis and Dropsy, 1 Anæmia, 1 Abcesses)
21 ox heads and tongues	(20 Tuberculosis, 1 Actinomycosis)
65 ox livers	(44 Flukes, 10 Tuberculosis, 4 Abcesses,
11.2 m 2 m 2 m 2 m 2 m 2 m 2 m 2 m 2 m 2 m	3 Cavernous Angioma, 2 Necrosis,
	2 Cirrhosis)
3 ox kidneys	(2 Nephritis, 1 Abcesses)
1 calf's liver	(Unsound)
105 pigs' heads and tongues	(Tuberculosis)
19 pigs' livers	(89 Cirrhosis, 19 Fatty Infiltration, 6 Cysts, 3 Tuberculosis, 2 Necrosis)
7 pigs' plucks	(4 Tuberculosis, 2 Congestion, 1 Pneumonia)
.57 sheep livers	(115 Flukes, 39 Other Parasites, 3 Cirrhosis)
.50 lbs. cf forequarter of beef	(Tuberculosis)
6 forequarters of mutton	(Unsound)
5 ¹ / ₄ lbs. of loin of mutton	do.
leg of pork	(Bruising)
82 lbs. of tinned ham	(Unsound)
56 lbs. of butter and lard	do.
20 lbs. margarine	do.
12 lbs. cheese	do.
3 boxes smoked fish	do. *

Other information as to inspections of food premises and their results are included the Medical Officer's statements under the heading "Inspection and Supervision of od."

DISINFECTION

202 rooms were disinfected after infectious disease, including 41 rooms after removal deaths of cases of Tuberculosis.

I am, Gentlemen,

Your obedient servant,

T. TOPPING.

Chief Sanitary Inspector

SMOKE ABATEMENT

It has not been necessary during the year to take any action in this matter.

SCHOOLS

The sanitary circumstances of the elementary schools in the District rema unchanged, and once again attention must be drawn to the trough closets still existiin some of the schools. These are insanitary and should be replaced by pedes closets.

HEALTH EDUCATION

The issue of the magazine "Better Health" has been discontinued and "Employment Marketing" Boards are now used for the display of posters giving information matters connected with health. By arrangement with the Central Council for Heal Education, new posters are supplied monthly, and so in the course of a year mass suggestions as to health preservation and protection are kept prominently before t citizens.

AISES AND OCCUPATIONS WHICH CAN BE CONTROLLED BY BYE-LAWS OR REGULATIONS

BAKEHOUSES

There are 18 bakehouses in the City and periodic inspection is maintained sure that legal requirements as to such premises are duly observed. One very old house presents serious difficulties against the maintenance of satisfactory conditions, negotiations are now proceeding with the tenant for its abandonment, and for the of suitable premises.

FACTORIES AND WORKSHOPS

There are 102 workshops on the register and at 14 houses homework is carried on. are systematically inspected and during the past year there was a complete spection for the purpose of revision of all information recorded in the Register. ets and unsatisfactory conditions, all of more or less minor nature, were discovered premises and action was taken to have these remedied.

LODGING HOUSES

The two common lodging houses in the city were subjected to periodic visits and found to be conducted and kept in accordance with the Byelaws. Towards the of the year the lodging house used as a women's hostel was closed owing to equate demand for such accommodation.

OFFENSIVE TRADES_FRIED FISH SHOPS .

The 16 fried fish shops in the city were periodically visited during the year, and one or two exceptions were found to be giving careful observance of the Byelaws r which they are controlled. The exceptions referred to were not serious cases of avention, but were sufficient to indicate the desirability of systematic supervision. ist be said, however, that on the whole the fish fryers continue to carry on their esses with due regard to the necessity for wholesomeness of the food they supply.

DAIRIES, COWSHEDS AND MILKSHOPS

Reference to these premises is made on page 16 under the heading of "Inspection Supervision of Food."

SLAUGHTER HOUSES

There are 5 slaughter houses in the city, three "Registered" and two "Licenced." e are constantly under supervision, as systematic inspection of animals slaughtered sitates many hundreds of visits in the course of a year. At two of the gistered" slaughter houses repairs had to be called for during the year, and at one e "Licenced" slaughter houses some difficulty was experienced about harvesting in getting the manure and waste matters removed as frequently as is desirable. butchers are dependent on farmers for such removal, and when the latter are ing all their horses in harvest operations there is a tendency for them to put ther-house manure removal on the waiting list.

RAG FLOCK ACTS, 1911 AND 1928

No action was taken under these Acts during the year.

1. Inspection of Factories, Workshops and Workplaces Including Inspections made by Sanitary Inspectors

HOUSING

The continual building of new houses in and adjacent to the City has materially ttered the general housing situation, but there is still an appreciable need of houses the smaller type. The lack of accommodation at a suitable rent for tenants of uses under Demolition Orders, inevitably led to delay in vacation of such dwellings, it promise of early removal of this handicap on clearance procedure lies in the Council's cision to build about 50 houses with the subsidy assistance available under the ousing Act, 1930.

There are several cases of overcrowding that present a common difficulty in the is of abatement. Large families and a comparitively small income make low rents necessity. In some instances the numbers in the households makes there acceptable for three-bedroomed Council houses, and just as unacceptable as tenants larger privately-owned dwellings, because owners are averse to letting to families no naturally by their numbers will increase normal wear and tear. The Council we provided some four-bedroomed houses and helped in this way to reduce the mber of such cases, but the remainder constitute an illustration of the most ercrowded being furthest away from housing help. It is hoped that the new housing oposals, which it is understood are now under preparation by the Ministry of Health, Il assist Councils to make provision for abatement of overcrowding independently Clearance or Improvement Area action.

Statistical record of Housing procedure follows, and details as to particular operties are recorded in the Chief Sanitary Inspector's Report on page 7.

HOUSING STATISTICS. 1. INSPECTION OF DWELLING HOUSES DURING THE YEAR:-

)	(a) Total number of dwelling houses inspected for housing defects	
	(under Public Health or Housing Acts)	559
1	(b) Number of inspections made for the purpose	2340
9	(a) Number of dwelling houses (included under sub-head (1) above)	
	which were inspected and recorded under the Housing	
	Consolidated Regulations, 1925	102
	(b) Number of inspections made for the purpose	420
P	Number of dwelling houses found to be in a state so dangerous or	
	injurious to health as to be unfit for human habitation	38
2	Number of dwelling houses (exclusive of those referred to under the	
	preceding sub-head) found not to be in all respects reasonably	
	fit for human habitation	64
10	OTE (I)Includes houses dealt with for defective drainage and sanitary fittings only.	
2	2. REMEDY OF DEFECTS DURING THE YEAR WITHOUT SERVICE	OF
	FORMAL NOTICES	
u	mber of defective dwelling houses rendered fit in consequence of informal	
~	action by the local Authority or their officers	543
٢	TEIncludes houses dealt with for defective drainage and sanitary fittings only.	
	3. ACTION UNDER STATUTORY POWERS DURING THE YEAR	
	Proceedings under Sections 17, 18 and 23 of the Housing Act, 1930	
	(1) Number of dwelling houses in respect of which notices were served	
	requiring repairs	17
	(2) Number of dwelling houses which were rendered fit after service	
	of formal notices :	
	(a) By Owners	9
	(b) By Local Authority in default of Owners	0
	15	

B. Proceedings under Public Health Acts

(1) Number of dwelling houses in respect of which notices were served requiring defects to be remedied.

- (2) Number of dwelling houses in which defects were remedied after service of formal notices :---.
 - (a) By Owners
 - (b) By Local Authority in default of Owners ...

C. Proceedings under Sections 19 and 21 of the Housing Act, 1930

- (1) No.of dwelling houses in respect of which Demolition Orders were made
- (2) No. of dwelling houses demolished in pursuance of Demolition Orders
- D. Proceedings under Section 20 of the Housing Act, 1930
 - (1) Number of separate tenements or underground rooms in respect of which Closing Orders were made
 - (2) Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit

During the year 82 new Council houses were completed and 221 we built by private enterprise.

E.

INSPECTION AND SUPERVISON OF FOOD

There are 5 registered cowkeepers with a total of 12 cowsheds, and 18 dairies the city; 10 dairymen with premises outside the city are registered as milk purveyo within the area, an increase of 3 over the figures for last year. In addition to the retailers, 51 shopkeepers are registered to retail milk in sealed bottles only, and wi 3 exceptions they sell sterilised milk. Three companies with premises in or ne London supply these shopkeepers with the sterilised milk and are registered here wholesalers.

Periodic visits to dairy premises revealed that due attention was being giv to the maintenance of cleanliness of production and distribution. Plans for o new cowshed were submitted and approved, and one small dairy was closed voluntari In two dairies small bulk pasteurising plant was installed. This extension of the to amount of milk pasteurised in the city is commendable and may be regarded as advisable safeguard of the health of the milk consumer.

No systematic sampling of milk for bacteriological examination is done. O sample was taken for evidence of tubercle infection, but gave a negative result. Of t 13 samples of Certified Milk taken 12 gave excellent results in comparison with t standard laid down by the Milk Designations Order. Investigation revealed the car of the unsatisfactory result in the other case, and this was quickly remedied.

In certain instances, dairymen who were in doubt as to the fat content of t milk supplied to them by producers, sent samples in to the Chief Sanitary Inspector be tested, and in one instance it was necessary to refer the producer to the Coun Agricultural Adviser for advice as to procedure for raising the fat percentage to above the minimum standard.

B. MEAT AND OTHER FOODS

The usual systematic supervision of slaughtering and inspection of meat, a periodic visits to other food premises were maintained.

C. ADULTERATION, ETC.

4 samples were submitted to the Public Analyst under the Food and Drugs Acts he Public Health (Preservatives. etc. in Food) Regulations, and the following hary gives the results.

Article	Number	Genuine	Adulterated
Milk	40	39	1
Cream	4	4	0
Butter	4	4	0
Lard	5	5	0
Whisky	3	3	0
Vinegar	5	4	1
Sausage	3	3	0

The sample of milk returned as adulterated was one taken in course of delivery lairyman. It was 10% defficient in fat. The cowkeeper requested that samples his cows should be taken and 12 of such samples were "Gerber" tested by the Sanitary Inspector. Four of the heaviest milkers in the small herd proved to be g milk deficient in fat to the extent necessary to bring the bulk down to about the ard of the sample. The cowkeeper was referred to the County Agricultural ser and samples taken later proved that the whole bulk had been raised to just the minimum standard for fat. Altogether 26 samples of milk were "Gerber" for fat content in addition to the samples sent to the Public Analyst, but only e case above referred was there any need for further action.

The sample of vinegar was purchased informally as malt vinegar and the Analyst ted that it was "spirit vinegar." A warning only was considered necessary in ase.

One sample of sausage contained 175 parts sulphur dioxide per million, but as a e was displayed intimating that the sausage contained preservative no offence had committed.

D. CHEMICAL AND BACTERIOLOGICAL EXAMINATION OF FOOD

The only chemical analysis of food done during the year was that detailed under eading "Adulteration" and bacteriological examinations were as mentioned under k Supply."

E. NUTRITION

The Journal "Better Health," formerly regarded as a good means of disseminating ledge on this subject, has now been discontinued, and, as previously stated, its taken by the by the regular publication of Posters.

PREVALENCE OF, AND CONTROL OVER INFECTIOUS AND OTHER DISEASES. SCARLET FEVER

Notifications-129. Removed to Hospital-120. Deaths-0.

The average number of notifications for the preceding five years was 79.

There were no undoubted "Return" cases,

The "Dick" test of susceptibility was not used.

DIPHTHERIA

Notifications-50. Removed to Hospital-46. Deaths-3.

The average number of notifications for the preceding five years was 58.

The "Schick" test was not used, but all nurses and members of the domestic staff . William's Isolation Hospital are artificially immunised on entering the service e hospital.

171 examinations of swabs, for the purpose of diagnosis, were made during the , with 133 negative and 38 positive results. There was no undoubted "Return" case.

Anti-Diphtheritic Serum is issued free of cost and is available day and night. During the year there were 19 applications for this Serum and 210,000 units issued at a cost to the Corporation of £9-0-3. The cost was £8-15-2 in 1932; 31, £3-13-7; in 1930, £8-10-10; in 1929, £10-9-8; and in 1928, £43-6-7.

ENTERIC FEVER

No case was notified.

One specimen of blood was taken for bacteriological examination and proved to be gative.

PUERPERAL FEVER

Notification 1. Removal to Hospital 1. Death 0.

PUERPERAL SEPTICÆMIA

No case was notified.

PNEUMONIA (All Forms)

Notifications 22. Deaths 20.

ERYSIPELAS

Notifications 7. Deaths 0.

CEREBRO SPINAL MENINGITIS

Notification 1. Death 1.

POLIOENCEPHALITIS

No case was notified.

SMALL POX

No case was notified. Arrangements have now been made by which cases of Small ox arising in the Area may be sent to the Infectious Disease Hospital at Joyce Green.

OPHTHALMIA NEONATORUM

Notifications 4. All made complete recoveries.

OTHER INFORMATION

SCHOOL INTIMATIONS

Every Head Teacher is supplied with a book of forms for the purpose of sending daily statement to the Medical Officer of Health, of children absent from School by ason of non-notifiable Infectious Disease. In this way the department is informed some extent as to the prevalence of these Diseases.

BACTERIOLOGICAL WORK

All specimens are sent to the County Laboratory at Maidstone. The following

a statement of bacteriological	Positive	Negative	Total
putum for Tubercle	47	141	188
wabs for Diphtheria	38	133	171
lood for Typhoid and			1
Para-typhoid Fever	0	1	1
wabs for Puerperal Fever cont	tacts 0	1	1

DISINFECTION AND DISINFESTATION

Disinfection of rooms and their contents is carried out by means of formaldehyde imigation, after which the free use of soap and water, and of fresh air is enjoined.

Occasionally, soft articles are steam disinfected at St. William's Hospital. No steps ave been taken during the year with regard to disinfestation of persons, except in ases which arise amongst school children, and which are described in the School ledical Officer's Report. Disinfestation of houses is referred to in the Chief Sanitary aspector's Report on page 10.

RATS AND MICE (DESTRUCTION) ACT, 1919

Total number of rats destroyed in 1933	6919
Total number of poison baits laid in 1933	9497
A verage yearly number of rats destroyed in the last five years	5422

CANCER

The following Table shews the number of deaths from Cancer, male and femal together with the incidence rate per 1000 of the population year by year, for the la 1 en years:

Year	Male	Female	Total	Rate of incidence
1933	29	25	51	1.7
1932	19	21	40	1.3
1931	21	25	46	1.5
1930	27	17	44	1.3
1929	22	22	44	1.3
1928	19	25	-14	1.3
1927	27	25	52	1.6
1926	24	29	53	1.6
1925	19	27	46	1.4
1924	20	25	45	1.3

No special enquiry has been made, during the year, with regard to cancer.

PREVENTION OF BLINDNESS

No action was taken during the year except such as arises at the Vener-Diseases Clinic.

VENEREAL DISEASES

Information as to the place and times when Venereal Diseases Clinics are he is freely made known throughout the District by means of Posters, and by bei published, until recently, in the issues of "Better Health."

The administration of the Clinic is in the hands of the County Council and conducted locally by Mr. Hamish Nicol, F.R.C.S., at 36, New Road, Rochester.

The following are the figures for treatment during the last ten years so far Rochester is concerned :---

New Cases	Attendances
67	3352
88	4203
55	3888
56	2624
103	1849
50	600
32	982
61	1830
52	493
53	642
	67 88 55 56 103 50 32 61 52

It will be observed that the number of new cases is considerably lower than 1932, but that there is still room for further improvement.

NON-NOTIFIABLE INFECTIOUS DISEASES (DEATHS)

TABLE IV.

Disease	1933	1932	1931	1930 5ª	1929	1928	1927	1926	1925	1924	1923

Influenza 2 years)	13	4	19	9	20	5	20	5	11	2	9

This Table shews the number of Deaths from Non-Notifiable Diseases, year by year, since 1923.

MEASLES

There were no deaths in 1933, but this immunity will probably soon come to an end.

WHOOPING COUGH

There was no death.

DIARRHCEA (under two years)

There was only one death, which is one less than in 1932 and well below the average.

INFLUENZA

There were 13 deaths. The outbreak of this disease was somewhat severe in 1933 and still takes a heavy toll of human life, particularly amongst elderly people.

HEALTH VISITORS' ANNUAL REPORT, 1933

uring the year, 370 births were registered in the District, of which 9 were imate. The total was made up as follows :---

South North	Males 105 75	Females 113 77	Total 218 152
	180	190	370

NOTIFICATION OF BIRTHS ACT

During the year 370 births were registered in the District and 396 were notified the Act.

"ifteen still-births were notified. The notifications were made up as follows :

Doctors	Midwives	Parents
127	267	2

82 infants were visited by the Nurses, who paid a total of 2,770 visits, average of 7 visits to each infant.

KIND OF FEEDING	Total	Percentages
1. Entirely breast-fed	232	60.7
2 Hand and breast-fed	38	9.9
3. Entirely hand-fed	112	29.3
KIND OF FOOD (when hand fed)-	- Children	
1. Fresh Cows' Milk and Water	6	1.5
2. Dried Milk	121 .	31.6
3. Patent Foods	2	.5
4. Condensed Milk	20	5.2
5. Biscuits, Groats, etc.	1	.2
MODE OF FEEDING-		
1. Boat Shaped Bottle	149	39.0
2. Spoon	1	.2
CONDITION OF HOUSE -		
1. Clean	302	79.0
2. Fairly Clean	79	20.6
3. Dirty	1	.2

OVERCROWDED HOUSES

fore than 2 persons per bedroom : Total 90. Percentage 23.5.

Il infants reckoned breast-fed in the above Table were still fed in the same way about the age of six months.

here were seven pairs of twins.

forty-six cases not notified under the Act were visited and are included in the figures.

n four instances the Nurses were refused admission.

There were twelve deaths of infants under one year of age. This gives a mortality lousand births of 32.4.

CLASSIFICATION OF VISITS PAID DURING 1933

First visits to Infants under 1 year	382
Subsequent visits to Infants under 1 year	2,388
Infectious Disease visits	5
Still-births enquiring visits	10
Infants' Deaths enquired into	12
Registered Nursing Homes visited	4
Infant Life Protection-Children visited	47
Ante-Natal Visits	144
Children visited between 1 and 5 years	3,330
Miscellaneous and Ineffectual visits	979
Total	7,301
ATTENDANCES AT MILK DISTRIBUTING CENTRE	1933

ATTENDANCES AT MILK DISTRIBUTING CENTRE	1933
Infants under one year	1,517
Children over one year	305
Ante-Natal Cases	42
Infant Life Protection	24
Miscellaneous	120
Total	2,008

Fifteen Hospital Tickets were given to mothers and infants who could not af a doctor's fee.

Three cases of neglected children were reported to the National Society for Prevention of Cruelty to Children.

PUERPERAL FEVER

There was one case notified, on the north side of the river. This patient is in Barming Asylum.

OPHTHALMIA NEONATORUM

Four cases were notified, one case from the South side of the river, and t from the North side.

Three cases were treated at Hospital and the other case was nursed at home. four cases made a recovery.

REPORT AS TO ST. WILLIAM'S HOSPITAL FOR THE YEAR 1933

325 patients were admitted during the year.

The following Table shews the total admissions from each District in the past ears :--

12"	Rochester	Chatham	Gillingham	Neighbouring Authorities	Totals
6	103	279 .	175	0	557
7	78	295	139	11	523
8	155	263	246	35	699

TABLE VII. CAUSES OF DEATH IN ROCHESTER IN 1933 CIVILIANS ONLY

Report as to Port Sanitary Authority

HEALTH DEPARTMENT,

SAYE HOUSE, ROCHESTER.

O THE CHAIRMAN AND MEMBERS OF THE PORT SANITARY COMMITTEE.

NTLEMEN,

I have the honour to lay before you the following Report o the Sanitary Work performed during the year 1933.

Amount of shipping entering the Port Sanitary District during the year 1933.

TABLE A.

ber of Vessels reported as having, or having had, during the voyage, infectious disease on board-Nil All Notices were informal

Estuarial Traffic, 945. These figures represent inspections only, as no record is ined of the number of barges, etc., trading between places on this river and the don river.

Total inspections of all craft, 2229.

Character of Trade of Port

) Passenger Traffic				
ber of Passengers	Ist Class	2nd Class	3rd Class	Transmigrants
Inwards	0	0	0	
Outwards	0	0	0	

b.) Cargo traffic :---

PRINCIPAL IMPORTS. Bricks, Timber, Wood Pulp, Coal, China Clay, Flour, Stone, Petrol, Fertiliser, Potatoes, Corn, Grain, Cotton Seed, Ground Nuts, and various r Seeds and Kernels for the making of Cattle Food.

PRINCIPAL EXPORTS. Cement, Cattle Cake, Oil, Paper, Fruit Boxes, Scrap Iron, umen bi-products of petrol refining.

Cement and paper is shipped to practically all parts of the world, either direct or London, Southampton, Liverpool, &c.

(c.) COUNTRIES WITH WHICH THE PORT PRINCIPALLY TRADES.

Import Trade is carried on with Scandinavian, French, Dutch, Belgian, Gerr Portugese, Russian and Baltic Ports, and with Mediterranean, West African, V Indian and American Ports.

The Principal British Ports with which trade is carried on are, Sunderla Blyth, Gool, Tyne, Tees, most of the Scottish East Coast Ports, Liverpool, Car Swansea, Barry, Southampton, the Cornish Clay Ports, Harwich, Ipswich and Lon

NUMBER AND NATIONALITY OF VESSELS

British 978, Dutch 112, Swedish 70, Danish 37, Norwegian 27, Finnish German 6, Belgian 2, Esthonian 5, American 1, Irish 1. Total 1260.

III.

Source of Water Supply

(a.) For the Port. There are two sources of supply. The South Side of the R is supplied by the Chatham and District Water Company and the North Side by Strood Water Works, the property of the Corporation of Rochester.

(b.) For Shipping. The supply is from the same sources.

(c.) Water Boat. One Water Boat is used for supplying the shipping. This c is inspected at frequent intervals. The tanks were cement-washed 4 times. during vear. A new tank has been fitted this year.

iV. Port Sanitary Regulations, 1933

As all foreign trading Ships have to pass through the water of the Port of Lon at Sheerness before they can enter the Port of Rochester, most of these Regulat are carried out by the Authorities of the Port of London. Should, however, a s bound for the Port of Rochester escape boarding at Sheerness, the Port of Roche would be immediately informed by wire or telephone and would undertake the necess steps of boarding, inspection, &c. The arrangements for dealing with Infectious Disease were fully described in the Report for 1927, and have undergone no change.

ED D C L C C

enomoniti

TABLE C.

Cases of Infectious Disease landed from vessels.

Disease	No. of Cases	No. of Cases during 1933	Average No. of Cases	No. of Vessels
	Passengers	Crew	for previous 5 years	Concerned
Scarlet Fever	0	12	2.	1

All these cases arose amongst the boys on board the Training Ship "Arethusa," now moored off Upnor, in the Port of Rochester. The patients were all removed to St. William's Isolation Hospital, Rochester, where they made complete recoveries.

TABLE D.

Cases of Infectious Disease occurring on Vessels during the voyage but disposed of prior to arrival.

I

No. of Vessels	Concerned	0
Average No. of Cases	for previous 5 years	0
No. of Cases during 1933	Crew	0
No. of Cases	Passengers	0
Disease		

No case of Plague, Cholera, Yellow Fever, Small Pox or Typhus Fever, and no Plague infected rats were found in 1933. The steps taken for the detection of Rodent Plague in ships in the Port a in warehouses, wharves, quays, &c., in the vicinity, are the same as those described the Report for 1929.

The owners and persons in charge of the various warehouses are aware of possibility of disease being spread by rats and, in addition to the services of the r catcher at intervals, discourage attempts at infestation on the part of rats by keep cats on the premises. Traps are also used but cats are more effective.

In one flour warehouse it was discovered that some rats were entering by a h in the roof of a part of the building. Their line of advance was shewn by min scratches on the various wooden beams, by displacement of dust and by discolourat of paintwork. The droppings shewed that two or three rats only were using a particular entry. By way of experiment, this part of the warehouse was barrica in order to keep the cats away and a trap was placed near the line of entry. The t was left in position for four days. No rats were caught. The rat-catcher's dogs w then brought into this part of the building and in a very little time caught two r Other rats were caught, of course, but this experiment is mentioned as tending to sl that the instinct of a good cat or dog is more to be relied upon than the doub attraction of the most dainty bait, particularly where food is to be found in abundant

In the case of grain and flour warehouses poison is not used as there is a possibi of poisoned rats contaminating the store.

There are some parts of the riverside where large tracts of mud flats are flanked various buildings, workshops, &c., which provide little or no food for rats. Neverthel during the night, rats come into the flats in numbers. Attempts have been made locate harbourages in the vicinity, but with no great success. Poison is put do between the intervals of high water, traps are used, and in one or two cases shot g have accounted for a number of rats. The rats found in this locality were all "brow rats.

Other methods in use are "sticky boards," fumigation, smoke machine and ferr according to the particular case to be deal t with.

There is much marshland adjoining the Port Sanitary District but no traces the Musk Rat have been seen.

2. No measures are taken to prevent the passage of rats from ship to shore exorest where circumstances point to the presence of Plague infected rats to be suspected in the case of a vessel from a plague-infected port, or a vessel that has loaded exorest from such a ship. Most of the large vessels from foreign ports are moored at but in the stream, the cargoes being discharged into lighters and barges. The rats to reach the shore via such craft. The number however is small, as they are usu caught and killed during the discharge of the smaller craft's cargo.

3. Methods of deratisation are as previously reported—sulphur dioxide and services of the rat-catcher.

4. The measures taken for detecting rat prevalence, both on ships and on sl were described in the Report for 1929.

5. Rat proofing. Although many of the riverside buildings have not been l on rat-proof lines, attempts are made to keep rats out by securing metal plates rat-holes and the provision of wire-netting over various places, such as ventile &c. Modern structures are more satisfactory owing to the use of concrete.

Where ships have rat proofing in a state of disrepair, this is treated as a de in the ordinary way.

RATS DESTROYED DURING 1933

TABLE E.

1. On Vessels:—About 50 rats were killed by cats, traps and cargo workers. ere was no suspicion of Plague.

Everyone concerned with shipping is made aware of the significance of the sence of the bodies of rats that have obviously died and have not been mauled cats, killed by traps, or crushed by cargo working, etc., and when this occurs the lies of the rats are kept for examination.

TABLE F.

2. In Docks, Quays and Warehouses :-

During the year, it has been calculated that about 1000 rats were accounted for the owners of the principal warehouses by means of cats, trapping, etc. This does include 1520 rats killed by the rat-catcher in riverside buildings and other mises.

Persons in charge of warehouses are made aware of the importance of reporting finding of dead rats

No rats were submitted for bacteriological examination during the year.

TABLE G.

Particulars of Plague "infected" or "suspected" Vessels arriving in the Porting 1933 are given under "General Sanitary Work of the Port."

TABLE H.

Measures of deratisation-No certificates were issued.

Hygiene of Crew Space

TABLE J.

Classification of Nuisances : _.

Nationality of Vessel	No. Inspected during 1933	Original	Structural Defects through Wear and Tear	Dirt, Vermin and other conditions prejudicial to Health
British	893	5	73	275
her Nations	282	I	19	120
Barges	945	10	20	50

With the exception of 2 intimation notices, all instructions were verbal and were nplied with.

Food Inspection

a.) Cargoes of Flour, Potatoes, Wheat, Meal, Oats, Linseed, Sugar, Maize i Sprats to the number of 108 cargoes, and Winkles, Mussels and Clams the extent of 47 bushels were examined.

b.) Shell Fish. See remarks under "General Sanitary Work."

Other Information

	boats on Register		"

CLASSIFIED LIST OF INFRINGEMENTS

Masters without Certificates	 	
Boats not properly marked	 	
Cabins not in cleanly condition	 	
Defective bulkheads	 	
Leaky decks causing wet cabins	 	
Dilapidated cabins	 	

Four boats were struck off the register owing to their dilapidated condition.

2. GENERAL SANITARY WORK OF THE PORT

a. The staff consists of the Medical Officer of Health, one Senior Sanita Inspector and one Assistant Sanitary Inspector, the latter being fully qualified.

b. A motor launch is provided which is navigated, cleaned and kept in runn repair by the Inspectors themselves.

c. The Port has no special provision for cleansing and disinfesting vermine persons, but, in case of need, the disinfesting station at the Medway Infirmary wo be available.

d. There is no arrangement for the receipt of wireless messages, relating to crews of incoming vessels, nor does such an arrangement seem to be necessary present.

e. In addition to the cargo traffic of the Port, there are several large day t passenger vessels operating between the Kent and Essex seaside resorts and betw Rochester and France. These vessels are inspected from time to time.

There are two large vessels permanently moored in the District, one of wh is a Steam Yacht, used as a club, and the other the Training Ship "Arethusa."

f. There are several small house boats on the river, used as dwellings. These visited from time to time.

g. With respect to Plague "Infected" or "Suspected" vessels, it has not b necessary to take any special action during year. Oil tankers arriving from trop ports are discharged in mid-stream in the lower reaches of the river. The rive wide at this point. The banks consist largely of marshland, and, with the except of the refinery stores of a petrol Company, are sparsely populated. This is simplified the question of guarantine should the need arise.

VIII.

The new "Declaration of Health" Certificates have been in operation sinc became law, and the various shipping agents, pilots and Customs Officers, who ht be concerned, have shewn an admirable readiness to co-operate.

Nine parrots were refused landing under the Psittacosis Regulations. One ot was admitted by Ministry of Health Order.

No shell fish grown in the river came under suspicion during the year as to r suitability and safety for human consumption.

CASES OF SICKNESS

Sixty two cases of sickness were advised to obtain medical attention. All of e were non-infectious and there were no deaths 12 cases of Scarlet Fever were oved to Hospital. All recovered.

4. GENERAL

Wouldham, Snodland, Cuxton, Halstow and Whitewall were visited from time me and offer no matter for comment.

Riverside wharves and factories have been visited periodically and the Port ulations duly posted.

Seven dead dogs found on the foreshore or afloat have been disinfected and buried. The number of dead dogs found has materially diminished in recent years.

The Port Sanitary District, which consists of about sixteen miles of waterway races a number of creeks, extending some distance inland. Many of these have e visited by bus or cycle.

5. COMPLETE LIST OF VESSELS INSPECTED IN 1933

Ships		 	1175
Barges		 	945
Canal Boats		 *	18
Lighters		 	56
Water Boat		 	8
House Boats	•••	 	27
			2229
		 and the second second second	

The following are the figures for the preceding ten years :--

1932	 2114 .	1927	 2194
1931	 2192	1926	 2075
1930	 2245	1925	 1753
1929	 2209	1924	 1830
1928	 2180	1923	 1931

Reference to Table 'A' will shew an appreciable increase in the number of foreign Coast-wise arrivals and also in Tonnage,

The extension to the Paper Factory referred to in the Report for 1932 was not lucing until very late in the year.

The depression that has been affecting shipping in general for some years appears e lifting, and there seems to be reasonable grounds for anticipating a continued ease in the number of arrivals both Foreign and Coastwise.

Each succeding year brings added duties and responsibilities imposed by the istry of Health upon the Port Sanitary staff.

This year has brought its due quota,

I am, Gentlemen,

Your obedient servant,

S. PRITCHETT,

Port Medical Officer of Health
