TO MR. ALD. NEWTON, J.P., L.F.P.S., CHAIRMAN OF THE
SANITARY COMMITTEE OF THE CORPORATION OF NEWCASTLE-
UPON-TYNE.

SIR,

Herewith I beg to submit to you my Twenty-fifth Annual Report, viz., that for the year 1897.

The *Death Rate* of Newcastle from "All Causes" during the year was 18·7 per 1,000 population. The average rate in 33 large towns in the United Kingdom was 19·1. Details as to the general mortality in the different Registration Sub-districts will be found at pages 32-35.

Marriages (see page 14). In the year ended 31st March, 1897, 2,173 marriages were registered in the Registration District of Newcastle-upon-Tyne (which includes the sub-district of Benwell and Fenham), an increase of 190 on the number (1,983) during the previous twelve months. This is the highest on record since the year 1874, when the number was 2,314.

Zymotic Diseases caused 348 deaths in 1897, against 374 in the previous year. Those from Measles, Whooping-Cough, and Diarrhoea were 96, 62, and 142 respectively, against 133, 95, and 77 in the previous year.

The number of deaths from *Scarlet Fever* was 24* against 23* in the previous year. The mortality from that disease per cent. to cases notified was 4·8, as compared with a rate of 2·6 for the year 1896. 496 cases of Scarlet Fever were notified in 1897, a decrease of 400 on the returns of the year before.

Enteric (or Typhoid) Fever caused 33* deaths, against the same number in the previous year. The rate of mortality to cases notified was 24·0 per cent., as compared with 18·7 in the year 1896. The number of cases notified (138) was 38 below that of the previous year's return.

*Corrected by distribution of those occurring in the City Hospital for Infectious Diseases, of persons belonging to the City.

Diphtheria caused 19* deaths, against 34* in 1896. The rate of mortality was 18·6 per cent. The total number of cases (102) notified shews a decrease of 62 below those of the previous year.

Measles.—Measles has continued prevalent throughout the year. The notifications, which during the last quarter of 1896 numbered 1,425, fell in the succeeding quarter, apparently under the influence of school closure and other preventive measures, to 801, but rose again in the summer quarter to 1,240, of which 963 occurred in the latter six weeks of that period. In the autumn quarter the number of cases declined to 522, and in the winter it was 653. The total for the entire year is therefore 3,216 cases. The Wards of the City most affected by the epidemic have been Elswick (North and South), Arthur's Hill, and Heaton. In each of these Wards are Elementary Schools, the congregation in which of large numbers of children has had greatly to do with the spread of infection, and the consequent maintenance of the epidemic. In November two Board Schools were fumigated throughout, and for a week after the floors were sprinkled daily with Sanitas powder. The result of this action was in each case a marked reduction of the disease. No actual steps have been taken by the Sanitary Authority during the year to close any school on account of the Measles epidemic, chiefly in the idea that beneficial effects would be less likely to follow closure in the middle of an epidemic than before it had gained a general hold on the community.

German Measles broke out in the Newcastle Workhouse in February, causing 103 cases in 18 days. The disease began in the Infants' Department, and the children affected were kept at the Workhouse. It afterwards extended to the Girls' Department. 39 of the latter cases were removed to the City Hospital for Infectious Disease. A total of 8 cases of the same disease occurring in the Orphanage, Moor Edge, were also removed to the Hospital. In November, German Measles again appeared in the Workhouse, and 22 cases were removed to the City Hospital for Infectious Diseases during the latter part of that month. Other

* Corrected by distribution of those occurring in the City Hospital for Infectious Diseases, of persons belonging to the City.

cases followed in December last, and these occupied one of the Hospital pavilions, thereby causing considerable crowding of the Scarlet Fever Blocks, and necessitating the refusal to admit a case of suspected Scarlet Fever, reported at the Out-Patients' Department of the Childrens' Hospital. At the time when this occurred, there was not an available Ward for Diphtheria. Happily no case presented itself for isolation at this juncture, otherwise it could not have been received.

As the cases reported were more than the Special Inspectors for Infectious Diseases and the staff connected with the Disinfecting Station, although working with energy, could cope with, other men were temporarily engaged to assist them.

Enteric Fever at a Country Dairy supplying Milk to Newcastle.—Toward the close of last year attention was drawn to the Milk custom of a certain dairyman in the Rural District, from the occurrence of certain cases of Enteric Fever among his customers in Newcastle. On obtaining a full list of these, 175 in number, the proportion of cases of Fever among them appeared suspicious. It was also ascertained that there were two other cases of Enteric Fever among consumers of the milk in question, not residing in Newcastle. The dairy was visited in January, 1898, by the Medical Officer of Health of Newcastle, who was met by the Medical Officer of Health, and Inspector of Nuisances, of the District. There had been no recent case of Enteric Fever on the premises, but the dairyman's medical attendant stated that six months previously the dairyman's wife suffered from a feverish illness with diarrhœa of a month's duration, suspected by him to be Enteric Fever. The premises were found to be in a very insanitary condition indeed, of which details were duly submitted, Sir, to your committee in a report in January, from which the following is an extract:—

“The conditions under which the milk is produced and stored are so grossly insanitary as to expose it to exceptional liability to contamination and to render the dairy in the opinion of the writer unfit for its purpose.”

"At present the Corporation have no legal power to prevent the sale of milk from any dairy—no matter what the circumstances may be. Such power is given in certain cases after illness has actually occurred under section 4 of the Infectious Diseases (Prevention) Act, 1890,—to Sanitary Authorities who adopt that section, which has not yet been done in Newcastle."

"The circumstances and conditions of the dairy above described appear to illustrate rather forcibly the desirability of Sanitary Authorities being armed with protective power in such cases before mischief happens. Here is a large foul dairy, situated outside of the City by which it thrives, and in a neighbouring district without bye-laws. Ought the 175 City customers of that dairy to be exposed to constant danger without remedy until disease has actually broken out?"

"If the dairy were within the City it would be under regulation. In the preparation of a former Newcastle Improvement Bill, it was proposed to seek for powers to require that the Sanitary Authority should be satisfied as to the sanitary condition of dairies outside of the City before allowing them to send milk for sale here. That proposal was struck out, apparently on the sole ground of supposed impracticability. But in the case in point the practicability, and also the necessity, of such a provision are obvious."

Scarlet Fever at St. Vincent's Home.—In October Scarlet Fever broke out among the boys at St. Vincent's Home. By the close of the year a total of 29 had been reported, all of whom were removed to Hospital.

Exposure of Infected Persons.—In January the Chief Constable reported to the Medical Officer of Health that a man named James Turner had placed two of his children, then suffering from Measles, in a cab, with the object of removing them from Waterloo Street to Buckingham Street, without informing the driver that they were suffering from an Infectious Disease. The children in question were afterwards notified to be suffering from Measles. The Sanitary Committee, on hearing the report of the circumstances, ordered Turner to be summoned, which was done, resulting in a fine of 10s. and costs.

House to House Inspection—Arthur's Hill Ward.—In last Annual Report the suspension of this work was referred to. By instruction of the committee it was resumed last spring, and has been carried on by the District Inspectors without assistance.

Examination of the Drains of New Houses.—In connexion with the examination and testing of the drains of new houses which was transferred in autumn to the Health Department, by the Sanitary and Town Improvement Committees, the Medical Officer of Health, with the approval of the Sanitary Committee, strengthened the staff by the engagement of three additional Assistant Inspectors, who entered on duty in September. Details of the new drain work examined and tested from that date will be found in the report of the Inspector of Nuisances.—(p. 24).

Bacteriological Examination of Water.—The question of the Bacteriological Examination of the Water Supply was under the consideration of the Sanitary Committee toward the close of the year, when this subject and other matters relating thereto, were referred to the City Engineer and Medical Officer of Health, and form material for a future report.

Hospitals for Infectious Diseases.—443 patients have been admitted to the City Hospital for Infectious Diseases at Walker Gate, an increase of 12 on the previous year's return. The proportion of patients in private medical practice removed to Hospital was 29·7 per cent. of the cases (other than Measles and Whooping Cough) notified in same form of practice. The proportion of cases (other than Measles and Whooping-Cough) notified in public practice (including those of the Dispensary) removed to Hospital was 84·5 per cent., as compared with 80·7 per cent. for the previous year.

The mortality to cases was 7·4 per cent. Details are given on pages 21 and 37.

The Smallpox Hospital has been unoccupied during the year. One case of suspected Cholera admitted to the Cholera Hospital in May proved to be Dysenteric Diarrhœa.

Infant Mortality.—The deaths of Infants under one year of age (1,203) show an increase of 96 over the returns for 1896 (1,107) (see pages 14 and 36).

The *Uncertified Deaths* registered are 36 against 16 in the preceding year.

The number of *Cases of Infectious Diseases Notified* by Medical Practitioners (see page 15) is 5,283 against 3,137 in the previous year. The increase is due to the notification of Measles and Whooping Cough (4,531 cases). The notified cases of other infectious disease are less in number by 496 than during the previous year.

THE WORK OF THE HEALTH DEPARTMENT.

The Reports of the Inspectors are given on pages 24 to 29, and the returns of their work will be found in Appendix A, (Tables VII. to XIII A).

22,027 *Inspections of Tenement Property* have been made during the year. The number of contraventions of the Bye-laws returned is 1,455, as compared with 1,030 last year.

137 cases of *nuisance* have been ordered to be taken before the magistrates, a decrease of 9 below the previous year's return.

HOUSING OF THE WORKING CLASSES ACT, 1890.

No representation under the Act has been made during the year.

Sellar's Entry, Sandgate.—As required by the Sanitary Committee, the Medical Officer of Health reported in September on certain rooms, ordered by the Magistrates to be closed, but which had remained occupied for a considerable time after the order. They were closed at the date of report.

CUSTOMS AND INLAND REVENUE ACT, 1890, s. 26 (2).

Applications for Certificates entitling the owners to exemption from Inhabited House Duty have been made during the year in respect of 6 Tenement Houses. After examination of the respective properties, one Certificate only, on the form amended and adopted by the Sanitary Committee in 1895, was given.

FACTORY AND WORKSHOP ACTS.

Last year 53 "Workshops," including 77 Workrooms, were reported by H.M. Inspector of Factories to the Medical Officer of Health on account of nuisance or sanitary defect. On examination, various insanitary conditions, as specified by the Inspector of Nuisances in his report, were dealt with.

HOUSEBUILDING IN THE CITY.

New accommodation has been provided for 1,173 families against provision for 895 during the previous year.

I have the honour to be,

Sir,

Your obedient Servant,

HENRY E. ARMSTRONG, D.H.Y.,

MEDICAL OFFICER OF HEALTH.

*Health Department,
Town Hall,
Newcastle-upon-Tyne,
4th April, 1898.*

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE.

REPORT, 1897.

GENERAL STATISTICS.

DURING the 52 weeks ended 1st January, 1898, 6,795 births and 4,066 deaths have been registered in the City. The births represent a rate of 31·2 and the deaths a rate of 18·7* per 1,000 of a population of 217,555 at all ages, as estimated by the Registrar General to the middle of the year.

The following is a Table of the recorded rates of mortality from all causes, and the seven "Chief Zymotic Diseases," for the year under report and previous years :—

RATES OF MORTALITY PER 1,000 POPULATION OF NEWCASTLE-UPON-TYNE.

1896	...	...	...	18·4	...	...	..	1·8
1897	...	...	...	18·7	...	...	...	1·6†

* This return does not include the deaths in the City Hospital for Infectious Diseases, 31 in number, of persons belonging to Newcastle. With these included the death-rate is 18·8 per 1,000. Deducting deaths (209) in the Infirmary of persons who came there from beyond the City boundary the rate is 17·7.

† Deducting deaths from diseases not ordinarily notifiable (Measles, 96; Whooping Cough, 62; and Diarrhoea, 142), the rate is 0·2.

Births and
Deaths.

The number of births and deaths in the different Registration Sub-districts of the City during 1897 is given in Appendix A, Table I.

Deaths in
Public
Institutions.

The Deaths in Public Institutions, &c., in the different Registration Sub-districts during the 52 weeks ended 1st January, 1898, are as follows :—

REGISTRATION SUB-DISTRICTS.	INSTITUTION.	DEATHS.
Westgate ...	Union Workhouse St. Joseph's House St. Vincent's Home	213 28 1
St. Andrew's ...	Magdalene Hospital Hospital for Incurables Barracks (Military) Central Police Station Eye Infirmary	5 8 5 1 1

* Exclusive of Deaths in the City Hospital for Infectious Diseases.

Deaths from
Miasmatic
order of
Zymotic
Diseases.

The condition of the different Registration Sub-Districts in regard of mortality from the Miasmatic order* of Zymotic diseases during the year is as given in Appendix A, Table II.

Diarrhœa,
Measles, and
Whooping-
Cough.

The most fatal Zymotic diseases have been Diarrhœa, Measles, and Whooping-Cough, from which 142, 96, and 62 deaths respectively are returned.

INFANT MORTALITY.

Infant
Mortality

The number of Infants dying before the completion of the first year of life is 1,203, as compared with 1,107, 1,196, and 980, respectively, in 1896, 1895, and 1894.

REGISTRATION SUB-DISTRICTS.	Deaths of Children under 1 year of age.		Rates per cent. of Deaths under 1 year to Births registered.	
	1897.	1896.	1897.	1896.
Westgate... ..	482	470	16·3	16·0
St. Andrew's	85	81	18·1	16·0
St. Nicholas'	50	35	27·8	18·9

Byker	401	350	17·7	16·0
City	1,203	1,107	17·7	16·5

UNCERTIFIED DEATHS DURING THE YEAR 1897.

Uncertified
Deaths.

36 deaths have been registered for which no proper medical certificate has been given or inquest held, as compared with 16 during the previous year.

MARRIAGES.

Marriages.

The number of marriages registered in Newcastle-upon-Tyne (Superintendent Registrar's district), during each of the past ten years (1888-97), is as under :—

Year. ended March 31.	Number of Marriages.	Year ended March 31.	Number of Marriages.
1888	1,829	1893	1,892
1889	1,874	1894	1,812
1890	2,020	1895	1,851
1891	2,124	1896	1,983
1892	1,894	1897	2,173

* In uniformity with the Classification of causes of death adopted by the Registrar General, Diarrhœal diseases are now excluded from the Miasmatic order of the Zymotic class of diseases. The deaths from these diseases are stated in the Table on previous page.

† Superintendent Registrar's district, which includes the Municipal area and the Extra-Municipal Townships of Benwell and Fenham.

INFECTIOUS DISEASES INQUIRY.

CASES OF INFECTIOUS DISEASE KNOWN TO THE HEALTH DEPARTMENT.

During the year under report the following cases of Infectious Disease have been made known to the Medical Officer of Health by medical practitioners and otherwise. Notification of Infectious Disease.

					CASES KNOWN TO THE HEALTH DEPARTMENT.

Scarlet Fever in relation to School Attendance.—Of the households infected with Scarlet Fever, 285 contained scholars of one or other of 72 different schools in the City. In 10 of the largest elementary schools, scholars came from upwards of 10 of such households during the year, the largest number of scholars from infected households attending any one school being 17. Scarlet Fever in relation to School Attendance.

In two schools there was infection in the households of its scholars during eight months of the year, and in three others during seven months.

Rate of
Scarlet
Fever in
Board
Schools.

Rate of Scarlet Fever in Board Schools.—Through the courtesy of the Clerk to the School Board, Mr. A. Goddard, who has furnished the average daily attendance at each of the Board Schools of the City, it has been possible to prepare the subjoined statement, shewing the percentage of households of scholars in which Scarlet Fever was notified to the average number of scholars in each school:—

Board School.	Per cent. of House- holds infected with Scarlet Fever.
Arthur's Hill	1·2
Bentinck	0·7
Blenheim Street	1·1
Chillingham Road	0·8
Diana Street	1·3
Elswick Road	0·2
Heaton Park Road	1·0

Victoria Jubilee	1·2
Westmorland Road	1·1

As usual circulars have been sent to the principals of the respective schools attended by pupils from houses notified to be occupied by cases of Infectious Disease, and certificates of final disinfection after this was done.

Diphtheria
and Milk
Supply.

Diphtheria in Relation to Milk Supply.—The households affected were supplied by a large number of dealers. There is no reason to suppose that any outbreak was attributable to milk. 4 dairies supplied milk to more than 1 infected household, viz. :—

1 Dairy	*14 households.
1 „	*5 „
1 „	4 „
1 „	2 „

* Large Dairies. The cases were spread over many months of the year.

Enteric Fever and Milk Supply.—The milk supplies of the households infected with Enteric Fever were derived as follows:—

Enteric
Fever & Milk
Supply.

1 Dairy supplied	...	...	...	*9 households.
1 „ „	...	...	...	*7 „
1 „ „	...	...	...	3 „
4 Dairies „	...	...	...	2 „ each.

Each of the remaining households was supplied by a separate dairy.

* These dairies supply a large number of persons, and have branch establishments in several parts of the city. The cases of Enteric Fever in question were spread over the year. There is no reason to blame the milk supply for their occurrence.

PUERPERAL FEVER.

The following details refer to Puerperal Fever during the year 1897:—

Puerperal
Fever

Inquiries were made in 7 households containing 7 cases.

Two of the cases were attended by the same medical practitioner. Three of the cases were attended by midwives, who were cautioned against continuing practice until the lapse of a period of two months after the respective confinements. This injunction is believed to have been attended to. Compensation for loss of practice was granted by the Sanitary Committee.

Infectious Disease Inquiry and Disinfection.—5,287 cases of notifiable infectious disease have been inquired into by the Special Inspectors, with temporary assistance, and the houses or rooms connected therewith disinfected, as compared with 3,137 during the year before. The bedding and other infected articles were removed to the Disinfecting Station, and, after purification, returned to the owners. (For List, see Appendix A, Table VI.)

Disease
Inquiry

Compensation granted on account of Infection.—In 6 cases compensation has been allowed by the Sanitary Committee to the occupiers of infected houses, for clothing, confectionery, &c., destroyed.

General
Work of the
Health
Department

WORK OF THE INSPECTORS OF THE HEALTH DEPARTMENT.

The Report of Mr. W. H. Wells, Inspector of Nuisances, is given below :—

TO THE MEDICAL OFFICER OF HEALTH.

SIR,

I beg to present you my report of the work done in my section of the Health Department during the year ending 31st December, 1897, which includes Tables Nos. VIII. to XIIA. (Appendix A.)

Nuisance
Abatement

Nuisance Abatement.—The details of this work are shewn in Tables VIII. and IX. (Appendix A.) There have been 185 privies with ashpits removed, and either water-closets or pail-closets provided instead.

Magisterial
Proceedings

Magisterial Proceedings for abatement of Nuisances, &c.—Particulars are given in Appendix A. Table X.

Tenement
Bye-laws.

Tenement Bye-Laws.—The houses in Meeting House Lane, mentioned in last year's report, have been closed, and several water-closets have been erected in the alleys off Sandgate. The latter, however, does not make the houses there all they should be as dwellings.

I have to report, as before, that the conduct of the occupiers of tenements is much improved since the bye-laws were put into force, but the almost daily presence of the District Inspector is needed to maintain the improvement.

House-to-
House In-
spection in
Arthur's
Hill.

House-to-House Inspection in Arthur's Hill.—This work was recommenced by order of the Sanitary Committee on March 25th, 1897, by the District Inspector, and was carried on in the ordinary district work without assistance. 296 drains were tested, of which 188, or 63·5 per cent., were found to be defective. All the defects were dealt with.

Drains of
New
Buildings.

Drains of New Buildings.—In August the Authority ordered the Health Department to undertake the work of testing drains in new buildings.

Three additional officers were appointed for the purpose, and the work commenced on September 20th. The amount of work done to the end of the year is shown in tabular form, as follows :—

No. of Drains Tested with Water.	No. of Drains Tested with Smoke.	Supplementary Tests.	Supervisions of Works in Progress.	Visits to Learn if Works are in Progress.	Final Examinations.
164	104	10	905	835	11

The reason for testing some drains with smoke instead of water is that some builders refuse to provide intercepting traps or access chambers upon the drains.

It is, under these circumstances, not possible to plug the drains for the water test, and the smoke test—the only alternative—is lessened in value from the same cause.

The building regulations of the city as to drains are imperfect, and, amongst other things, do not provide for intercepting traps, or even for efficient ventilation of drains. Before this work can be in all points satisfactorily carried out, new regulations must be made.

The final examinations in the table mean those made when the whole sanitary system of the new building is completed, *i.e.*, w.c., &c., fixed, the prior tests having been applied to the drains alone before filling in of trenches, and therefore before the plumbing work has been begun.

Bakehouses.—The Retail Bakehouses (65) have been systematically inspected every six months, and at other times. The Wholesale Bakehouses (13) are under the superintendence of the Government Inspector of Factories.

Offensive Trades.—The following establishments—
 Triperies (11), Marine Stores (23), Blood Drying (1),
 Chemical Manure Works (1), Fish Curing (9), Knackeries
 (2), Soap Works (4), Tanneries (3), and Leather Dressing (3)
 have been regularly attended to as to cleansing, &c.

Common
Lodging
Houses

Common Lodging Houses.—These houses have been well conducted. Four of the older houses have been closed, and six new ones placed upon the Register.

The total number of lodgers for which the Common Lodging Houses of the City were registered was, at the close of 1896, 1,865. At the close of the year under report (1897) the number was 2,058.

The average number of lodgers per night was 1,507.

Factory and
Workshop
Acts.

The highest and lowest numbers on any one night were respectively 1,597 and 1,372. For details see Appendix A, Tables XII. and XIII.

Factory and Workshop Acts.—53 Workshops, which included 77 Workrooms, were inspected during the year. 107 sanitary defects were found, and remedied, as follows:—

Dirty rooms	...	...	...	...	...	...	36
Insufficient ventilation to rooms	...	...	...	...	...	...	1
Overcrowded rooms	...	..	...	...	...	...	8
Dirty passages and staircases	...	...	...	...	...	...	11
Gas Stoves without means provided to carry away the fumes	...	...	...	...	...	...	4
Gas Irons without means provided to carry off the fumes	...	...	...	...	...	...	4
No water-closet accommodation	...	...	...	...	...	...	10
Insufficient water-closet accommodation	...	...	...	...	...	...	6
Defective water-closets	...	...	...	...	...	...	4
Choked water-closets	...	...	...	...	...	...	3
Dirty water-closets	...	...	...	...	...	...	2
No water supply to water-closet	...	...	...	...	...	...	1
Defective pail-closet	...	...	...	...	...	...	1
Defective drains	...	..	..	...	...	...	2
Dirty bakehouse	...	...	...	...	...	...	1
Foul manure pits under workrooms and foul accumulations	...	...	...	...	...	...	3
Defective yard pavements	...	...	...	...	...	...	4
Insufficient provision for escape in case of fire	...	...	...	...	...	...	1
Dirty yards	...	...	...	..	...	...	3
Broken roofs and spouting	...	...	...	...	...	...	1
Want of a urinal to workshop	...	...	...	...	...	...	1
Total...	...	...	...	...	...	...	107

I will again remark, that by the instruction of the Sanitary Authority, only such workshops and factories are examined as are complained of to the Department. Further visits are periodically made to all such workshops, so far as can be done with the present staff, the number on our books being now 499.

Adulteration Acts.—The number of milk samples purchased during the year is 266. Only 2·63% of these were certified to be adulterated. Most of the milk samples are first tested in the office with hydrometer and cremometer. Of these 26 were considered to be doubtful, and sent to the Public Analyst, who certified six of them to be adulterated and five doubtful. Adulteration Acts

37 of the samples were sent direct to the Analyst without previous test. Of these one was certified to be adulterated and four doubtful.

The total number of samples of foods and drugs taken during the year is 397, against 406 in 1896. (For details see Appendix A, Table XI).

The assistance of the staff has been freely sought by the public during the year.

I am, Sir,

Your obedient Servant,

W. H. WELLS,

INSPECTOR OF NUISANCES, COMMON
LODGING HOUSES, &c.

Health Department,

Town Hall,

25th February, 1898.

The following is the report of Inspector Hedley :—

TO THE MEDICAL OFFICER OF HEALTH.

SIR,

I beg to present you with the following report for the year ending December 31st, 1897.

The general health of the cattle in the City has been satisfactory throughout the year. There has been only one outbreak of Swine Fever, two swine being affected. They were killed, and the carcasses were destroyed.

Two persons were summoned for removing diseased swine from the County of Northumberland into the City. They were fined £5 and costs each.

Cow-sheds. — These have been regularly inspected during the year, and several necessary repairs made on the verbal request of the Inspector. In one case the occupier having declined to put his premises in good sanitary condition, was summoned, and fined £5 and costs. The place has been closed since.

Two persons have ceased to keep milch cows in the City, leaving only 65 who keep cows for the purpose of supplying milk to the public.

Two outbreaks of Measles have occurred in the families of Dairymen. In one case, the patient was removed to Hospital; in the other, all communication was cut off between the patient and the milk supply. No spread of infection is known to have occurred through the milk.

Slaughter Houses.—Little change has taken place. Two have been closed during the year, the premises being required for other purposes. 126 were licensed at the end of the year.

Fish Destroyed during 1897.—

Salmon and Salmon Trout.—82 Fish.
 Ling.—2 Barrels, 2 Boxes, and 6 Fish.
 Skate.—5 Barrels.
 Haddocks.—2 Boxes.
 Herrings, (Fresh).—7 Large Boxes,
 10½ cwt.
 Sprats.—1 Barrel and 4 Boxes.

Mackeral.—40 Fish. } By order
 Plaice.—19 Fish. } of Justice.
 Findon Haddocks.—135 Boxes.
 Kipperd Herring.—541 Boxes.
 Bloaters.—11 Boxes.
 Mussels.—19 Bags.

One person was summoned and fined 10 shillings and costs for exposing bad fish for sale.

Diseased Meat and other Provisions.—A return of the diseased meat and other unsound provisions dealt with during the year, and the magisterial proceedings resulting thereon, is given in the Appendix A, Table VII.

I am, Sir,

Your obedient Servant,

WM. HEDLEY,

INSPECTOR OF CATTLE, PROVISIONS, &c.

*Health Department,
 Town Hall,
 Newcastle-on-Tyne,
 24th Feb., 1897.*

HOUSES BUILT DURING THE YEAR 1897.

House-
building.

The following return of houses built during the year under report is supplied through the courtesy of the City Engineer :—

Newcastle-upon-Tyne.				Houses, Self-contained.	Houses of Two Flats each.
Elswick Township	...	...	...	8	87
Westgate Township	...	..	...	1	23

St. John's Parish	...	...	...	—	—
St. Nicholas' Parish	...	...	...	—	—
All Saints' Parish...	...	...	...	—	—
				133	520
(for 1,040 families.)					

New Accom-
modation.

New accommodation has thus been provided for 1,173 families, or at the rate of 5 persons to a family, 5,865 persons, as compared with accommodation estimated for 4,475 persons provided during 1896.

SANITARY ALTERATIONS.

65 plans for minor sanitary works have been examined and approved or otherwise by the Medical Officer of Health and forwarded to the City Engineer for his consideration, as compared with 60 during the previous year.

HENRY E. ARMSTRONG, D.H.Y.,

MEDICAL OFFICER OF HEALTH.

*Health Department,
Town Hall,*

*Newcastle-upon-Tyne.
4th April, 1898.*

City and County of Newcastle-upon-Tyne, 1897.

	Total ...	3,465	3,330	6,795	2,131	1,935	4,066

The Births represent a rate of 31·2, and the Deaths a rate of 18·7 per 1,000 estimated population. The increase of births over deaths is 2,729 this year, as compared with 2,805 in 1896. The increase of population at Midsummer, 1897, over that at Midsummer, 1896, is estimated by the Registrar General at 5,332 persons.

A large number of the quarters of beef were imported dead meat from Denmark. 18 were found to be diseased or unsound, and were destroyed. Of the 72 carcasses of beef returned as bad, 14 of the animals were sold in public markets; when slaughtered, they were found affected with tubercle, and were destroyed.

Seven persons were summoned for exposing bad meat for sale. Two of the cases resulted in fines of £20 and costs each, three £10 and costs each, one £5 and costs, and one 40s. and costs.

WM. HEDLEY, INSPECTOR.

TABLE VIII.

SUMMARY OF NUISANCES FOR THE ABATEMENT OF WHICH NOTICES
HAVE BEEN SERVED DURING 1897.

Foul privies and ashpits to replace with water-closets or pail-closets ...	296
Cellar dwellings not in conformity with law (to be closed or not used separately as dwellings)	7
Dirty or dilapidated rooms (to be cleaned or repaired)	166
Insufficient privy accommodation (additional water-closets or pail-closets ordered)	61
Foul ashpits not connected with privies (to remove and provide tubs)...	201
Defective tubs (to provide new tubs)	118
Insufficient tubs for dry house refuse (to provide additional tubs) ...	105
*Defective water-closets	167
*Water-closets without water supply	66
*Choked water-closets (mostly served on tenants)	434
*Dirty water-closets (all served on tenants)	58
†Defective pail-closets	725
†Dirty pail-closets (all served on tenants)	85
Smoke nuisances (to abate)	10
Overcrowding (to abate)	50
Defective pavement in yards and passages (to repair)	180
Dirty yards and passages (to cleanse)	334
Defective drains, sinks, soil-pipes, &c. (to cleanse, repair, or construct new drains)	1,227
Broken roofs and water spouting (to repair)	267
Want of water supply (to provide)	209
Animals, pigeons, and fowls improperly kept (to remove)	43
Accumulations of manure (to periodically remove)	161
Offensive accumulations (to remove)	67
Unclassified minor nuisances (to abate)	20
Want of sanitary conveniences in public houses (to provide)	1
Totals	5,058

*To repair or cleanse. †To provide new pans, or to repair the roofs, seats, and floors, or to cleanse.
