TO THE HEALTH COMMITTEE.

GENTLEMEN,

I have pleasure in submitting for your consideration the Annual Report on the Health of Salford during the year 1905, detailing the work carried out by the Department under your control.

The death rate for this year was 17·2, and is the lowest recorded for the Borough.

There has been no special feature in the year's work, but steady progress has been made in the conversion of privy middens and pail closets to water closets, and the remodelling of back-to-back houses.

Special attention has again been paid to the question of infant mortality, and it is gratifying to note that this bane of industrial populations appears to be diminishing.

I have the honour to be, Gentlemen,

Your obedient servant,

C. H. TATTERSALL.

Town Hall,

Salford,

April, 1906.

PART I.
MORTALITY STATISTICS.

PART I.

MORTALITY STATISTICS.

POPULATION.

The Registrar-General estimates that the population of the County Borough of Salford was **231,514** in the middle of 1905, and this number—which is ascertained by assuming that the population of the Borough continues to increase at the same rate as in the decennium 1891 to 1901—is made the basis on which the various Birth, Death, and Sickness rates mentioned in this report are calculated.

The male population is estimated to be **111,895**, and the female **119,619**.

The age distribution of the population is—

Under five years of age	27,851
From 5 to 15	48,976
„ 15 to 25	47,484
„ 25 to 65	100,465
Over 65	6,738

The population is divided among the four districts as follows :—

Regent Road	74,383
Greengate	51,111
Pendleton	46,953
Broughton.....	59,067

The natural increase of the population for the year, that is, the excess of births over deaths is 3,185 as compared with the estimated increase of 2,531.

BIRTHS.

There were 7,165 births registered in the Borough in 1905, 3,673 being males and 3,492 females, giving a birth-rate of 30·9 per thousand of the population.

This is a decrease from the previous year of 96 births, or a reduction in the birth-rate of 0·4 per thousand.

The birth-rate in the Regent Road District was 31·8; in the Greengate District, 35·7; in Pendleton, 30·6; and in Broughton, 26·0.

The birth-rate for the 76 large towns averaged 28·2, and for the whole of England and Wales, 27·2; as compared with 30·9 in Salford.

There were 236 births registered as illegitimate, or 3·3 per cent. of the total births.

The illegitimate births in the various districts were—

Regent Road,	80 or 3·4	per cent. of the total births.
Greengate,	66 or 3·6	„ „ „
Pendleton,	38 or 2·6	„ „ „
Broughton,	52 or 3·4	„ „ „

The average rate for the preceding ten years were :—
Regent Road, 3·1 per cent.; Greengate, 4·4 per cent.;
Pendleton, 3·4 per cent.; and Broughton, 2·8 per cent.

There were 51 illegitimate births in the first quarter
56 in the second, 73 in the third, and 56 in the fourth.

Deaths in each week from all Causes, and from Zymotic Diseases, 1905.

Still Births.—I have ascertained from the Registrars of the Cemeteries that the bodies of 288 still born children have been buried. It is extremely unsatisfactory that the registration of the births of still born infants is not compulsory.

DEATHS.

The total number of deaths registered in the Borough during 1905 was 3,980, of which numbers 2,065 were males and 1,915 females, giving a **death-rate of 17·2** per thousand of the population.

There were 972 deaths in the first quarter of the year, 947 in the second, 1,092 in the third, and 969 in the fourth.

The accompanying chart shows the number of deaths registered weekly from all causes, and from zymotic diseases, respectively.

District Mortality Rates.—The death-rate in the Regent Road District was 17·6 per thousand, as compared with 23·4 the average for the preceding five years and 17·2 the death-rate for the whole Borough.

In Greengate the death-rate was 20·4 per thousand, as compared with 29·4 per thousand for the preceding five years; in Pendleton it was 18·4, as compared with 19·3; and in Broughton 12·8, as compared with 15·4, the average for the preceding five years.

Thus, Regent Road, Greengate and Pendleton, were above the average for the Borough, and Broughton was below it.

Deaths at Various Ages.—These are shown in detail in Tables Nos. 3, 6, and 12.

Comparing the death-rates with the previous year, it is found that under five years of age the rate is 56·7 per thousand against 80·8; from 5 to 15 years of age the rate is 3·3 against 3·8; from 15 to 25, 3·4 against 4·0; from 25 to 65, 14·2 against 15·0; and over 65, 97·4 against 108·0 per thousand.

Infant Mortality.—There were 1,062 deaths of infants under one year of age, registered during the year, giving a death-rate of 148 per thousand births. This is a distinct decrease on the previous year, when the death-rate was 193 per thousand births.

The chief causes of death among infants, compared with the average of the preceding five years were—

Zymotic diseases	353	compared with	397
Atrophy, marasmus, debility	130	„ „	182
Premature birth.....	149	„ „	154
Convulsions	53	„ „	92
Bronchitis and pneumonia.	163	„ „	215
Disease of digestive system.	74	„ „	120

The 353 deaths from zymotic disease were principally due to diarrhoea, 204; enteritis, 45; and tuberculosis, 78.

The work of the Visitors of the Ladies' Health Society in the Greengate District, in keeping each newly born child under observation, has been continued, and the information contained in Tables A, B, C, D, and E has been obtained.

Totals.....	229	56	244	2857	530	185

7·4 per cent only of the mothers worked out.

Comparing the mortality with the previous year, there is a decrease in each group, except that fed on fresh milk alone, and here the death rate has risen from 264 to 375 per thousand.

Table B is compiled from the returns of the Visitors, and relates to 1,262 infants born in 1903 and kept under observation until they died or arrived at the age of 12 months.

It is noticeable that the death rate of these children, although living in our most unhealthy district, was below the rest of the Borough, being 138 per thousand as compared with a rate for the Borough in 1904 of 193.

It should also be stated that about 70 out of the 190 deaths occurred before the infants came under observation.

Among the 1,124 infants observed there were 47 illegitimate. Of these 9 died, 16 removed out of the district and were lost sight of, and 22 lived to the age of 12 months.

I learn from the Visitors that there has been a distinct improvement in the condition of the dwellings during the year, and that they find mothers more willing to accept advice as to the feeding of their infants, than they were when the movement was first commenced.

In Table D, particulars are given of the character of the mothers as ascertained by the Health Visitors, and the death rates among their children, and as might be expected the children of intemperate mothers have only about half the chance of living compared with others.

In Table E, particulars as to the occupation of the

mothers is given for the past four years, and the most interesting point is the comparatively small number of children whose mothers work out. Thus, out of 3,086 only 229, or 7·4 per cent., were the children of women who went out to work. It is difficult to form any idea of the extent to which this represents the condition of affairs as to the employment of married women in the Borough, since the figures are taken from one district only.

As might be expected, the deaths were more numerous among the children of those who had to leave them to go out to work.

In Table No. 14 the infant mortality rate for the 33 Great Towns is given, and Salford is 28th on the list.

Compared with the eight Lancashire towns as regards Infantile Mortality Salford stands second, the rates being Blackburn 146, Salford 148, Oldham 150, Preston 153, Liverpool 154, Manchester 157, Bolton 166, and Burnley 173.

Senile Mortality.—656 or 16 per cent. of the total deaths were those of persons of 65 years of age or over, this is one per cent. more than last year.

Of these 82 were certified to have died from old age, 106 from heart disease, 153 from bronchitis, 40 from pneumonia, and 108 from brain disease.

Comparison of the Death Rate in Salford with that in the 33 Great Towns.—This is shown in Table No. 14 where the details will be found.

The death rate for the year in the whole of England

and Wales was 15·2 per thousand, in the 76 Great Towns it averaged 15·7, and in Salford it was 17·2 per thousand.

Classification of the Causes of Death.—This is set out in full detail in Table No. 12 appended to this report. From this it is seen that of this total, 3,980 deaths from all causes, there were from—

Zymotic diseases	1,221	deaths,	or	30·7	per cent.	of the total deaths.
Constitutional	„	182	„	4·6	„	„
Developmental	„	289	„	7·2	„	„
Local	„	1,914	„	48·1	„	„
Other	„	374	„	9·4	„	„
		<u>3,980</u>		<u>100·0</u>		

Zymotic Diseases.—The zymotic death rate for the year was 2·5 per thousand of the population, as compared with 4·3 in the previous year, 2·8 in 1903, and 2·6 in 1902.

The deaths from the various diseases are given in the following table :—

	1905.	1904.		1905.	1904.
Measles.....	73 ...	254	Whooping Cough...	46 ...	139
Scarlet Fever	66 ...	56	Diphtheria	81 ...	116
Fever { Typhus ...	— ...	4	Diarrhoea	275 ...	372
Enteric ...	44 ...	47	Small-pox	— ...	2
Continued..	— ...	1			

Detailed information as to Zymotic sickness will be found in Part II. of this report.

Acute Lung Diseases.—From bronchitis, pneumonia, and pleurisy, 825 deaths were registered, against 910 for 1904, 882 for 1903, and 973 for 1902. From bronchitis there were 403 deaths, giving a death rate of 1·7 per 1,000 persons living, while from pneumonia there were 413 deaths, giving a death rate of 1·8.

From respiratory diseases generally there were 85 fewer deaths than in 1904.

Cancer.—There were 143 deaths registered as being due to cancer or malignant disease, giving a death rate of 0·6 per thousand.

The rate is identical with that of last year.

Nervous Diseases.—From the various nervous diseases there were 373 deaths, giving a death rate of 1·6 per 1,000, as compared with 1·7 in 1904, 1·9 in 1903, 2·0 in 1902, and 2·2 the average for the five years 1897 to 1901.

Heart Disease.—There were 360 deaths from heart disease. This gives a death rate of 1·6 per 1,000, compared with 1·6 for 1904, 1·4 for 1903, 1·4 for 1902, and 1·4 the average for the five years 1897 to 1901.

Comparison with Decennial Averages.—In Table 13 there will be found an interesting comparison of the deaths from various specified causes in 1905, with the decennial average number for the Borough, and from this it will be seen that in only two diseases there was an increase, viz., diphtheria 4, and heart diseases 47.

The greatest diminution was in respiratory diseases, which were 210 below the average, and the greatest excess was in heart diseases, which were 47 above the average.

Phthisis, Tubercular Diseases, and Influenza.—The mortality from these diseases will be found in Part II. of this report.

PART II.

INFECTIOUS DISEASES.

The total number of cases of infectious disease notified to the Health Department, under the Infectious Diseases Notification Act for the year 1905, was 1677, which is 253 less than in the previous year and 236 below the average for the preceding five years.

There were 3 cases of small-pox, 960 of scarlet fever, 363 of diphtheria, and 142 of enteric fever. Full details, for comparison, of these figures with preceding years will be found in Table No. 18, but it may be here stated that these numbers show a decrease from those of 1904, and, with the exception of diphtheria, show a decrease from the average of the preceding five years.

The death-rate from the seven zymotics for the year was 2·5 per thousand, compared with 4·3 in 1904, 2·8 for 1903, 2·6 for 1902, and 4·2 for 1901. These figures include the deaths from diarrhœa, measles, and whooping cough, in addition to the notifiable diseases.

Particulars as to sickness from the non-notifiable infectious diseases cannot be given, but the particulars of mortality are as follows :—

Phthisis	331	deaths.
Other Tubercular Diseases.....	206	„
Measles	73	„
Whooping Cough	46	„
Diarrhœa	275	„
Influenza	27	„

The accompanying chart shows the weekly incidence of the cases notified, from which it will be seen that the highest number in any one week was 47, which occurred in the 11th week, and the lowest number was 19 in the 4th and 8th weeks. In 1904 the highest number was 63 in the 40th week, and the lowest 13 in the 15th week.

Comparison with England and Wales, &c.—The mortality rates from scarlet fever, diphtheria, whooping cough, measles, and diarrhœa, are given in Table No. 23, where they are compared with the similar rates for England and Wales, the 76 Great Towns, and London.

SMALL-POX.

The three cases were infected by an overlooked case which appeared to have acquired the infection outside the Borough.

SCARLET FEVER.

Ages.	Cases.	Deaths.	
		Total.	Percentage.
Under 1 year ...	15	2	13'3
1 to 5 years...	340	46	13'5
5 to 15 „ ...	538	16	3'0
15 to 25 „ ...	55	1	1'8
25 to 65 „ ...	12	1	8'3
Over 65 „ ...	...	...	...
TOTAL.....	960	66	6'9

There were 960 cases of scarlet fever notified during 1905. This number is less by 83 than that for the preceding year and 79 fewer than the average for the preceding five years.

The attack rate is therefore 41'5 per, 10,000 of the population, as compared with 45'5 for the preceding year.

There were 66 deaths, giving a mortality rate of 6'9 per cent. of the cases or 0'28 per thousand of the population.

The cases were spread over the whole year, as shown on the accompanying chart, being most numerous in the

month of September, when there were 114 notifications, and fewest in January, when there were 46 notifications.

SCARLET FEVER SICKNESS.—RATES PER 1,000 OF THE POPULATION.

	1900.	1901.	1902.	1903.	1904.	Mean.	1905.
Salford (Borough)...	6.02	5.96	3.28	3.25	4.55	4.61	4.15
Regent Road	5.54	4.86	2.49	2.84	4.02	3.95	5.69
Greengate.....	6.70	9.13	3.02	3.11	2.65	4.92	2.64
Pendleton.....	6.63	4.97	3.37	4.09	5.06	4.82	4.77
Broughton	5.41	6.73	5.04	2.78	5.83	5.16	3.01

In respect of age scarlet fever showed itself to be mainly a disease of youth, 56 per cent. of the cases occurring between the ages of five and fifteen, 7 per cent. were over fifteen years of age, and 37 per cent. were children under five years of age. The mortality, as might be expected, is much the heaviest among the latter, being over 13 per cent. of the cases, whereas between the ages of five and fifteen and over fifteen the mortality was 3 per cent.

The Regent Road district suffered most, the attack rate being 56.9 per 10,000 of the population; in Pendleton the rate was 47.7; in Broughton, 30.1; and in Greengate, 26.4.

There were removed to the Ladywell Sanatorium 759 cases, or 79 per cent. of the total cases.

RETURN CASES OF SCARLET FEVER.

During the year the experiment of discharging patients earlier than in the past has been continued. Desquamation as an indication of convalescence has been entirely ignored, and the patients have been discharged at

the end of four weeks, or as soon afterwards as their general condition permitted, patients with nasal or ear trouble being retained until convalescent.

During the year 1905, 677 patients were discharged. Of these, 418 were still desquamating.

From these 418 cases 29 were connected with so-called "return cases," or 6.9 per cent., while of the remaining 259, who were discharged after desquamation had been completed, 32, or 12.4 per cent., were connected with "return cases."

These figures for "return cases" appear very high, but they include cases which occurred as long as seven weeks after the return of the first case. If the return cases be limited to those occurring within three weeks of the return home from the hospital of the primary case, 30 of the 418 desquamating cases discharged proved capable of conveying infection, or 7 per cent.; and 25 of the 259 discharged after desquamation had been completed, or 10 per cent.

It is again proved that we are quite correct in neglecting entirely the presence or absence of desquamation as an indication of the presence or absence of infection. This is further confirmed by the fact that although so many cases were discharged desquamating there is a slight reduction in the percentage of return cases.

These "return cases" have been carefully inquired into, and the primary cases examined. It was found that in 18.0 per cent. of the primary cases nasal discharge, and in 8.2 per cent. ear discharge, was present. In the

remaining 73·8 per cent. nothing tangible to account for the occurrence of return cases could be discovered.

CASES OF SCARLET FEVER FOR THE YEAR 1905.

CASES REMOVED TO HOSPITAL.

	Number.	Per cent. of Total Cases.	Number of Susceptible Persons under 15 remaining in House.	Number of Secondary Cases.	Per cent. of susceptibles under 15 left in house.

DIPHTHERIA.

There were 363 cases of diphtheria notified during 1905, compared with 422 in 1904, and 308 the average for the preceding five years.

There were 81 deaths registered from diphtheria, giving a death rate of 22 per cent. of those attacked, compared with a death rate of 27 per cent. in 1904, and an average for the preceding five years of 30 per cent.

AGES.	CASES.	DEATHS.

25 to 65 „ ...	20	...	...
Over 65 „ ...	...	*1	...
TOTAL.....	363	81	22·3

* This case occurred on the 31st of December, 1904.

The cases were spread over the whole year, the numbers ranging from 20 in August to 43 in February.

With regard to age, 307 cases or 85 per cent. were children under 15 years of age, and 167 cases or 46 per cent. were children under five years of age, the mortality amongst the latter class being very heavy, the deaths reaching the large proportion of 32 per cent. of the cases.

In respect to district, 138 cases occurred in Regent

Road district, 42 in Greengate, 94 in Pendleton, and 89 in Broughton. The attack rate was highest in Pendleton, being 19·0 per 10,000 persons living, and the lowest in Greengate, where it was 8·2 per 10,000.

During the year 144 specimens were forwarded by the medical practitioners to Professor Delepine for bacteriological examination. Where a positive result is obtained, an immediate and distinct advantage is gained by practitioner and patient, as it is usually followed up at once by anti-toxin injections.

A negative result is unfortunately not decisive in diphtheria, but the following table will show that the cases giving a negative result were evidently of a less serious character.

	Cases.	Mortality.	Percentage.
Notification of Diphtheria.....	363	81	22·3
Specimens submitted to Bacteriological examination with Positive results	50	4	8·0
Specimens submitted to Bacteriological examination with Negative results.....	94	1	1·1

Comparing Salford with England and Wales, the 76 Great Towns, and London, the mortality rates were as follows per 10,000 living.

England and Wales	2
76 Great Towns	2
London	1
Salford	3

ENTERIC OR TYPHOID FEVER.

There were 142 cases of enteric fever notified during 1905, which is a decrease of 60 when compared with 1904, and a decrease of 106, the average of the preceding five years. This gives an attack rate for the Borough of 61 per 100,000 persons living. Out of the 142 cases, 44 died, giving a mortality rate of 31 per cent.

The cases were most numerous in the month of October, reaching their highest point, 9 cases, in the 41st and 43rd weeks; they were least numerous in the months of February, April and May. On referring to the accompanying chart, it will be seen that the Autumnal rise was well marked.

With regard to age, the cases were most numerous in the age period 25 to 65 years, the number (73) being 51 per cent. of the total cases.

AGES.	CASES	DEATHS.	
		TOTAL.	PERCENTAGE.

1 to 5 „ ...	3	...	...
5 to 15 „ ...	37	6	16.2
15 to 25 „ ...	27	7	25.9
25 to 65 „ ...	73	30	41.1
Over 65 „ ...	2	1	50.0
TOTAL.....	142	44	31.0

In respect to district, 78 cases occurred in Regent Road District, 17 in Greengate, 39 in Pendleton, and 8 in Broughton. The attack rates in the various districts were 105 per 100,000 living in Regent Road District, 33 in Greengate, 83 in Pendleton, and 13 in Broughton.

There were 100 cases removed to the Sanatorium, or 70 per cent. of the total cases, as compared with 74 per cent in 1904, 66 in 1903, 57 in 1902, and 56 in 1901.

ENTERIC FEVER.

	Cases.	Mortality.	Percentage.
Notification of Enteric Fever...	142	44	31'0
Specimens submitted to Bacteriological examination with Positive results	36	8	22'2
Specimens submitted to Bacteriological examination with Negative results	68	1	1'5

PUERPERAL FEVER.

There were 26 cases of this disease notified during the year, of which 9 occurred in Regent Road District, 4 in Greengate, 11 in Pendleton, and 2 in Broughton.

There were 7,165 births during the year, so that the attack rate was 0'4 per cent.

Of these cases 15 died, giving a mortality rate of 58 per cent.

ERYSIPELAS.

There were 176 cases of erysipelas during the year

1905, as against 168 in 1904, 161 in 1903, 164 in 1902, 230 in 1901, 179 in 1900, 153 in 1899, and 146 in 1898.

There appears to be very little advantage from the notification of this disease, as nothing of a preventive nature can be accomplished by the Health Department.

MEASLES.

There were 73 deaths from measles during the year, giving a death rate of 31 per 100,000 living. This rate is only about a quarter of the number for last year, which was 111; the numbers for the preceding five years being 1899, 97; 1900, 57; 1901, 51; 1902, 68; and 1903, 57.

An arrangement is in existence with the officials of the Education Committee, who advise the department of every case of this disease coming to their notice. The cases are then visited, and the parents advised as to the precautions to be taken.

Leaflets are issued and distributed by the Health Visitors pointing out the dangerous character of the disease, and advising as to the precautions to be taken to prevent its spread.

WHOOPING COUGH.

There were 46 deaths from whooping cough during the year, 45 of which occurred among children under five years of age. The death rate for the Borough was 19 per 100,000 persons living, as compared with 61 for 1904, and 53 the average for the past five years. The death rate for England and Wales was 25 per 100,000, and the average for the 76 great towns was 29.

In Regent Road District there were 16 deaths, 11 in Greengate, 10 in Pendleton, and 9 in Broughton.

DIARRHŒA.

The death rate from diarrhœa was 1·18 per 1,000 living, as compared with 1·61 last year, 0·99 in 1903, 0·63 in 1902, 1·86 in 1901, and 1·45 in 1900.

TUBERCULOSIS.

During the year there were 537 deaths from phthisis and other tubercular diseases.

In every case of death from phthisis the house is visited, and consent to thorough disinfection is requested. Disinfection is then carried out free of charge. Leaflets of precautions to be taken have been supplied to all the medical men with a request that they would give them to their patients, and the lady visitors have visited the houses of the sick, and given instructions as to the best methods of preventing the spread of the disease.

To assist in the diagnosis of difficult cases the Committee have also arranged for the examination of specimens of sputum, &c., free of charge to the medical practitioners.

There were 62 specimens examined bacteriologically during the year.

MEASURES TAKEN TO PREVENT THE SPREAD OF INFECTIOUS DISEASE.

Isolation.—Out of the total, 1677 cases of infectious disease notified during the year, 1,196, or 71 per cent.

were removed to the Ladywell Sanatorium and to Drinkwater Park, and there isolated.

Disinfection.—All infected bedding has been stoved in the steam disinfecter.

During the year three schools were disinfected, in consequence of the prevalence of measles and scarlet fever.

Bacteriology.—310 specimens in suspected cases of enteric fever, diphtheria, and phthisis have been sent to Professor Delepine, of the Owens college, for examination, and the following is the result of the work done during the year 1905 :—

Enteric Fever.—104 examinations made, positive reactions obtained 36, or 34·6 per cent.

Diphtheria.—144 examinations made, and the specific bacilli were found in 50 cases, or 34·7 per cent.

Phthisis.—62 tests were made, and tubercle bacilli were found in 25 cases, or 40·3 per cent.

PART III.

WORK OF THE HEALTH DEPARTMENT.

PART III.

WORK OF THE HEALTH DEPARTMENT.

The staff of the Department consists of an Assistant Medical Officer, a Veterinary Surgeon, and 15 Inspectors including one Female Inspector. There are also 8 Female Visitors working jointly with this Department and the Ladies' Health Society.

Systematic Inspection and Abatement of Nuisances.—The systematic inspection of the Borough was conducted during the year 1905, on the same lines as in previous years, and with satisfactory results. The result of the inspections may be gathered from a perusal of the "Register of Work Done," which is to be found at the end of this section of the report. It shows that the number of complaints received at the office of the Department was 2,909, as compared with 3,760 received in 1904; also that 7,581 dwelling-houses were inspected during the year, and that 54 cases of overcrowding were abated. 1,610 house-drains were repaired, 3,028 were reconstructed, 481 properly trapped, 13 waste pipes disconnected from drains, and also 92 rain-water pipes. In respect to water-closets, 2,553 new ones were provided, and two were properly ventilated, 16 soil pipes were also ventilated. 60 houses were closed as unfit for human habitation. 301 seizures were made of meat unfit for food, which included animals that had died in transit to the market, and 801 samples of food were purchased for the purpose of analysis.

HOUSING OF THE WORKING CLASSES.

Springfield Lane.—This scheme for 76 tenements which had been sanctioned by the Local Government Board, has been found to be very costly, and is at present receiving further consideration from the Committee.

The remaining properties of the Committee have on the whole been well let during the year, namely:—Barrack Site (319 cottages and 32 shops); Queen Street Dwellings (69 tenements); King Street Cottages (36); and Seaford Road (252 houses).

The financial statement for the year for each of the schemes already completed is given below.

Common Lodging Houses.—There were 38 Common Lodging Houses on the register at the end of the year, including the Model Lodging House in Bloom Street, namely, 3 in the Regent Road District, 25 in Greengate District, and 10 in the Broughton District. These houses contain 235 rooms, and accommodate 1,572 lodgers. 1,999 inspections have been made in the day time, and 17 at night.

Seamen's Lodging Houses.—Owing to the development of Salford as a port, there has been a great increase in the number of seamen's lodgings in the Borough, and consequently in the number of houses kept for the special purpose of receiving them. With a view of regulating them, Bye-laws under the Merchant Shipping Act were made and approved by the Board of Trade.

An order has been made by His Majesty's Privy

Council constituting Salford a seaport, and making the registration of Seamen's Lodging Houses compulsory.

SEAMEN'S LODGING HOUSES, ALL IN REGENT ROAD.

Any prohibition as to infected houses (Sec. 110), nil.

(B) General.

Number and nature of sanitary defects reported to the authority by H.M. Inspectors during 1905, 17.

Water-closet accommodation deficient, 3. Separation of sexes 1; lime-washing, 3. No intervening space to water closets, 7. Workrooms overcrowded, 1. Closets unlighted, 1. Cellar Bakehouse, no certificate; action taken in consequence—Notices served. Cellar Bakehouse certified.

Number of infringements reported by Sanitary Authority to H.M. Inspector (Sec. 133), 128.

Tuberculosis in Milk.—Nine samples of milk were submitted to Professor Delepine during the year, which were taken from farmers' cans at the railway stations, but in no case were they found to be tuberculous.

Sale of Food and Drugs.—301 samples have been purchased for analysis during the year, and 1.9 per cent. of these proved to be adulterated. Owing to the difficulty in obtaining fair samples from fraudulent dealers it is necessary to purchase many samples in an unofficial manner. Of the total number of samples purchased 379 were official and 422 unofficial.

Full particulars are given in Table 30, appended.

Shop Hours Act.—There were 523 shops on the register in which young persons under 18 years of age were employed. This number is a decrease of 31 for the year 1905; and the number of young persons employed therein shows a decrease of 2 as compared with the year 1904.

MIDWIVES ACT.

There are now 58 midwives registered as practicing in the Borough, and they have been regularly inspected as required by the Act.

The total number of births in Salford in 1905 was 7,165. Of these, 5,287 were attended by midwives.

It is now required that, on each occasion a midwife advises that medical assistance be obtained, she should notify the supervising authority of the fact. 170 notifications have been received and are classified below :—

Post-partum Hæmorrhage	7
Abnormal Presentations	20
Inertia of Uterus	17
Deformed Pelvis	11
Ruptured Perineum	11
Rise of Temperature.....	11
Accidental Hæmorrhage	7
Placenta Preavia	11
Retained Placenta.....	14
Eclampsia	4
Other Causes.....	57
	170

Twenty-six cases of puerperal fever were notified, of which 18 were attended by midwives.

Of the 26 cases of puerperal 14 were fatal.

During the year, 135 notifications of still births were received.

Smoke Nuisance.—During the year 1905, 3342 smoke observations have been made, as against 2,230 in the year 1904, and 1,903 in the year 1903.

619 stokers and others were cautioned by the Inspector for negligence in firing the furnaces under their charge ; at the same time, 94 firms were reported to and dealt with by the Health Committee; also 619 firms have been furnished with a table of smoke observations taken from their chimneys.

TABLE SHOWING THE NUMBER OF HALF-HOURLY OBSERVATIONS
TAKEN DURING THE YEAR 1904.

Minutes of Black Smoke emitted in half-an-hour.	No. of Observations taken.	Percentage to Total.
No Black Smoke	1426	42·7
One Minute	1203	36·0
Two Minutes	321	9·6
Three Minutes	298	8·9
Over Three Minutes	94	2·8
Total Observations taken	3342	100·0

Several chimneys have been raised during the year, particularly in connection with small workshops and bakehouses.

Particulars as to smoke nuisances caused by firms and firemen during the year 1905, and dealt with by the Health Committee :—

10 firms were summoned by the Health Committee for smoke nuisances during 1905, and fined in the aggregate £19 5s.

Disease of Animals.--No case of Foot and Mouth

Disease or Pleuro-Pneumonia occurred in the Borough during the year 1905.

Swine Fever.—There were four outbreaks of Swine Fever during 1905. In consequence 57 pigs were killed and 4 died. These were all destroyed in the destructor. Disinfection and other precautions were carried out by Order of the Board of Agriculture.

Parasitic Mange.—8 outbreaks of Parasitic Mange occurred. 10 animals were affected. The Regulations of the Parasitic Mange Order were carried out in each case.

Anthrax.—The Veterinary Inspector examined the carcase of a cow in the Cattle Market, which was found to have died from Anthrax. The Inspector's diagnosis was corroborated by Professor Delepine, of the Manchester Public Health Laboratory.

The cow had died in a meadow in Ellesmere Park, Eccles. The case was promptly reported to the Eccles Authorities, who took precautions under the direction of the Board of Agriculture. The carcase was destroyed in the destructor.

Glanders.—One case of Glanders occurred during the year. The animal was slaughtered, the carcase destroyed, and disinfection carried out.

Rabies.—A suspicious case of Rabies was reported, but the diagnosis was not confirmed by the Board of Agriculture.

Shippons.—There were 12 Shippons in use in the

Borough during the year. These were kept under observation.

Slaughter Houses.—There were 20 Slaughter Houses in use during 1905, which were kept under inspection by the Veterinary Inspector and the District Inspectors.

Pig Keeping.—No orders were necessary. Any nuisances arising from the keeping of pigs were promptly remedied by the keepers.

Offensive Trades.—The following is a list of these trades in the Borough.

Nature of Trades.	No. of Trades in the Districts and Borough.					Discontinued.	Newly Registered.

Canal Boats.—During the year 1905, 1,042 canal boats were inspected, as against 413 in the year 1904, and 206 in the year 1903.

Of the boats inspected, 70 were found to contravene the Acts and Regulations.

The inspected boats contained 1652 men, 475 women, and 353 children under 12 years of age.

The following is a list of defects found in the inspected boats :—

Boats working without certificates	2
Boats of which Numbers or Names were defective.....	5
Cabins dirty	27
Dilapidated	4
Water vessels defective.....	19
Painting and repairing	34
Overcrowding	...
Separation of sexes	2
Ventilation	4
Number of notices served on Owners.....	70
Summons issued	7

Conversion of Privy Middens and Pail Closets to Waterclosets.—This work has been steadily progressing during the year as shewn in Table 35. The deficiency in the water supply in the Regent District has again prevented progress, but I hope to be able to report next year that this difficulty has disappeared.

Sanitary Conveniences.—There are 18 conveniences in the Borough, under the control of the Health Committee, situated :—

Trinity Market, Salford.
Liverpool Street, Salford.
Broughton Lane, Broughton.
Trafford Road, Salford.
Pack Horse, Bolton Road, Pendleton.
Frederick Street, Pendleton.
Whit Lane, Pendleton.
Windsor Bridge, Salford.
Bleecher Street, Salford.
Crescent, Salford.
Stevenson Street, Salford.
The Cliff, Broughton.
Park Lane, Broughton.
Broad Street, Pendleton.
Greengate Arch, Salford.
Everard Street, Salford.
Eccles New Road, Weaste.
Broughton Bridge.

TABLES.

PART I.
MORTALITY STATISTICS.

STATISTICAL SUMMARY, 1905.

Population. —Estimated to the	{	Males	111,895	}	Total	231,514
middle of the year	{	Females ...	119,619	}		

Marriages 2002Annual Rate of Persons Married per 1,000 of the Population. 173

Births	{	Males	3,673	} Total	7,165
		Females ...	3,492		

Annual Rate of Births per 1,000 of the Population.....	30.9
--	------

Deaths under One Year of Age per 1,000 Births.....	148
--	-----

Deaths	{	Males	2,065	} Total	3,980
		Females ..	1,915		

Annual Rate of Mortality	{ Males	18.4	{ Total	17.2
per 1,000	{ Females ...	16.0		

Annual Rate of Mortality per 1,000 from the seven principal Zymotic Diseases	25
--	----

Excess of Registered Births over Deaths	3,185
---	-------

Estimated Annual Increase of Population	2,531
---	-------

Density.—The mean density of the Borough is equal to 44·5 persons per acre:—in Regent Road, 61·1; Greengate, 73·3; Pendleton, 25·9; Broughton, 40·0.

Area.—The Municipal Borough of Salford comprises the Townships of Salford (divided for statistical purposes into the Regent Road and Greengate Districts), Pendleton, and Broughton, and has a total area of 5,202 acres:—in Salford, 1,914 acres (Regent Road, 1,217; Greengate, 697); Pendleton, 1,813; Broughton, 1,475.

Elevation.—The mean elevation of the Borough is 140 feet above sea-level, and varies between 85 feet and 250 feet.

* Rates in Columns 4, 8, and 13 calculated per 1,000 of estimated population.

NOTE.—The deaths to be included in Column 7 of this table are the whole of those registered during the year as having actually occurred within the district or division. The deaths to be included in Column 12 are the number in Column 7, corrected by the subtraction of the number in Column 10 and the addition of the number in Column 11.

By the term "Non-Residents" is meant persons brought into the district on account of sickness or infirmity, and dying in public institutions there; and by the term "Residents" is meant persons who have been taken out of the district on account of sickness or infirmity, and have died in public institutions elsewhere.

Area of district in acres (exclusive of area covered by water) 5,202

Total Population at All Ages 220,957 } At Census

NOTES.—(a.) The separate localities adopted for this table should be areas of which the populations are obtainable from the Census returns, such as wards, parishes, or groups of parishes, or registration sub-districts. Block 1 may, if desired, be used for the whole district; and blocks 2, 3, &c., for the several localities. In small districts without recognised divisions of known population, this table need not be filled up.

(b.) Deaths of residents occurring beyond the district are to be included in sub-columns c of this table, and those of non-residents registered in the district excluded. (See note on Table I. as to meaning of terms "resident" and "non-resident.")

(c.) Deaths of residents occurring in public institutions are to be allotted to the respective localities, according to addresses of the deceased.

Calculations have been made on the Populations in the different districts as revised by the Registrar General in 1896 and again in 1905.

NOTES.—(a.) The deaths of residents occurring beyond the limits of the district are to be included in this table, and deaths of non-residents occurring in the district are to be excluded.

(b.) Deaths of residents occurring in public institutions are to be allotted to the respective localities according to the addresses of the deceased as given by the Registrars, and, in addition, to be classified under "Public Institutions."

(c.) Under the heading of "Diarrhoea" are to be included deaths certified as from diarrhoea, alone or in combination with some other cause of ill-defined nature; and also deaths certified as from

Epidemic Enteritis;

Zymotic Enteritis;

Epidemic Diarrhoea. Summer Diarrhoea;

Dysentery and Dysenteric Diarrhoea;

Choleraic Diarrhoea, Cholera, Cholera Nostras (in the absence of Asiatic Cholera).

Under the heading of "Enteritis" are to be included those certified as from Gastro-enteritis, Muco-enteritis, and Gastric Catarrh, unless from information obtained by enquiry from the certifying practitioner or otherwise, the Medical Officer of Health should have reason for including such deaths, especially those of infants, under the specific term "Diarrhoea."

Deaths from Diarrhoea secondary to some other well-defined disease should be included under the latter.

There are 593 Milkshops and 13 Shippons on the register, as against 577 in 1904, being an increase of 16 during the year.

Two cases of infectious disease occurred amongst them. Both were removed to hospital, and business suspended until after disinfection.

TABLE 29.

MILK FROM FARMERS' CANS, 1905.

There has been no occasion to take samples under the Sale of Food and Drugs Act, from farmers' cans at the railway stations in Salford during the year ; those cases which required following up arrived at stations in the City of Manchester.

TABLE 30.
