TO THE MAYOR, ALDERMEN AND COUNCILLORS,

I have the honour to submit the Annual Report of your Medical Officer of Health. As Dr. I.E. Jameson acted as Medical Officer of Health throughout the latter part of the year, and was responsible for much of the work entailed, it seemed to me only appropriate that he should sign this report.

Dr. E.M. Wright was your Medical Officer of Health until his retirement in August 1966. I would like to pay a tribute to the efficient and happy Department that he had built up and which I took over when I assumed office as your Medical Officer of Health in February 1967. It is my desire to see that this relationship which existed under Dr. Wright and Dr. Jameson continues, as harmony and happy relations form the basis of an efficient Department.

I am.

Your obedient Servant,

Medical Officer of Health

September, 1967.

TO THE MAYOR, ALDERMEN AND COUNCILLORS,

I have the honour to submit to you my Annual Report on the state of the public health and details of public health work in the City during the year 1966. The Report of your Senior Public Health Inspector is incorporated.

It gives me great pleasure to record my appreciation of the assistance and co-operation of the staff of the Public Health Department and of my colleagues in other Departments of the Council.

I am,

Your obedient Servant,

September, 1967.

Deputy Medical Officer of Health

PREVALENCE AND CONTROL OVER INFECTIOUS AND OTHER DISEASES

Homes are visited by the Medical Officer of Health or the Public Health Inspectors when necessary upon receipt of notifications of infectious disease and enquiries are made regarding contacts and the possible source of infection.

Bedding is removed for disinfection when necessary, and disinfectants supplied to householders, with instructions given for their use.

Mr. H. Dixon, C.S.I.B., A.R.S.H., M.A.P.H.I.

Mr. J.W. Fairless, C.S.I.B., A.R.S.H.

(Resigned 31st October, 1966)

Mr. R.E. Wilcoxon, C.S.I.B.

(Resigned 31st July, 1966)

CLERICAL STAFF

Mrs. J. Weeks

Mrs. W. Womersley

Miss C. Brown

The following Health Visitors are employed by the Wiltshire County Council for duty in the City:-

Miss P.E. Morris, S.R.N., S.C.M., R.F.N., H.V. Cert. (Retired)

Miss M.H. Norman, S.R.N., S.C.M., H.V. Cert.

Miss E.C.N. Cross, S.R.N., S.C.M., R.F.N., H.V. Cert.

(Resigned) Mrs. A.H. Soilleux, S.R.N., S.C.M., H.V. Cert. Miss J.E. Robson, S.R.N., S.C.M., A.R.S.H., H.V. Cert. (Retired)

Miss J.P. Humpherson, S.R.N., S.C.M., H.V. Cert.

(Resigned) Miss E.N. Davies, S.R.N., O.N.S., H.V. Cert. (Resigned)

Miss J.M. Hood, S.R.N., O.N.S., H.V. Cert.

Mrs. J.E. Mildred, S.R.N., S.C.M., M.T.D., Q.N., H.V. Cert.

The following School Nurses are also employed by the Wiltshire County Council for duties in the Schools in the City:-

Mrs. B. A. Brown, S.R.N., S.C.M. Mrs. N. M. Dalzell, S.R.N., S.C.M.

Laboratory facilities are available at the Public Health Laboratory, Odstock Hospital, Salisbury, where examinations of specimens connected with infectious disease and examinations of water supplies, milk, ice-cream, food, etc. are regularly carried out.

IMMUNISATION AND VACCINATION

I am indebted to the County Medical Officer of Health for the following figures for immunisation and vaccination work carried out in the City during 1966.

Immunisation against Diphtheria, Whooping Cough and Tetanus

Immunisation against these diseases is carried out in Salisbury under arrangements made by the Wiltshire County Council as local health authority. The work is shared between medical staff of the County Council and general medical practitioners in the City.

The following figures show the number of children immunised against these diseases in 1966 by age groups.

Year of Bir	thorado	1966	1965	1964	1963	1962	1957 61	1951 -56	Others under 16

REMOVAL TO SUITABLE PREMISES OF PERSONS IN NEED OF CARE AND ATTENTION

No action was taken during the year under Section 47 of the National Assistance Act, 1948, or the National Assistance (Amendment) Act, 1951. In several instances, however, advice was given regarding cases where action might have been necessary at a later date.

WATER SUPPLIES

The water supply of the City is derived from bore holes, situated in the Devizes Road area, the Wyndham Road area, and at Deans Farm north of Old Sarum respectively.

Samples are taken for bacteriological examination before and after chlorination at each well weekly. All samples from the bore holes were free from evidence of pollution, both before and after cholorination.

A sample of a main water supply taken in 1960 showed 0.1 parts per million of fluoride.

No restrictions on the consumption of water were imposed during the year.

Nine samples were taken by the public health inspectors during the year from four private wells supplying dairies and other industrial premises in the City and all were satisfactory.

The number of houses in the City with direct water supply was 11,519. There were eleven houses with an approximate population of nineteen served by standpipes.

SEWAGE AND REFUSE DISPOSAL

The sewage works at Petersfinger is working very satisfactorily, and it may be confidently anticipated that they will continue to serve the City and parts of the surrounding district for a considerable period.

Refuse collection is dealt with by Pakamatic and freighter type vehicles, which deliver to a well controlled tip.

COMMON LODGING HOUSES

There are at present no registered common lodging houses in the City.

THE FACTORIES ACT, 1937

The work carried out under the Factories Act, 1937, is included as an Annex to this Report.

REPORT OF THE SENIOR PUBLIC HEALTH INSPECTOR

Staffing

Two Meat Inspectors resigned in August and October to take up better paid positions with other authorities and a district inspector was transferred to the abattoir for three months whilst the vacancies were filled.

With three Meat Inspectors doing the work of four the extra expense of overtime has to be borne and the effectiveness of the Public Health Department is reduced.

A Rodent Operative appointed in November 1965 left in September 1966. His successor left in February 1967 and in view of the difficulties of replacement the possibility of letting this work out to contract is now being considered.

General Hygiene

One thousand, six hundred and eighty-one inspections of premises (*1,483) and 1,332 additional visits were made (1,488), including the following:-

130	inspections	of	dwellings,
86	" "		drainage systems,
75	"		restaurant kitchens,
49	"		butchers' shops,
19	"	11	bakehouses,
13	11	11	factories.

Three hundred and eleven complaints (158 relating to rodents and 55 to wasps nests) were received: forty-four informal and 14 statutory notices were served and 25 informal and 19 statutory notices had been complied with at the end of the year, the latter including some outstanding from 1965.

As previously reported, all plans received in the City Engineer's Department relating to the construction or re-planning of shops, warehouses, factories, cafes and other premises with which the Public Health Department is concerned are examined for compliance with the relative statutes administered by this Department, and some of this work is reflected in the items shown on pages 13 and 14.

Rag Flock and Other Filling Materials Act, 1951

All the material used in the upholstery trade in the City still comes from sources where the British Standard Specifications are complied with, therefore no samples were submitted for examination, saving both time and expense.

(* indicates figures for 1965)

Offices, Shops and Railway Premises Act, 1963

During the year 49 inspections and 85 additional visits had been made making a total of 133 inspections and 266 additional visits to the 629 offices and shops registered since the Act became operative in August 1964: 34 informal notices were served and 14 fully complied with during the year.

PREMISES AND OCCUPATIONS WHICH ARE CONTROLLED BY BYE-LAWS AND REGULATIONS

The Liquid Egg (Pasteurisation) Regulations, 1963

Number of new cases Number of verminous rooms sprayed Number of verminous rooms treated

There are no egg pasteurisation plants within the City.

The Market Place

Thirty-three (53) general inspections and 865 (477) individual inspections of stalls were made with a view to observing the sale of unsound food and also compliance with the Food Handling Bye-laws and the Food Hygiene Regulations. Two notices were served under the Food Hygiene Regulations, and 2 others were complied with.

Offensive Trades

There is still only one such trade carried on within the City, viz. a marine store. The premises are regularly inspected and are generally kept clean, tidy and free from vermin.

Moveable Dwellings

Nine inspections of the two sites, 1 inspection and 2 additional visits to individual vans were made during the year. Five notices were served and 2 complied with.

Ice-cream

Forty-four samples of ice-cream were submitted for bacteriological examination and 43 were found to be satisfactory (grades 1 and 2) and 1 fairly satisfactory (grade 3).

Food Hygiene (General) Regulations, 1960

The following table shows the number of food premises subject to the Regulations and requiring the provision of sinks and/or washing facilities:-

10	Number	of food premise	s	0 0		0 0			277
		having wash-han							265
3.	Number	requiring sinks	for	washing	food	or	equipm	ent	268

Food and Drugs Act, 1955: Poultry inspection

There are no poultry processing premises within the City.

Food Inspection

Details of the amount of food examined and voluntarily surrendered by wholesalers, shopkeepers, canteens, etc. as unfit for human consumption are shown below. The first item given (fresh meat condemned in the City) includes meat condemned at the abattoir for decomposition etc., (not as a result of routine meat inspection) and also meat condemned at butchers' shops in the City.

4,655 lbs. 4 ozs. meat (2 tons, 1 cwt., 2 qtrs., 7 lbs., 4 ozs.),
1,039 lbs. 8 ozs. tinned meat,
834 tins fruit, fish, soup, vegetables, milk, etc.,
65 lbs. and 3 bales of bacon fore-ends,
80 lbs. mixed biscuits,
298 lbs. carrots,
140 lbs. apples.

The following complaints of unsound food being sold, offered for sale, or deposited with a view to sale, were reported to the Public Health Committee and column (4) indicates the action taken.

Article (1)	How discovered or reported (2)	Nature of complaint or other irregularity (3)	Action authorised (4)
Tin of peas	Complaint after sale	Containing cigarette end	Warning letter in- dicating legal proceedings for a future offence
Loaf of bread	Complaint after sale	Containing grey substance	Warning letter in- dicating legal proceedings for a future offence
Fruit pie	Complaint after sale	Contaminated by mould growth	Warning letter in- dicating legal proceedings for a future offence
Pork pie	Complaint after sale	Contaminated by mould growth	Warning letter in- dicating legal proceedings for a future offence
Wrapped cut loaf	Complaint after sale	Contaminated by mould growth	Legal proceedings taken: £10 fine
Fruit bun	Complaint after sale	Containing a cigarette filter	Legal proceedings taken: £10 fine
Fruit bun	Complaint after sale	Containing a screw	Strong letter of warning indicat- ing legal pro- ceedings for a future offence

Other complaints, in which no official action was taken, included the sale of bread, grapes, meat pudding, croquettes, pies, condensed milk, cooked meat, tinned peaches.

Milk Sampling

There are 49 distributors of "Pasteurised" milk on the register, including 2 dairies, selling bottled milk only: 5 new Dealers' licences were issued during the year. The dairies (including a pasteurising plant) are visited regularly: 13 inspections and 242 visits for samples being made. Two hundred and thirteen samples submitted for cleanliness and pasteurising efficiency, with an additional 33 samples for pasteurising efficiency alone, and 122 washed bottles were submitted for examination, results being shown below.

anolisaseini mort south as Milk Samples avail stawes and tasy direct

Number taken	Examination undertaken	Number satisfactory	Percentage satisfactory
213	Statutory test for "Pasteurised" milk	211	99%
33	Phosphatase test only for "Pasteurised" milk	33	100%
20	Statutory test for untreated milk	18	90%
122	Washed bottles submitted for bacterial cleanliness	109	89%
7	The presence of tubercle bacilli	7	100%
21	The presence of Brucella Abortus	21	100%

Two hundred and forty-six milk samples (213 + 33: lines 1 and 2 in the table above) were submitted to the statutory test for pasteurised milk which comprises a phosphatase test (to check the efficiency of heat-treatment) and a methylene blue test (which indicates the cleanliness or keeping quality of the milk): the latter test however cannot be applied during hot weather and in these circumstances the phosphatase test only is undertaken - vide line 2.

Biological Milk Samples

All samples submitted for the presence of tuberculosis since 1952 have proved negative.

THE PREVENTION OF DAMAGE BY PESTS ACT, 1949

During the year 158 complaints of rats or mice were received and together with surveys undertaken on adjoining properties, a total of 460 inspections (involving 1,839 visits and 134 treatments) of the following varied types of premises were made: - dwellings, business premises, institutions, garden sheds and poultry runs, pig sties, sewage works and the refuse tip. The annual test baiting of the City's sewers was carried out in April: none of the 150 manholes checked showed any evidence of infestation, therefore it was not necessary to carry out any treatments. It is pleasing to report that this is the fourth year the sewers have been recorded as free from infestation.

MEAT INSPECTION - 1966

Number of animals slaughtered and inspected

The number of animals slaughtered and inspected during the year is shown in Table I.

TABLE I

Cattle other than cows	13,745
Cows	1,251
Calves	2,554
Sheep	42,074
Pigs	55,039
Total	114,663

Included in the above figures are 1,659 sows and boars and 2,491 ewes and rams.

The total number of animals slaughtered shows a decrease of 1,370 compared with 1965. Pigs decreased by 7,760 whilst cattle increased by 729, calves by 86 and sheep by 5,579.

The standardised unit figure for the year was 51,782, a decrease of 2,008, whilst the average unit figure per week fell by 38.to 996.

Table II shows the number of animals slaughtered since the abattoir opened.

TABLE II

Number of animals slaughtered since 1954

Year		Number of animals	Number of "units"	Average number of "units" per week		
1954 (9	months)	41,782 ^(a)	16,972	435

1966	0 0 0 0	114,663	51,782	996		

⁽a) Including 2,624 animals inspected at the Stratford-sub-Castle Slaughterhouse

Result of post-mortem inspection

Six hundred and eighty-four whole carcases were rejected as unfit for human consumption, an increase of 226 over 1965. This is 0.6% of the total number of animals slaughtered. In addition 37,498 animals had some part rejected as unfit for human consumption. This means that some 33% of the animals slaughtered had some disease, infection or infestation.

Table III shows the number of whole carcases rejected as unfit for human consumption and the reasons therefore; Table IV shows a similar comparison for part carcases and offal and Table V summarises the number of animals from which some part or organ was rejected.

Cysticercus Bovis

Seventy-six cases of cysticerous bovis were found during the year and Table VI indicates the site of infection. As the cyst is easily destroyed by freezing all affected carcases were removed to cold stores in Salisbury or Southampton and kept there for the requisite period.

TABLE VI

Cysticercus bovis - Distribution of Cysts

Tuberculosis

Seven cattle and 283 pigs were found to be affected with tuberculosis during the year.

A further 9 cattle (7 cows and 2 steers) having reacted to the tuberculin test were slaughtered under the provisions of the Tuberculosis Order 1964. Of these 9 reactors only 2 showed any macroscopic evidence of tuberculosis.

Five other cattle, being non-reactors, were found to show evidence of tuberculosis (1 generalised). All 5 were actually purchased from farms or markets in the South of England, 1 of them having been imported from Eire.

Table VIII shows the percentage incidence of tuberculosis in cattle found at the abattoir since 1955.

TABLE VIII

Incidence of Tuberculosis in Cattle

Year	Cattle	other than	cows		Cows	
1955		5.75%			7.96%	
1956		4.26%		101 0 0	8.64%

1966		0.04%	0.04%	0.16%		0.16%

Other Diseases

The number of pig carcases rejected for causes associated with necrotic tails (tail biting) has increased during the year by 100%. The number of cow carcases rejected for oedema or oedema with emaciation has increased by 200% and sheep, for the same reasons, by 50%

Disposal of meat and offal rejected as unfit for human consumption

During the year 123 tons, 6 cwts., 3 qrs., and 3 lbs., of meat and offal were rejected as unfit for human consumption - Table IX; this shows an increase of 19 tons over 1965.

TABLE IX

Weight in lbs. of meat and offal rejected for human consumption

Bodd bill	Meat	Offal	Total
Tuberculosis	3,840	265	4,105
Other diseases	99,950	172,224	272,174
Total	103,790	172,489	276,279

On no occasion during the year was it necessary to seize any meat under Section 9 of the Food and Drugs Act, 1955.

As no means of sterilisation is provided at the abattoir, all meat and offal rejected as unfit for human consumption is taken in large containers to the F.M.C's new bye-products factory at Stoke Bardolph, Nottingham.

Other food products

In addition to the above 80 lbs. of offal and 1,420 lbs. of meat were rejected on the sales side of the factory; 3 tins of corned beef at Wilsons Meats Ltd; 69 gammons (weight 997 lbs.) at Salisbury Cold Store Ltd. and 2,355 lbs. of sausages, pork patties, porkburgers and beefburgers.
