### Prevalence of and Control over Infectious Diseases

#### SCARLET FEVER

65 cases of Scarlet Fever were notified during 1943 as against 33 for 1942

62 cases were admitted to hospital and all recovered.

#### DIPHTHERIA

During 1943, 83 cases of Diphtheria were notified as against 27 in 1942, 7 deaths occurred.

#### CONTROL OF INFECTION

All cases were notified by telephone and removed without delay to your hospital.

As in the past nine years the throats of all 'contacts' were swabbed in order to detect any 'carriers' and injections of anti-toxin offered free of charge.

52 injections of anti-toxin were given to Diphtheria 'contacts' mainly children, 440 throat swabs, and 43 nasal swabs taken.

All 'carriers' discovered were warned as to their condition and 'swabbed' until free from infection.

DIPHTHERIA PROPHYLAXIS.

Under a Ministry of Health Circular (Autumn, 1940) asking Local Authorities to secure the immunisation of as many children as possible, in order to meet the increased risks which inevitably arise out of wartime conditions, this Council prepared a scheme whereby children of and under school age could be immunised (free of any charge to the parents) by the Medical Practitioners of the Area at clinics set up in the schools and other suitable premises within the district.

Under this scheme, which commenced in August 1941, 736 children between the ages of 1 and 15 years completed the full course of treatment during 1943.

Since the commencement of the scheme, the total number of children who had completed the full course of treatment at the 31st. December, 1943, was 5,114.
