To The Chairman and Members of the Selby Urban District Council.

Ladies and Gentlemen,

I have the honour to present to you my Sixteenth Annual Report on the health of the Urban District and the work of the Public Health Department for the year 1962.

Vital Statistics.

There were 163 live births registered, an increase of 5, giving a Birth Rate of 15.5 per thousand population (Adjusted Birth Rate 15.5). The West Riding County Birth Rate for Urban Districts was 17.5 and for England and Wales 18.0.

127 deaths occurred, giving a Crude Death Rate of 12.1 (Adjusted Death Rate 11.9). The aggregate County Rate was 12.1 and the rate for England and Wales 11.9. Births exceeded deaths by 36.

Four infants died under the age of one year, giving an Infant Mortality Rate of 24.5. The National Rate was 21.4.

Infectious Diseases.

The incidence of notifiable diseases was low. Measels accounted for 85 of the 90 notified cases. Diphtheria has been absent from the District for sixteen years; a tribute to the good response to immunisation in the past. A high level of immunisation must be maintained if this happy state is to continue.

No case of poliomyelitis has occurred since 1958.

Tuberculosis.

The virtual elimination of tuberculosis in cattle, coupled with the heat treatment of milk, has removed the once potent source of infection in children. The steady decrease in the number of new cases of tuberculosis further diminished a source of infection in the community. This is well demonstrated by reference to the B.C.G. vaccination of children against tuberculosis.

In 1955 when the scheme was introduced in the District, 28.7% of children tested in their fourteenth year showed a "positive Mantoux test," that is, evidence of a sub-clinical infection with the tubercle organism from some source in their earlier years of life. In 1962 only 9% of children tested showed this evidence of earlier contact with tuberculosis.

However, there still remains another possible source of infection to be dealt with, namely, "grandpa's cough." It is believed that an unknown but significant amount of chronic bronchitis in the elderly is tuberculous in origin, and therefore an unrecognised source of danger to others.

Every doctor knows that any lump developing in the body in middle age and later years should be regarded as malignant until proved to be otherwise. I would ask all doctors and intelligent laymen to regard every case of chronic bronchitis as tuberculous until proved to be otherwise. In this way one of the remaining bastions of a diminishing but still dangerous disease could be brought under control.

County Clinic.

The new Clinic is now well established and the commodious, cheerful and hygienic accommodation is much appreciated by mothers who attend and the medical, dental and nursing staff who work there. The number of babies attending has increased, and the Mothercraft Class is well supported, but ante-natal attendances, which have been falling for some years, have declined further. This is largely due to the establishment of ante-natal sessions by general practitioners in their surgeries, and, to a lesser extent, to mothers booked for hospital making ante-natal attendances in York.

An innovation this year has been the formation of a Mothers' Club, meeting fortnightly at the Clinic for an evening's recreation, discussion and instruction. An attendance of 90 is not unusual.

Finally, I record my appreciation of the continued support of the Members and Officers of the Council during 1962, and my thanks to the Voluntary Committee at the Clinic, and to the W.V.S. for the distribution of welfare foods.

I remain, Your obedient servant,

S. KENNAUGH APPLETON,

Medical Officer of Health.

July, 1963.

Cinemas.

No complaints received during the year and they were generally well kept.

Periodical inspections were carried out and any minor defects reported to the respective managers remedied without the service of notices.

Meat and Other Foods.

Meat.—Total weight of meat condemned: 6 cwts. 3 qrs.

Food.—Total weight of food condemned: 29 cwts. 3 qrs.

Rats and Mice Destruction. Rodent Operative.

Number of visits and re-visits	348
Number of complaints received	45
Notices given to ratproof premises	11

Rat Infestation of Sewers.

The sewers are treated twice each year. The method of treatment is as follows: A 10% baiting test is placed in the inspection chambers, this gives an indication as to which sections are rat infested. The infested sections are then treated with Zinc Phosphide and from the amount of this poison taken it would seem that a large number of rats were killed.

Water Supply.

All houses are provided with piped water from deep wells at Brayton. During the year 4 samples were taken for bacteriological examination. All were satisfactory.

Clean Air Act.

Nine smoke observations were made, each of 30 minutes' duration. Interviews with stokers were held regarding methods of firing.

Four letters were sent out to various factories, drawing attention to heavy emissions of smoke. Interviews were also held with the respective managers.

Market Stalls and Vehicles.

Twenty verbal warnings were given for minor infringements of Byelaws. In all cases the matter complained of was rectified forthwith.

Public Baths.

The water fed to the baths is from the town mains and is chlorinated in the Pumphouse at Brayton Barff. Breakpoint chlorination of the swimming water is also carried out at the Baths before the water enters the bath. The swimming water is changed every 4 hours.
