HEALTH OFFICE,

SHEFFIELD,

*June 13th, 1895.*

TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE.

GENTLEMEN,

I beg herewith to hand you my Report on the health of the City during the year 1894. As will be seen from the statistics the death-rate was lower than it has ever been before during any year of which a record has been kept.

I have the honour to be, Gentlemen,

Your obedient Servant,

HARVEY LITTLEJOHN,

*Medical Officer of Health.*

## SUMMARY OF VITAL AND MORTAL STATISTICS FOR 1894.

---

AREA OF CITY .....	19,651 acres divided into NINE Registration Sub- Districts.
POPULATION .....	338,316.
DENSITY.....	17·2 persons per acre.
INHABITED HOUSES.....	Census of 1891, 66,783, with 2,596 uninhabited, and 321 building.
NUMBER OF DWELLING HOUSES CERTIFIED AS FIT FOR OCCU- PATION DURING THE YEAR .....	632.
RATEABLE VALUE .....	£1,177,124.
MARRIAGES.....	3,215.
BIRTHS .....	11,267.
DEATHS .....	6,028.
INFANTILE MORTALITY .....	1,772 under 1 year, or 157 per 1,000 births.
ZYMOTIC DEATH RATE.....	1·72 (exclusive of Diarrhœa).
ESTIMATED INCREASE OF POPU- LATION .....	4,394, but the natural in- crease, <i>i.e.</i> , excess of Births over Deaths, was 5,239.
LENGTH OF SEWERS CONSTRUC- TED.....	6,311 yards, or 3·58 miles.

# REPORT.

## POPULATION.

In Table I. the populations of the different districts at the Census enumerations of 1881 and 1891, are given, together with the estimated populations in 1894, from which it will be seen that the districts most rapidly increasing are those of Ecclesall, Brightside, and Nether Hallam, a fact which must be self-evident to those acquainted with the town, from the active building operations in progress at Heeley, Pitsmoor, and Walkley.

The estimated population of the City for the year 1894 was 338,316, or an increase of 4,394 persons on the population of the previous year.

**TABLE I.**—*Shewing the Population of each of the Nine Registration Sub-Districts at the Census of 1881 and 1891, also the computed Population at the middle of 1894.*

DISTRICT.	Population 1881.	Population 1891.	Middle of 1894.
Sheffield West .....	14,957	14,105	13,807
Do. North .....	38,982	37,499	36,916
Do. South .....	17,919	18,411	18,581
Do. Park .....	19,948	21,401	21,888
Brightside ... ..	56,719	67,083	70,727
Attercliffe ... ..	26,965	35,883	39,166
Nether Hallam .....	38,967	46,328	48,916
Upper Hallam .....	2,513	2,709	2,756
Ecclesall .....	67,538	80,824	85,559
Totals .....	284,508	324,243	338,316

**TABLE II.**—*Shewing the Area in Acres, and Number of Persons per Acre in each of the Nine Registration Sub-Districts.*

DISTRICT.	Area in Acres.	Population 1894.	Persons per Acre.
Sheffield West .....	198	13,807	69·7
Do. North .....	160	36,916	231·0
Do. South .....	253	18,581	73·4
Do. Park .....	2,417	21,888	9·0
Brightside ... ..	2,821	70,727	25·0
Attercliffe ... ..	1,297	39,166	30·2
Nether Hallam .....	1,538	48,916	31·8
Upper Hallam .....	6,334	2,756	0·4
Ecclesall .....	4,633	85,559	18·2
Totals ... ..	19,651	338,316	17·2

It may be a matter of wonder to some where the people come from to inhabit the large number of houses annually constructed in the outlying portions of the town. To some extent, no doubt, they are necessary for the increasing population, but the majority are, I hope, and believe, occupied by persons who formerly lived in the centre of the town, but who are beginning to appreciate the advantages to be derived from the purer atmosphere and more cheerful surroundings, in addition to the infinitely better sanitary arrangements to be found in houses built in accordance with our present building Bye-laws.

The immense advantages to health of such dwellings, which can be obtained at rentals little, if at all, above those of houses of a similar size near the centre of the town, cannot be over-estimated, and the one drawback appears to be the difficulty of easy and cheap transit.

This, to the working man who has to be at his work early, and in all weathers, is a real difficulty and disadvantage, and until greater facilities of transport are offered, I fear that the question of convenience will outweigh all other considerations.

In Table II. the area of each district, with the population and number of persons to the acre, are given, and I must repeat what has been before stated, viz. : that the number of persons to the acre cannot be taken as representing the actual density of population in each district, since a considerable portion of some districts is practically rural, the bulk of the population being confined to comparatively small areas.

#### MARRIAGES.

During the year, 3,215 marriages took place, or 6,430 persons, or 19 in every 1,000 inhabitants were married. If we take only persons between the ages of 15 and 60, then we find that 1 out of every 31 got married. This is a slightly higher rate than last year, when 1 out of every 35 was married, and may perhaps be accounted for by more favourable conditions of trade.

#### BIRTHS.

The birth-rate during the year was 33·3 compared with 34·7 in 1893, and 35·2 the year before.

The birth-rate of the thirty-three large towns in England and Wales was 30·7, and ranged from 35·4 in Liverpool, down to the low rate of 20·2 in Hull and Huddersfield. Sheffield has the eighth highest birth-rate amongst the large towns.

**TABLE III.**—*Shewing the Birth-rate during the year for the whole City, and for each of the Registration Sub-Districts, also the total number of Births, Legitimate and Illegitimate in each.*

District.	Estimated Population in the middle of 1894.	Legitimate.		Illegitimate.		Total.	Birth-rate per 1,000 per annum.
		Male.	Female.	Male.	Female.		
Sheffield, West	13,807	251	259	13	9	532	38·5
Do. North	36,916	666	665	44	37	1,412	38·2
Do. South	18,581	277	276	23	14	590	31·7
Do. Park	21,888	385	383	23	17	808	36·9
Brightside ...	70,727	1,153	1,081	63	59	2,359	33·3
Attercliffe ...	39,166	681	628	28	20	1,357	34·6
Nether Hallam	48,916	801	744	29	27	1,601	32·7
Upper Hallam	2,756	33	25	2	5	65	23·6
Ecclesall ...	85,559	1,275	1,171	49	48	2,543	29·7
Totals ...	338,316	5,522	5,235	274	236	11,267	33·3

Of the 11,267 births 510 were illegitimate, or a percentage of 4·5 illegitimate to legitimate births. The percentage in the previous year was 4·6

In the various districts of the City the percentages of illegitimate to the total number of births in each district were as follows:

Sheffield West	...	4·1	Brightside ...	...	5·1
Do. North	...	5·7	Attercliffe ...	...	3·5
Do. South	...	6·2	Nether Hallam	...	3·4
Do. Park	...	4·9	Upper Hallam	...	10·7
			Ecclesall ...	...	3·7

**TABLE IV.**—*Shewing the Population of Sheffield, and the number of Births and Deaths in past years. The Birth and Death-rates deducible from these figures are also shown.*

YEAR.	POPULATION.	BIRTHS.		DEATHS.	
		Number of Births.	Birth-rate per 1,000 per annum	Number of Deaths.	Death-rate per 1,000 per annum.
1736	14,105				
1801	45,758				
1811	53,231				
1821	65,272				
1831	91,702				
1841	110,891				
1851	142,635	5,946	41·6	4,027	28·2
1861	186,375	7,561	40·5	4,610	24·7
1871	241,506	9,764	40·4	6,843	28·3

1881	284,508	10,814	38·0	5,909	20·7
1882	289,194	10,837	35·4	6,281	21·7
1883	293,001	10,812	36·9	6,755	23·0
1884	296,856	11,272	37·9	6,832	23·0
1885	300,762	10,737	35·6	6,328	21·0
1886	304,720	10,567	34·6	6,130	20·1
1887	308,730	10,389	33·6	6,820	22·0
1888	312,793	9,863	31·5	6,611	21·1
1889	316,901	10,844	34·2	6,841	21·5
1890	321,079	10,691	33·2	8,316	25·9
1891	325,304	11,862	36·4	7,775	23·9
1892	329,585	11,846	35·2	6,840	20·7
1893	333,922	11,584	34·7	7,419	22·2
1894	338,316	11,267	33·3	6,028	17·8

#### DEATHS.

6,028 deaths, of which 3,173 occurred in males and 2,855 in females, were recorded in the City during the year, equal to a death-rate of 17·8 per 1,000 of the estimated population.

The death-rate in the first quarter of the year was 19·2, in the second and third 16·3 and 17·6 respectively, while in the fourth quarter it was 17·9.

**TABLE V.**—*Recorded and Corrected Death-rates per 1,000 persons living in the 33 Great Towns in 1894.*

Towns in the order of their Corrected Death-rates.	Recorded Death-rate.	Corrected Death-rate.	Comparative Mortality figure

PRESTON . . . . .	20·81	22·88	1,379
MANCHESTER . . . . .	20·42	23·14	1,395
SALFORD . . . . .	21·00	23·61	1,423
LIVERPOOL . . . . .	23·85	26·46	1,595

From a comparison of the statistics in Table IV. it will be seen that not only are the number of deaths, irrespective of population, less than in any year since 1861, but the death-rate per 1,000 is lower than any of which we have a record.

Never before has it been below 20 per 1,000, and thus the great decline to 17·8 is all the more striking. There can be no doubt that the favourable climatic conditions are largely accountable for the low death-rate and owing to the same conditions having been general throughout the country, a similar result may be noted in connection with most of the large towns. Thus in Table V. where the "corrected" death-rates are given it is seen that Sheffield notwithstanding its low death-rate, did not materially improve its position amongst other large towns. The causes of death which shew the greatest decrease compared with the previous year, and hence chiefly account for the low death-rate in 1894 are Diarrhoea and Diseases of the Respiratory and Nervous systems. These three causes of death alone making a difference of no fewer than 1,034 deaths as compared with 1893.

The death-rate for the 33 large towns of England during 1894 was 18·1, the average of the previous 10 years being 21·3. The lowest death-rates were recorded in Croydon 13·2, Leicester 14·7, Derby 15·0, and Portsmouth 15·2; while the highest were those of Liverpool 23·8 and Salford 21·0.

The average death-rate of Sheffield during the 10 years 1884-1893 was 22·1.

**TABLE VI.**—*Shewing the number of deaths, at different ages and from various causes, in each of the nine Registration Sub-Districts, for the year 1894.*

DISTRICTS.	AGES AT DEATH.							CAUSES OF DEATH.				
	All Ages.	Under 1 Year.	1 and under 5 Years.	5 and under 15 Years.	15 and under 25 Years.	25 and under 60 Years.	Over 60 Years.	Zymotic Diseases (excluding Diarrhoea).	Diarrhoea.	Phthisis.	Chest Inflamma- tions.	Other Diseases.

This Table has been compiled after distributing the deaths which occurred in the various Hospitals and Workhouses over the Sub-Districts from which they were admitted.

**TABLE VIII.**—*Shewing the number of deaths and the death-rate per 1,000 of the Inhabitants of Sheffield during 1894, from all causes, and from a number of specified causes. Also the number of persons alive, the number of deaths and the death-rate per 1,000 of those living at all ages and at certain specified age-periods. The number of Marriages and of Births, together with the rates deducible therefrom, are also given.*

	Annual Death-rate per 1,000	All Ages. Deaths of Infants (under one year) to 1,000 Births... 157

Marriages	...	3,215	Annual rate per 1,000 living (Births ...	19·0
Births	...	11,267	Persons married ...	33·3

In Tables VI. and VII. are shewn the number of deaths at different ages and from various causes in each of the nine registration districts, and the death-rates per 1,000 of the population.

The highest death-rate occurs in Sheffield North, viz., 24.5, as compared with 30.6 in 1893, while the lowest district death-rates are those of Nether Hallam 15.7, and Ecclesall 15.2. All the districts show a marked decrease as compared with the previous year, more especially in the number of deaths under one year of age.

### INFANTILE DEATHS.

Of the total 6,028 deaths, 2,776 occurred in children under five years of age, or 46 per cent., and of these again, 1,772 had not reached the age of one year. If we analyse these latter as to their causes, we see in Table VIII. that no fewer than 103 died from whooping cough, 151 from diarrhoea, and 318 and 394 respectively from diseases of the nervous system, and of the respiratory system.

**TABLE IX.**—*Analysis of the Deaths which occurred during the year 1894, among Illegitimate Children under the age of five years.*

Totals . .	159	89	70	26	20	86	27	15	14	34	28	6	44	18	145	7	7	

157 infants under 1 year of age died last year to every 1,000 births; but if we differentiate the legitimate and illegitimate births, it will be found that, while 152 legitimate children die per 1,000 births, 259 illegitimate infants succumb.

The reason of this much higher mortality is not far to seek, the mother unmarried, without a house of her own, and having to work for her living, soon gives up nursing the child, which is then left to be looked after by some other younger member of her parents family, while its food consists of whatever happens to be going, to use the common expression, which usually means weak tea and bread. There is little wonder that such unfortunate children exhibit a high rate of mortality, and in Table IX. we see from the causes of death how many succumb to ill defined and, in all probability, preventible ailments arising from exposure and unsuitable nourishment.

## CHIEF CAUSES OF DEATH.

The chief causes of death are tabulated in Table VIII. and again in a more extended form in Table XI.

## ZYMOTIC DISEASES.

The total number of zymotic deaths during the year, including diarrhoea, was 792, equal to a death-rate of 2.33 per 1,000. This is very much lower than the same rate in 1893, which was 3.62, and compares favourably with the average rate of the large towns last year, viz. : 2.44. The average zymotic death-rate of Sheffield during the ten years 1884—1893, was 3.42

The cause of the decrease in the number of deaths from zymotic diseases is the diminution in the deaths from diarrhoea.

Notwithstanding the great heat and dryness of last summer, and the consequent deficient flushing of the sewers and drains, the amount of diarrhoea was small, and certainly much less than one would have expected from the sanitary conditions existing in the poorer quarters of the town during the warm weather.

**TABLE X.** affords a means of comparison between the Zymotic Death-rate of Sheffield during 1894, and the 10 years immediately preceding, and also between the rates of Sheffield in 1894 and the average rates of the 33 large towns.

	Birth and Death-rate to 1,000 Persons.

## SMALL-POX

Notwithstanding the fact that Small-pox was prevalent in several districts around Sheffield during the greater part of the year, only eight cases occurred in the City. Five families were affected, and in all the source of infection was traced to direct communication with an infected locality.

In all instances strict precautions were adopted to prevent further spread of the disease, the families being removed into quarantine and the houses carefully disinfected and cleansed. One death resulted, and this was in a child four years of age, on whom no marks of vaccination could be detected, although the mother alleged that the operation had been carried out.

In this case the infection resulted from a washerwoman whose husband was ill with the disease at Whittington, near Chesterfield, who continued during his illness to come to Sheffield and wash for the child's parents.

## SCARLET FEVER.

There was a great reduction last year both in the number of cases and in the deaths from scarlet fever, as compared with any previous year since notification of infectious diseases was introduced. As will be seen from Table XIII. the number of cases reported last year was only 832, whereas the yearly average during the five years since 1890 is no less than 1,523.

The number of deaths was 40, as compared with 89 in 1893, and while the death-rate from Scarlet Fever in Sheffield during the 10 years 1884-1894 was  $\cdot 58$  per 1,000 of the population, last year it was only  $\cdot 12$ .

## DIPHTHERIA AND MEMBRANOUS CROUP.

95 cases of Diphtheria and 54 cases of Membranous Croup were notified during the year, causing 31 and 37 deaths respectively.

This is a smaller number of cases than in any of the previous four years, and considerably below the average of the five notification years 1890-1894, which was 217.

At one time I was inclined to doubt the probability of some of the cases notified as Diphtheria really being so, owing to the fact that on the Inspector visiting the infected house on reception of the notification he was not infrequently met by the patient, who had never been confined to bed, and was apparently quite recovered.

During the past year, however, fewer such cases have come under my notice, and judging from the proportion of deaths to cases, it cannot be doubted that in all probability all the cases have been true Diphtheria.

## ENTERIC FEVER.

347 cases of Enteric Fever were notified during the year, causing 62 deaths. Of these 32 occurred in males and 30 in females. The disease was most prevalent in August and September, and chiefly in the districts of Brightside and Sheffield North.

## PHTHISIS.

502 deaths were registered from this cause, and of these no fewer than 322 were males, while only 180 were females. It seems difficult to account for such a great difference in the mortality between the two sexes, except on the ground that trade influences have produced a deleterious effect in the case of the male and rendered him more susceptible to the disease.

The Health Committee have decided to issue a handbill setting forth the precautions which should be used by consumptives in order to prevent the spread of infection. It is a question whether any benefit results from the issue of such handbills to the general public, but at present I think that neither the medical profession nor the public are prepared for the adoption of any more practical precautionary measures by the Sanitary Authority, even if the legislature provides the necessary powers.

In all cases of death or illness the Health Department are prepared to carry out disinfection of the dwellings and clothes, free of charge, and I hope that this will be taken advantage of more and more every year, and at any rate help towards a diminution of the disease.

## PLUMBISM.

Nine deaths were registered as due to lead poisoning during the year, and the following table gives the sex, age, and occupation in each case. It is satisfactory to find that in no instance could the origin of the disease be traced to the water supply, and so far as my experience goes there has been no authenticated case of lead poisoning due to this cause during the last four years.

The system of treatment of the High Level water supply by means of chalk appears to be eminently successful, and although by the direction of the Health Committee samples of household water are regularly taken with a view to the discovery of lead, it is only in very few instances that any trace can be found.

There can, however, be no question of the great frequency with which lead poisoning is found amongst file cutters, and the number of deaths ascribed to the disease in no way forms an index to the actual number of cases. It is surprising to find, on personal investigation, how many workers at the trade have suffered or are actually affected with the disease, and there can be little question that lead poisoning has a much greater influence on the general mortality of the class than the statistics indicate.

#### DISEASES OF THE NERVOUS SYSTEM.

Diseases of the nervous system caused 770 deaths as compared with 950 in the previous year. The decrease is accounted for largely by a diminution in the number of deaths from apoplexy and convulsions.

#### DISEASES OF THE CIRCULATORY SYSTEM.

Exactly the same number of deaths were due to this cause as in 1893, viz. : 410, and the same correspondence is found in the number of deaths in the chief sub-division of this system—valvular disease of the heart—which accounts for 348 deaths as against 349 in 1893.

#### DISEASES OF THE RESPIRATORY SYSTEM.

A diminution in the number of deaths last year from diseases in the respiratory system was to be expected from the general mildness of the weather, and both in deaths from Pneumonia and Bronchitis a very considerable decrease compared with previous years is to be noted.

Totals . . . . .	145	136	138	154	117	130	136	177	171	161	164	130	1,759

The number of notifications of cases of infectious disease received last year was very considerably less than it has ever been since the Act came into force.

This is accounted for by the decrease in the notifications of scarlet fever chiefly, for whereas the yearly average number of cases reported of this disease is 1,523, only 832 were notified last year.

From a consideration of Table XIII., which shews the monthly incidence of the disease, it will be seen that we suffered from no sudden epidemic outbreaks of any of the zymotic diseases, and the above cases must be regarded as, more or less, the necessary attributes of the aggregation of a large number of persons in a city such as Sheffield.

**TABLE XIV.**—*Cases of Infectious Disease notified since the Act came into operation.*

DISEASES	NUMBER OF CASES NOTIFIED.					Average of 5 Years
	1890	1891	1892	1893	1894

TOTALS . . . . .	3,159	2,168	2,349	3,048	1,759	2,497

## ADMISSIONS TO HOSPITAL.

It is very satisfactory to be able to report still further progress in the work of the City Hospitals in treating cases of infectious disease. This progress has been marked every year since notification of infectious diseases was made compulsory, and the benefits which the hospitals confer on the public, and especially on those living in small houses in the poorer districts of the town, are inestimable.

For the first time since the hospital was opened, we have succeeded in getting over 50 per cent. of the cases of Scarlet Fever removed from their homes and isolated in hospital, while nearly double the number of cases of Enteric Fever ever admitted before in any year have been isolated. The beneficial results of such isolation are very great, both to the patients themselves, and in preventing the spread of disease; and I do not doubt that as the hospital is still further taken advantage of, its great influence in limiting outbreaks of infectious disease will be distinctly traceable in our statistics.

**TABLE XV.**—*Shewing the monthly admissions to Hospital during the year 1894 of cases of each Disease, also the average number of cases admitted suffering from these Diseases during the five years 1890, 1891, 1892, 1893, and 1894.*

DISEASE.	JAN.	FEB.	MAR.	APRIL.	MAY.	JUNE.	JULY.	AUGUST.	SEPT.	OCT.	NOV.	DEC.	TOTAL 1894	AVERAGE OF 5 YEARS.
Small Pox . . .	—	—	—	1	—	—	5	2	—	—	—	—	8	31
Scarlet Fever . .	24	20	28	38	23	41	48	35	43	49	47	56	452	518
Typhus Fever . .	—	—	—	—	—	—	—	—	—	—	—	—	—	3
Diphtheria and Mem- branous Croup .	—	5	—	2	1	—	2	1	1	2	—	2	16	7
Enteric Fever . .	16	16	16	18	12	4	11	41	34	10	11	5	194	108
Measles . . . .	—	—	2	—	—	—	—	—	—	1	3	1	7	9
Other Diseases . .	2	2	9	6	8	4	2	2	6	4	5	7	57	27
Total admissions .	42	43	55	65	44	49	68	81	84	66	66	71	734	703

It will be noticed that a comparatively large number of patients were sent into hospital supposed to be suffering from infectious complaints, but which on further examination and careful observation were found to be non-infectious. This appears to me to be one of the most gratifying features in the work of the hospital, as it demonstrates not only a willingness on the part of patients to undergo isolation, but also a desire on the part of the medical man in attendance to secure early removal of the patients, a fact of great importance in preventing the disease from spreading to other members of the household. It is easy to come to a correct diagnosis if the case is kept long enough under observation, but by that time much mischief may have been done and several others have caught the disease. It is infinitely better that all doubtful and difficult cases should be removed to hospital, where with perfect safety they can be isolated in a separate room, and the progress of the disease observed until a definite diagnosis is formed. Much disease and many fatal cases are the result of delay and an unfortunate failure to adopt this wise precaution.

## NUISANCES.

The number of inspections made by the district Inspectors of Nuisances during the year was 33,158, and from the Table it is seen that these inspections include examinations for nuisances, enquiries as to cases of infectious disease, inspections of Bakehouses, Workshops, and Premises where offensive trades are conducted.

While the total number of inspections is highly satisfactory, the amount of work accomplished in the supervision of workshops cannot be so regarded. As pointed out in previous reports the duty of inspecting and supervising the sanitary condition of workshops has been laid upon the Sanitary Authority, and in a City like Sheffield it is impossible for this duty to be efficiently performed except by an inspector who is able to devote his whole time to it and carry out the work in a systematic manner.

**TABLE XVI.—SUMMARY OF THE WORK DONE BY THE INSPECTORS OF  
NUISANCES DURING THE YEAR 1894.**

Cases dismissed	—	—	1	—	—	—	—	—	—	1

It will be noticed in the Table that the number of premises disinfected, where cases of infectious disease had occurred, is small as compared with the total number of infected dwellings, and it is right that I should explain that this is owing to the fact that disinfection is not carried out in the majority of houses where cases of measles or whooping cough have occurred, although all cases coming to our knowledge are visited, in order that enquiries may be made, and any sanitary defects of the houses remedied.

In all cases of scarlet fever, enteric fever, small-pox, diphtheria, and membranous croup, the Inspector sees that the bedding, etc., is removed for disinfection by steam, after which, the house is stoved with sulphur. I have attempted to insist on this in all cases, irrespective of the social condition of the patient, as, I think, it is only right that the public should have some guarantee that the process has been thoroughly carried out, and the only way to ensure this is, that the disinfection should be, in all instances, by the Sanitary Authority.

Some persons object to allow their bedding, blankets, etc., to be treated by the steam disinfector, on the ground that the articles are damaged, and that they can disinfect them as well themselves. As regards the first ground, I can only say that for the many thousands of articles removed yearly and disinfected, I have only received complaints of accidental damage in two or three instances, and in regard to the second ground, there can be no question that thorough disinfection of heavy textile fabrics is only possible by means of an apparatus such as we possess, and that the so-called disinfection of them at home, by means of sulphur fumigation, is a mere delusion.

It is a matter of regret that the question of refuse disposal has not made more progress during the year, as there is no factor so largely influencing the health and general sanitary condition of the city, as the present method of removal and treatment of refuse of all sorts.

A site for one Destructor has been obtained, and plans are being prepared for its erection; but to deal properly with the refuse of a large city, several destructors, situated in different parts of the town, are required, and I cannot too strongly advise the Committee to cope energetically with the question, and enable the present system of refuse disposal to be abolished as soon as possible.

There are now, I believe, no towns of even half the size of Sheffield without one or more destructors, and it certainly seems a reflection on our progress that we should still be in the position we are.

The conversion of privies into water closets under Section 21 of the Corporation Act, 1890, has proceeded slowly during the year, and as many of the worst cases have been dealt with as the means at disposal have enabled me to overtake.

At the present rate of conversion it will take rather more than 100 years to abolish the present privy-midden system, so that the constant allegation by those opposed to water-carriage, that the Health Committee are proceeding with undue haste in this matter can scarcely be held to be justified.

The advantages of water-carriage, both on sanitary grounds and in respect to decency and to the comfort of tenants, can be proved by any one who will take the trouble to inspect the closets which have been converted in the poorer quarters of the town, and it can be shewn that the benefits of having a closet free from the disgusting nuisance associated with a privy-midden is appreciated by tenants, and can be safely provided for them without the fear that they will be continually choked and misused as is so frequently averred.

The strongest argument against the introduction of the water-carriage system has so far been the liability of the water supply freezing, but under ordinary conditions of frost it has been shewn that a trough closet, flushed automatically, is less liable to be affected by frost, even when situated in an outside yard, than the ordinary pan water-closet, and that with due precautions it continues to act satisfactorily under the conditions of frost usually associated with our winters.

In connection with the subject of water-carriage a case of considerable interest was decided last year in your favour by the Local Government Board, to whom the defendants appealed. A notice under Section 36 of the Public Health Act, 1875, had been served on the owner of 25 houses to provide additional closet accommodation, the existing accommodation consisting of only six privies. The notice specified that six additional water-closets should be provided, and the defendants, while admitting that the additional closets were required, refused to provide water-closets; but stated their willingness to construct another block of privies.

Looking to the fact that the Corporation are endeavouring to abolish privies, and are paying one third of the cost of converting existing privies into water-closets, it seemed to them, both on this ground and for sanitary reasons, inadvisable to allow the erection of privies.

On appeal by the defendants to the Local Government Board, and after an enquiry held by the Government Inspector, the action of the Corporation in having themselves done the necessary work was upheld, and the defendants were ordered to pay the cost incurred in the erection of the closets.

It thus appears to have been laid down by the Local Government Board, that the Sanitary Authority is entitled, when serving notice under Section 36 of the Public Health Act, to specify the kind of closet to be provided, whether privy, earth closet, or water-closet—a point of great importance to all sanitary authorities in dealing with similar cases of deficient closet accommodation.

#### SMOKE ABATEMENT.

The subjoined Table shews the work which has been carried out by the Smoke Inspectors during the year.

**TABLE XVII.**—*Summary of Work done during the year.*

PARTICULARS.			
Number of complaints received during the year ...	...	...	23
Number of observations of chimneys ...	...	...	6,686
Average number of minutes of black smoke per hour ...	...	...	2·8
Number of notices served on manufacturers ...	...	...	125
Number of new chimneys erected ...	...	...	17
Number of furnaces altered or re-arranged ...	...	...	24
Number of chimneys raised ...	...	...	5
Number of boilers put down ...	...	...	19
Number of smoke-consuming apparatus introduced ...	...	...	38

The average number of minutes of black smoke emitted in the 6,686 observations taken, each of one hour's duration, was 2·8, which is exactly the same as last year's average.

When it is considered that the above observations include all the chimneys in the city, irrespective of the kind of trade, and that in a large number of instances, in addition to the smoke from steam boiler furnaces, the smoke of various other kinds of furnaces employed in the metal trades also enter the flues, the average of 2·8 minutes of black smoke per hour is not unsatisfactory.

As in previous years I append a tabulated list of the cases in which legal notices for abatement of the nuisance were served, with particulars as to the number of minutes of black smoke for which each notice was served, and as to any appliance to aid combustion of smoke in use at the time, or adopted subsequently.

Towards the close of the year the regulations in regard to the amount of black smoke emitted from chimneys were rendered more rigid, and instead of allowing four minutes per hour for three boilers or less, and six minutes for four or more boilers, the Inspectors have now instructions to report all cases where the smoke emitted exceeds

- 2 minutes where one boiler is attached.  
 3 " " two boilers are attached.  
 4 " " three boilers are attached.  
 6 " " four or more boilers are attached.

This is a more equitable arrangement than that previously enforced, as it entails greater care on the part of those best able to consume their smoke, viz., those having only one or two boilers, while it leaves the others unaffected.

There were nine prosecutions during the year for smoke nuisance. In eight cases a Magistrate's Order to abate the nuisance was made, with costs against the defendants, and in addition fines were imposed in three instances, one of 40s. and two of 10s. each. The remaining case was withdrawn on the defendants expressing their intention to provide an efficient smoke consuming appliance.

## MEAT INSPECTION, SLAUGHTER-HOUSES, ETC.

TABLE XIX.—Shewing the amount of Meat, &amp;c., condemned as unfit for human food during the year 1894.

MEAT, ETC.			FISH.			FRUIT AND VEGETABLES.		
87½	Carcases of Beef	15	Boxes, Barrels, &c., of Codfish					
52	Pieces „	1	„ „ Coalfish					
43	Hearts „	1	„ „ Conger Eel	57	Boxes, Barrels, &c. of Currants			
55	Carcases of Mutton	144	„ „ Herrings					
1	Piece of Mutton	18½	„ „ Haddock	20	„ „ Plums			
10	Sheeps Heads & Plucks	13	„ „ Hake					
2	Carcases of Goat	1	„ „ Halibut	31	„ „ Peas			
1	„ „ Venison	17	„ „ Ling					
50	„ „ Pork	5	„ „ Mixed Fish	63	„ „ Tomatoes			
9	Pieces „ „	4	„ „ Mullett					
12	Viscera „ „	5	„ „ Salmon	6	„ „ Chestnuts			
43	Carcases of Veal	1	„ „ Skate					
2	Pieces „	2	„ „ Sprag					
13	Carcases of Lamb	603	„ „ Kippers		Weight, 1 ton 15 cwt.			
3	Pieces „	19	„ „ Red Herrings					
1	Side of Bacon	50	„ „ Cockles					
137	Couples of Rabbits	141	„ „ Mussels		Total weight of food condemned,			
		114½	„ „ Oysters					
		3	„ „ Whelks					
		17	„ „ Shrimps		53 tons 15 cwt.			
	Weight, 20 tons 9 cwt. 3 qrs.		Weight, 31 tons 10 cwt. 1 qr.					

The amount of meat, fish, fruit, etc., condemned by the Meat Inspector is shewn in the subjoined Table, and is nearly 20 tons in excess of last year, owing chiefly to the large quantity of fish found to be unfit for food during the hot weather.

43 carcasses of beef, one of mutton, two of pork, and three of veal were condemned on account of Tuberculosis.

**TABLE XX.—INSPECTION OF SLAUGHTER-HOUSES, TRIPE-BOILING HOUSES, &c.**

No. of Slaughter-houses in use previous to 1865.	No. of Slaughter-houses on the Register of 1865.	No. of Slaughter-houses on the Register of 1875.	No. of Annual Licenses under the Sheffield Corporation Act.	No. of Horse Slaughter-houses on the Register.	Total No. of Slaughter-houses on the Register.	No. of Visits to Slaughter-houses.	No. of Visits to Shops and Stores.	No. of Tripe-Boiling Premises in use.	No. of Visits to Tripe-Boiling Premises.

Cases Withdrawn ...	2	1	—	—	—	—	—	—	1	—	—	—
Cases Dismissed ...	—	—	—	—	—	—	—	—	—	—	—	—
<b>FINES IMPOSED.</b>												
MILK.—In 3 cases £3 and costs; in 2 cases, £2 and costs; in 2 cases, £2 and £1 each including costs; 2 cases withdrawn.												
BUTTER.—Fined 2/6 and costs.												
GIN.—Fined 20/ and costs.												
VINEGAR.—Fined £5 including costs.												
WHISKEY.—Fined £1 each including costs.												

279 samples were taken under the Sale of Food and Drugs Act by the Inspectors, an increase of 78 over the previous year. Of these 181 were samples of milk, and I am glad to report that a most satisfactory improvement was noticeable in the quality of this article in respect to adulteration, only seven convictions having to be recorded in comparison with 17 in 1893. This result is no doubt greatly due to the vigilance with which the sale of milk has been supervised, and I am convinced that only continual watchfulness on the part of the milk inspector will tend to secure to the public an unadulterated supply of this most important article of food.

TABLE XXII.—HOUSES LET IN LODGINGS.

Total number of houses on the Register	...	...	287
Number of lettings in the said houses	...	...	511
Total number of persons occupying the said houses	...	...	1,340
(a) Adult males...	...	...	551
(b) Adult females	...	...	470
(c) Children	...	...	319
Number of houses registered during the year	...	...	70
Number of lettings in the said houses	...	...	136
Number of persons occupying the said houses	...	...	240
(a) Adult males	...	...	115
(b) Adult females	...	...	84
(c) Children	...	...	41
Number of inspections made	...	...	2,592
Number of notices served	...	...	103
(a) Overcrowding	...	...	22
(b) Whitewashing and cleansing	...	...	52
(c) Thorough repairing	...	...	1
(d) Minor structural defects	...	...	20
(e) Occupation of cellar dwellings	...	...	2
(f) Removal of refuse	...	...	4
(g) Animals improperly kept	...	...	2

Satisfactory progress has been made in the work of registering these houses, and the number of inspections alone have risen from 1,137 in 1893, to 2,592 last year. Much good results from the supervision of these houses, more especially by securing proper attention to cleanliness, and in preventing overcrowding.

(a) Occupying Cowshed without giving notice to Sanitary Authority						Fined 10s. and 7s. costs ...	1
(b) Non-compliance with Notice 1—Fined 50s. and 7s. costs.							1

The work in this department has proceeded satisfactorily, and a great improvement is to be found in the cowsheds throughout the district, owing to alterations which have been effected in them during the last three years. With few exceptions their sanitary condition, both structurally and in regard to cleanliness, is all that can be desired; and it is gratifying to find among the Cowkeepers generally, a desire to comply with the regulations of the Corporation, and an acknowledgment of the benefits derived from the structural alterations effected by them.

## HOUSING OF THE WORKING CLASSES ACT, 1890.

TABLE XXIV.

41 houses were condemned under Part II. of this Act as unfit for human habitation during the year, viz., 1 in Sheffield West, 18 in Sheffield North, 10 in South, 11 in Park, and 1 in Nether Hallam.

Of these 20 have been repaired, 6 demolished, and the remaining 15 closed, 3 of these latter are now being put in repair.

The following is a list of the properties condemned :—

Lister's Row ...	...	Nos. 1, 2, 3, 4, 5, 6, 7, 8, and 9 in 2 court.
Cricket Inn Road ...	...	"Garden House."
Pea Croft ...	...	Nos. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, and 13 in 9 court.
Norwich Street ...	...	No. 4 in 4 court.
Pond Street ...	...	Nos. 10, 11, and 12 in 31 court.
" " ...	...	No. 2 in 25 court.
" " ...	...	Nos. 4 and 5 in 21 court.
" " ...	...	Nos. 3 and 4 in 19 court.
" " ...	...	No. 1 in 17 court.
" " ...	...	House at back of No. 121.
Boden Lane ...	...	No. 1 in 1 court.
Allen Street ...	...	No. 6 in 13 court.
Lambert Street ...	...	No. 2 and Workshop in 15 court.
Penistone Road ...	...	No. 6 in 11 court.
Russell Street ...	...	House over Workshop in 10 court.

TABLE XXV.—CANAL BOATS.

Total number of Inspections of Canal Boats	...	...	...	1250
Total number of Boats registered as belonging to Sheffield...	...	...	...	177
INFRINGEMENTS, ETC.				
Neglect to notify change of Masters	...	...	...	6
Absence of Certificate of Registration	...	...	...	14
Certificate not identifying Owner with boat	...	...	...	5
Boats not properly marked and numbered	...	...	...	17
Cabins requiring repairing	...	...	...	2
Cabins requiring painting or cleaning	...	...	...	12
Boats not registered	...	...	...	2
Overcrowding	...	...	...	2
Number of Notices issued	...	...	...	46
Number of Notices complied with	...	...	...	37
Boats Registered during the year	...	...	...	4

The inspection of these boats has been constantly carried out, and the number of inspections has risen from 949 the previous year, to 1,250. That constant inspection is much needed is borne out by the Annual Reports of H.M. Chief Inspector under the Canal Boats Acts. The usual conditions of life on such boats are none of the best, and there can be no doubt that the frequent visits of an inspector are of the greatest benefit in improving them, and securing compliance with the Bye-laws.

Legal proceedings were instituted in one instance for neglect to paint the cabin, and the defendant was convicted, and fined 10s. and costs.

TABLE XXVI.—DISINFECTING STATION.

SUMMARY FOR THE YEAR ENDING 31ST DECEMBER, 1894.
