PUBLIC HEALTH STAFF At 31st DECEMBER, 1934.

Medical Officer of Health : JOHN RENNIE, M.D., D.P.H.

Deputy Medical Officer of Health (also Medical Superintendent of City General Hospital, Nether Edge Hospital, City Hospital for Infectious Diseases and Medical Officer, Firvale House and Herries Road, etc. Homes) :---JAMES CLARK, M.D., M.R.C.P., D.P.H.

Medical Superintendent of King Edward VII Hospital for Crippled Children and Surgical Tuberculosis Officer :

C. LEE PATTISON, M.B., B.S., M.R.C.S., L.R.C.P.

Clinical Tuberculosis Officer and Medical Superintendent of City Sanatoria : H. MIDGLEY TURNER, M.D., D.P.H.

Senior Medical Officer of City Hospital for Infectious Diseases and Medical Officer Fulwood Cottage Homes :

JOSEPH M. KENNEDY, M.B., Ch.B., D.P.H.

Deputy Medical Superintendent of City General Hospital : W. J. CLANCY, M.B., Ch.B., B.A.O.

Senior Assistant Medical Officer of Nether Edge Hospital : L. P. De ABREW, M.R.C.S., L.R.C.P.

> Assistant Medical Officer (Maternity) : ANN KIRK BLACK, M.B., Ch.B.

Chief Veterinary Officer : WILLIAM TWEED, M.R.C.V.S., D.V.S.M.

> Public Analyst : JOHN EVANS, F.I.C., F.C.S.

Consultants, Medical Practitioners, Dental Surgeons, etc., discharging special duties for the Health Committee :---

Radiologist and Dermatologist at City General Hospital.

Consultant Physician at City General Hospital.

Consultant Surgeon at City General Hospital.

3 Assistant Medical Officers for Maternity and Child Welfare.

Consultant Gynæcologist at Maternity Clinic.

Dental Surgeon to expectant mothers.

Assistant Medical Officer for Tuberculosis.

- 6 Medical Officers of Venereal Disease Clinics at Voluntary Hospitals. 2 Consultants and 2 Visiting Medical Officers under Mental Deficiency Acts.
- 33 District Medical Officers under the Poor Law Acts Mostly
- **33** Public Vaccinators

Dual appointments. 4 Medical Officers in connection with Children's Homes and Scattered Homes. Other Officers :-

- 3 Assistant Medical Officers-City Fever Hospitals.
- Assistant Medical Officers-City General Hospital.
- House Surgeon King Edward VII Hospital.
- 5 Assistant Tuberculosis Officers. 2 Assistant Veterinary Inspectors.
- 1 Meat Inspector.
- Meat Detention Officers-Abattoir.
- 2 Food and Drugs Inspectors.
- 5 Superintendent Sanitary Inspectors.

31 District Sanitary Inspectors.

Superintendent Health Visitor.

26 Health Visitors,

Chief Tuberculosis Inspector.

4 Tuberculosis Inspectors.

- 5 Smoke Abatement Inspectors (serving Sheffield and Rotherham Regional Area).
- 14 Vaccination Officers.
- Superintendent and Matron, Herries Road, etc. Homes.

Superintendent and Matron, Fulwood Cottage Homes.

Inspector to Boarded-Out Children.

TOWN HALL,

SHEFFIELD.

July, 1935.

TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE.

MR. CHAIRMAN, LADIES AND GENTLEMEN,

I beg to present herewith my Annual Report on the health of the City for the year 1934.

The general death rate for the City was a favourable one. It was lower than in the previous year and again lower than the rate for England and Wales.

The Infant Mortality rate was the lowest ever recorded for Sheffield and for the second year in succession it was lower than the rate for England and Wales.

Mortality from the infectious diseases was comparatively low during the year with the exception of Diphtheria which was higher than for several years past. The high mortality rate from Diphtheria was general throughout the country.

With regard to the mortality from Cancer, a still higher rate has unfortunately to be recorded.

The Maternal Mortality rate was high in comparison with the past four years and so long as a high incidence of death due to Abortion continues, no improvement can be expected.

The hospital services were maintained with efficiency throughout the year. The hospital accommodation for infectious diseases was under great strain owing to a concurrent epidemic of Scarlet Fever and Diphtheria although no delay was experienced in dealing with cases of Diphtheria notwithstanding that a larger number of cases were treated in the Hospital than ever before.

The new Out-patient Department at the City General Hospital, together with a new operating theatre and a new maternity block, also an addition to the Nurses' Home, were opened in October by the Rt. Hon. Sir Edward Hilton Young, Minister of Health. This completes a scheme inaugurated by the Sheffield Municipal and Voluntary Hospitals Joint Advisory Committee for the extension of the hospital services of the City.

The work of the Maternity and Child Welfare Centre and the Ante-natal Clinic has been further extended during the year by the provision of additional sessions.

The Domiciliary Midwifery Service for necessitous cases, inaugurated in 1932, which is now regarded as a very valuable part of the Maternity and Child Welfare scheme in Sheffield, has been found to work very satisfactorily. The number of cases dealt with during the year again considerably increased. The very efficient system of caring for adopted children, some in Scattered Homes and others in a colony of Cottage Homes, worked very satisfactorily throughout the year. There was an excellent standard of health among the children.

As regards Housing, a general survey was made of the housing conditions of the City and in the year 1930 a scheme was submitted to the City Council. This scheme which was agreed to, provided for the demolition annually of 500 insanitary houses. On the 7th June, 1933, this number was increased to 1,000 and again on the 7th February, 1934, to 2,000 per annum as from 1st April, 1934. Accordingly representations were made during the year with respect to 3,237 houses in 67 elearance areas, also with respect to 163 individual unfit houses. Five Ministry of Health Inquiries were held during the year, in March, July, September, November and December, involving 1,636 houses.

An important addition was made to the City on the 1st April, 1934, by the extension of the area to include the Parish of Norton, the Township of Dore, part of the Township of Totley and the Liberty of Beauchief. The area for the most part is rural in character and is situated at an altitude of 400 to 1,000 feet above sea level. This from a health point of view will be a great asset to the City in connection with further housing developments.

I have again to record my appreciation of the hearty co-operation of all members of my staff in a year of increased activity in every Department.

In conclusion, I must express my thanks to the Chairman and Members of the Health Committee for their support and assistance.

I am,

Your obedient servant,

JOHN RENNIE,

Medical Officer of Health.

VITAL AND MORTAL STATISTICS.

SPECIAL FEATURES.—The general death rate was lower than in 1933, and was lower than the rate for England and Wales.

A new low record in the Infant Mortality rate was reached; for the second year in succession it was actually below the rate for England and Wales.

The low Tuberculosis death rate constituted a new record, and its satisfactory position in the list of large towns was again well maintained.

The mortality rate among Children under two years of age from Diarrhœal diseases was the lowest yet recorded, and was below that for England and Wales.

The mortality rates from Searlet Fever and Enteric Fever were comparatively low.

Diphtheria assumed epidemic proportions and the mortality rate was the highest since 1926. Notwithstanding, it did not reach England's figure.

The Maternal Mortality rate was definitely higher than the average, both as regards sepsis and all other puerperal causes.

There was a marked increase in the mortality from Cancer as compared with the previous year's figures. The rate was the highest on record for the city.

The mortality from Influenza was low, and the low mortality from Bronehitis constituted a new record.

AREA.— The area of the City was increased on the 1st April, 1934, by the addition of 5,432 acres, comprising part of the parish of Norton, the township of Dore, part of the township of Totley and the liberty of Beauchief. The added area is largely agricultural and moorland. The total area of the City as extended on 1st April, 1934, is 39,583 acres.

POPULATION.—The normal mid 1934 estimate of the population for the area as now constituted is given by the Registrar General as 520,950, but, for use with the composite statistics now supplied, a working population figure, modified to take account of the fact that the records do not wholly relate to the entire year, has been provided by the Registrar General as 518,525. The area added to the City on the 1st April, 1934, contained at the 1931 Census a population of 6,500. It is interesting to note that this was an increase over the 1921 Census population (4,511) of 1,989, or 44 per cent.

The City population estimate, year by year, is given in Table IV.

With regard to the figures showing the distribution of population in Registration Sub-Districts and Sections, which appear in Table VI. the estimates have been based upon the 1931 Census, with additions in respect of new houses creeted in these areas since the Census, and deductions for houses demolished, and a further pro rata reduction to bring the total down to the new estimate of the Registrar General.

TABLE A .- Censuses 1911, 1921 and 1931. Age distribution per 1000 of each sex.

SEX AND AGE DISTRIBUTION.—The preceding table which is based upon the Census Reports of 1911, 1921 and 1931, is repeated as it shows the age and sex distribution of the population of the City and the marked change which has taken place during the 20 years intervening. The outstanding feature of the table is the reduction in the proportion of children and the increase in the proportion of persons over 40 years of age. The one is largely explained by the decrease in the Birth Rate and the other by the improved health of the community and lengthening average life.

DWELLINGS AND FAMILIES AT THE CENSUS.—Particulars were extracted from the Report of the Census with regard to the relationship of houses and families, and the following statement which appeared in the Annual Report for 1933 is repeated. It shows that notwithstanding the increase of 18,350 dwellings during the intercensal period there was still a deficiency of 5,584 dwellings, i.e., a shortage as between families and dwellings. The position was somewhat more acute than at the Census of 1921, even when allowance is made for holiday movement of population at the 1921 Census. The explanation is that the number of families increased at a greater rate than the provision of houses.

The number of persons per family decreased from $4 \cdot 37$ in 1921 to $3 \cdot 84$ in 1931, and, looked at from the point of view of over-crowding, the position must necessarily to this extent have been relieved. At the same time Sheffield is shown as having at 1931 Census, a population of 40,908, or $8 \cdot 24$ per cent., living under conditions of more than 2 persons per room as compared with $8 \cdot 21$ in Leeds, $7 \cdot 92$ in Huddersfield, $7 \cdot 34$ in Rotherham and $6 \cdot 91$ in Bradford. Halifax was the only West Riding County Borough with a greater density than that in Sheffield, namely $10 \cdot 08$ per cent.

	1921	1931	Net
	Census	Census	Increase
Families	 109,895	129,396	19,501
Structurally separate dwellings	 105,462	123,812	18,350
Population in private families	 479,400	496,205	16,805
Deficiency of Houses	 4,433	5,584	-

The Census at 1921 was taken on 19th June, at which time many people were away from home on holiday, and an adjustment of the total population figures was made by the Registrar General, Sheffield's figure being increased 7,261, making the population 497,900. The actual Census figure was 490,639.

No figure was given by the Registrar General for holiday movement as regards private families, the total for which was 109,895 at the enumeration on 19th June, 1921, as shown above.

The number of people in the institutions of the City however, is unaffected by holiday movement and remains practically stationary, so that the difference of 7,261 may be added to the population in private families, making the total (479,400 + 7,261) 486,661, as shown in the table below.

With regard to the number of private families, if it is assumed that (say) 50 per cent. of the 7,261 persons were on holiday in complete families and taking $4 \cdot 4$ persons, which was the average per family, we get the following :—7,261÷2=3,630. 3,630÷4·4 =825, the number to be added to total families (109,895) making in all 110,720.

After making the adjustment for holiday movement at Census 1921 the statement reads as follows :---

		1921 Census	1931 Census	Net Increase
Families	•••	110,720 (corrected)	129,396	18,676 (corrected)
Structurally separate dwellings		105,462	123,812	18,350
Population in private families		486,661 (corrected)	496,205	9,544 (corrected)
Deficiency of Houses		5,258 (corrected)	5,584	-

MARRIAGES.—The number of marriages in 1934 was 4,891, the highest number since 1920. The marriage rate was $18 \cdot 8$. It was pointed out in the Annual Report for 1921 that for the first time on record the marriage rate was less in Sheffield than in England and Wales as a whole. The disparity was further accentuated in 1922, when the rate fell to $14 \cdot 4$ as compared with $15 \cdot 7$ for England and Wales. Sheffield's rate for 1922, moreover, was the lowest recorded for the City, whilst that for England had been lower than in 1922 in 17 of the 33 years shown in the Table. The rate for 1923 was the same for Sheffield as for England and Wales ; in 1924-1926 it again fell below that for England rate but overreaching it, and the excess over the England rate has been well maintained.

Table III gives marriages and rates for Sheffield and for England since 1890.

12

BIRTHS.—The number of live births registered during the year was 7,829 and the transferable births numbered 41 inwards and 340 outwards. The number of births allocated to Sheffield, therefore, was 7,530, which was more than in the preceding year by 352. The number of births allocated to Sheffield in 1920 was 13,130. Since that year the number of births has gradually fallen, but in 1934 there was a slight increase. The annual birth rate was 14.5 per 1,000 persons living. The average rate for the previous ten years was 16.0.

	Year	Births	Rate per 1000
	1924	 9,712	 18.5
	1925	 9,321	 17.7
	1926	 9,013	 17.2
	1927	 8,526	 $16 \cdot 2$
	1928	 8,438	 16.4
	1929	 7,976	 15.4
	1930	 7,831	 $15 \cdot 1$
	1931	 7,777	 15.0
	1932	 7,393	 14.4
	1933	 7,178	 14.0
rage	1924-33	 8,317	 16.0
	1934	 7,530	 14.5

Aver

A

The birth-rate for 1934 was 1.5 lower than the average for the last decade, but higher than for the two previous years.

Still births registered during 1934 totalled 391, but after allocation of transfers, the net total was 335, which gives a rate of 0.65 per 1,000 of the population. The rate for England was 0.62.

Total births registered (live and still) numbered 7,865 (nett) as against 7,525 in 1933, an increase of 340 on the year.

DEATHS.—The number of deaths of Sheffield residents during the year was 5,886 (3,118 male, 2,768 female), making a death rate of 11.4 per 1,000 living, which was lower than the average death rate for the decade 1924-1933 by 0.4. The figure for 1934 is again below that for England and Wales (11.8).

	Year	Deaths	Rate per 1000
	1924	 6,110	 11.6
	1925	 6,078	 11.5
	1926	 5,927	 11.3
	1927	 6,436	 $12 \cdot 3$
	1928	 6,099	 11.8
	1929	 6,850	 13.2
	1930	 5,675	 $11 \cdot 0$
	1931	 5,839	 11.3
	1932	 5,976	 11.6
	1933	 6,117	 $12 \cdot 0$
verage	1924-33	 6,111	 11.8
	1934	 5,886	 11.4

A comparison of the death rate of Sheffield with that of England and Wales in quinquennia is given in the following table. It will be noted that for the periods 1921-25 and 1926-30, also in the four succeeding years, Sheffield's rate was below that for England and Wales. The lower mortality in Sheffield from Scarlet Fever, Diphtheria, Tuberculosis, Bronchitis and Cancer accounts for this to some extent.

Quinquennial Periods				per 1,000 Sheffield	ality Rate opulation. England
1871-1875	***			 $26 \cdot 8$	 $22 \cdot 0$
1876-1880				 $24 \cdot 2$	 20.8
1881-1885				 $21 \cdot 6$	 19.4
1886-1890				 $22 \cdot 1$	 18.9
1891-1895				 $20 \cdot 9$	 18.7
1896-1900				 20.6	 17.7
1901-1905				 $18 \cdot 2$	 $16 \cdot 1$
1906-1910				 16.4	 14.7
1911-1915				 $15 \cdot 9$	 $14 \cdot 3$
1916-1920				 15.7	 $14 \cdot 4$
1921-1925				 11.8	 $12 \cdot 2$
1926-1930				 11.9	 $12 \cdot 1$
1931-1934	(four ye	ars on	ly)	 $11 \cdot 6$	 $12 \cdot 1$

SMALL-POX .- There was no case of Small-Pox notified during the year.

MEASLES.—The number of cases notified voluntarily during 1934 was only 262, of which 218 or 83 per cent, were removed to the City Fever Hospital, Lodge Moor.

The mortality rate for the year was 0.05 per 1,000 persons living per annum. The average rate for the five years 1929-33 was 0.05 per annum.

The following table shows that the mortality rate alternates between high and low. Mortality Rate per Million in Sheffield from Measles-11 years-1924 - 1934.

Year			Mortality e per Millio	K
1924	 	 	 217	
1925	 	 	 59	
1926	 	 	 136	
1927	 	 	 44	
1928	 	 	 229	
1929	 	 	 27	
1930	 	 	 129	
1931	 	 	 10	
1932	 	 	 86	
1933	 	 	 4	
1934	 	 	 50	

SCARLET FEVER.—The death rate from Scarlet Fever was 0.012 per 1,000 of the population, the same as in 1933, which followed successive record low rates of 0.006 and 0.002 for years 1931 and 1932 respectively. The average annual rate for the quinquennium 1929-33 was 0.016.

The attack rate was 4.58 per 1,000 as against 3.84 for the quinquennium 1929-33.

The very low mortality, notwithstanding the comparatively high attack rate, proves that this disease is of a very mild type at the present time.

DIPHTHERIA.—The death rate from Diphtheria was 0.081 per 1,000 of the population as compared with 0.1 for England and Wales. The rate for the quinquennium 1929-1933 was 0.034, as against 0.073 for England and Wales.

The attack rate during 1934 was $2 \cdot 75$, which has to be compared with an average of $1 \cdot 26$ for the quinquennium 1929-33.

The epidemic prevalence of this disease started in September of 1933, and reached a maximum of 52 cases in the week ended 28th October. This high incidence continued until the first week in December and the disease was more or less prevalent during the spring and summer of 1934, and by the middle of October it had assumed epidemic form again. By the middle of December a total of 63 new cases in the week had been reached. This was the highest since the great epidemic of 1899-1901. WHOOPING COUGH.—The mortality from this disease was at the rate of 0.067 per 1,000 living. The average for the quinquennium 1929-33 was 0.076.

TYPHOID FEVER.—The number of typhoid cases notified during the year 1934 was 5, giving an attack rate of 0.01 per 1,000 living, which has to be compared with an average for the quinquennium 1929-33 of 0.036. Three deaths occurred, giving a mortality rate of 0.006 per 1,000 living, which is the same figure as for the quinquennium 1929-33.

DIARRHGEA AND ENTERITIS, UNDER TWO YEARS OF AGE.—Mortality from this group of diseases is now stated per 1,000 born, and the figure thus obtained is 3.72 for 1934 as compared with 5.4 for England.

The rate for 1933 was 6.27 for Sheffield as against 7.1 for England.

Sheffield therefore occupies a favourable position. This is very marked in the towns table "L" where Sheffield appears with a low mortality rate only excelled by Bristol. Portsmouth and Plymouth. If reference is made to Annual Reports of the early years of the present century, it will be found that Sheffield then occupied actually the worst position among the great towns as regards mortality from this group of diseases.

The great decrease in the prevalence of Diarrhea in Sheffield may be attributed to the greater attention given in recent years to Child Welfare, the activities of the Health Visitors, especially their educational work, and the large substitution of Dried Milk for fluid milk; the measures taken for the prevention of fly breeding, and instructions to the public as to the danger of flies; the abolition of privy middens in the congested parts of the City; and the campaign against unpaved yards.

UNDULANT FEVER.—A definite case of Undulant Fever was reported during 1934. All necessary action was taken.

CEREBRO-SPINAL FEVER. During the year there were 46 notified cases of Cerebro-Spinal Fever, with 22 deaths.

This disease was prevalent during 1930 in the adjoining districts in the West Rinding of Yorkshire, and the notifications increased in Sheffield from 1 in January to 10 in the month of August, 1931. Twice during 1932 the number of notifications in the month reached 10. During the first quarter of 1933 the disease was reaching serious proportions, 56 new cases having been reported. Prompt measures were adopted for dealing with contacts and happily the prevalence subsided until in September not a single new case was reported. Since that month the average per month up to the end of 1934 was four. Further reference to this disease will be found in the City Fever Hospitals section of this report.

ACUTE POLIOMYELITIS.—8 cases of Acute Poliomyelitis or Polioencephalitis were notified in 1934, as against 10 in 1933, 40 in 1932, 45 in 1931, 5 in 1930, 3 in 1929, 12 in 1928, 18 in 1927, 6 in 1926, 16 in 1925, 53 in 1924, 1 in 1923, and 20 in 1922. One death occurred during 1934.

The decided increase in the number of notifications of this disease in 1931, made it necessary to organise Hospital and Out-patient Treatment and Dr. Pattison, the Surgical Tuberculosis Officer, undertook this responsibility. Special arrangements were made at the Maternity and Child Welfare Clinic for Orthopædic treatment and beds at the King Edward VII Hospital were allocated for the treatment of this disease after the acute stage. Further reference to this is made in the special section by Dr. Pattison on page 106.

ENCEPHALITIS LETHARGICA.—The year 1924 was noteworthy for a very severe outbreak of Encephalitis Lethargiea when there were 337 cases notified. The outbreak quickly subsided, and during the last three years one case only was notified. The deaths now being registered are chiefly in persons who contracted the disease during the 1924 epidemic. There were nine deaths in 1934. DYSENTERY.— Prior to 1932, practically all the notified cases of Dysentery were contracted abroad, but in 1932 there was an outbreak of Dysentery and nine cases were diagnosed. The whole of the cases notified originated in Sheffield. 18 cases were notified in 1933, and four cases in 1934.

MALARIA.—Two cases were notified, each of whom had contracted the disease in the Army.

INFLUENZA.—The prevalence of Influenza was world-wide in 1918, and all parts of this country have been visited by minor epidemics in each year since then. Below are set out the mortality rates per 1,000 living for the years 1918 onwards in Sheffield and in the whole country. On the whole, Sheffield has suffered more heavily than the rest of the country.

Sheffield England & Wales	$1918 \\ 4 \cdot 55 \\ 3 \cdot 08$	$1919 \\ 1 \cdot 10 \\ 1 \cdot 18$	$1920 \\ 0.86 \\ 0.28$	$1921 \\ 0.47 \\ 0.24$	$1922 \\ 0.23 \\ 0.56$	$1923 \\ 0.51 \\ 0.22$	$1924 \\ 0.35 \\ 0.49$	$1925 \\ 0.23 \\ 0.33$	
Sheffield England & Wales	$1926 \\ 0 \cdot 24 \\ 0 \cdot 23$	$1927 \\ 0.48 \\ 0.57$	$1928 \\ 0.17 \\ 0.20$	$1929 \\ 0.89 \\ 0.74$	$1930 \\ 0.09 \\ 0.12$	$1931 \\ 0.34 \\ 0.36$	$1932 \\ 0.30 \\ 0.32$	$1933 \\ 0.60 \\ 0.57$	$1934 \\ 0.10 \\ 0.14$

PNEUMONIA.—It has been the practice since the beginning of 1922 until recently to draw the attention of the medical attendant to failure to notify whenever an unnotified case of Pneumonia has appeared in the death returns. This has resulted in practically every case of fatal Pneumonia being notified prior to death, and has made the incidence of Pneumonia in Sheffield apparently excessive as compared with other towns.

The true index is of course the mortality rate. Particulars are given below for the five largest towns of England and Wales as regards the incidence rate and death rate from Pneumonia from which it will be seen that Sheffield's incidence rate of 4.6 is the highest in the list. At the same time, the mortality rate of 0.881 is next to the lowest. The figures for cases and deaths are taken from the Registrar General's latest summary and refer to the year 1933.

PI	ieumo	nia in	nve larg	gest towns —	1933.	
			Cases.	Incidence Rate per 1,000 persons living.	Deaths.	Death Rate per 1,000 persons living.
Birmingham			2,646	$2 \cdot 616$	861	0.851
Liverpool			3,106	3.615	1,410	1.641
Manchester			2,598	$3 \cdot 427$	824	1.087
Sheffield			2,378	$4 \cdot 646$	451	0.881
Leeds			1,012	2.087	484	0.998

In Sheffield every case notified and treated at home is visited by the Queen's nurses.

The percentage of cases removed to the City Fever Hospital and City General Hospital during 1934 was 33-0.

The following table shows the number and the percentage of cases removed to the City Fever and City General Hospitals during the last 10 years.

TABLE B. Pneumonia.—Cases notified and treated in the City Hospitals, also percentage treated. Years 1925 to 1934.

	1925	1926	1927	1928	1929	1930	1931	1932	1933	1934
Cases Notified Cases treated in (a) City Fever	3219	2643	3154	2693	3389	1568	2175	2338	2378	1684
(b) City General	562	466	357	328	318	288	480	643	480	21
Hospital Percentage of Cases	258	288	290	403	343	208	256	342	516	535
treated	$25 \cdot 5$	28.5	20.5	$27 \cdot 1$	19.5	31.6	33.8	$42 \cdot 2$	41.9	33.0

Particulars are given below with regard to mortality from Pneumonia in males and females during 1934 and the previous five years. The sex disparity was very marked in 1934. The excess in the male is probably accounted for by the fact that he is more exposed by his occupation than the female.

Year		Deaths	Rate	Rate per 1,000		
	Males	Females	Total	- per 1,000	England and Wales	
1929	439	288	727	1.40	1.11	
1930	259	119	378	0.73	0.70

TABLE C.—Pneumonia Mortality	TA	BLE	C	Pneu	imonia	Mori	ality
------------------------------	----	-----	---	------	--------	------	-------

° Figure not available.

BRONCHITIS.—The mortality in the sexes during 1934 and the quinquennium 1929-33 is set out in the table below. The mortality rate for 1934 was the lowest on record. The figures throughout compare favourably with those for England.

Year		Deaths	Rate per 1,000	Rate per 1,000	
	Males	Females	Total	Tes dess	England and Wales
1929	171	193	364	0.70	0.84
1930	105	68	173	0.33	0.49

1933	106	103	209	0.41	0.52
Average for 5 years	123	117	240	0.46	0.60
1934	73	68	141	0.27	*

TABLE D.-Bronchitis Mortality.

* Figure not available.

CANCER.—The mortality from Cancer in the sexes during 1934 and the previous five years is set out below. The rate for 1934 is the highest in the period and the highest on record for Sheffield. Sheffield's figure, however, was consistently below that for England and Wales during the whole period set out.

TABLE	ECancer	Mortality.
-------	---------	------------

Year		Deaths	Rate per 1,000			
Lear	Males	Females	Total	Sheffield	England and Wales	
1929	404	321	725	1.40	1.44	
1930	372	380	752	1.45	1.45	
1931	384	355	739	1.43	1.48	
1932	363	314	677	1.32	1.51	
1933	399	364	763	1.49	1.53	
Average for 5 years	384	347	731	1.42	1.48	
1934	413	376	789	1.52	1.56	

TUBERCULOUS DISEASES.—The low death rate for 1934 of 756 per million living constitutes a new record figure. This applies to both Respiratory and Other Forms grouped. The death rate from Tuberculous Diseases declined steadily from 1901 to 1910, but during the next four years there was a setback in the decline ; and during the years of the war there was a decided increase. There was again a marked decline in 1919, and the improvement has been maintained, although with slight fluctuations.

The death rates per million from all Tuberculous Diseases during 1934 and the previous 20 years were as follows :---

	Lungs	Other Forms	All Forms		Lungs	Other Forms	All Forms		Lungs	Other Forms	All Forms
1914	1273	403	1676	1921	998	237	1235	1928	745	190	935
1915	1372	412	1784	1922	1028	189	1217	1929	788	166	954
1916	1330	400	1730	1923	854	174	1028	1930	685	172	857
1917	1396	428	1824	1924	821	202	1023	1931	673	145	818
1918	1410	430	1840	1925	791	197	988	1932	688	129	817
1919	996	268	1264	1926	745	182	927	1933	707	131	838
1920	924	260	1184	1927	703	189	892	1934	640	116	756

The following shows sex mortality during 1934 and the previous 10 years :--

			Tuberculo	sis Deaths			
Year	Respiratory		Other Forms		All	Total Deaths	
	Males	Females	Males	Females	Males	Females	
1924	286	145	60	46	346	191	537

The notifications of Tuberculosis of organs other than the lungs since 1914-the first full year after the commencement of notification-were as follows :---

Military cases are excluded from these figures,

Table G which follows, gives a comparison of the death rates from All Forms of Tuberculosis and Respiratory Tuberculosis in England and Wales and the 17 other large towns, for the years 1925 to 1934. The Chart which accompanies the Table shows very graphically the rise during the war years and the subsequent fall. Sheffield's improved position is clearly indicated.

It will be seen that in 1934 Sheffield's death rate from Tuberculosis was less than that of all other towns with the exception of Croydon, both as regards Respiratory Tuberculosis and also All Forms. It was very considerably less than most of them.

Sheffield's favourable position as regards its death rate from Tuberculosis is due to many factors, the most important of which are :---

- Complete co-operation on the part of the general practitioners in the Tuberculosis Scheme.
- (2) Adequate Sanatorium and Hospital accommodation for all citizens who are suffering from Tuberculosis or even suspected to be suffering from Tuberculosis.
- (3) The treatment of a large number of early eases of Tubereulosis discovered by means of the examination of contacts of notified eases.
- (4) Intensive work with regard to the isolation of infectious cases of Tubereulosis either in Hospital or in their homes; and latterly
- (5) The re-housing scheme for infectious cases of Tuberculosis living under such conditions that isolation is impossible.

TABLE H.—Mortality among Grinders and all persons over 15 years of age, 1886 to 1934 in Quinquennia.

Table H shows that the percentage of deaths among grinders due to Tuberculosis of the Lung has not decreased materially during the last 49 years, whereas the percentage of deaths due to Tuberculosis amongst all persons over the age of 15 years has decreased by 53 per cent.

TABLE I.— Pulmonary Tuberculosis in Sheffield.—Mortality Rates among Workers in Unhealthy Trades, and among All Persons over 15 (for comparison), during the years 1925—1934.

Trades	Workers employed over 14 years of age				Mort	tality fr Tub	om Re erculos	spiratis.	tory			
	(Census 1931),		1925	1926	1927	1928	1929	1930	1931	1932	1933	1934
Grinders	4,600	Number of Deaths Rate per 1,000	31 6·3	$28 \\ 6 \cdot 1$	38 8·3	30 6 · 5	33 7 · 2	28 6 · 1		20 4 · 3		
Cutlers	3,635	Number of Deaths Rate per 1,000	11 2·8	12 3 · 3	$10 \\ 2 \cdot 8$	4 1 · 1	8 2·2	10 2 · 8				$14 \\ 3 \cdot 9$
All persons o 15 years age in Sheffi	of 387,579	$\left. \begin{array}{c} \text{Number} \\ \text{of Deaths} \\ \text{Rate per} \\ 1,000 \end{array} \right\}$	398 1 · 1	371 1·0	353 0 • 9	372 1.0				348 0 · 9		

Table I shows that the death rate from Tuberculosis amongst grinders is still more than five times that among all persons over 15 years of age in Sheffield. INFANT MORTALITY.—The number of deaths of Infants under one year of age was 415, as compared with 454 in 1933, 543 in 1932, 533 in 1931, 522 in 1930, 698 in 1929, 619 in 1928, 774 in 1927, 712 in 1926, 788 in 1925, and 871 in 1924. The number of births registered in 1934 was 7,530 after making allowance for transfers. Infant Mortality is usually recorded as the number of deaths occurring under the ageof twelve months per 1,000 births registered during the same period, and the rate for 1934, calculated in this manner is 55 per 1,000. This, for a second year in succession, constitutes a new low record.

Deaths of infants occurring before the first month of life was reached numbered 241. This gives a rate of 32 per 1,000 births registered, or what is known as the neo-natal mortality. The neo-natal mortality for 1933 was 31; for 1932, 33; for 1931, 34; for 1930, 37; for 1929, 39; for 1928, 38; for 1927, 40; for 1926, 23; for 1925, 37; and for 1924, 44.

The following Table gives alongside the Infant Mortality Rates for England and for Sheffield during the past 20 years. It will be noted that Sheffield's figure for the past two years was actually below the England rate.

Year	Infant 3 Sheffield	Mortality England	Excess over EnglandRate	Year	Infant M Sheffield	fortality England	Excess over EnglandRat

TABLE J .- Infant Mortality.

The table on the next page shows a marked decline in Infantile Mortality from most of the causes set out.

Measles and Whooping Cough were responsible for more deaths than in 1933, 1934 being the alternate year for a higher mortality rate,

Bronchitis and Pneumonia show a most marked decline—less than a third the mortality of the earlier years.

There has been no death from Scarlet Fever among infants since 1929.

Deaths from Diarrhœa and Enteritis have fallen from 109 in 1926 to an average of 35 in the last 5 years. Among the most important factors in bringing about this decline, must be placed the encouragement of breast feeding, the extended use of dried milk in artificial feeding and the work of the medical staff and health visitors at the Maternity and Child Welfare Centre.

TABLE K .- Infant Mortality from stated causes in 1925-1934.

1934 Infant Mortality Rate :- Legitimate, 54 ; Illegitimate, 84.

MATERNAL MORTALITY.—Maternal mortality in Sheffield reached the high figure of 6.11 per 1,000 live births, which has to be compared with 4.60 for England as a whole. The rate per 1,000 all births was 5.85 as compared with 4.41 for all England.

In considering the maternal mortality rate the position with regard to Abortion must be taken into account as in the majority of cases Abortion is a condition which is beyond the control of preventive medicine.

It will be seen from the table which is appended that 15 women died as a result of Abortion during the year 1934 (apart from criminal abortions which are not classed to childbirth). In 13 of these cases a septic condition supervened.

Deaths from Abortion in relation to total Deaths from Diseases of Pregnancy, Childbirth and the Puerperal State, Sheffield and England, during the years 1932, 1933 and 1934.

		932 Sheffield		933 Sheffield	England 1	934 Sheffield
	England	Sheffield	England	chemena	England	onerneid
Total Childbirth	2587	33	2618	35	*	46
Abortion (not including Criminal Abortion).	379	6	378	8	-	15
Percentage	14.65%	18.18%	14.44%	$22 \cdot 86\%$	-	$32 \cdot 61\%$

Figures not available for England 1934.

If the percentage of Abortion had been the same for Sheffield in 1934 as for England in 1933, the number of deaths from Abortion would have been 5 instead of 15, and the total deaths in Childbirth etc. 36, or 4.78 per 1,000 births, instead of 6.11 as recorded. This would compare with 4.60 for England as a whole.

There was increasing activity during the year in connection with the work of the Ante-natal Clinic at the Maternity and Child Welfare Centre. Full particulars of the work carried out are given in the section dealing with this department. Hospital provision for maternity cases was increased in October by the addition of 32 beds at the City General Hospital. These were not fully occupied until the early months of the present year.

REGISTRATION SUB-DISTRICTS AND SECTIONS.

A full description of the boundaries of the Sections adopted as statistical units was given in the Annual Report for 1923. Owing to the different enumeration areas adopted in connection with the 1921 and 1931 Censuses, the boundaries were altered. The alterations, however, are so slight that the statistical areas remain practically the same.

Table VI gives the estimated population, the density of the population, death rates from all causes and from certain specified causes, infant mortality rates, and birth rates, in each of the statistical units of the City, and sickness from the notifiable infectious diseases is given in Table XVIII.

With regard to mortality in the statistical areas, while the boundaries of the areas as given in the tables do not accurately conform to the different residential and industrial portions of the City, it will nevertheless be seen that the death rates are, on the whole, higher in the overcrowded and smoky industrial neighbourhoods than in the residential parts. This contrast is, however, very much less marked in recent years.

Position of Sheffield amongst the Largest Towns.

Table L shows the position of Sheffield amongst the largest towns of England and Wales as regards Birth-rate, Death-rate from All Causes, and from certain specified causes; also Infant Mortality. It will be noted that a new feature is the introduction of an additional column for General Death Rates to show the adjustment made by the Registrar General for differences in sex and age group components of the several localities in order to make them comparable with the crude death rate of the country as a whole or with the mortality of any other local area. The Comparability Factor for Sheffield is given by the Registrar General as 1.13. **TABLE L.**—Towns over 200,000 Population—Birth Rates, Death Rates, All Causes and Certain Infectious Diseases; Infant Mortality (Deaths under 1 year per 1,000 Live Births) All Causes and Diarrhaed Diseases in the year 1934.

TABLE	IVPopulation	and	Births	and	Deaths	in	Sheffield	in	past	years.	Also	Birth-rates
	an	d Dea	th-rates	in Sl	heffield a	ind	in Englan	d as	ad We	ales.		

Population at earlier dates :—1736, 14,105 ; 1801, 45,755 ; 1811, 53,231 ; 1821, 65,275 ; 1831, 91,692 ; 1841, 111,091.

* City extended.

The table shows that while in 1851, with a Birth Rate of $41 \cdot 6$ and a Rate of Increase, *i.e.*, excess of Birth Rate over Death Rate, of $13 \cdot 4$, the actual increment of population was 1,919, in 1934, with a Birth Rate of only $14 \cdot 5$ and a Rate of Increase reduced to $3 \cdot 1$ the actual increment was no less than 1,644. This, of course, is because these rates have to be applied to an enormously increased population. Had the Birth Rate which prevailed in 1851 been maintained in 1934, the actual number of Births would have been 21,571 instead of 7,530.

HOSPITALS.

The following table sets out particulars with regard to the Hospitals, public and voluntary, belonging to the City, also outside Hospitals with which arrangements have been made for the admission of patients.

Full particulars with regard to the work will be found in the Reports given by Dr. James Clark, Dr. H. Midgley Turner, and Dr. C. Lee Pattison, which follow the table.

TABLE XXI.

CITY FEVER HOSPITALS.

Medical Superintendent ... JAMES CLARK, M.D., M.R.C.P., D.P.H.

Senior Medical Officer :- JOSEPH M. KENNEDY, M.B., Ch.B., D.P.H.

Assistant Medical Officers :---

LEWIS MACKENZIE, L.R.C.P. (Edin.), L.R.F.P.S. (Glas.).

JOHN HOWARD WILBOURN, M.B., Ch.B. (Sheffield).

WILLIAM DORNAN, M.B., B.Ch. (Belfast). (from August 1st, 1934 to December 31st, 1934).

DAVID HENRY ANDERSON, M.B., B.Ch., B.A.O. (Belfast). (from December 1st, 1934).

The incidence of infectious diseases varies considerably at different periods, with the result that there is often accommodation available in excess of the requirements. This is used according to the incidence of other infectious diseases in the City, such as Measles, Whooping Cough and Erysipelas, and the requirements of the Health Department.

It also has to be remembered in dealing with acute infections, that often Wards for any particular disease may be strained to their utmost in certain months of the year, and very light in others. Even when this occurs it is often impossible to close them down, and the spare beds cannot, of course, be used for other infections. One of the chief difficulties with which one has to contend in this variable incidence is to have sufficient accommodation for any ordinary requirements and a certain number of extra staff to meet any sudden increase.

During the second half of the year a wide-spread epidemic of Searlet Fever and Diphtheria made its appearance, and continued throughout the winter. The Hospital was taxed to capacity, with the result that the record was reached on December 8th, when 561 were present in the Hospital. During the month of November alone 520 cases were admitted.

Notwithstanding the sudden and urgent call on the beds it is seen from Table XXIV that the percentage of cases admitted on notifications was greater than for previous epidemic years.

Scarlet Fever continues to be of the mild type, and acknowledging this fact the number of admissions in the winter months was reduced in order to provide sufficient accommodation for cases of Diphtheria.

Diphtheria which has appeared in Sheffield was the very severe type which other eities in the north of England have been experiencing for the past few years. The Gravis type of C. diphtheriae was isolated in the greater percentage of the severe cases. This severe type has continued throughout the winter, resulting in a steady increase in the number of deaths from Diphtheria.

A record number for Diphtheria was reached when 1,385 cases were admitted for the year, which surpassed all previous years.

The Hospital was not in a position to admit eases of Pneumonia, as in previous years, but a number of cases were treated, having been certified as other infectious diseases.

Measles, which was epidemic during the early summer months, was admitted. It is interesting to note the exceedingly low death rate from this disease, considering that only the severe cases, or those where the home conditions were poor, were admitted. This fact points out that Measles, a severe disease, responds very well to treatment in Hospital and should perhaps be given preference to the mild Scarlet Fever which is generally present.

There has been a sudden fall in the incidence of Cerebro-spinal Fever, as only 47 cases were treated during the year. The death rate was higher than in previous years, but this was due to the small number of cases and the very high death rate amongst infants, who do not respond well to treatment.

Of the 109 cases of Erysipelas treated to a conclusion during the year, 8 proved fatal, which is a very low death rate. It is interesting to note that no serum is used in the treatment, as we have not found any benefit whatever from the use of serum in Erysipelas.

There were no cases of Small Pox admitted.

The total number of cases admitted during the year was 3,861, the previous years being as follows :----

	Lodge Moor	Redmires Camp	Contact Cottages

TABLE XXXVII.-Number of Cases treated in Observation Ward.

This block continues to be of great value for isolating doubtful cases and mixed infections from the Wards, or on admission. It is also used for cases of disease for which no general wards are available.

Remaining	Admissions	s from	Discharged	Transferred		Remaining
31/12/33	Ambulance	Wards	Block	to Wards	Deaths	in 31/12/34
25	233	125	258	81	19	25

RETURN CASES.

These are patients who may possibly have contracted the disease from a patient discharged from Hospital within 28 days. There are always a certain number of these connected with cases when discharged from either the sick room or a Hospital. Many of them, however, have been proved to be due to the unearthing of infection when making preparations for the return of a case home.

The period of 28 days is really too long, as should the discharged case be infectious, it is more than likely that it would infect the secondary case long before that period.

Discaso		Discharges	Certified Return Cases	Possible Return Cases	Return Rate
Searlet Fever	 	 1,794	82	60	3.3
Diphtheria	 	 1,071	27	10	0.93

SCARLET FEVER.

As regards the cases referred to above, these may possibly be due to the return home of the primary cases. 60 of the secondary cases were admitted into Hospital and verified. 9 were definitely not " return " cases, 1 was doubtful and 12 cases were not removed to hospital.

DIPHTHERIA.

These again are in all probability due to the return home of the primary cases, athough two negative cultures are obtained before the discharge of the patient takes place. All the secondary cases were admitted into Hospital and verified. Of these, 16 were definitely not "return" cases, and 1 was doubtful.

AMBULANCE DEPARTMENT.

The Ambulance Department on the 31st December, 1934, consisted of four Austin Ambulances.

During the year the ambulances covered 48,848 miles in the removal of cases to Hospital.

The ambulances are used for the conveyance of cases to Lodge Moor Hospital and consumptives to and from Winter Street, Crimicar Lane, Commonside and Nether Edge Hospitals, as well as for taking cases from these Institutions to the X-Ray Department in Queen's Road.

The vehicles are stationed at Lodge Moor Hospital.

TABLE XXXVIII.

BACTERIOLOGICAL WORK CARRIED OUT AT LODGE MOOR HOSPITAL.

Bacteriological work has been entirely done by the Resident Medical Officers at Lodge Moor Hospital, the media on which organisms are grown having been prepared in the Hospital Laboratory.

Virulence and typing of the C. diphtheriae have been carried out by Professor Edington, Sheffield University.

TABLE XXXIX.-Diseases from which members of the Staff have suffered during the year 1934.

All members of the Nursing and Domestie Staff, on joining, are vaccinated, and inoculated against Enteric Fever with T.A.B. They are also Schick and Dick Tested, and if positive, immunised.

One nurse and one maid contracted Scarlet Fever and six nurses Diphtheria, before being effectively immunised.

CITY GENERAL HOSPITALS.

DISCHARGES AND DEATHS.

	MEN.	WOMEN.	CHILDREN.	TOTAL
Discharged to Town	1502	2450	1290	5242
Discharged to Fir Vale House	151	139	2	292
Discharged to Nether Edge Hospital	6	7		13
Discharged to Children's Homes	-	-	118	118
DEATHS	599	377	119	1095
TOTAL	2258	2973	1529	6760
Remaining in Hospital, 31st December, 1934	182	247	119	548

The total admissions and births was 6,742, a decrease of 12 from last year. There was an increase of 140 men and a decrease of 41 women admitted from town. Admissions from Fir Vale House show a decrease of 9 men and 8 women, and from Nether Edge Hospital a decrease of 2 men and 5 women. There was an increase of 4 children admitted from Nether Edge Hospital and 14 from the Homes, and births show an increase of 7, while there was a decrease of 111 children admitted from town, and 1 child from Fir Vale House, showing a net decrease of 87 children admitted and born.

The average daily number under treatment was $597 \cdot 6$, an increase of $4 \cdot 93$ over last year.

The highest daily number was 661 on the 26th and 27th April, and the 3rd May, and the lowest number was 511 on the 25th December.

The average duration of treatment was $28 \cdot 93$ days, a decrease of $\cdot 14$ days from last year. This figure is the lowest on record for the hospital.

The number of patients in hospital throughout the whole year was 12, a decrease of 13 from last year.

There has been the same difficulty during the year under review as in former years in finding accommodation for patients. This has been most marked on the female side and during almost the whole of the year there has been a waiting list of non-urgent cases. Most of these waiting list patients have been women and there is at the present time a definite shortage of beds for infirm patients The Infirm Wards at Fir Vale House are kept permanently full, and a considerable number of infirm cases have to be retained in this hospital pending vacancies there. When this deficiency is remedied there will be no difficulty with admissions.

NEW BUILDINGS.

The hospital extensions which have been carried out during the past eighteen months were completed and officially opened by the Minister of Health, The Rt. Hon. Sir Edward Hilton Young, on the 12th October, 1934.

The Theatre Unit which comprises three operating theatres with the necessary sterilizing rooms, anæsthetic rooms, surgeons' and nurses' rooms, etc., is centrally situated near the administrative block, and has been in full operation since the 1st May, 1934. This unit has proved in every way highly satisfactory for the work for which it was designed.

The Maternity and Ante-Natal extension provides 32 additional lying-in beds with cots, and 4 additional labour wards with the necessary sterilizing rooms. There is a new ante-natal department adjoining the new Maternity Wards. This unit opened on the 1st August, 1934, and has proved satisfactory in use.

The extension to the Nurses' Home provides 92 additional bedrooms with sitting-rooms, and has enabled much needed increases in the nursing staff to be carried out.

The Casualty Unit was complete at the time of opening with the exception of some special fittings, and from the opening casualties have been treated in it. As the equipment was not complete, however, no attempt has been made to do our full share of the work of the City, but we are confident from what work has been done that the building will prove satisfactory.

TABLE XLII.

ADMISSIONS.

CLASSIFICATION OF DISEASES.

Infectious and Parasitic Diseases :--

Enteric Fever 1, Scarlet Fever 2, Nasal Diphtheria 9, Whooping Cough 40, Influenza 23, Psoas Abscess 1, Erysipelas 23, Post Encephalitic Parkinsonism 5, Cerebro-spinal Meningitis 9, Tuberculosis of the Lungs 65, Tuberculous Meningitis 6, Tuberculosis of the Peritoneum 5, Tuberculosis of the Testicle 1, Tuberculosis of the Abdominal Glands 1, Tuberculosis of the Kidney 2, Tuberculosis of the Spine 3, Tuberculosis of the Knee Joint 2, Lupus 8, Miliary Tuberculosis 1, Syphilis 50, Gonorrhza 8, Tapeworm 1, Ringworm 2, Ophthalmia Neonatorum 3, Chickenpox 3, Measles 27, Mumps 2, Septie Wound (Septicæmia) 3, Pneumococcal Septicaemia 2.—Total 308.

Cancer and Other Tumours :--

Cancer of Palate 2, Cancer of Tongue 5, Cancer of Mouth 4, Cancer of Epiglottis 1, Cancer of Jaw 1, Cancer of Tonsil 9, Cancer of Antrum of Highmore 1, Cancer of Pharynx 4, Cancer of Stomach 50, Cancer of Liver 1, Cancer of Pancreas 10, Cancer of Oesophagus 11, Cancer of Brain 1, Cancer of Colon 39, Cancer of Peritoneum 1, Cancer of Rectum 29, Cancer of Lung 16, Cancer of Larynx 6, Cancer of Spine 1, Cancer of Bronchus 2, Cancer of Uterus 32. Cancer of Vulva 2, Cancer of Cervical Glands (Secondary) 4, Cancer of Ovary 5, Cancer of Breast 28, Cancer of Prostate 12, Cancer of Penis 2, Cancer of Bladder 4, Cancer of Parotid Glands 1, Cancer of Scrotum 1, Epithelioma of Skin 1, Rodent Ulcer of Face 3, Melanoma 2, Lymphosarcoma of Mediastinum 2, Sarcoma of Malar Bone 1, Osteosarcoma of Skull 1, Endometrioma 1, Papilloma of Sealp 1, Tumour of Spine 1, Tumour of Mediastinum 2, Labial Cyst 2, Nasal Polypus 5, Dermoid Cyst 2, Dental Cyst 1, Lipoma 3, Myoma of Uterus 17, Ovarian Cyst 9, Uterine Polypus 9, Hæmatoma of Vulva 1, Papilloma of Bladder 5, Cerebral Tumour 4, Cyst of Epididymis 1, Adenoma of Breast 10, Tumour of Finger 1, Tumour of Lung 3, Tumour of Kidney 1, Rectal Polypus 4, Teratoma of Testicle 1, Hypernephroma 1, Osteoma of Toe 1, Osteoma of Heel 1, Chondroma of Hand 1.-Total 383.

Rheumatism, Diseases of Nutrition and of Endocrine Glands, and Other General Diseases :---

Rheumatism 148, Rheumatoid Arthritis 29, Spondylitis Deformans 10, Diabetes Mellitus 29, Seurvy 1, Rickets 2, Myxœdema 4, Exophthalmic Goitre 3, Toxic Goitre 3, Obesity 2.—Total 231.

Diseases of the Blood and Blood-Forming Organs :--

Hæmophilia 3, Anæmia 5, Pernicious Anæmia 16.-Total 24.

Chronic Poisoning :--

Plumbism 1, Alcoholism 1, Arsenical Dermatitis 7.-Total 9.

Diseases of the Nervous System and Sense Organs :--

Meningitis 3, Streptoeoccal Meningitis 2, Pneumococcal Meningitis 1, Tabes Dorsalis 11, Bulbar Paralysis 1, Spastic Paraplegia 1, Functional Paraplegia 1, Sub-acute Combined Degeneration 2, Progressive Muscular Atrophy 3, Myelitis 1, Bell's Palsy 1, Cerebral Hæmorrhage 44 Subarachnoid Hæmorrhage 8, Cerebral Thrombosis 43, Cerebral Embolism 7, General Paralysis of the Insane 5, Delusional Insanity 5, Confusional Insanity 1, Mania 1, Epilepsy 38, Chorea 27, Huntingdon's Chorea 1, Angioneurotic Oedema 1, Intercostal Neuralgia 3, Neuritis 7, Peripheral Neuritis 5, Paralysis Agitans 1, Disseminated Sclerosis 8, Neurasthenia 29, Hysteria 6, Melancholia 8, Neurosis 10, Panophthalmitis 1, Dacrocystitis 2, Mental Deficiency 7, Optic Atrophy 1, Labyrinthitis 1, Corneal Ulcer 1, Blepharitis 3, Acute Conjunctivitis 6, Otitis Media 17, Mastoiditis 5, Mastoid Abscess 4, Keratitis 1.— Total 334.

Diseases of the Circulatory System :---

Adherent Pericardium 1, Pericarditis 6, Infective Endocarditis 7, Aortic Incompetence 4, Angina Pectoris 4, Mitral Stenosis 107, Tachycardia 1, Myocarditis 47, Coronary Thrombosis 3, Coronary Embolism 1, Arterio-sclerosis 402, Senile Gangrene 16, Hæmorrhoids 81, Varicocele 7, Varicose Ulcer 8, Varicose Veins 6, Phlebitis 10, Adenitis 20, Hyperpiesis 6, Lymphangitis 1.—Total 738.

Diseases of the Respiratory System :--

Coryza 8, Pulmonary Embolism 2, Sinusitis 1, Bronchitis 282, Bronchieetasis 8, Broncho-pneumonia 99, Lobar Pneumonia 436, Empyema 19, Pleurisy 34, Pneumothorax 1, Asthma 29, Abseess of Lung 4, Hæmoptysis 2.—Total 925.

Diseases of the Digestive System :---

Dental Caries 9, Alveolar Abseess 3, Stomatitis 3, Lip Abseess 0, Enlarged Tonsils 241, Tonsillitis 21, Quinsy 13, Abdominal Pain ? Cause 13, Salivary Calculus 1, Abseess of Sublingual Glands 1, Gastrie Ulcer 59, Duodenal Ulcer 49, Gastritis 27, Achlorhydria 4, Dyspepsia 4, Aleoholie Dyspepsia 1, Pylorie Stenosis 4, Gastro-enteritis 18, Enteritis 22, Colitis 12, Ulcer of Cæcum 1, Diarrhœa 2, Appendicitis 173, Inguinal Hernia 123, Ventral Hernia 3, Femoral Hernia 18, Umbilical Hernia 7, Epigastric Hernia 1, Strangulated Hernia 7, Diverticulitis 4, Intestinal Obstruction from Abdominal Adhesions 12, Acute Gastrectasis 1, Constipation 59, Rectal Prolapse 2, Inguinal Abseess 1, Fistula in Ano 7, Fissure in Ano 8, Ischio-rectal Abseess 18, Anal Stricture 2, Faecal Fistula 2, Cirrhosis of Liver 9, Jaundice 4, Gallstones 20, Cholecystitis 40, Ulcer of Abdominal Wall 1, Abseess of Abdominal Wall 1, Abseess of Perineum 2, General Peritonitis 2, Contusion of Peritoneum 1, Pneumocoecal Peritonitis 2, Retropharyngeal Abseess 1,—Total 1,039.

Non-Venereal Diseases of Genito-Urinary System :---

Chronic Nephritis 45, Acute Nephritis 43, Perinephritic Abscess 4, Pyelitis 22, Abscess of Serotum 2, Haematuria 2, Pyelonephritis 1, Bacilluria 2, Perineal Abscess 1, Renal Glycosuria 1, Renal Colic 22, Renal Calculus 12, Vesical Calculus 1, Cystitis 27, Cystocele 15, Urethral Stricture 4, Urethral Caruncle 1, Urethral Fistulæ 1, Extravasation of Urine 2, Enlargement of Prostate 54, Abscess of Prostate 1, Orchitis 8, Hydrocele 16, Phimosis 4, Paraphimosis 3, Salpingitis 9, Pyosalpinx 17, Pelvie Abscess 4, Pelvie Cellulitis 3, Leucorrhoea 2, Endometritis 3, Prolapse of Uterus 6, Menorrhagia 7, Dysmenorrhœa 2, Metrorrhagia 3, Menopause 5, Retroversion of Uterus 1, Subinvolution of Uterus 4, Chronic Metritis 2, Abscess of Uterine Wall 1, Pelvic Peritonitis 4, Bartholin's Abscess 9, Erosion of Cervix 1, Lacerated Cervix 8, Menstruation 3, Inflammation of Ovary 2, Vaginal Prolapse 4, Sterility 2.—Total 396.

Diseases of Pregnancy, Childbirth and the Puerperium :---

Abortions 337, Ectopic Gestation 9, Corneous Mole 2, Puerperal Pyrexia 4, Puerperal Septicaemia 2, Postpartum Eclampsia 5, Pyelitis of Pregnancy 14, Hyperemesis Gravidarum 9, Toxaemia of Pregnancy 12, Phlegmasia Alba Dolens 3, Chorea 2, Puerperal Mastitis 2, Breast Abscess 15, Puerperium 27, Lactation 8, Retained Placenta 3, Pregnancy 564.—Total. 1,018.

Diseases of the Skin and Cellular Tissue :--

Carbunele and Boil 23, Phlegmon of Lip 1, Cellulitis 43, Abscesses—Various 35, Psoriasis 7, Dermatitis 74, Pityriasis 1, Impetigo 31, Pemphigus 3, Scabies 21, Ulcers 28, Erythema Nodosum 4, Paronychia 1, Urticaria 1, Blisters 2, Sycosis 6, Sebaceous Cyst 1, Ingrowing Toe Nail 7, Herpes 7, Skin Graft 1.—Total 297.

Diseases of the Bones and Organs of Locomotion :--

Osteomyelitis 26, Mobile Coceyx 1, Paget's Disease 5, Caries 2, Periostitis 2, Abscess of Knee Joint 1, Torn Semilunar Cartilage 12, Prepatellar Bursitis 15, Necrosis 9, Arthritis 6, Synovitis 2, Hallux Rigidus 2, Hallux Valgus 3, Various Deformity of Toes 1, Hammer Toe 4, Ganglion of Wrist 2, Lumbago 5, Contracture of Hand 2, Talipes 1.— Total 101.

Diseases of Early Infancy :--

Test Feeding 1, Malnutrition 14, Subtentorial Hæmorrhage 1, Atelectasis 1, Marasmus 12, Hæmatemesis Neonatorum 1, Pemphigus Neonatorum 2, Infants born 513, Infants Suckling 45, Prematurity 26, Debility from Birth 8.—Total 624.

Congenital Malformations :--

Violence :--

Suicides:—by Poisoning (Chemical) 13, by Gas 13, by Drowning 1, by Cut Throat 13, Food Poisoning 1, Burns 19, Wounds 24, Shoek (Accident) 1, Fractures 87, Contusions, etc., 39, Dislocation 4, Concussion 2, Sprains 3, Foreign Body embedded 4.—Total 224.

Ill-Defined Diseases :--

Malnutrition 2, Debility 13, Drunk 2, Nil Abnormal Discovered 56, Examination and Observation 7.—Total 80. Grand Total 6,742.

DEATHS.

During the year 1,095 patients died in the hospital, an increase of 38 from last year.

The following list shows the figures for the commoner diseases during the last three years :--

		1932	1933	1934
Arterio-sclerosis	 	282	223	323
Bronchitis	 	115	97	57
Tuberculosis of the Lungs	 	18	23	23
Lobar Pneumonia	 	53	42	102
Broncho Pneumonia	 	21	44	36
Valvular Disease of the Heart	 	41	29	32
Malignant Disease	 	143	186	171

In Table XLIII the diseases causing death are classified, and in Table XLIV the ages at death for the last three years are set out. In Table XLV the causes of death of infants under one year are given. This figure shows a decrease of 7 from last year.

TABLE XLIII.

CAUSES OF DEATH.

Infectious and Parasitic Diseases :---

Whooping Cough 8, Enteric Fever 1, Erysipelas 4, Diphtheria 1, Cerebro-Spinal Fever 3, Cerebro-spinal Meningitis 1, Psoas Abseess 1, Tuberculosis of the Lungs 23, Tuberculous Meningitis 6, Lupus 1, Miliary Tuberculosis 1, Spinal Caries 1, Streptococcal Dermatitis 1, Measles 2, Syphilis 8, Septicaemia 1, Septic Sore 1.—Total 64.

Cancer and Other Tumours :--

Cancer of Antrum of Highmore 1, Cancer of Floor of Mouth 2, Cancer of Pharynx 1, Cancer of Tongue 3, Cancer of Tonsil 6, Cancer of Colon 19, Cancer of Ear 1, Cancer of Oesophagus 6, Cancer of Pancreas 10, Cancer of Rectum 18, Cancer of Brain 1, Cancer of Stomach 26, Cancer of Bronchus 1, Cancer of Larynx 6, Cancer of Lung 14, Cancer of Uterus 9, Cancer of Ovaries 4, Cancer of Vulva 2, Cancer of Breast 13, Cancer of Bladder 4, Cancer of Penis 2, Cancer of Prostate 6, Rodent Ulcer 1, Epithelioma of Skin 1, Epithelioma of Buccal Mucosa 1, Cerebral Tumour 2, Melanoma 1, Osteo-sarcoma of Skull 1, Lymphosarcoma of Neck Glands 2, Lymphosarcoma of Mediastinum 3, Sarcoma of Spine 1, Sarcoma of Humerus 1, Neoplasm of Spinal Cord 1, Teratoma of Testiele 1.—Total 171.

Diseases of the Blood and Blood Forming Organs :-Pernicious Anæmia 6.—Total 6.

Diseases of the Nervous System and Sense Organs :---

Cerebral Abscess 1, Streptococcal Meningitis 4, Pneumococcal Meningitis 1, Tabes Dorsalis 1, Cerebral Hæmorrhage 17, Peripheral Neuritis 3, Melancholia (Stupor) 1, Epilepsy 5, Cerebral Thrombosis 7, General Paralysis of Insane 1, Huntingdon's Chorea 1, Disseminated Sclerosis 1, Otitis Media 3, Mastoid Abscess 1.—Total 47.

Diseases of the Circulatory System :---

Pericarditis 3, Infective Endocarditis 5, Aortic Regurgitation 3, Mitral Stenosis 29, Myocarditis 2, Agranulocytic Angina 1, Coronary Thrombosis 3, Arterio-sclerosis 323, Senile Gangrene 8, Phlebitis 3, Abscess of Axilla and Chest Wall 1.—Total 381.

Diseases of the Respiratory System :---

Bronchitis 57, Bronchiectasis 3, Bronchopneumonia 36, Lobar Pneumonia 102, Empyema 1, Left Hæmothorax 1, Abscess of Lung 3, Pulmonary Embolism 3.—Total 206.

Diseases of the Digestive System :---

Ulcer of Cæcum 1, Streptococcal Tonsillitis 3, Peritonsillar Abseess 1, Gastric Ulcer 5, Duodenal Ulcer 4, Ileo-Colitis 1, Pyloric Stenosis 1, Infective Enteritis 2, Appendicitis 2, Strangulated Inguinal Hernia 3, Strangulated Umbilical Hernia 2, Acute Gastrectasis 1, Inguinal Abscess 1, Ischio-rectal Abseess 1, Stricture of Anus 1, Cholecystitis 1, Cirrhosis of Liver 8, Stomatitis 1, Pneumococcal Peritonitis 2, General Peritonitis 1.—Total 42.

Non-Venereal Diseases of the Genito-Urinary System :---

Nephritis 35, Pyelonephritis 3, Pyosalpinx 4, Renal Calculus 3, Cystitis 4, Stricture of Urethra 2, Enlarged Prostate 10.—Total 61.

Diseases of Pregnancy, Childbirth and the Puerperium :--

Septie Abortion 15, Puerperal Septicamia 2, Toxamia of Pregnancy 2, Eclampsia (Hamorrhagie) 1.-Total 20.

Diseases of the Skin and Cellular Tissue :--

Generalised Impetigo 2, Carbuncle of Neck 2, Cellulitis 2, Ulcer of Leg (Toxæmia) 2, Pemphigus 1, Phlegmon of Upper Lip 1, Whitlow of Finger (Septicæmia) 1.—Total 11.

Diseases of the Bones and Organs of Locomotion :--

Paget's Disease of Bone 1, Acute Epiphysitis (Pyamia) 1 .- Total 2.

Congenital Malformations :--

Congenital Heart Disease 1, Exomphalos 1.-Total 2.

Diseases of Early Infancy :--

Debility from Birth 5, Premature Birth 26, Subtentorial Hæmorrhage 1, Asphyxia Neonatorum 1, Atelectasis 1, Pemphigus Neonatorum 1.—Total 35.

Deaths from Violence :--

Burns 1, Cut Throat 1, Fractures 17, Poison 4, Injury to Skull 1, Wounds (Shock) 3. Total 27.

Ill-Defined Diseases :--

Marasmus (Premature) 2, Senile Gangrene 2.-Total 4. Grand Total 1,095.

MEDICAL WORK,

It is really surprising how little variation there is in the Medical work from year to year, and there is little that calls for special comment.

During the whole of the year, the Lodge Moor Hospital has been fully occupied with infectious diseases, and no cases of pneumonia could be treated there. Consequently the number in this hospital is very much greater than normal. Pneumonia has been, on the whole, less prevalent than in 1933, but owing to the fact that a considerable number were treated in Lodge Moor in that year, the total number of primary pneumonia treated (535) was 19 more than last year. The average in normal years is about 300. There was an increase of 113 in cases of Lobar Pneumonia, and a decrease of 94 in cases of Bronchopneumonia from last year. A very large number of cases of Lobar Pneumonia occurred amongst very old people, and the death rate was higher than we have ever had in this hospital.

There was a complete absence of true Influenza during 1934. Twenty-three patients were diagnosed Influenza but were really severe colds, and there was no mortality.

There was a slight rise in the number of cases of Tuberculosis of the Lungs from 47 to 65. Most of these cases were severe and 23 were too ill to transfer to a sanatorium, and died in the hospital.

The other medical work calls for no comment.

SURGICAL WORK.

Here again there has been little change to report in the character of the work during last year.

The number of cases of malignant disease still continues to increase. The total for 1934 was 295, against 267 for 1933, and 223 for 1932. Most of the cases were very advanced, but in spite of the increased number, the deaths fell by 15.

The arrangement whereby we take patients from the surgical waiting lists of the Royal Infirmary and Royal Hospital has continued throughout the year, and in the 12 months 513 cases, of whom 431 were from the Royal Infirmary and 82 from the Royal Hospital, were admitted.

A detailed list of operations is given in Table XLVI.

TABLE XLVI.

OPERATIONS.

Abdominal Operations :--

Appendicectomy 131, Caccostomy 1, Cholecystectomy 22, Cholecystostomy 10, Colostomy 13, Cholecystgastrostomy 1, Duodenal Diverticulum 1, Exploratory Laparotomy 2, Excision of Colon (Cancer) 5, for Tuberculous Peritonitis 1, Gastreetomy 1, Ileo-colostomy 1, Gastrojejunostomy 8, Laparotomy (Cancer) 3, Laparotomy (General Peritonitis) 4, Perforated Diverticulitis 1, Perforated Duodenal Uleer 5, Perforated Gastric Ulcer 2, Peritoneal Adhesions (Obstruction) 3, Pyloroplasty (Rammstedt) 1, Recidual Abseess (General Peritonitis) 2, Spleneetomy 1.—Total 219.

Operations for Hernia :--

Epigastric Hernia 1, Femoral Hernia 12, Incisional Hernia 5, Inguinal Hernia 124, Umbilical Hernia 9, Umbilical Hernia (Strangulated) 1, Femoral Hernia (Strangulated) 4, Inguinal Hernia (Strangulated) 6.—Total 162.

Amputations :--

Finger 3, Thigh 4, Toe 3.-Total 10.

Operations on Urinary Tract :---

Circumcision 13, Cystoscopy 17, Cystostomy 21, Nephrectomy 3, Nephro-lithotomy 8, Papilloma of Bladder 2, Periurethral Abscess 1, Pyelography 1, Stricture of Urethra 2, Urethral Carunele 2, Vesical Calculus 1.—Total 71.

Operations on Female Generative Organs :--

Amputation of Cervix 6, Abortion 286, Bartholin's Abscess 8, Cæsarean Section 22, Colpoperineorrhaphy 20, Curettage of Uterus 31, for Ectopic Gestation 9, Hysterectomy 28, Hysterotomy and Salpingectomy 2, Myomectomy 1, Ovariotomy 9, Post Colpotomy 5, Salpingectomy 38, Uterine Polypus 5.—Total 470.

Operations on the Breast :--

Abscess 12, Excision 5, Excision of Adenoma 3 .- Total 20.

Operations on Male Generative Organs :--

Cyst of Epididymis 1, Excision of Testis 2, Hydrocele 15, Prostatectomy 9, Undescended Testis 5, Varicoeele 7.—Total 39.

Operations on Bones and Joints :-

Dislocation 5, Excision of Cartilage 9, Excision of Coceyx 2, Excision of Ostcomata 4, Excision of Ganglion 2, For Hallux Rigidus 2, For Hallux Valgus 3, For Hammer Toe 5, Laminectomy 1, Manipulation of Joints 2, For Ostcomyelitis 6, Plastic Operation on Bones 1, For Prepatellar Bursitis 13, Tenotomy 1, For Septic Arthritis 2, Setting Fracture 14, Sequestrectomy 8.—Total 80.

Operations on Eye, Ear, Nose, Throat and Chest :--

Daeryocystitis 2, Mastoid Antrotomy 7, Mastoidectomy 3, Nasal Polypus 1, Retropharyngeal Abscess 2, Rib Resection for Empyema 32, Submucous Resection 1, Removal of Tonsils and Adenoids 250.—Total 298.

Excision of Various Tumours :---

Excision of Cancer of Tongue 1, Excision of Chondroma 2, Excision of Cyst 7, Excision of Fibroma 2, Excision of Lipoma 7, Excision of Mole 1, Excision of Papilloma 1, Excision of Parotid Cyst 1.—Total 22.

Operations on Rectum, Anal Canal, etc. :--

Excision of Rectal Polypus 3, Fissure in Ano 7, Fistula in Ano 17, Hæmorrhoids 67, Ischio-rectal Abscess 17, Sigmoidoscopy 5, Stricture of Rectum 1.-Total 117.

Miscellaneous :--

Curettage of Lupus 2, Dental Caries 84, Diathermy of Ulcer 2, Drainage of Abscess, Cellulitis, etc., 95, Dupuytren's Contraction 1, Excision of Scar 2, Excision of Ulcer 2, Embolectomy 1, Exploration of Parathyroids 1, Lumbar Puncture 1, Repair of Wound 3, Salivary Calculus 1, Skin Grafting 1, Thyroidectomy 3, Toilet of Burns 1, For Whitlow (Avulsion of Nail) 22.—Total 222. Grand Total 1,730.

CHILDREN'S WARDS.

The total number of children treated was 1,648, a decrease of 71 from the previous year.

There was an epidemic of Whooping Cough and Measles amongst young children, but we were only able to admit those with complications such as pneumonia, in each case. Forty cases of Whooping Cough and twenty-seven of Measles were treated during the year.

There is always a very large number of children under treatment suffering from skin diseases, many of whom are very resistant to treatment and occupy beds for a long time. The skin ward has been overflowing practically the whole of the year. Apart from this, there has been ample accommodation for children throughout the year.

MATERNITY DEPARTMENT.

In 1934, 564 women were confined in the hospital, an increase of 18 from the previous year. Of these 251 were primiparæ and 307 multiparæ. Of the 564 children born 490 were legitimate and 74 illegitimate. The number of legitimate births was higher than last year, and the illegitimate births show a decrease of 7.

PRESENTATIONS :---

Vertex Presentations .--- L.O.A. 313, R.O.A. 164, R.O.P. 12 unreduced, L.O.P. 10 unreduced.-- Total 499.

Breech Presentations.-L.S.A. 9, R.S.A. 8, R.S.P. 3, L.S.P. 1.-Total 21.

Footling Presentations 1.

Face Presentations.-L.M.A. 4, R.M.P. 4, R.M.A. 1.-Total 9.

Spontaneous Expulsion 14.

MULTIPLE PREGNANCIES :---

Twins 5.

The Placenta was removed manually in three cases.

Forceps were necessary in 28 cases.

Cæsarean Section was performed on 22 patients, and in 6 of these cases Salpingectomy was also performed. The indications for Cæsarean Section were .--

Contracted Pelvis 16, Cancer of Rectum 1, Spinal Caries 1, Ruptured Cæsarean Scar 1, Bicornuate Uterus 1, Extended Breech 1, Poor General Health 1.

The indications for Salpingectomy were :---

Previous Cæsarean Sections 3, Mental Deficiency 1, Spinal Caries 1, Cancer of Rectum 1.

Craniotomy was necessary in three emergency cases where the child was dead.

Labour was induced in 90 cases. Medical induction was successful in 68 cases, the indications being :---

Maturity 59, Toxæmia 2, Disproportion 3, Ante-partum Hæmorrhage 2, Fætal Death 1, Hydramnios 1.

Surgical induction was performed in 22 cases, the indications being :-

Toxæmia 4, Placenta Prævia 1, Dead Fœtus 2, Ante-partum Hæmorrhage 1, Maturity 9, Hydramnios 4, Disproportion 1.

Post-partum Hæmorrhage occurred in 30 patients, and there were ten cases of accidental hæmorrhage.

There were 12 cases of Placenta Prævia.

Of the labours 74 were premature, an increase of 30 from last year.

There were 35 women with Toxæmia of Pregnancy, and of these 3 developed Eclampsia.

One woman developed Mammary Abseess and one Puerperal Mania.

During pregnancy 11 women suffered from Bacillus Coli Pyelitis and required antenatal treatment.

No case of Puerperal Fever was notified during this year.

There were 22 cases of Puerperal Pyrexia notified, all of whom recovered. The causes of the Pyrexia were :---

Pyelitis 8, Mastitis 2, Various trivial conditions 12.

Other diseases associated with pregnancy were :--

Mitral Stenosis 21, Aortic Stenosis 1, Mitral Regurgitation 4, Chronic Bronchitis 3, Chronic Bronchitis with Myocarditis 1, Chronic Bronchitis with Asthma 1, Bronchiectasis 1, Tuberculosis 1, Anæmia 2, Lobar Pneumonia 2, Meningitis 1, Chorea 2, Syphilis 15, Chronic Nephritis 5.

During the year seven women died in the Maternity Hospital.

(1) One woman, aged 35, who had a Colostomy for inoperable cancer of the rectum in this hospital unfortunately became pregnant and was far advanced in pregnancy before she sought advice. In addition, she had a large cancer of the left ovary and a malignant mass completely obstructed the pelvis so that normal delivery was impossible. Labour commenced in the thirty-sixth week and Cæsarean Section was performed. The patient stood the operation well but unfortunately she developed acute ædema of the lungs and died on the fourth day.

(2) A primigravida, aged 38, was admitted for profound Toxæmia in the thirty-fourth week. She had had no previous ante-natal care. She was vomiting persistently and dehydrated on admission. Her blood N.P.N. was 89 m.gms.%. In spite of vigorous treatment she died undelivered. At the post-mortem examination, severe lesions were found in the kidney and liver typical of Toxæmia

(3) A primigravida, 34-35 weeks' pregnant, aged 31, was admitted in a state of coma with a history of fits, and died 15 minutes after admission. There was a typical history of Toxæma of pregnancy for some time, but she had had no ante-natal treatment. At the post-mortem she had a large pontine hæmorrhage and typical lesions of eclampsia were found in the liver.

(4) A woman, aged 31, with her third pregnancy, reported to the Clinic 22-24 weeks pregnant, suffering from mitral stenosis. She was admitted and kept strictly in bed, but did not improve. She was too ill to have the pregnancy terminated. She delivered herself easily of a stillborn premature child (36 weeks), but died five days after labour.

(5) A primigravida, aged 23, 37 weeks' pregnant, was admitted in a comatose conditions from severe toxæmia of pregnancy. She did not respond to vigorous treatment and died the day after admission not delivered. She had had no ante-natal treatment whatever.

(6) A booked case, an elderly primigravida, first attended the Clinic when 37 weeks' pregnant. The head was free, but could be made to engage. She had premature rupture of the membranes without pain and the vertex engaged in the R.O.P. position. She had practically no pain for two days, but the head gradually passed down into the pelvis. On the third day of labour the head was well down, was still R.O.P., and the os only admitted two fingers. On the fifth day of labour the cervix was only ‡ dilated, the head still in a posterior position, and the patient's general condition gave rise to alarm. It was decided to terminate labour and owing to the incomplete dilatation of the cervix the head was perforated to facilitate delivery. The patient's condition after the anaesthetic was not good and next day she developed signs of acute dilatation of the stomach and died of shock. A Cæsarean Section might have avoided this death had the chain of events been foreseen.

(7) A patient, aged 30, pregnant for the fifth time, was admitted to the Medical Wards of the Hospital 36 weeks' pregnant, suffering from severe anæmia and extreme debility. She was definitely mentally defective and was absolutely destitute. She was kept in hospital and treated on a balcony in the fresh air. After three weeks' she went into labour, the fætal heart not then being heard. She delivered herself without incident of a macerated fætus. She had no rise of temperature or sign of infection. On the third day she had a pulmonary embolism at noon from which she recovered, but on the same day at 7.30 p.m. she had a second, from which she did not recover. The post-mortem showed no evidence of sepsis to the naked eye or histologically. A pulmonary embolism was found.

There were 54 children stillborn, an increase of 11 from last year. The causes of the stillbirths were as follows :---

Prematurity 8, Ruptured Uterus 1, Revealed Ante-partum Hæmorrhage 7, Prolapse of Cord 3, Complicated Breech Presentation 3, Placenta Prævia 6, Following External Version 1, White Asphyxia 1, Craniotomy 3, Obstructed Labour 5, Maternal Syphilis 3, Monsters (Anencephalic, Hydrocephalic, etc.) 4, Delayed Labour 2, Intra-uterine Deaths 3, Sub-tentorial Hæmorrhage 4.

There were no cases of Pemphigus this year.

There was 1 case of Ophthalmia Neonatorum which completely recovered.

During the year 21 newborn children died in the Maternity Wards, a decrease of 2 from last year. The causes of death were :---

Prematurity 18, Atelectasis 1, Sub-tentorial Hæmorrhage 1, Obstructed Labour 1.

Artificial Feeding :-

During the year 15 children required to be artificially fed. The indications for artificial feeding were :--

Parted from Baby 1, Prematurity 1, Tuberculosis of Mother 1, Mother aged 47 1, Eclampsia 1, Mammary Abscess 1, Severe Mitral Stenosis 6, Chronic Nephritis 2, Viridans Septicaemia 1.

In addition, 15 babies had the breast milk supplemented.

The work of the Ante-Natal Department was much the same as last year. During the year 93 women were confined who had not attended the Ante-Natal Clinic at least once, and a very considerable number of these were genuine emergencies. It seems probable that the number of emergencies will always remain round about this figure, as in addition to genuine emergencies there will always be some women who fail to make provision for their confinement. During last year, 602 attended the Clinic, and the total attendances were 3,705, an increase of 510 from last year. During the year 35 women were given general anaesthesia in the Ante-Natal Department for various manipulations and examinations.

A high proportion of the women attending required pre-natal treatment, many for comparatively trivial things, only requiring instructions as to diet, extra nourishment and rest. The number of toxamias was considerably lower than the previous year, the figures being 32 against 73.

The attendances at the Post-natal Clinic still leave much to be desired, although there was a slight improvement from last year. 366 women attended, and made in all 509 visits to the Clinic. Every effort is made to induce patients to return for examination after discharge, but in spite of our efforts last year, 215 women failed to take advantage of the opportunities offered them.

GYNÆCOLOGY.

A great deal of the Surgery amongst women comes under this heading, and details are reported in the appropriate sections of Tables XLII and XLVI.

After a slight fall last year, I regret to state that the number of abortions treated has been a record. There were 337 patients admitted, an increase of 57 from 1933, and 10 more than the highest number previously recorded. The number of gravely infected cases was the highest we have ever had, and no less than 15 died, which also constitutes a record for this hospital. So long as the number of infected abortions continues at this high level, the maternal mortality rate for the City must be abnormally high.

Abortions alone accounted for 2 per thousand of the maternal mortality rate in Sheffield for 1934. The abortion mortality rate was 4.45%, the highest we have ever had. Considering the number of infected cases the mortality might well have been

higher, as an unusually large number of desperate cases recovered. Details of other Gynæcological work are set out in the appropriate sections of Tables XLII and XLVI.

VENEREAL WORK,

Very few true venereal cases were admitted again this year, and no comment is necessary. There were 8 cases of Gonorrhœa in addition to the 31 treated in the Ante-Natal Department, and 50 cases of Syphilis, a decrease of 1 and 6 respectively from last year. Almost all the cases of Syphilis were late cases.

During the year 844 Wassermann Tests were carried out, and 423 injections of Salvarsan substitutes were given.

MASSAGE AND ELECTRICAL DEPARTMENT.

The amount of X-ray work continues to increase, the number of patients examined showing an increase of 296 from 1933. The number of patients receiving therapeutic doses of X-rays showed a decrease.

A summary of the work done for the last four years is given below :----

	1931	1932	1933	1934
Skiagrams	 1,331	1,479	1.670	1,966
Treatments	 286	341	611	496

There was a decrease in the number of patients treated by Massage and also in the number of patients treated by Utra-Violet Radiation, compared with last year.

Massage	 	No. of Patients	 	94
		Treatments	 	2,407
Ultra-Violet Radiation	 	No. of Patients	 	28
		Treatments	 	688
Medical Diathermy	 	No. of Patients	 	12
		Treatments	 	158

PATHOLOGICAL WORK.

The amount of Pathological work required by the hospital has now grown to such an extent that some re-arrangement of the laboratory is urgent.

Dr. Jenkinson still continues to come three afternoons a week, but this is quite insufficient to cover the amount of Biochemical work necessary. Latterly the number of sessions has been increased to five, and in place of being afternoon sessions they now amount to practically the whole day. This change has been highly satisfactory, and we are now for the first time able to keep our biochemical and clinical pathological work up to date.

The present laboratory is hopelessly inadequate, and the whole question of the re-arrangement of the pathological work of the hospital is under consideration at the present time.

CASUALTY DEPARTMENT.

The Casualty Department was only in use for a very short time after the Opening Ceremony, and during this time 203 new patients were seen in this department, and the total number of attendances was 734.

NURSING STAFF.

The extension of the Nurses' Home has provided urgently needed accommodation with the result that we have been able to increase the number of nurses to a more adequate level. At the end of the year the total staff, excluding all administrative officers was 179, an increase of 27 from 1933.

An adequate number of suitable candidates still present themselves for appointment of probationer nurse, and the results at the examinations both of the General Nursing Council and the Central Midwives Board have been entirely satisfactory. During 1934, 23 passed the examination and were placed in the general part of the register of the General Nursing Council, and 13 nurses passed the examination of the Central Midwives Board.

HOSPITAL LIBRARY SERVICE.

This service has been continued as formerly, and gives the greatest satisfaction to the patients.

The librarians maintain their interest in the patients and in their special tastes in literature. Often at great inconvenience to themselves they bring books from other libraries when suitable volumes are not to be found in the hospital.

I wish to express again my appreciation of the services rendered to the hospital by the visiting librarians.

ALMONER'S DEPARTMENT.

(Report by Miss G. Gauge, B.A., A.I.H.A.).

Patients' Payments.

This work has continued as before, increasing inevitably with the increasing number of admissions, and now takes up the greater part of the Almoner's time.

After-Care Work, etc.

The total number of patients registered as receiving help of all kinds was 398. This help may be analysed as follows :---

					123
					17
nt					73
nt					19
					88
					78
	 nt nt 	nt	nt nt	nt nt	nt nt

Of the 123 patients for whom convalescent treatment was arranged, 55 were paid for wholly or in part by the After-Care Fund, the rest being assisted by Approved Societies, contributory schemes or other agencies.

The work has been carried out in co-operation with many outside agencies both voluntary and statutory as the following table shows .--

Referred to Maternity and Child Welfare Centre :--

For special visits, for ante-natal and post-natal patients, and supervision of infants discharged from the wards

41

" Sanitary Inspectors, Tuberculosis Dispensary and School Medical Officer :--For Housing, cleansing, etc., 6 .. Public Assistance Committee :--For extra nourishment, special diet, surgical appliances and general help 63 " Approved Societies :--39 For convalescent treatment and appliances 14 " Sheffield Hospitals' Council :--For convalescent treatment 53 " Works' Contributory Scheme :--3 For convalescent treatment " Queen Victoria District Nursing Association :--For home nursing 16

NETHER EDGE HOSPITAL.

Medical and Nursing Staff :--

L. P. DE ABREW, M.R.C.S., L.R.C.P.
ANN KIRK BLACK, M.B., Ch.B.
MARY C. O'CONNELL, M.B., Ch.B., D.P.H.
HILDA LINFORD, M.D., F.R.C.S.
IRENE HASTILOW, M.B., Ch.B., D.P.H.

Matron, Assistant Matron, Home Sister, Night Sister and 119 other Nursing Staff.

The hospital is divided into three sections. The Tuberculosis Section is under the care of Dr. H. Midgley Turner and his staff, and details of the work appear in his report. The details of the work of the Maternity Section, including Shirle Hill Annexe, are given in the report of the Maternity and Child Welfare Department. The General Medical Section is used almost exclusively for the treatment of chronic and incurable cases of both sexes, and consequently the patients remain in hospital for long periods and the turnover is small in comparison to the number of beds occupied.

The pressure on the beds for chronic cases was such that one floor of the Muxlow Block had to be utilised, and this has been full throughout the year. The number of such cases seeking admission continues to grow, and arrangements are now being made

The number of patients treated in the hospital during the year 1934, was 3,474.

Tuberculosis Patients		Men			302

MATERNITY AND CHILD WELFARE.

During the year, Dr. Ann Kirk Black, M.B., Ch.B., occupied the position of Assistant Medical Officer (Maternity).

The duties of the Assistant Medical Officer are divided between the Maternity Hospital at Nether Edge and the Ante-natal Clinic at the Centre.

Mr. John Chisholm, M.B., Ch.B., F.R.C.S., is Consulting Obstetrician to the Centre Ante-Natal Clinic. All cases of difficulty are referred to him by the Medical Officers of the Clinic.

The work at the Ante-natal Clinic at the City General Hospital, recently co-ordinated with the Central Clinic, continued to deal with the large number of abnormal cases which are referred to this department.

The number of expectant mothers who attended at the several Clinics in the City during 1934 was as follows :---

City General Hospital, 602 ; Maternity Centre, 2,854 ;

Jessop Hospital (Voluntary), 808 ; Total, 4,264.

The percentage of total notified births (live and still) represented by this number is $54 \cdot 1$. This was a considerable advance on the two previous years, when the percentage was 38 (1931), 47 (1932), and 53 (1933).

The whole of the ante-natal work is now being carried on by Medical Officers who are also engaged in active midwifery practice in the Municipal Hospitals.

The total number of lying-in beds, including ante-natal, available in the City at the end of the year was 165, made up as follows:—City General Hospital 70 beds, Nether Edge Hospital 32 beds, Shirle Hill Annexe 20 beds, Jessop Hospital (Voluntary) 43 beds, (approximatey 39% of the patients admitted to the Jessop Hospital are from outside the City).

In addition to the foregoing there are 23 beds at the Jessop (Firth Auxiliary) Hospital for Septie cases,

The Scheme for providing the services of a midwife in necessitous cases, which was adopted by the Health Committee in 1931, and which is now regarded as a very valuable part of the Maternity and Child Welfare Scheme in Sheffield, was found to work very satisfactorily and was again considerably extended during the year. This relieved to some extent the pressure on the accommodation at the maternity hospitals.

The maternity services were further augmented during the year by the opening in October of the new maternity block at the City General Hospital providing 32 lying-in beds and an Ante-natal Clinic.

During the year 1932 the value of Child Welfare work was greatly enhanced by the establishment of a Rickets Clinic. The result of treatment of these cases either as outpatients or out-patients plus hospital treatment has proved most satisfactory and has resulted in the practical elimination of the grosser type of deformity although there are still a fairly large number of cases of minor Rickets.

The work of the Orthopædic Clinic has been carried on successfully during the year and it is satisfactory to note that these cases are being dealt with at the earliest possible stage when the most permanent results are obtainable.

The Ultra Violet Ray Clinic has been found a very useful adjunct to the general Child Welfare and Rickets Clinic.

MIDWIVES ACT, 1902 and 1918.

At the end of the year 1934, there were 82 midwives in practice on their own account in Sheffield. Of this number 76 were hospital trained midwives and 6 were untrained midwives who were in bona-fide practice as such at the time of the passing of the 1902 Act.

There were 90 visits of inspection paid to midwives at their own homes during the year, and there were 536 interviews of midwives for various reasons connected with their work at the office of the Chief Inspector of Midwives. In accordance with the rules of the Central Midwives Board notifications have been received from midwives under certain circumstances.

There were 45 notifications of still births received from Midwives, 24 having reference to full time births, and 21 to premature births.

There were 530 notifications received stating that the midwife had been obliged to send for medical help. The reasons for sending for medical help, as far as could be ascertained, were as follows :---

1.—Abnormal presentations.

Breech 9; Arm, foot or shoulder 9; Transverse 1; Face 3; Right Occipito Posterior 40; Funis 1. Total 63.

2.-Causes affecting the child.

Convulsions 3; Debility 9; Asphyxia 6; Prematurity 24; Spina Bifida 8; Ophthalmia 25; Jaundice 2; Cleft palate or hare lip 2; Miscellaneous 27. Total 106.

3.-Causes affecting the mother.

Placenta prævia 5; Ante-partum hæmorrhage 31; Eelampsia 1; Post-partum hæmorrhage 31; Uterine inertia 55; Ruptured perineum 143; Contracted pelvis 3; Rigid Os or Perineum 4; Adherent placenta or membrane 14; Misearriage 6; Rise of temperature 22; Miseellaneous 46. Total 361.

In 15 cases the midwife sent in a notification that the mother intended to substitute artificial feeding for breast feeding.

REPORT ON ORTHOPÆDIC DISEASES (Non-Tuberculous)

BY C. LEE PATTISON, M.B., B.S. (Lond.), M.R.C.S., L.R.C.P.,

Medical Superintendent King Edward VII Hospital and Medical Officer in Charge

of the Orthopædic Clinic.

KING EDWARD VII HOSPITAL, RIVELIN.

During 1934 the following non-tuberculous orthopædic cases were discharged after treatment in this Hospital :---

Rickets		 	 	 	19
Anterior Poliomyelitis		 	 	 	5
Cerebral Spastic Paralys	is	 	 	 	8
Congenital Talipes		 	 	 	3
Meningo-Myelocele		 	 	 	2
Congenital Deformity of	Femu		 	 	1
Congenital Torticollis		 	 	 	1
Osteomyelitis of Femur		 	 	 	1
					40

After Discharge from Hospital these patients were kept under supervision and given treatment at the Orthopædic treatment clinics in the Child Welfare Centre.

THE RICKETS AND ORTHOPÆDIC CONSULTATION CLINICS.

These clinics are held at the Child Welfare Centre on Tuesday afternoons and Thursday mornings.

During 1934, there was a total attendance of 5,541 patients. The total number of new cases seen was 767 :---

Rickets		 	 	 	629
Anterior Poliomyelitis		 	 	 	9
Cerebral Spastic Paralysis		 	 	 	4
Congenital Talipes		 	 	 	15
Other Congenital Deformit	ties	 	 	 	18
Tuberculous Joints		 	 	 	7
Other Bone and Joint Les	ions	 	 	 	10
Cervical Glands Enlarged		 	 	 	29
Malnutrition		 	 	 	10
Unclassified		 	 	 	36
					767

RICKETS.

There is a very marked change in the type of rickets now compared with that seen in 1930. In that year when the special clinic for this condition was initiated, a very large number of children with very severe acute rickets were examined. At the present time, very few cases of acute disease are seen. It would appear that the preventive measures used at the clinic aided by the widespread teaching in dietetics by general medical practitioners and others has brought about the arrest of the disease before it becomes acute. At the same time the fact that there were 629 patients with rickets attending the clinic for the first time who had a mild degree of the disease does not allow us to contemplate the situation with complacency, especially as most of these patients showed some degree of deformity of their chest and evidence of avitaminosis. These factors together result in poor posture, and an unhealthy condition of the lining membranes of the body with the usual associated ill-health.

It is therefore important that we should use every effort to prevent the development of rickets in its very earliest stage, at a time when there is practically no evidence that the disease exists. This will mean the employment of prophylatic measures in as many babies as possible although they may appear quite healthy.

Most of the children with other crippling conditions were transferred to the Orthopædic treatment clinic; the remainder were passed on to the various organisations designed for dealing with the different types of case.

ULTRA-VIOLET RAY CLINICS.

These are held four mornings a week. 10,368 exposures were given during the year. An average weekly attendance of 203 patients—450 new patients in addition to old cases were treated by this means.

ORTHOPÆDIC TREATMENT CLINIC

This is held at the Child Welfare Centre on five afternoons and four mornings a week, under the direction of the Medical Superintendent of the King Edward VII Hospital.

The work is carried out by a Sister experienced in Orthopædic work, and having the diplomas of C.S.M.M.G., M.E., L.E.T., with the assistance of two fully qualified masseuses.

It is usually essential for each child to attend two or three times a week. The treatment at each session occupies a considerable time, as frequently several forms of treatment are needed for each individual.

The total attendances during the year were 3,873.

153 patients were treated and of these 75 were new patients. The patients were classified as follows :---

Dis	ease.			Total	Cases.	New Cases.
Anterior Poliomyelitis	4			 	39	7
Cerebral Spastic and			lysis	 ***	17	5
Congenital Talipes				 	25	15
Other Congenital Defe				 	14	12
Rickets (Knock-knees				 	26	15
Postural Defects				 	14	11
Myopathy				 	1	
Slipped Femoral Epip				 	1	_
Arthritis Deformans				 	1	
Tuberculosis of Spine	3			 	5	2
Tuberculosis of Other	Joint	s		 	4	4
Ataxy				 	2	1
Fractures and Disloca	tions			 	2	1
Spina Bifida				 	1	1
Torticollis				 	1	1
				-	153	75

It is hoped that by this means we shall be able to deal with the deformities of the children in the early hopeful stage before they are old enough to attend school.

All the patients are kept under observation in their homes by the Health Visitors, and reviewed periodically by the Medical Officer.

CENTRAL MATERNITY CLINIC.

REPORT BY ANN KIRK BLACK, M.B., Ch.B., Assistant Medical Officer for Maternity.

In reviewing the work of the year we find that there has been a further increase in the number of expectant mothers and post-natal patients to the clinics. It is estimated that over one-third of the expectant mothers of the City were seen at the Central Clinic.

The majority of the mothers attended the Clinic much earlier in the pregnancy than formerly, and usually made arrangements for the confinement on the first visit. The maternity beds at the Nether Edge and City General Hospitals were fully booked throughout the year. Towards the end of the year the number of maternity beds at the City General Hospital was increased by 32.

The Domiciliary Midwifery Scheme continued to work most satisfactorily and was much appreciated by patients and midwives.

The Post-natal Clinic, which became fully established last year, continued to work very successfully and the patients appreciated this added service. On leaving the hospital, each patient was given an appointed time at which to attend the Clinic for examination. In addition to hospital cases, doctors' and midwives' patients were dealt with at the Clinic.

The Post-Natal Clinic at the City General Hospital dealt with the patients delivered in that hospital.

The Birth Control Clinic was conducted on the same lines as last year, and in accordance with the regulations of the Ministry of Health.

ANTE-NATAL CLASSIFICATION OF CASES.

Normal Cases-Total 2,052.

Toxamia of Pregnancy-

Hyperemesis Gravidarum 9, Albuminuria 61, High Blood Pressure 29, Toxic Oedema 3, Eclampsia 2.—Total 104.

Hæmorrhages-

TNAT

Threatened Miscarriages 4, Miscarriages 62, Placenta Prævia 1, Ante-partum Hæmorrhage 14.—Total 81.

General Condition of the Mother-

Malnutrition 48, Anæmia 33, Malignant disease 1 .-- Total 82.

Contracted Pelvis-

Generally contracted pelvis 11, Rachitic flat pelvis 5, Simple flat pelvis 5, Deformity of pelvic outlet 1.—Total 22.

Diseases associated with Pregnancy-

Pyelitis 29, Lobar Pneumonia 1, Epilepsy 2, Tuberculosis 10, Syphilis 23, Thrombophlebitis 1, Mitral Stenosis 26, Glyeosuria 1, Mitral Regurgitation 2, Auricular Fibrillation 1, Encephalitis Lethargica 1, Chronic Bronchitis 6, Mental Deficiency 1, Chorea 3.—Total 107.

Tumours complicating Pregnancy-

Ovarian cyst 2, Cervical polypus 3, Gartner's cyst 1, Dermoid cyst 2 .- Total 8.

Conditions associated with the Fatus-

Malpresentation-

Transverse 32 (rectification performed in all the cases), Breech 203 (169 of the breech cases had external version performed).—Total 235.

Results of Confinements 1934.

The following summary of ante-natal cases dealt with during 1934 shows 2,883 charts completed :---

Cases brought forward from 1933	 	 	 802
New cases 1934	 	 	 3,020
Cases carried forward to 1935	 	 	 3,822 939
			2,883

The 2,883 charts show the following results-

Normal deliveries 2,480, Instrumental deliveries 113, Cæsarean Section 20, Craniotomy 1, Hysterotomy 2, Miscarriages 68, Evacuation of Uterus 9, Undelivered 1, Patients who were not pregnant 146, Left the City 25, Cases which could not be traced 18.

The Indications for Casarean Section were-

Disproportion 13, Repeat Cæsarean Section 4, Breech-extended legs 1, Deformed outlet 1, Double uterus 1.-Total 20.

Labour was induced in 98 cases, medical induction was successful in 69 of the cases but 29 required surgical induction.

Out of the cases who attended the clinic 6 were notified as Puerperal Fever, and 40 as Puerperal Pyrexia.

There were 31 sets of twins and 1 set of triplets.

Live and Still-born Babies.

2,557 babies were live-born-of these 103 were premature.

90 babies were still-born and the causes of still-birth were as follows :---

Maternal Toxæmia	 	 		 	7
Maternal Syphilis	 	 		 	3
Maternal Mitral Stenosis	 	 		 	2
Accidental Hæmorrhage	 	 		 	2
Prolapsed Cord	 	 	•••	 	4
Craniotomy	 	 		 	1
Difficult Breech delivery	 	 		 	3

Ruptured Uterus-pro	evious	Cæsarean	Section	 	 	1
Placenta Prævia			***	 	 	2
Monsters-Anenceph	aly, et	е,		 	 	11
Meningeal Hæmorrh	age			 	 	4
Sub-tentorial Hæmor	rrhage			 	 	3
Intra-placental Hæm	orrhag	e		 	 	1
Difficult instrumenta	al deliv	ery		 	 	7
Prematurity				 	 	19
Macerated Fœtus				 	 	12
Cause not evident				 	 	8

There were 66 neo-natal deaths from the following causes :---

Prematurity			 	 	 	33
Atelectasis			 	 	 	10
Meningeal Hæmorrh	nage		 	 	 	3
Sub-tentorial Hæmo	rrhage	1	 	 	 	1
Hydrocephaly			 	 	 	2
Convulsions			 	 	 	2
Congenital Heart D	isease		 	 	 	2
Asphyxia Pallida			 	 	 	1
Asphyxia Livida			 	 	 	2
Exomphalos			 	 	 	2
Congenital Atresia	of bile	duct	 	 	 	1
Sub-acute Volvulus			 	 	 	1
Pvæmia			 	 	 	1
Broncho-pneumonia			 	 	 	2
Debility			 	 	 	3

There were 8 maternal deaths from the following causes :---

Pulmonary Embolism with Phlebitis. Pulmonary Embolism with Mitral Stenosis. Infective Endocarditis with Mitral Stenosis. Eclampsia. Acute Inversion of Uterus with Obstetric Shock. Puerperal Sepsis. Post-partum Hæmorrhage with Obstetric Shock. Acute Gastrectasis.

One patient who attended the clinic on one occasion died undelivered in the Firth Auxiliary Hospital, Norton, from malignant disease.

DOMICILIARY MIDWIFERY SCHEME, 1934.

718 cases were allotted to district midwives under the Scheme.

Confinements attended at home by	midwives			674
Midwife attended, but patient was	subsequently	transferred,	during

Ovarian cyst					 			1
Gonorrhœa					 			1
Syphilis					 			1
Gynæcological cases					 			4

The majority of the patients received treatment at the Clinic. A few were sent into hospital for operation and two were transferred to the V. D. Clinic at the Jessop Hospital for Women for treatment.

BIRTH CONTROL CLINIC.

Total attendan	ee	 			 	27
Total new case	s	 	***	 	 	10

Of the 10 patients who attended the Clinic 8 received instructions and appliances. One patient, who was suffering from Pulmonary Tuberculosis, and another, who had pelvic deformity due to an old Tuberculous hip, were sent to the City General Hospital for sterilisation.

21 ante-natal patients, who were booked for confinement at one of the Municipal Hospitals, were sterilised for various reasons as follows :---

Malnutrition and Multiple Pregnancies 2, Contracted pelvis 5, Tuberculosis 4, Epilepsy 1, Hyperemesis Gravidarum 1, Low Mentality 2, Mitral Stenosis 4, Mitral Regurgitation 1, Chronic Bronchitis 1,

LABORATORY TESTS.

The numbers of specimens submitted were—Blood for Wassermann Tests 323, Urine for Bacteriological examination 60, Throat swabs for Bacteriological examination 14, Vaginal swabs for Bacteriological examination 15, Smears for Gonococcus 18, Urine for Aschheim Zondek Tests 20.—Total 450.

NETHER EDGE MATERNITY HOSPITAL.

The work at the Nether Edge Maternity Hospital has been conducted on the same lines as formerly.

The number of cases admitted to the hospital was 872. There were 761 women confined and of this number 500 were primiparæ and 261 were multiparæ.

During the year 177 ante-natal patients were admitted for treatment, investigation or examination under anæsthesia. This branch of preventive medicine has proved most satisfactory as only 3 cases developed serious symptoms of toxæmia of pregnancy, all of whom eventually did well.

On discharge from hospital patients are advised to attend the post-natal clinic at the Maternity and Child Welfare Centre. An appointment is made for examination six weeks after the confinement.

The following gives a short account of the work done during the year :---

Confinements in the hospital during each of the following years :---

March-December	1927	 	56
Year	1928	 	239
",	1929	 	596
	1930	 	579
"	1931	 	715
.,	1932	 	773
"	1933	 	706
"	1934	 	761

There were 177 ante-natal patients admitted for treatment with the following results:

Toxamia of Pregnancy :---

- 44 cases of Albuminuria—4 improved with treatment and were discharged to the elinie, 2 left hospital against advice, 38 remained in hospital for confinement (of these 29 had normal full time confinements, 6 had normal premature confinements, 1 developed intra-partum eclampsia and had a forceps delivery for P.O.P. presentation, 1 had forceps delivery for delayed labour, and 1 had surgical induction for cessation of gestation).
- 9 cases of High Blood Pressure-6 improved with treatment and were discharged to the elinic, 3 remained in hospital and had normal full time confinements.
- 16 cases of Hyperemesis Gravidarum (including Hyperemesis in the later half of pregnancy)—all recovered completely and were discharged to the Clinic.

Diseases associated with Pregnancy :---

- 9 cases of Pyelitis—5 improved with treatment and were discharged to the Clinie, 1 was transferred to the City General Hospital for special treatment (indwelling ureteric catheterisation), 3 remained in hospital and had normal full time confinements.
- 1 case of Synovitis of Knee-the patient remained in hospital for confinement.

22 cases were admitted with minor ailments for treatment or investigation.

4 patients were admitted for minor operations, 3 for removal of cervical polypus and 1 for excision of vaginal septum.

Condition of Mother.

4 cases of Malnutrition, all improved with treatment and were discharged to the Clinic. 3 cases of Anæmia, all improved with treatment and were discharged to the Clinic.

Conditions associated with the Fatus and Pregnancy.

- 10 cases of Ante-partum hæmorrhage (slight), 2 improved and were discharged to the Clinic, 8 remained in hospital and had normal full time confinements.
- 32 cases of Breech presentation were admitted for version under anæsthesia, 22 were successful, 6 failed version and in 4 cases version was not attempted for various reasons.
- 2 cases of Transverse presentation were admitted for rectification and both were successful.
- 2 cases of Hydramnios.
- 2 do. Retroversion of Uterus.
- 2 do. Missed Abortion for evacuation of Uterus.
- 2 do. large foetus-patient admitted for induction.
- 5 do. post-maturity-patient admitted for induction.
- 1 case of Cessation of Gestation-patient admitted for termination of pregnancy.
- 8 patients were admitted for examination under anæsthesia on account of high head.

Miscellaneous.

- 39 patients were admitted to hospital as they thought that labour had started, 21 remained a few days and were then discharged to attend the Clinic again, the remainder stayed in hospital until after the confinement.
- The confinements in hospital show the following results :--

Normal deliveries	 	 	 	 743
Forceps deliveries	 	 	 	 18
Miscarriage	 	 	 	 1
Evacuation of uterus	 	 	 	 1

There were 38 premature children born, which is a decrease of 17 on last year.

The principal obstetrical abnormalities were :---

I	Breech presentation	1							 17
S	sets of twins								 12
S	sets of triplets								 1
I	Persistent Occipito	Poste	erior	Presenta	ation				 8
I	Iydramnios						***	***	 2
3	fissed Abortion								 1
0	lessation of Gestat	ion							 3
H	Post-maturity								 5
I	rolapsed cord	***							 2
H	Brow presentation								 1
F	ace presentation								 2
3	Iarginal Placenta	Prae	via		***	***			 1

The placenta was manually removed in 5 cases.

There were 758 live births (including twins and triplets). There were 19 stillbirths, which is a decrease of 19 on last year, of this number 12 children were premature.

The stillbirths were due to the following causes :---

Prolapse of cord 1, Maternal Toxæmia 2, Accidental hæmorrhage 1, Brow presentation (version) 1, Monsters (Anencephaly Exomphalos) 6, Meningeal Hæmorrhage 4, Prematurity 2, Macerated Foetus 2.—Total 19.

During the year 14 new born children died in the maternity wards. The causes of death were :—Atelectasis 4, Prematurity 3, Meningeal Hæmorrhage 2, Congenital Atresia of bile duet 1, Broncho-pneumonia 2, Hydrocephalus 2.

There were 9 cases of Puerperal Pyrexia notified, all of whom recovered, and 1 case of Puerperal Fever, which proved fatal.

During the year there were 2 cases of Ophthalmia Neonatorum, both cases recovered without injury to the eyes.

There were no cases of Pemphigus Neonatorum.

There were 4 cases of Broncho-pneumonia in infants notified and 2 recovered.

During the year 2 patients died in the maternity wards, one from Post-partum Hæmorrhage and Obstetric Shoek and the other from Puerperal Sepsis,

Three mothers developed mammary abseess.

Five ante-natal patients were transferred to the City General Hospital for special treatment. One mother was discharged to the Winter Street Sanatorium on the tenth day of the puerperium with pleural effusion.

Two babies were sent to the Children's Department of the City General Hospital for treatment.

744 babies were discharged from hospital and of this number 448 were entirely breast fed, 213 were having breast and supplementary feeds and 83 were artificially fed.

MATERNITY AND NURSING HOMES.

The following are the particulars with regard to Maternity and Nursing Homes in Sheffield :----

1. Number of applications for registration during 1934 :---

For Maternity Ca	ases .						 _
For Maternity, M	edical and	l Sur	gical	Cases			 1
For Maternity and	d Medical	Case	8				 1
For Medical Case	s .						 1
2. Number of Homes reg	istered du	iring	1934				 3
3. Number of orders ma	de refusir	ig or	canee	lling r	egistrat	ion	 -
4. Number of appeals a	gainst su	ch or	lers				 -

(a) confirmed on a	appeal .						 _
(b) disallowed							 -
6. Number of application (Hospitals)	ns for exe	mptio	n from	m regis	tration		 4
7. Number of cases in w	hich even	ntion	has h	een			
(a) granted							4
(b) withdrawn							 -
(c) refused							

DAY NURSERY.

The Day Nursery, Edward Street, affiliated with the Association of Day Nurseries, was formed for taking charge of young children of mothers who are obliged to work away from home, or who are temporarily laid aside by illness.

Infants between the ages of one month and five years are admitted every day (Saturdays and Sundays excepted) from 7.30 a.m. to 7 p.m., during which time they are fed and cared for by suitable nurses. A charge of 6d, per day for each child, or 2/- per week of 5 days, is made towards the cost of food; if two children are received from the same home a fee of 9d, per day is charged. Numbers have increased with the increase in employment, notwithstanding removal to housing estates of families whose houses have been demolished under the slum clearance scheme. The distance has not been a deterrent.

In the Nursery there are 20 cots and 26 stretchers, and they have accommodation for 40 children. The accommodation was not fully used during the year, unemployment having kept many mothers at home. The staff at present consists of Matron and four nurses, who also do the housework, and a Medical Attendant who visits at least once per week.

The babies are weighed and charts are kept containing records of progress. The charts are supplied from the Maternity and Child Welfare Centre.

It is believed that by this system many children are saved from accidents. Habits of cleanliness are inculcated ; and a moral influence is exercised over both child and parent.

With the exception of the 6d, per day paid by the mothers and a grant out of the General Exchequer Contribution of the Ministry of Health, the Day Nursery is supported by voluntary contributions.

The open-air Shelter, recently creeted, has greatly facilitated the work.

Institutional Provision for Unmarried Mothers, Illegitimate Infants and Homeless Children.

Diocesan Babies' Home (Church of England), East Bank Road, admits illegitimate children upon payment, the children being admitted at birth and discharged at two years of age. There are 31 beds, and accommodation is also provided for 4 nursing mothers.

St. Agatha's Home (Church of England), Burngreave Road, is a Home for unmarried expectant mothers and has accommodation for 14. They are transferred for confinement to the Jessop Hospital for Women or to the City General Hospital, afterwards returning with the baby to the Home for a short period. The babies are then transferred to the Diocesan Babies' Home with the object of work being found for the mothers.

St. Veronica's Home (Roman Catholic), Barnsley Road, receives infants only, but in emergency unmarried mothers and their infants are admitted.

The Salvation Army Home, Kenwood Park Road, admits various classes of cases including homeless children.

The Public Assistance Institution, belonging to the Sheffield City Council receives expectant unmarried mothers.

Homeless children are received by the Sheffield Children's Homes which are now administered by the Health Committee of the City Council, and also into the Sheffield branch of Dr. Barnardo's Home.

MATERNAL MORTALITY.

In connection with the investigation of Maternal Mortality Mr. Miles H. Philips, M.B., F.R.C.S., Professor of Obstetrics and Gynaecology, voluntarily undertakes this work, and makes himself responsible for the detailed reports sent to the Ministry of Health on individual cases.

His interest and advice continues to be of great value in connection with the Maternity Services.

CHILDREN'S HOMES.

The administrative scheme under the Local Government Act, 1929, made by the City Council on the 4th September, 1929, provided that the functions of the Public Assistance Committee in so far as related to the maintenance of poor children apart from their parents should be discharged on behalf of and subject to the general direction and control of the Public Assistance Committee by the Health Committee.

As regards finance, the accounts belong to the Public Assistance Committee and are therefore subject to audit by the Ministry of Health. For this reason they are kept separate from the accounts of the Health Committee. The Health Committee acts as agent of the Public Assistance Committee in the matter of administration.

With regard to the buildings in which the work of maintenance of Poor Law Children apart from their parents is carried on, they are as follows :----

Herries Road (Headquarters), with accommodation for 169 children. Scattered Homes (16 in all), with accommodation for 174 children. Fulwood Cottage Homes, with accommodation for 295 children,

The total accommodation is for 638 children.

The Nursery Block, which is situate at Headquarters, was part of the Firvale House, but was transferred at the time of the change over. The block has accommodation for 54 children and 14 adults. All children under three years of age for whom the late Guardians were responsible were placed in this block. On attaining the age of three years they are transferred to one of the Children's Homes.

The work in connection with the Boarding-out of Children which came over to the Health Committee as part of the transferred functions of the late Board of Guardians still remains to some extent under the surveillance of the Public Assistance Committee. A statement with regard to the work will be found following that relating to the work of the Children's Homes in general.

The following are the reports of the Superintendents of the Homes for the year 1934 :---

 Report of the General Superintendent of the Herries Road and Scattered Homes —Mr. W. F. Hastie.

Number of children in the Homes on 1st January, 1934	 	293
Number of children in the Homes on 31st December, 1934	 	301
Number of children admitted during the year	 	462
Number of children discharged during the year	 	454
Number of children transferred to Fulwood Cottage Homes	 	52
Average number of children resident in the Homes	 	300

CHILDREN.

The good standard of health of the children has been maintained during the year, and the reports of the Medical Superintendent and District Medical Officers have continued to be most satisfactory.

SPORT AND ENTERTAINMENT.

The children have again taken advantage of the sports facilities provided and have taken part in organized games, etc. Football, cricket, and tennis have been the favourites, whilst during the winter months physical training has been carried out in the recreation hall.

The children have continued to be successful in gaining certificates, etc. at school for swimming, life saving, etc. There has been an exceptional and gratifying number of learners, but no swimming gala was held this year as the numbers of advanced pupils did not justify it.

Entertainments and concerts were continued throughout the winter months in the recreation hall, and our thanks are due to the many kind friends who have come along and provided happy evenings for the children. Many invitations also were received for the children to attend outside concerts, etc.

The children in the Heeley Bank and Duchess Road Homes were again invited to the Annual Sports by the City Surveyor's Department Sports Club, and were again very successful in many of the events.

A tea and social was held by the Herries Road branch of the G.F.S. on 15th November, the refreshments being kindly provided by two ladies.

The children have continued their membership of the various branches of Boy Scouts, Girl Guides, and similar organizations throughout the City, and have benefited by their associations with other children.

EDUCATION.

The attendances at school have continued to be good and reports from the Head Teachers very satisfactory. 3 children attended Secondary Schools, 1 the Junior Technical School, 1 the Pupil Teacher Centre, and 3 Intermediate Schools. Two boys, George Green and Edwin Shuttleworth, qualified for admission to Secondary Schools.

Harry Crawshaw, attending the Firth Park Secondary School, accompanied the School Choir on their trip to Belgium in August.

Henry Jones, in a situation as Research Laboratory Assistant continued to be successful in his Evening School studies and was awarded an Evening School Leaving Scholarship tenable at the Evening Classes of the University for a course in Metallurgy (Value £2 with remission of tuition fees for two years).

The Herries Road Band of Hope was successful in winning the " Palmer Cup."

HOLIDAY CAMP.

229 children and 27 staff went to Withernsea again in August for the Annual Holiday camp. All had a splendid time and good weather prevailed. We are again indebted to a member of the Committee for providing additional donkey rides, etc. for the children.

TRAINING.

The boys and girls who had left school continued to receive useful training in the tailor's and shoemaker's shops, garden, sewing-room, and hand-laundry, before being placed into situations, and 28 situations were found for them during the year.

One boy was transferred to the Training Ship " Exmouth " to receive training for a sea career.

AFTER-CARE.

Eight boys and twelve girls in situations attained the age of 18 years, and their bank books with credit balances amounting to a total of $\pounds 137/0/7$ were handed to them. At the end of the year 22 boys and 19 girls were still in situations and under the control of the Committee. They are visited in their situations by the General Matron and myself and they regularly revisit Home, there being 984 recorded visits during the year.

The Annual Christmas Party was again a great success and is a function to which they all look forward with much pleasure. It is very gratifying to meet many who are now away from Sheffield in situations, and all thoroughly enjoy renewing their old associations.

STAFF.

I regret to record the retirement, owing to ill-health, of Miss A. Gilbert, who for many years has been one of our most valued foster mothers.

GENERAL.

Arrangements were made for the children attending schools to have a bottle of milk each morning in accordance with the scheme and this is continuing.

(2) Report of the Superintendent of Fulwood Cottage Homes-Mr. L. Hildreth.

Number of children resident 1st January, 1934	 	228
Number of children admitted during the year	 	100
Number of children discharged during the year	 	88
Number of children resident 31st December, 1934	 	240
Average daily number of children resident during the year	 	238

HEALTH.

The general health of the children during the year has been excellent. Satisfactory reports have been received from the Medical Officer after quarterly examination. During the latter part of the year six cases of Scarlet Fever were transferred to Lodge Moor Hospital. The Dental Clinic of the School Medical Service submitted excellent reports on the children's teeth.

EDUCATION AND TRAINING.

The attendances at the week-day (96%) and Sunday Schools have reached an excellent standard. The masters and teachers in each class of school maintained their usual interest in the children as shewn by each child's term report. It is pleasing to report each child is taking advantage of the educational opportunities offered.

All girls attending Domestic Science centres have done excellent work, several certificates of merit being obtained.

The various branches of industrial training have shewn satisfactory results. 3,179 new articles of clothing and house linen have been cut out and made up for instruction in each training department.

A similar number of situations for boys and girls have been obtained as in 1933, viz. 47, the situations being in the following categories :-- Clerks, Mercantile Marine, Machinists, Mechanics, Butchers, Assistant Storekeepers, Gardeners, Farm Workers, Tailors and various branches of domestic work.

"AFTER-CARE" work increased during 1934 ($33\frac{1}{2}$ % increase on 1933), 83 boys and girls were regularly visited and good reports obtained generally as to welfare and progress. The total of bank balances at the year end of children in situations was approximately £212. 26 banking accounts (Total credit £165) were handed to boys and girls over 18 years of age, shewing individual balances as follows :—£22/10/0, £21/6/2, £10/6/5, £8/4/7, £8/1/1, £7/12/8, £7/6/6, £6/8/11, £6/7/1, £5/19/0, £5/15/6, £5/9/4, £5/2/3, £5/0/9 £4/14/6, £4/12/0, £4/5/3, £4/4/11, £3/15/6, £3/14/11, £3/12/2, £2/14/5, £2/4/0 £2/2/10, £1/15/6, £1/9/0.

1,064 visits to the Homes were made during 1934 by old boys and old girls.

RECREATION.

Continued interest has been shewn in all form of sport, both indoor and outdoor, the football and cricket teams making satisfactory progress. The "Maclaurin" Football Shield, which is competed for annually by the eight boys cottages, was won by the team representing cottage No. 1.

The "Nunn" Swimming Trophy, awarded each year to the girl making most progress in swimming was won by Evelyn Gray, and the "Deacon" Swimming Trophy, awarded under similar conditions for boys, was won by Peter Roys. Proficiency certificates of the Royal Life Saving Society were obtained by certain children, i.e., Distance, Diving and Life Saving. In addition to these certificates, merit medals for swimming were awarded. A keen but friendly spirit has been shewn by all competitors in the various branches of sport.

Literature as provided by the Public Libraries Committee gave great pleasure and interest to the children. The books forming our circulating library were continually changed.

The Boys' Choir and Homes' Concert Party gave an entertainment during the Christmas festivities, and during the winter months numerous entertainments and gifts were enjoyed through the kind offices of various parties and friends.

OLD BOYS AND OLD GIRLS.

It is 30 years since the Homes were opened, and 3,768 children have passed through during that period. Out of this number 620 have been placed in situations. It is a pleasure to report that the majority so placed have done well, and the appreciation shewn by the old boys and old girls for what has been done for them by the Committee is realised by the number of visits paid to "Home." The number of visits made annually during the past five years is as follows:—1930—450, 1931—1,042, 1932—1,245, 1933—987, 1934—1,064.

The OLD BOYS' AND OLD GIRLS' ASSOCIATION held the 4th Annual Re-union on the 28th December, 1934, a party of 150 members and visitors present spending a very pleasant evening. The Association continues to form a link between all the old boys and old girls and their old home. The attendance at the annual re-union increases each year.

GENERAL.

Admissions and Discharges for 1934 were higher than 1933 as follows :--Admissions 1933-50, Admissions 1934-100. Discharges for 1933-73, Discharges for 1934-88.

The annual camp week was held in August at Withernsea. Fine weather was a feature of the week's holiday, making camp a pleasure for both children and staff. The usual camp sports were held and keen competition was shewn by all competitors.

There were three changes on the staff during 1934, affecting the staff in charge of cottages in two cases only.

1934 like 1933 proved a good year in affording opportunities to place boys in situations, and I am pleased to report that such situations were of a more varied character.

Appreciation was expressed in connection with the Committee's work on behalf of the children by various parties visiting the Homes during the year.

Report of the Inspector on Boarded-Out Children-Miss H. Trickettfor the Year 1934.

The number of children Boarded-out during the year 1934 in the Sheffield area was 48, one of whom removed into the area of the Derbyshire County Council, and one child from the Rotherham area was removed back to Sheffield.

There were 12 children Boarded-out beyond the Sheffield area including the two mentioned above. These non-resident children were paid and supervised on behalf of the Sheffield Authority, by the Authority in whose district they resided. One boy was admitted to the David Lewis Epileptic Colony.

The amount paid during the year for maintenance of children in the Sheffield area was $\pounds 658/12/3$, and for elothing $\pounds 115/1/9$. There were 528 visits made to the homes of these children. The amount paid for those outside the Sheffield area was $\pounds 184/13/10$, and for elothing $\pounds 30$.

Under the Widows, Orphans and Old Age Contributory Pensions Act, 1925-29, the sum of $\pounds 76/17/6$ was received in respect of Boarded-out children and the sum of $\pounds 13$ was received in respect of one boy resident in a Non-Poor-Law Home.

Of these Boarded-out cases, 7 boys and 12 girls were working and some assistance was given. Later, 5 became entirely self supporting. Three boys and two girls attained the age of 16 years and Boarding-out allowance consequently ceased. These children were employed at Steel works—in the office and works, Groeer's shop, Cutlery manufacturers, Co-operative Society, Baker's shop, Tool manufacturers, Dressmakers and Electroplate works and as daily domestic.

The health of the children was very good throughout the year, there having been nothing of a grave nature to report. The District Medical Officers attended to a few minor ailments.

The houses were well kept and clean, and the children were treated by the foster parents as their own family. The clothing provided was satisfactory and the money was well spent. The Ministry of Health Inspector visited Sheffield during the year. She inspected 8 homes and expressed herself as highly satisfied with the conditions.

Dental treatment was received at the School Clinic and the children were encouraged by their foster mothers to take care of their teeth.

A School report was received quarterly in respect of each child and these were excellent with respect to progress, conduct and general appearance.

One girl attended the Central Secondary School and another girl the Notre Dame High School, studying to be a teacher. Both passed the Matriculation Examination and very good reports were received in each case. As these girls had attained the age of 16 years, permission was asked and granted by the Ministry of Health for Boarding-out allowance to be continued.

The children were taken by their foster parents in the summer holidays to the sea for one or two weeks or for days, and some went into camp.

There were 3 non-settled children Boarded-out in Sheffield belonging to Staffordshire County Council. The foster mother was paid and the case supervised by the Inspectors of the Local Authority on behalf of Staffordshire. Later these children were admitted to their own Children's Homes, Nr. Lichfield.

In addition to the work in connection with Boarded-out children 155 visits were made to the homes of applicants for the custody of children, or children to be allowed to visit their homes, or visits to the children in the Homes, both in Sheffield and beyond, also to the homes of applicants for adoption of children in the custody of the Corporation for the purpose of enquiry as to the suitability of the applicant and the home concerned.

PREVENTION AND TREATMENT OF TUBERCULOSIS.

REPORT BY H. MIDGLEY TURNER, M.D., D.P.H.,

Clinical Tuberculosis Officer and Medical Superintendent of City Sanatoria.

MEDICAL STAFF :---

Clinical Tuberculosis Officer and Medical

Superintendent of the City Sanatoria. II. MIDGLEY TURNER, M.D., D.P.H.

Assistant Tuberculosis Officers.

The number of primary notifications of Tuberculosis of the Lung received during 1934 was 1,274 and Other Forms of Tuberculosis 211, giving an incidence rate per 1,000 of the population of 6 for Tuberculosis of the Lung and 0.41 for Other Forms of Tuberculosis.

Table XLIX shows the number of new cases notified, deaths and non-notified deaths at the various age periods.

TABLE XLIX.

† including one military case.

* including six military cases.

§ including four military cases.

A comparison of the notifications by age groups with notifications in similar age groups last year shows that the decrease in new cases is fairly evenly spread over the age groups up to the age of 35 years, after this age the figures do not appreciably differ from those of 1933.

In 282 of the 1,274 cases of Tuberculosis of the Lung, tuberele bacilli were found in the sputum, and the advanced nature of the disease when it has reached the infectious stage is well shown by the fact that 75 of these 282 cases died before the end of the year. These infectious cases, therefore, cannot be considered early Tuberculosis from any point of view.

The number of notifications received during 1934 shows a decline on the previous year, but this figure has never been considered a criterion of our position as regards Tuberculosis. The principal point is the proportion of cases notified in the early and non-infectious stage of the disease, and if a diagnosis is made at this stage, and treatment given, in a very large proportion of the cases the disease will become permanently arrested. In $22 \cdot 14$ per cent. of the 1934 notifications tubercle bacilli were found in the sputum. A large proportion of the remaining $77 \cdot 86$ per cent. of the cases were notified in the early and curable stage of the disease. Our work is, therefore, directed towards a decrease in the number of infectious cases amongst the primary notifications, and establishing a diagnosis of Tuberculosis in the earliest stage of the disease. It is consequently very gratifying to record that the number of new infectious cases during 1934 was only 323 as compared with 377 in 1933, and 402 in 1932. Such a decrease in new infectious cases when accompanied by a decrease in the Death-rate from Pulmonary Tuberculosis is an indication of a real decrease in Tuberculosis in the City.

The total number of notified cases on the Register on December 31st, 1934, was 6,893. Of these 1,399 (including eleven children under 15 years of age) were infectious cases, i.e., cases in which tuberele bacilli have been found in the sputum at some period of the illness. No case which at any time has been found to be infectious has so far been removed from the register as " cured."

94-3 per cent. of the cases of Tubereulosis of the Lung notified during the year were examined by the Dispensary Staff. This figure shows that the patients are anxious to receive the treatment provided by the municipality. Of the remaining 80 cases, 23 were receiving treatment in Institutions other than Corporation Institutions at the time of notification and of the other 57 cases 29 did not desire treatment, and 28 died prior to or within 14 days of notification.

The primary investigation of all notified cases is carried out by the Male Inspectors.

The Health Visitors re-visit the homes of the notified cases of Tubereulosis of the Lung, and make reports to the Clinical Tuberculosis Officer, thus keeping him in touch with the home conditions of patients whether they are attending the Dispensary or not.

The total number of such visits paid during the year was 13,771. The Clinical Tuberculosis Officer receives periodical reports on the visits made by the Health Visitors and reviews the whole of the cases on their visiting lists.

The number of deaths from Tuberculosis of the Lung of Sheffield residents occurring in the City during the year was 327, which is equal to 25.37 per cent. of the notifications received. To this number must be added 5 deaths of Sheffield residents occurring outside the City.

The Death-rate for Tuberculosis of the Lung is 0.640 per 1,000 of the population and for Other Forms of Tuberculosis is 0.116, giving a total Death-rate for the City for All Forms of Tuberculosis of 0.756. This compares with a Death-rate of 0.635 for Pulmonary Tuberculosis and 0.764 for All Forms of Tuberculosis, for England and Wales.

Thus after two years of slight upward fluctuation the Death-rate both for Pulmonary and for Other Forms of Tuberculosis shows once again an appreciable reduction. This reduction is especially gratifying coming as it does after several years of extreme depression and poverty in the City.

TABLE L.—Deaths from Tuberculosis of the Lung occurring during 1934, divided into sex and age groups, showing whether sputum examined and result.

Table L shows that the diagnosis was confirmed by tubercle bacilli being demonstrated in the sputum in 86.5 per cent. of the cases.

It is very desirable for statistical purposes that the sputum of every case, even though advanced, should be examined.

Table LI shows the length of time between notification and death of the 327 cases of Sheffield residents dying in the City during 1934.

From this Table it will be seen that 15.90 per cent. died before or within one month of notification, and 39.76 per cent. of the total deaths occurred within one year of notification. These figures are better than the corresponding figures for 1933, but it will be appreciated that the percentage of cases dying within one year of notification is still large.

The percentage dying prior to, or within one month of notification is still large. It must be recognised, as regards tuberculosis, that in a certain proportion of the cases the disease runs a rapid course.

Of the 47 cases who had been notified for six years or over, nine lived six years, six lived seven years, five lived eight years, two lived nine years, five lived ten years, five lived twelve years, two lived thirteen years, one lived fourteen years, one lived fifteen years, two lived sixteen years, three lived seventeen years, one lived eighteen years, three lived twenty years, and one lived twenty-one years. In 24 of the 47 cases who lived six years and over after notification, tubercle baeilli had been found in the sputum at least six years previously, viz., in nine cases six years previously; in one case seven years previously; in two cases eight years previously; in one case nine years previously; in one case ten years previously; in three cases eleven years previously; in one case fifteen years previously; in one case seventeen years previously; in two cases fifteen years previously; in one case seventeen years previously; in one case fifteen years previously; in one case seventeen years previously.

The Dispensary, situate in Queen's Road, is open on week-days from 9.0 a.m. to 5.0 p.m., except on Saturdays, when it is open from 9.0 a. m. to 12.30 p.m., and patients are seen on Mondays, Wednesdays and Thursdays in the morning and afternoon, on Tuesdays and Fridays in the afternoon, and on Saturday mornings. There are also two evening sessions, Tuesday and Friday, from 6.0 p.m. to 8.0 p.m., for the convenience of patients who are working. There is no branch Dispensary.

PUBLIC HEALTH (PREVENTION OF TUBERCULOSIS) REGULATIONS, 1925.

One case of Tuberculosis occurred in a Milk Handler during 1934. This man is still under treatment in Sanatorium and will not resume work as a dairyman.

Public Health Act, 1925, Section 62.

No action was taken under this Section with regard to compulsory removal to hospital.

ATTENDANCES AT THE DISPENSARY.

Patients who attend at the Dispensary may be divided into (a) Old Cases and (b) Cases seen for the first time.

OLD CASES-NOTIFIED.

The total number of notified cases who attended the Dispensary for treatment and supervision during the year was 6,140 and on December 31st, 1934, there remained on treatment and supervision 5,265. In addition 1,628 cases remained on General Supervision. The number of attendances of notified cases made during the year was 35,906.

Every effort is made by the Dispensary Staff to keep in touch with the notified cases.

NEW CASES.

Table LII gives particulars of the cases at the time of their visit to the Dispensary and the result of the primary examination arranged under three headings, viz., (a) Cases notified prior to their first attendance at the Dispensary; (b) "Suspects"; (c) "Contacts."

The large figure of 2,489 sent to the Dispensary for diagnosis shows that the medical profession in Sheffield continue to make full use of the Dispensary. In 93.88 per cent. of the cases notified during life the patients were sent to the Dispensary prior to notification. It is in this way that we find our early and curable cases. It is gratifying to find that the medical profession in Sheffield recognise the importance of early diagnosis, and to know that the co-operation between all members of the medical profession and the Dispensary is so good.

The ultimate diagnosis of these suspicious cases often entails observation for long periods, and, in many cases, residence in the observation beds in the Sanatoria.

Cases which are diagnosed in the General Hospitals are always treated as urgent cases, and are admitted to Sanatorium without delay.

The number of attendances at the Dispensary made by "Suspects" during 1934 was 11,395.

During the year, 115 patients were examined at home in consultation with private medical practitioners. In the majority of these home consultations the patient was not fit to attend the Tuberculosis Dispensary and this figure is in no sense an index of the number of personal consultations which takes place with private practitioners. Frequently patients are accompanied by their private doctor to the Dispensary. On other occasions patients are admitted direct from home to observation beds in Sanatorium as the result of a telephone conversation with their medical attendants.

" CONTACTS."

2,402 "Contacts" from the homes of notified cases were examined, and of these it was found desirable to retain 41.17 per cent. for further observation and treatment.

The number of "Contacts" examined remains high, although lower than the number examined in the year 1933. This is accounted for by the reduction in the number of new cases during the year. As it is among this section of the population that Tuberculosis is most likely to arise in the future, the examination and treatment, where necessary, of such "Contacts" is one of the most valuable activities of the Department.

PATIENTS OF SCHOOL AGE.

As in former years, the work of the Tuberculosis Dispensary amongst tuberculous children has been carried on in close co-operation with the School Medical Department. The Sanatorium beds provided are proving of much value in the preventive work amongst school children.

The School Medical Officers refer all suspicious cases to the Dispensary for diagnosis, and the responsibility for diagnosis and notification rests with the Clinical Tuberculosis Officer.

The names of all children of school age who are known to have been exposed to infection in their homes are supplied to the School Medical Officer, so that he may observe them closely during their school life. If any indication of Tuberculosis is observed amongst these children they are immediately referred to the Tuberculosis Dispensary. In this way the School Medical Officer is kept in touch with a large proportion of the children who are known to have been exposed to infection.

The greater part of the work at the Dispensary on Wednesday and on Saturday morning is devoted to children of school age, and one of the Assistant School Medical Officers attends each Session on Wednesday. During the year 1934, 18,981 attendances (exclusive of new cases) were made by school children, 14,220 by notified cases, and 4,761 by observation cases.

Forty-six places at the Whiteley Wood Open-Air School, and twenty-six places at the Springvale House Open-Air School, were reserved for childen selected by the Clinical Tuberculosis Officer.

Tuberele Bacilli were found in the sputum of one child, whose name was therefore taken off the school register.

It will be observed from these figures that a large amount of work is being done among the school children of Sheffield, and I feel confident that this is the most encouraging part of our work, and is likely to be favourably reflected in our future tuberculosis results.

TOTAL ATTENDANCES.

The number of attendances at the Dispensary during 1934 was 55,381, which includes 2,981 attendances for ultra-violet light treatment.

EXAMINATION OF SPUTA.

During the year 4,476 specimens of sputa were examined, 802 at Crimicar Lane Sanatorium, and 3,674 at the Dispensary. Of these 4,476 specimens 754 were found to contain typical tubercle bacilli.

X-RAY DEPARTMENT.

3,908 Skiagrams were taken during the year, as compared with 4,113 during 1933 and 3,784 during 1932. A first-class skiagram is not only valuable as a permanent record of the condition of a chest, but is so useful in diagnosis that it may now be considered indispensable. It is now the routine practice to take an X-ray film of the chest of all adult cases who have either a negative sputum or no sputum.

In special cases "screening" by X-rays is carried out. This method of X-ray examination of the chest has its value in special cases but cannot in any way replace the taking of X-ray films. For routine purposes the disadvantage of "screening" is that no permanent record remains after the actual examination.

During 1934 there were 112 "screenings."

Reports, etc., to Ministry of Pensions, and to the Regional Medical Officer of the Ministry of Health.

During the year, 21 certificates and reports with regard to ex-service men were furnished to the Ministry of Pensions; and 103 reports on the condition of patients were made at the request of the Regional Medical Officer of the Ministry of Health.

Domiciliary Treatment.

There were 69 insured persons receiving Domiciliary Treatment on December 31st, 1934. During the year, 127 Reports on Form GP 36 were received from Health Insurance Practitioners in respect of Insured Persons.

AFTER-CARE,

The organisation with regard to after-care is carried on through the Dispensary.

Unsatisfactory cases are reported to the Hospitals Sub-Committee, who consider the cases and instruct the Tuberculosis Medical Officer to deal with them. Shelters are lent to infectious cases, but it is found in Sheffield that the home surroundings are such that in very few cases is it possible to find adequate accommodation for a shelter. This form of isolation in Sheffield is of very little practical value. Beds and mattresses are lent to infectious cases who are unable to provide for themselves a separate bed, and during the year 82 beds and 84 mattresses were lent.

In all 395 beds were out on loan at the end of the year.

In addition to lending beds and mattresses, the Health Committee lend complete sets of bed-clothing to infectious cases who are unable, owing to their financial circumstances to procure them. During the year 74 sets of bed-clothing were lent.

RE-HOUSING OF INFECTIOUS CASES OF TUBERCULOSIS.

This scheme, which was commenced in 1928, is still in operation. The worst cases of overcrowding in households where there is a known infectious case of Pulmonary Tuberculosis have now been dealt with. The environmental conditions of new infectious cases are investigated immediately, and the families which require re-housing now come in the main from this latter group.

The families which have been re-housed are kept under special supervision by the Superintendent Tuberculosis Inspector.

The number of cases re-housed up to December 31st, 1934, is given in the following Table :---

Year	Cases re-housed	Tenancies terminated	Still under Scheme on 31/12/34	as aft	I living on Estates ordinary Tenants er termination of pecial conditions

It was recognised at the outset when this Scheme came into operation, that while the improvement in environment would be to the benefit of the infectious case, the more permanent benefit of the scheme would be for the "Contacts" of these infectious cases.

The following table gives information as to the numbers of "Cases" and "Contacts" in each age group, who have been re-housed up to December 31st, 1934.

Age.	-1	1–5	5-10	10-15	15-20	20-25	25-35	35-45	45-55	55-65	65+	Totals

The special Housing Scheme has now been in operation for nearly seven years. It has, therefore, emerged from the experimental stage and now holds its place as an officially recognised activity of the scheme for the prevention and treatment of Tuberculosis.

The following Table shows the Occupations of the newly positive cases which occurred during the years 1931, 1932, 1933, and 1934.

TABLE	LIII.—Occu	pations of	newly	positive	cases, 19	31, 1932,	1933,	and	1934.

CITY SANATORIA.

It is pleasing to record that the number of beds allocated for the treatment of All Forms of Tuberculosis in the City of Sheffield appears to have reached a maximum figure, and, fortunately, long waiting lists for institutional treatment are a thing of the past. The number of beds available for the treatment of Respiratory Tuberculosis, and the

nursing staff employed, is as follows :---

t Hospit					106 } ^M	atron and	18 other	Nursing Staff.

TABLE L

Table LVI shows the classification on admission of cases received in the various Sanatoria during the year.

The number of admissions to Sanatorium shows a decrease on the figures for 1933 and this is most marked in the number of children treated in Sanatorium. The reduction in the number of adults treated coincides with the favourable morbidity and mortality figures for the year. In the case of the children the prevalence of infectious disease in the City during the year had an adverse effect on the smooth working of the Children's Wards. On several occasions infection obtained access to the Children's Wards and it was necessary, amongst other measures, to suspend admissions temporarily.

.

REPORT ON NON-PULMONARY FORMS OF TUBERCULOSIS

BY C. LEE PATTISON, M.B., B.S. (Lond.), M.R.C.S., L.R.C.P.,

Surgical Tuberculosis Officer and Medical Superintendent King Edward VII Hospital.

MEDICAL AND NURSING STAFF :---

Medical Superintendent and Surgical Tuberculosis Officer C. LEE PATTISON, M.B., B.S. (Lond.), M.R.C.S., L.R.C.P.

House Surgeon-MARY C. ORR, M.B., Ch.B.

Matron and 40 other Nursing Staff.

The number of notified cases and the death rate of the various types of non-pulmonary tuberculosis is shown in the following Table.

				Number of Cases Notified	Number of Deaths	Death Rate per 1000 Population per annum
Meningeal .			 	 26	_	_
Abdominal .			 	 36	-	-
Genito-Urinary			 	 8		-
Vertebrae (Spin	e)		 	 33		
Other Bones an			 	 49		
Skin			 	 -	-	- 1
Others (Chiefly	peripheral	Glands)	 	 78	-	-
	Total		 	 230*	_	

TABLE LVII.

* The figure 230 includes 19 cases not notified during lifetime.

It should be noted that the above notifications do not include the many patients with non-pulmonary tuberculosis who are affected with tuberculosis of the lungs.

The total number of notifications of non-pulmonary forms of tuberculosis has been higher in the year 1934 than at any time since 1926, and the number of notified cases of bone and joint tuberculosis and of tuberculosis of peripheral glands is even higher than in 1926.

		1934	1933	1932	1931	1930	1929	1928	1927	1926

TOTALS		 230	217	217	207	166	201	158	207	237

TABLE LVIII.-Notifications of Non-Pulmonary Tuberculosis.

INSTITUTIONAL TREATMENT.

THE KING EDWARD VII. HOSPITAL, RIVELIN VALLEY ROAD.

Children under 16 years of age with Non-Pulmonary Tuberculosis continue to be treated in this Institution. A few beds are available for such children sent by local authorities from outside Sheffield, the full cost of their maintenance being borne by these authorities. A report on patients with cripping due to non-tuberculous causes will be found on page 106.

During 1934 the following cases of non-pulmonary tuberculosis were discharged after treatment in the King Edward VII Hospital :---

PART AFFI	ECTED.		MALES.	FEMALES.	TOTALS.
(Spine) Vertebrae			19	15	34
Hip Joint			16	14	30

TOTALS			92	73	165

TABLE LIX.

[®] Observation cases are those in which the diagnosis was uncertain on admission and which later proved to be non-tuberculous.

OPERATIONS.

During the year 416 Aspirations of abscesses, and 44 other operations were performed.

PLASTER OF PARIS SPLINTS, &C.

294 Plaster of Paris Splints were applied and 61 Celluloid Splints were made.

NETHER EDGE HOSPITAL.

Adult patients with bone or joint tuberculosis are treated in the Nether Edge Hospital under the supervision of the Surgical Tuberculosis Officer. About 30 beds are in constant use by these patients, a considerable number of which are also suffering from pulmonary tuberculosis in addition to the bone lesions.

64 Plaster of Paris Splints were applied during the year.

OUT-PATIENT SUPERVISION.

The Out-Patient Department for dealing with non-pulmonary tuberculosis continues to be held at the Tuberculosis Dispensary where the Surgical Tuberculosis Officer attends on Wednesday and Friday afternoons and in the evening of the 1st Tuesday in each month.

During 1934, 353 new patients attended the department, of these 42 were men, 33 women, 91 boys, and 123 girls, and in addition 64 who were found to be non-tuberculous.

The disease occurred in the following situations :---

TA	BI	LE	LX.

PART AFFECT	TED	 	MALES	FEMALES	TOTAL
Vertebrae (Spine)		 	20	30	50
Hip Joint Knee Joint		 	15	17	32
Knee Joint		 	11	12	23
Elbow Joint		 	1	1	27
Ankle Joint		 	1	6	. 7
Other Bones and Join	ts	 	18	14	32
Lymphatic Glands		 	44	54	98
Peritoneum		 	15	20	35
Skin (Lupus)		 	2	1	3
Genito-Urinary	• •	 	6	1	7
TOTALS		 	133	156	289

New patients were sent to the Out-Patient Department from the following sources :---

Sheffield Medical Practitioners			 	 67
Clinical Tuberculosis Officer			 	 84
Maternity & Child Welfare Centre			 	 23
School Medical Department			 	 57
Sheffield Voluntary Hospitals			 	 17
Tuberculosis Officer West Riding Co	unty C	ouncil	 	 16
Other Sources			 	 89
1	otal		 	 353

The fact that a large number of the new patients are sent by general practitioners is encouraging as an indication that the medical profession generally recognise the utility of the facilities provided for the diagnosis and treatment of non-pulmonary tuberculosis.

Recently an arrangement has been made with the Tuberculosis Department of the West Riding County Council by which their Medical Officers can send patients with Surgical forms of Tuberculosis or other Orthopædic conditions for consultation with the Sheffield Surgical Tuberculosis Officer. The West Riding Authorities pay the Sheffield Health Committee for each examination and report.

During 1934 there was a total attendance of 4,556 patients at the Out-Patient Department, compared with 4,423 in 1933.

ULTRA-VIOLET LIGHT TREATMENT.

Ultra-violet light therapy has been continued both at the King Edward VII Hospital and at the Tuberculosis Dispensary. Six sessions per week were held at the Dispensary, at which there were 2,981 attendances. INVESTIGATION OF LATE RESULTS OF TREATMENT IN PATIENTS WITH TUBERCULOSIS OF THE KNEE-JOINT.

During the year an investigation was made into the present condition of the first 100 patients with tuberculosis of the knee-joint who were treated in the King Edward VII Hospital.

These patients had been discharged from Hospital for an average period of 61 years.

13 of these patients had had a recurrence of the disease in their Knee-joints, 2 had died and 14 had developed Pulmonary Tuberculosis (4 with positive sputa).

The amount of movement present in the affected Knee-joints at the present time gives some indication of the degree of success of treatment employed.

43 had perfect movement: 15 a fair amount of movement.

.

18 had only slight movement, and in 23 cases the joint was fixed. Amputation had been performed on 1 patient.

The large majority of the patients were in fairly good health, and 32 were at work.

PREVENTION AND TREATMENT OF VENEREAL DISEASES.

The Clinics at the Royal Infirmary, Royal Hospital and Jessop Hospital for Women, continued in full operation during the year 1934.

It will be noted from Table LXII that there was a slight increase in the total number of new cases treated during 1934, but that there was a slight decrease in the average number of attendances per case.

The total attendances rose from 34,516 in 1933 to 35,830 in 1934.

The total cost of treatment during the year was $\pounds 6,279$ which was rather higher than in 1933, although the average cost per case of $\pounds 5/17/8$ was practically the same.

Table LXIII gives particulars of pathological examinations made in the Bacteriological Laboratory of the University, of specimens sent for diagnostic purposes by treatment centres and medical practitioners.

Table LXIV gives particulars of all the Clinics in connection with the Sheffield scheme together with a statement of the average number of patients attending during each quarter of the year.

Table LXV gives a summary of the returns from the several centres with regard to persons dealt with, distinguishing between Sheffield residents and residents of other districts who have come in for treatment.

Table LXI is again produced. It gives the diseases treated, going back to the year of commencement. It is interesting as showing the decrease in the number of Syphilis and Soft Chancre patients of both sexes, also female Gonorrhœa patients. Male Gonorrhœa patients have decreased but not to the same extent.

POOR LAW MEDICAL OUT-RELIEF.

During the year under review, the arrangements for Poor Law Medical Out-relief have continued to work satisfactorily.

There are now 135 local chemists who are members of the Public Assistance Panel and who dispense for the Public Assistance Committee the prescriptions of District Medical Officers upon terms almost identical with those governing the National Health Insurance Dispensary services.

During the year, 152,637 prescriptions have been dispensed at a total cost of $\pounds4,814$ 2s. 5d., an increase on the preceding year of 37,997 prescriptions, and $\pounds1,277$ 11s. 4d. cost respectively.

The cost for the year is made up as follows :----

Total cost of ingredients	 	 	 	 £ 1,967	s. 8	d. 7	
Total dispensing fees	 	 	 	 2,831	18	5	
Cost of containers	 	 	 	 14	15	5

TABLE LXVII.-Bacteriological Examinations at the Sheffield University during the year 1934.

Notes.—(1) In addition to the examinations carried out at the University, 206 microscopical examinations of Milk for Tubercle Bacilli were made at the Veterinary Department by the Staff ; and 4,476 microscopical examinations of Sputa for Tubercle Bacilli were made by the Staff of the Tuberculosis Dispensary.

(2) Particulars of Examinations in connection with the City Fever Hospitals, the City General Hospital and the Venereal Diseases Clinics are given in the appropriate sections of the Report.

AMBULANCE FACILITIES.

INFECTIOUS CASES.—There are four ambulances in connection with the City Fever Hospitals—four Austins.

NON-INFECTIOUS AND ACCIDENT CASES.—A Central Ambulance Service for Sheffield was instituted on the 7th April, 1930, when six ambulances belonging to the Sheffield Hospitals Council were transferred to the new Central Station at Corporation Street. The Health Committee's ambulances (four in number) were transferred to the Station on the 1st June, and the Watch Committee's ambulances (three in number) were taken over on the 1st July, 1930.

During the year two old ambulances were replaced by three new Austin vehicles.

The scope of the service is roughly as follows :---

SHEFFIELD HOSPITALS COUNCIL :

Admission, discharge and treatment cases in connection with the Sheffield Voluntary Hospitals, the Sheffield Radium Centre, the Edgar Allen Institute, and the Nursing Homes in Sheffield and district. The area covered is approximately that within twenty miles radius of Sheffield.

HEALTH COMMITTEE :

Admission and discharge cases in connection with the City General, Nether Edge and King Edward VII Hospitals, and, by arrangement made by the Health Committee with the Public Assistance Committee, the transfer of cases from their homes to Fir Vale House, the South Yorkshire Mental Hospital, and other Institutions as required.

WATCH COMMITTEE :

The conveyance of accident and casualty cases from the scenes of accidents to the nearest hospitals. The cases of the Watch Committee proper are those where the accidents happen within the City of Sheffield, but by arrangements made by the Watch Committee with the West Riding of Yorkshire and Derbyshire Constabularies, the ambulances also respond to the calls for accident cases in those areas.

The ambulances themselves still remain the property of the separate Bodies (Sheffield Hospitals Council, Health Committee and Watch Committee) whose services are administered by the Central Ambulance Service, but the use of the vehicles is general for all services, except that at present, the Watch Committee Ambulances, on account of special fittings for special requirements, are almost entirely used for the Watch Committee cases.

There are also, in connection with the large works of Sheffield, a number of privately owned ambulances for works' accidents and emergency cases.

SANITARY ADMINISTRATION.

GENERAL SANITARY WORK.

TABLE LXVIII.-Summary of Work done by Sanitary Inspectors during 1934.

DISINFECTING AND CLEANSING STATION.

1.	Number of Houses disinfected, including disinfection of Bedding, Clothing, etc	3,986
2.	Number of Cases of Scabies from which Bedding, Clothing, etc. collected and disinfected	42
3.	Number of Scabies infected Children from the School Medical Department attending at the Station for Cleansing	104
4.	Number of Scabies infected Persons attending at the Station for Cleansing (School Children included)	163
5.	Number of Houses from which Beds, Bedsteads, Mattresses, Furniture, Clothing, etc., taken for disinfestation in connection with Re-	
	housing schemes	1,534
6.	Number of Persons attending for Cleansing before being Re-housed	3,379
7.	Number of Midwives attending for baths and disinfection of Clothing	20

It is well known that a large proportion of old houses are infested with bugs. In connection with the re-housing of tenants from slum areas, arrangements were made for the removal of infested furniture, bedding, etc., to the Cleansing Station for disinfestation. 1,534 houses were so dealt with during the year. The methods adopted have been very effective and the work has been very greatly appreciated by the occupants of the houses.

HOUSING.

On the 7th February, 1934, the City Council decided to increase the rate per annum of unfit houses to be dealt with from 1,000 to 2,000, as from 1st April, 1934. This of course greatly increased the work of the Department, as, owing to the length of time which elapses between Representation and Confirmation of Orders, it was necessary to make Representations for more than 2,000 houses per annum.

The actual number of houses involved in Clearance Areas for which Official Representations were made during the year is 3,237, in addition to which Representations were made under Section 19 of the Housing Act, 1930, with regard to 151 individual unfit houses and under Section 20 of the Housing Act, 1930, with regard to 12 individual unfit dwellings.

Five public Inquiries were held by Ministry of Health Inspectors during the year, as follows :---

Date of Inquiry.		Clearance Areas Numbered	No. of Houses Involved.
20th to 22nd March, 1934	 	 35 - 40	271
24th to 25th July, 1934	 	 41 - 46	399
25th to 27th September, 1934		 47 - 55	363
13th to 15th November, 1934	 	 56 - 63	389
18th to 19th December, 1934	 	 64 - 68	214
		Total	1,636

Full details of the work done in connection with Clearance Areas and individual unfit houses and the position on December 31st, 1934, are given on pages 149-165.

CLOSING ORDERS.—Representations were submitted under Section 20 of the Housing Act, 1930, for Closing Orders to be made in respect of 8 properties, involving 12 houses, as follows:—

Case No.	Situation of Property.	No. of Houses.	Date of Re- presentation.	Date Closing Order made.	Date Closing Order operativ

TABLE LXXI.- Housing Statistics for City for the year 1934.

1. Inspection of Dwellinghouses during the year	
(1) (a) Total number of dwellinghouses inspected for housing defects (under Public Health or Housing Acts)	15,078
(b) Number of inspections made for the purpose	25,314
 (2) (a) Number of dwellinghouses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolid- ated Regulations, 1925 	Nil
(b) Number of inspections made for the purpose	Nil
(3) Number of dwellinghouses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	3,400
 (4) Number of dwellinghouses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation 	3
2. Remedy of defects during the Year without Service of formal Notices :	
Number of defective dwellinghouses rendered fit in consequence of informal action by the Local Authority or their Officers	8,903
3. Action under Statutory Powers during the Year :	
(a) Proceedings under Section 17, 18 and 23 of the Housing Act, 1930 :	
(1) Number of dwellinghouses in respect of which notices were served' requiring repairs	Nil
(2) Number of dwellinghouses which were rendered fit after service of formal notices :—	
(a) By owners	Nil.
(b) By local authority in default of owners	Nil.
(b) Proceedings under Public Health Acts :	
(1) Number of dwellinghouses in respect of which notices were served requiring defects to be remedied	1,067
 (2) Number of dwellinghouses in which defects were remedied after service of formal notices : 	1,001
(a) By owners	918
(b) By local authority in default of owners	-
(c) Proceedings under Sections 19 and 21 of the Housing Act, 1930 :	
(1) Number of dwellinghouses in respect of which Demolition Orders were made	98
(2) Number of dwellinghouses demolished in pursuance of Demoli-	00
tion Orders	154
(d) Proceedings under Section 20 of the Housing Act, 1930 :	
(1) Number of separate tenements or underground rooms in	10
respect of which Closing Orders were made (2) Number of separate tenements or underground rooms in	12
(2) Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit	Nil.
tenement or room having been rendered ht	INII.

The following table shows the number of new dwelling-houses built since 1886, the figures being for the Municipal year ending 31st March—thus the number for the year 1934 means the number built during the year ended 31st March 1935.

Year ending	Houses	Year ending	Houses	Year ending	Houses
March	Built	March	Built	March	Built
1886	725	1902	1,977	1918	8
1887	928	1903	2,051	1919	120
1888	806	1904	1,963	1920	392
1889	830	1905	1,982	1921	1,184

TABLE LXXII-Houses built since year 1886.

CONVERSION OF PRIVIES, WASTE WATER CLOSETS, ETC.

PRIVY CONVERSION SCHEME.—During the year 47 privies were abolished or converted into waterclosets. Of these, 20 were situated in the Norton added area. At 4 of the properties involved, additional waterclosets were provided.

ABOLITION AND CONVERSION OF TROUGH CLOSETS, WASTE WATER CLOSETS, &c.---Under the powers obtained under the local Act of 1928, this work has been proceeding as rapidly as possible. The following details show the progress made during the last five years.

	Trough	Closets	Waste Wate	er Closets	Pail C	losets
Year	Converted into Pedestal W.C's	Abolished	Converted into Pedestal W.C's	Abolished	Converted into Pedestal W.C's	Abolished
1929	937		1,033	11	15	-
1930	982	-	693	11	47	4
1931	833	11	424		19	3
1932	338		128	2	18	
1933	105	-	63	2	1	1
1934	201	38	42		4	

The number of sanitary conveniences at 31st December, 1934 (including the Norton added area) was approximately as follows:----

(a)	Privies with fixed recep	ptaeles						339
(b)	Privies with removable	receptacles	(known	as Pai	l Close	ets)		249
(e)	Fresh Water Closets						13	6,224
(d)	Waste Water Closets	(approximat	elv only	-revis	ed fig	ure)		63

The work of Conversion of Privies was completed during the year 1928, with the exception of those cases where, owing to the enormous cost involved in providing adequate drainage or water supply, proceedings were abandoned. Most of these properties are dairy farms in rural areas outside the built-on portions of the City. As opportunity presents, advantage is taken of the provisions of the Milk and Dairies Order, 1926, for effecting improvements in sanitary conveniences on these dairy farms.

Full particulars with regard to Privy Conversion work will be found in Table LXXIII.

ADDITIONAL WATER-CLOSETS SO AS TO PROVIDE ONE FOR EVERY HOUSE.

The work of providing additional water-eloset accommodation so as to provide one W.C. for every house in the City, in accordance with the policy of the Health Committee adopted by the City Council in May, 1928, was pressed forward as expeditionally as possible, as will be seen from the figures given below.

The cost of this work falls entirely on the owner of the property, but arrangements can be made under which the work is done by the Corporation and repayment to the Corporation is spread over a period of years.

	1929	1320	1931	1932	1332	1934

223,181

:: :

: :

: :

... ... Total ... The figures given in the last three columns of the table have been furnished by the City Treasurer. They refer to the financial year ended 31st March—three months later than the year to which the other figures refer.

The figures in column 7 for 1934 includes 20 privies which were converted in the Norton added area.

ADDITIONAL ASHBINS SO AS TO PROVIDE ONE FOR EVERY HOUSE. Under the provisions of the Public Health Act, 1875, (Section 36), Public Health

Acts (Amendment) Act, 1890—Section 2 (3) and 11 (1), and the Sheffield Corporation (Consolidation) Act, 1918—Section 352 (1), 290 additional ashbins were provided in the City during 1934.

During the 4 previous years additional bins were provided as follows:—1929—2,421; 1930—1,108; 1931—989; 1932—720; 1933—290.

REGISTRATION OF PREMISES USED FOR PREPARATION OR MANUFACTURE OF POTTED OR PRESERVED MEAT, FISH OR OTHER FOOD INTENDED FOR SALE OR THE MANUFACTURE FOR SALE OR SALE OF ICE-CREAM.

During the year 1934, applications under Section 186 of the Sheffield Corporation Act, 1928, were dealt with by the Committee as follows:—

	Applications received	Applications considered	Applications granted	Applications withdrawn	Applications refused
Manufacture of Potted Meat, Fish, et	e. 18	15	15	3	-
Manufacture and sale of Ice-Cream .	21	19	19	2	-
Sale only of Ice-Cream	69	66	66	3	-
Totals	108	100	100	8	

As shewn in Column 4, 8 applications were withdrawn on advice that the premises could not be made to comply with the Committee's requirements or that the expense involved would be prohibitive.

REGISTRATION OF PREMISES FOR FISH FRYING.

During the year, eight applications for registration of premises for fish frying were granted and five were refused.

Registration was cancelled in one case where the premises had been closed for more than six months.

The number of fish fryers on the register at the close of 1933 was 576. The number of visits paid to premises of this class was 919.

REGISTRATION OF PREMISES FOR OTHER OFFENSIVE TRADES.

During the year, the half-yearly licences permitting certain premises to be used for Offensive Trades were renewed twice, as follows :----

No. of Premises.	Offensive Trade carried on.
2	Rag and Bone Dealing.
1	Rag Washing.
2	Tripe dressing and boiling.

A licence to establish the Offensive Trade of Bone, Fat and Tallow dealing at 1 property was granted and renewed at the end of six months.

During the year, all the premises where Offensive Trades are carried out were periodically visited by the Sanitary Inspectors to see that the Byelaws were being strictly complied with.

HOUSES LET-IN-LODGINGS.

The Sanitary Inspectors visited these premises from time to time in collaboration with the Health Visitors, with a view to remedying the defects which were found and enforcing the Byelaws.

171 RAG FLOCK ACTS, 1911 AND 1928.

There are thirty-six premises in the City to which the above Acts apply. These comprise 2 premises from which rag flocks are sold only ; 23 upholsterers' premises ; and 9 bedding and manufacturers' premises. There are no premises where rag flocks are manufactured. All the premises were visited during the year. It was found that in every case where rag flocks were used they were obtained under a guarantee that they comply with the standard set forth in the Acts.

CANAL BOATS ACTS.

The number of inspections of canal boats during the year was 123.

The total number of infringements complained of was 34 relating to 22 inspections of boats. The infringements complained of were :---

Absence of certificate					 	 3
Want of marking, letterin	g or nu	umber	ing		 	 5
Certificate not identifying	owner				 	 1
Painting of cabins					 	 4
Repairs to cabins					 	 4
Absence of water casks or	defecti	ve wat	ter cask	s	 	 3
Cleanliness of cabins					 	 1
Ventilation of cabins					 	 4
Separation of sexes					 	 1
Children not attending so	ehool				 	 8

On subsequent inspection of the boats about which complaints have been made, the matters were found in most cases to have been remedied.

In a number of instances, owing to change of ownership, the certificates were found to be absent on first inspection, but on subsequent inspection this infringement was found to be remedied.

In the case of 101 inspections the boats were found to be in compliance with the above Acts and Regulations, and in good order.

It has not been found necessary to institute legal proceedings with regard to infringements of the regulations.

No notices were served under the Canal Boats Regulations relating to infringements during the year. A number of verbal notices were given to masters or owners, who promised compliance, and 5 letters were sent to owners with regard to infringements.

There was no case of infectious disease on board any of the boats during the year.

The number of boats on the Sheffield register on December 31st, 1934, was 72, made up as follows :---

(a)	Boats	believ	red	to be	in	actu	al	and p	present	use	 	 6
(b)	Boats	not s	een	since	191	16 .					 	 14
(e)	Boats	not se	een	since	191	11					 	 52
												72

No boats were registered during the year.

The number of visits paid to the canal during the year was 33. The total number of persons living on board at the time of the inspections was as follows :----

Males over 14 years of age		 	 	131
Female over 14 years of age		 	 	50
Children between 5 and 14 years of	of age	 	 	13
Children under 5 years of age		 	 	7
				201

In the above total the same families have, in some cases, been counted again and again in accordance with the number of visits paid by a particular boat to Sheffield. The total of 201 divided by the number of canal boats inspected, viz. 104 give the average number of occupants in each boat as 1.93.

In most of the cases where children of school age were found on board the boats the masters stated that it was impossible for them to allow their wives and children to remain at home on account of expense, and, therefore, they were continuously living on the canal boats.

No boat was detained for cleansing or disinfection during the year.

SMOKE ABATEMENT.

The Sheffield, Rotherham and District Smoke Abatement Committee was formed in April, 1930, and commenced to function in May, 1930. It was to continue in operation for five years at least and thereafter until one of the constituent authorities gave notice on the 1st January in any year of its intention to withdraw, when the Committee was to dissolve on the following 31st March.

The constituent authorities, comprising the Councils of the City of Sheffield, the Rotherham County Borough, the Stocksbridge, Rawmarsh and Greasborough Urban Districts, and the Rotherham Rural District, passed the necessary resolutions to combine to carry out their duties under Section 92 of the Public Health Act, 1875, in respect of Smoke Nuisances and to concur in appointing the Sheffield, Rotherham and District Smoke Abatement Committee and also entered into an agreement embodying the terms of combination concurrence and appointment and ancillary provisions. This Committee is the only Statutory Committee of its kind in the country, the other Joint Committees formed on this subject acting only in an advisory capacity.

ATMOSPHERIC POLLUTION.—There are three "fixed" gauges in Sheffield for the measurement of atmospheric pollution, at Attercliffe, Surrey Street, and Nether Green. An additional gauge is also in operation at Hillsboro. This is considered as a "mobile" gauge, to be used for the purpose of finding where pollution is heaviest. The following table summarises the monthly reports issued during the year.

 TABLE LXXV.—Solid Matter deposited at the four Sheffield Collecting Stations during the year 1934.

				TONS PER S	QUARE MILE.		
Month.			Attercliffe.	Nether Green.	Surrey Street.	Hillsboro.	
January			27.76	8.30	36.98	$12 \cdot 69$

October			20.49	7.30	20.22	$11 \cdot 40$	
November			18.54	5.38	23.53	10.86	
December			31.18	7.33	25.47	17.96	
Тота	LS		273.17	91.51	362.66	156-23	
Averages pe	r mon	th	22.76	7.62	30.22	15.62	

In conjunction with the pollution gauges and at the "fixed" stations, gauges are placed for the measurement of ultra violet rays by the Acetone Methylene Blue Test. Daily readings are taken and below are set out the averages of the units recorded at the various stations. According to the statement of the maker of the apparatus "a tube filled with the Methylene Blue Solution exposed for one hour at a distance of one yard to an Arc Lamp (25 amperes) shows a reading of one unit."

			Ave	AGE UNITS PER DAY.

TABLE LXXVI.—Ultra Violet Ray Records at the three Sheffield Stations during the
--

SULPHUR DETERMINATION.—Records for the determination of sulphur in the atmosphere are being taken by the volumetric method at Surrey Street, and by the lead peroxide method at Surrey Street, Handsworth and Dore. The lead peroxide method, having proved itself reliable and convenient, has been adopted by the Department of Scientific and Industrial Research as a standard method of measurement. Although no definite correlation has yet been shown between the two methods in operation, graphs showing rise and fall have been prepared, which indicate that these two methods have produced results which relatively correspond.

With the volumetric method it has been found that the acidity of the atmosphere varies inversely with the wind velocity, abnormal deposits occurring during fog and in heavy humid atmospheric conditions. The maximum sulphur reading for this station is slightly less than one part per million by volume.

TABLE LXXVII.—Details of work done in Sheffield by Smoke Inspectors during the year 1934.

Number of Chimneys observed	 	 	5,861
Number of minutes smoke emitted	 	 	16,179
Average minutes per hour	 	 	2.7

" " Raised	 	 •••	10
" " Erected	 	 	24

PROSECUTIONS.

During the year 14 cases were reported to the Committee for their consideration.

In 10 cases the Committee decided that no proceedings be taken, but warning letters were sent to the firms concerned in five of the reports. Proceedings against a Canning Factory and a Brickworks were withdrawn when satisfactory reconstruction work had been completed. Fines of £9 and £6 respectively were imposed on the owners of two Steelworks chimneys for the emission of excessive smoke from their boiler chimneys.

RESEARCH WORK.

Research work has been continued by the Joint Advisory Committee, under the Chairmanship of Professor R. V. Wheeler, D.Sc., F.I.C., of the Department of Fuel Technology of the Sheffield University, up to September, 1934, on the lines previously indicated, *i.e.*, the appointment by the University, on behalf of the Committee, of someone to hold a watching brief and who would visit works, inspect plant, and carry out certain limited experimental work, but with no definite programme.

At the meeting of the Joint Advisory Committee, held in September, 1934, Professor Wheeler stated that research work had been carried out in regard to domestic smoke, and that it was possible for blast furnace coke, suitably sized, to be burned in the ordinary domestic open grate. Information on this subject had been conveyed to the coke producers and as a result they were producing sized domestic fuel from such coke.

With regard to industrial smoke, he reported that occasional examinations of furnaces had been made. He did not think, however, that further experimental work could usefully be done by the Committee in regard to smoke from furnaces, the matter being in the hands of individual manufacturers.

The programme of research for the year ending 1st September, 1935, was considered by the Joint Committee and referred to a Special Sub-Committee, who decided that, in view of the fact that other organisations proposed to undertake research on cognate problems (e.g., the British Iron and Steel Federation, on the burning properties of coals for marine boilers; and the Fuel Research Board, on the burning properties of house coals), an attempt should be made to obtain fundamental data regarding the properties of coals that influence their mode of burning.

To this end it was agreed that the Programme should include :---

- Analytical data regarding representative boiler and furnace coals in use in Sheffield and Rotherham, in particular ash and moisture contents, calorifie value and fusibility of ash. In addition laboratory studies should be made of the behaviour of the coals during heating (e.g., as regards their tendency to melt); and of their "re-activity."
- 2. Small-scale furnace tests of the burning properties of representative coals.
- Full-scale trials, at hand-fired boilers, of a limited number of coals chosen from those examined under (1) and (2), to correlate their performance with the analytical and test data obtained.

Progress Reports have been submitted from time to time, and copies have been sent to the British Iron and Steel Federation for submission to the Iron and Steel Industrial Research Council.

The cost for the year ending 1st September, 1935, is estimated at £300, such amount being guaranteed by the Sheffield, Rotherham and District Smoke Abatement Committee, but it is anticipated that the Department of Scientific and Industrial Research, through the British Iron and Steel Federation, and the Local Manufacturers' Committee, will each contribute towards such expenditure. STANDARDS AS TO SMOKE EMISSION.

The standards which the Committee's Inspectors work to are as follows :----

Where there is one boiler attached to a chimney		2	minutes	\mathbf{per}	hour.
Where there are two boilers attached to a chimney		3	,,	,,	
Where there are three boilers attached to a chimney		4	,,	"	
Where there are four or more boilers attached to a chin	nney	6	,,	,,	
Where there are one or more boilers and one or mor furnaces attached to a chimney		6			

Additional information and a further review of the activities in connection with Smoke Abatement in Sheffield and in the surrounding areas co-operating in the Scheme are to be found in the Annual Report of the Sheffield, Rotherham and District Smoke Abatement Committee. Embodied in this publication is a Report by the Chief Smoke Inspector.

No legal proceedings were taken under the Preservative Regulations.

CONTROL OF MILK SUPPLY.

A special investigation was made of the milk supply of Sheffield and the following statement shows the quantity and source of the supply.

Total daily consumption of	Mill	t in the	City		 25,065 gallons.
Population of Sheffield					 520,950
Average daily consumption	per	head of	popula	ation	 0.38 Pint.

SOURCE OF SUPPLIES.

Milk produced in the City from 1,977 Cows—4,943 gallons. Milk brought into the City by road and rail—20,122 gallons. Of the latter amount 13,989 gallons came from Derbyshire by road.

940			Derbyshire by rail.
4,932			Yorkshire by road.
199	,,	,,	Yorkshire by rail.
7	,,	,	Nottinghamshire by rail.
34	,,	,,	Gloucestershire by rail.
21	"	"	Lincolnshire by rail
20,122			

GRADED MILKS.

Certified Milk.-It is estimated that 42 gallons representing 336 bottles of this milk were sold daily in the City. The milk was produced on two farms outside the City.

Grade A Milk. About 147 gallons representing 1,176 bottles of this milk were sold daily in the City.

Two farms in the City produced 47 gallons daily, the remainder came from two outside farms.

Pasteurised Milk.—Three firms are licensed for the pasteurisation of milk in the City and the total daily sale of this milk is estimated at 8,454 gallons or 33.7% of the City's total supply.

Sterilised Milk .--- This milk is sold in the City by seven firms. The total daily sale of this milk equals 956 gallons.

MILK IN SCHOOLS SCHEME.

On October 1st, 1934, the above scheme was started. Each child (whose parents were willing) was to receive a third of a pint bottle of milk for ½d. The Milk Marketing Board agreed to pay to the Milk Vendor an additional ½d. for each bottle supplied.

During the last quarter of the year 138 schools entered the scheme. The schools were open 57 days, and each day an average of 55,596 bottles of milk, representing 2,316 gallons were delivered.

The school milks were strictly supervised, and numerous samples taken at the schools were submitted to bacteriological and other tests to ascertain the purity of the milks.

In four cases the milk was found unsatisfactory and was stopped.

RETAIL SALE OF MILK IN THE CITY.

1.	Producer-Retailers who produce and retail their own mil	k :	
	Number resident in the City		 116
	Number resident outside the City		 160
2.	Retailers who purchase milk and retail it in the City :		
	Number resident in the City		 241
	Number resident outside the City		 47
3.	Shopkeepers who retail milk from Registered Dairies		 107
	Total number retailing Milk		 671

In addition to the above, bottled Sterilised Milk is sold from approximately 1,200 shops.

EXAMINATION OF MILK.

	Number	Cost
Chemical Analyses of Milk under Sale of Food and Drugs Acts Biological tests of Milk for Tuberculosis	$1201 \\ 992 \\ 744 \\ 359 \\ 206 \\ 5946$	£ s. d. 720 12 0 744 0 0 148 16 0 107 14 0 Work done by Veterinary Depart- ment Staff.

SAMPLING OF MILK UNDER THE MILK AND DAIRIES ACT AND THE TUBERCULOSIS ORDER.

All milk entering the City but produced outside the City boundary was sampled during the year for Tuberele bacilli. The rail samples were taken at the Stations, and the road samples were taken at the City boundaries or at the farms before collection.

Out of the 661 mixed samples of milk taken, 69 or 10.4% were found by the biological test to contain Tubercle bacilli.

The milk from the City farms was sampled twice during the year, and out of 325 samples taken 17 or 5% were reported to contain Tuberele bacilli.

Pasteurised Milk was sampled 45 times for the presence of Tubercle bacilli and in all cases was reported to be free from infection.

CLEANLINESS OF THE MILK PRODUCED IN THE CITY.

The milk was sampled twice during the year for the presence of Bacillus coli.

The relative absence of this bacteria in the milk indicates that hygienic methods have been used in the milking and storage.

The samples were taken either at the farms or just after the milk had left the farm premises,

	Sampl	es obta	ined	Number	No Bacillus Coli in 1/100 c.c. in a 3 tube test	Percentage
1934				 325	177	54.5
1933				 247	169	68.4
1932				 249	186	74.7
1931				 258	132	51.0

The Bacillus Coli test for "Grade A" milk is :--No Bacillus Coli to be present in 1/100 of a cubic centimetre.

AGRICULTURAL PRODUCE (GRADING AND MARKING) ACT, 1928.

The above Act and the numerous Orders made under the Act, are designed to secure specific grades of Agricultural and Horticultural Produce. When the produce is sold to the public it is a guarantee that it is produced in England and Wales and complies with certain standards.

Practically all agricultural and horticultural produce can now be graded under the Act, and it is possible to buy many grades in the City shops and markets.

One station for grading eggs has been working in the City for the last five years.

Two premises in the City are registered for the cold storage of eggs.

Three informal samples of eggs were taken during the year, but no offence could be proved.

FERTILISERS AND FEEDING STUFFS ACT, 1926.

The above Act and the Regulations made under the Act are designed to secure that all food of cattle and fertilisers of the soil shall carry a guarantee with regard to their composition and quality. The Act is divided into a civil portion, where the Official Sampler may be called in to test sales, and a legal portion, where inspection and sampling by the Inspector is provided for.

Civil Action :---Any purchaser of either a fertiliser or feeding stuff may call upon the Official Sampler to take a sample within 14 days of purchase. The Local Authority may make a small charge, but the custom is to make no charge whatever. Should the sample not comply with the guarantee only civil action may be taken. Legal Action :—The two sampling officers also act in the capacity of Inspectors. They have power to inspect all premises where fertilisers and feeding stuffs are prepared or stored. They may inspect all Register of Marks and Guarantees and take samples for verification.

During the year, four informal samples of fertilisers were taken and submitted to the Agricultural Analyst. All four samples practically complied with their guarantee.

No complaints were received during the year.

MERCHANDISE MARKS ACT, 1926.

The two Food and Drugs Inspectors are appointed to carry out the duties under the above Act.

"Orders in Council" are made at various times making it illegal to import, sell or expose for sale specified imported food stuffs unless at the time of importation, sale or exposure for sale, the food-stuff was marked with an "Indication of Origin." The "Indication of Origin" may be the name of the country producing the foodstuff or the word "Empire" or "Foreign" as the case may require.

"Orders in Council" now apply to :--Apples, Currants, Raisins, Sultanas, Dried Eggs, Eggs in shell, Frozen or chilled Salmon and Sea Trout, Honey, Oats Produce, Tomatoes, Butter, Bacon and Ham, Dead Poultry and Meat. "Orders in Council" also apply to miscellaneous merchandise. The tradesmen in the City have had their attention drawn to the above requirements but the frequent changing of tenancies give rise to a certain amount of evasion of the law.

Only one case was taken to the Police Court. Imported dead poultry had been supplied, and though imported, were supplied as "English" and the "Indication Mark" had been removed. A penalty of £11 was imposed.

REPORT OF THE CHIEF VETERINARY OFFICER.

W. TWEED, M.R.C.V.S., D.V.S.M.

For the year ending December 31st, 1934.

VETERINARY STAFF :

H. M. Salisbury, M.R.C.V.S., D.V.H., Senior Assistant Veterinary Officer.F. Addison, B.Sc., M.R.C.V.S., D.V.S.M., Assistant Veterinary Officer

In presenting my report for the year 1934, I have tabulated the work as far as possible and the following is a summary of the most important matters connected with the administration, which have arisen during the year.

DISEASES OF ANIMALS ACTS.

The Diseases of Animals Act of 1894 with its nine amending acts of 1896 to 1927, and orders made thereunder, confer wide powers upon the Ministry of Agriculture and Fisheries and Local Authorities in the control of the contagious diseases of animals, of which there are 13 scheduled. In addition there are the Milk and Dairies (Consolidation) Act, 1915, the Milk and Dairies (Amendment) Act, 1922, and the orders made thereunder, which include Veterinary duties in relation to the diseases of animals.

The following is a list of Contagious Diseases which are scheduled under the above :---Anthrax, Foot and Mouth Disease, Parasitic Mange of Horses, Rabies, Sheep Scab, Sheep Pox, Swine Fever, Cattle Plague, Pleuro-Pneumonia, Epizootic Lymphangitis, Glanders and Farey, Epizootic Abortion of Cattle, Tubereulosis.

Table showing the number of cases of scheduled diseases confirmed in the City.

TUBERCULOSIS ORDER, 1925.

During the year, 485 inspections of the dairy herds in the City were carried out and 5,946 cows were examined by the two Veterinary Officers. 69 cows were found suffering from one or other of the scheduled forms of Tuberculosis and were slaughtered under the Order. Of these 28 were found to be affected with tuberculosis of the udder and 41 with other forms of tuberculosis.

Table showing the number of animals dealt with and the total compensation paid.

SWINE FEVER.

99 dead pigs were reported by owners during the year and a post-mortem examination was carried out in each case by a Veterinary Officer. In 11 cases specimens were sent to the Ministry's Laboratory for diagnosis and the disease was confirmed in 8 cases.

In 2 of these cases the disease was discovered in pigs slaughtered at the abattoir. Their origin was traced and immediate steps were taken to control the remaining animals on the premises from whence they came.

The remaining 6 cases occurred on pig keepers' premises in the City area and the necessary control of infected animals and premises was carried out.

10,199 store pigs were brought into private premises in the City on licence from markets. These pigs were detained and isolated for 27 days and kept under observation.

6,289 pigs were received on licence from markets outside the City for slaughter. Licences were granted for the movement of 665 fat pigs and 453 store pigs in the City.

SHEEP SCAB.

The Ministry of Agriculture included part of Sheffield in a Double Dipping Area on two occasions during the year.

1,717 sheep were dipped on four occasions under our supervision in an approved sheep dip. Each sheep was examined by a Veterinary Officer prior to dipping.

No cases of affected sheep were discovered in the Sheffield area.

The movement of sheep out of the area was controlled by licence and licenses were issued for the movement of 4,774 sheep.

FOOT AND MOUTH DISEASE.

On October 4th, an outbreak of Foot and Mouth Disease occurred among pigs on the premises of a farmer in the City.

A report that the pigs were lame was received and on examination the disease was found to exist. A stand-still area of 5 miles radius was made which restricted the movement of animals except by licence.

The Ministry of Agriculture and Fisheries were notified and they confirmed the disease and the area was then extended to 15 miles radius.

The affected pigs were destroyed and the premises disinfected and no spread of the disease resulted from this outbreak.

There was another outbreak later in the year outside the City and Sheffield was included in the movement area, so that for two periods during the year all movement of animals was governed by licences granted in this office.

The number of licences granted during these two periods was 2,542 for the movement of 27,642 animals.

In addition to the above confirmed cases of scheduled disease, many suspected cases were also investigated.

	Import	ED ANIMALS.	
The following animals	were received	from Canada and	Ireland on Licence
Oxen	Sheep	Pigs	
774	1,187	1,875	

183

LIVESTOCK MARKETS.

There are 2 livestock markets in the City at which weekly sales are held. An officer of the Department attends each market to examine the animals and issue licences for the movement of pigs under the Regulation of Movement of Swine Order of 1922.

TRANSIT OF ANIMALS (AMENDMENT) ORDER OF 1931.

A charge of 6d, per vehicle was made for cleansing and disinfecting road vehicles used for the transport of animals.

	1932	1933	1934
No. of Vehicles cleansed and disinfected	 3005	 2563	 2025

TUBERCULOUS INFECTION IN THE MILK SUPPLY.

28 cows infecting the milk supply with tuberculous infection were eliminated from the city herds during the year. 41 other cows, badly affected with tuberculosis which were not actually infecting the milk supply, but were dangerous sources of possible infection to other animals on the premises were also removed from the herds and slaughtered.

On April 1st, 1934, Norton district was included in the City area. A survey was made of this area and it was found that there were 42 dairy farms, with 522 cows, 16 stock farms and 585 other animals, brought under the Department's supervision.

Bulk samples of milk from herds supplying milk for sale in the City were taken periodically. Those containing infection were traced and the source of infection was eliminated by Veterinary examination and the examination of milk samples from suspicious cows.

By similar means, 42 further cows infecting the milk supply with tuberculous infection were eliminated from herds outside the City by the County Authorities concerned, on receipt of reports from Sheffield under Section 4 of the Milk and Dairies (Consolidation) Act, 1915.

SUMMARY OF MILK SAMPLES EXAMINED BACTERIOLOGICALLY AND INSPECTION WORK CARRIED OUT IN THE ELIMINATION OF TUBERCULOUS INFECTION FROM THE MILK SUPPLY.

COUNTRY HERDS.

(In co-operation with the County Authorities concerned)

Mixed Samples examined for Tuberculous Infection	846
Number found Tuberculous	72
Percentage	8.5

Tuberculous-Biological	0

GRADE "A" FARMS.

The cows in two herds licensed to sell Grade "A" milk were examined by the Veterinary Officers every three months.

9 visits were made and 178 examinations of cows carried out.

The Corporation farm at Longley Hall is not licensed as the milk is used for supplying the City General Hospital. The cows in the herd have all passed the tuberculin test, carried out by the Veterinary Officers and the milk is of Grade "A" Tuberculin Tested standard.

TUBERCULIN TESTING OF DAIRY COWS.

The tuberculin test was applied to 166 cows selected for purchase during the Year. Of these 83 passed the test and the cows required for Longley Hall were taken from these cows.

TUBERCLE FREE HERDS.

There has been increased interest and enquiries made by the City farmers to have their cows entirely free from tuberculosis. This is due to the lead taken by the Corporation with their herd at Longley Hall Farm and also the fact that under the Milk Marketing Scheme, owners of licensed tubercle free herds were not included and therefore no payments had to be made to the Board.

The difficulty of obtaining any advance in this direction is twofold :----

- (1) The herds are non-breeding and cows are bought in and sold out fat after one period of milking, the cows being purchased from markets and dealers.
- (2) Owing to the lack of organisation in tuberculin testing, the supply of tubercle free cows for purchase is limited.

The use of the tuberculin test should be encouraged as it is a guarantee against the risk of infection of the milk supply with tuberculous infection and also against condemnation of the meat when the animal is sent for slaughter, which compensates for the care taken by the farmer in the purchase of cows which have passed this test.

MEAT INSPECTION.

ISOLATION SLAUGHTERHOUSE.—This is rented by the Health Committee from the Markets Committee and serves a very useful purpose in a large abattoir. All animals suspected to be suffering from disease are isolated, slaughtered, and dressed here, thus enabling records to be kept of illness, medicinal treatment, etc. This provision is of great value in the inspection and detention of the carcases.

Owing to the risk of receiving animals infected with anthrax which have been taken ill and bled on the farm by the owners and sent to the abattoir for the final dressing and sale, a routine microscopical examination of all suspected cases of this disease is carried out and no contact with the main slaughter halls takes place. In addition, animals which are slaughtered by the Corporation and Local Authorities outside the City under the Tuberculosis Order, can be carefully kept under observation in this slaughterhouse.

The charges made for the use of the Isolation Slaughterhouse are similar to those made for the use of the Main Slaughter Halls and the accounts are kept by this Department.

Animals Slaughtered at the Abattoir and Private Slaughter Houses.

8,036 more animals were slaughtered in the Corporation Abattoir during the year compared with 1933. There were 4 private slaughterhouses being used in the City during the year, 650 more animals being slaughtered therein compared with 1933.

During the year a larger quantity of fresh carcases dressed in slaughterhouses outside the City was submitted at the abattoir for inspection, than in the previous year.

One butcher still insists on submitting this meat for inspection at the shop, but the majority have met with our wishes and brought this meat to the abattoir for inspection before sale.

12 butchers have been able to get their meat stamped by the Meat Inspector of the district in which it was slaughtered. It is hoped that compulsory powers will be adopted to have all unstamped fresh meat brought to a clearing house at the abattoir for inspection.

Carcases of	Animals	Dressed	in	Slaughterhouses	outside	the	City	Submitted

1933	661	179	1544	1339	3723
1934	820	113	1917	1356	4206

4,518 visits were also made to slaughterhouses and shops, and 110 pigs slaughtered on private premises for the owners' own consumption, were examined.

All carcases and offals were examined as laid down in Memo 62 (Foods) by the Detention Officers at the abattoir and any diseased carcase was taken to the Detention room for final judgment by a Veterinary Inspector. In this way it is possible to detain carcases for further inspection to judge their suitability for food.

Total number of home killed carcases and offal inspected for soundness each year before sale.

1930	 	 	164,954
1931	 	 	149,409
1932	 	 	180,516
1933	 	 	192,733
1934	 	 	200,909

In addition, a large number of home killed and imported carcases were received in the City bearing a stamp or certificate of inspection. Periodical check inspections only were made of this material.

	Total	 268	4	3	296	13	0	422	11	2

All the meat condemned was voluntarily handed over to the Corporation by the butchers to be dealt with as they thought fit, on the agreement that the Corporation should pay compensation at the rate of 2/6d. per hundredweight for condemned carcases, and 1/- per hundredweight being paid for condemned offal. To make payment to each butcher for their meat condemned, the carcase meat is weighed and the weight of offal calculated on average weights for each organ.

In no case was seizure and a magistrate's order for the destruction of meat necessary.

During the year an arrangement was made with the butchers to purchase certain material from them, such as cattle uteri, sheep and calves' middles, and to remove the third stomachs of cattle free of charge. In the past, this material has been collected by pig-keepers and the practice encouraged undesirable persons gaining access to the abattoir for its collection with consequent danger of theft. Some of this material is of use for manufacture with the condemned meat, the remainder being at present destroyed pending the erection of suitable plant for its manufacture into fertiliser.

A total weight of 1,095 tons, 11 cwts. 2 qrs, of material was removed from the abattoir during the year (condemned meat and offal included) of which 422 tons, 11 cwts. 2 qrs. were manufactured and 673 tons destroyed.

MECHANICAL STUNNING OF ANIMALS.

The Slaughter of Animals Act came into force on January 1st, 1934. Negotiations with the butchers resulted in an agreement under Section 6 of this Act whereby the Corporation supply the necessary apparatus with employees for the carrying out of the stunning of animals slaughtered in the abattoir with the exception of those for Jewish slaughter. This work is proceeding very satisfactorily and is carried out by three men solely engaged in this work.

Cattle are still being stunned by the captive bolt pistol, although it has been possible to construct suitable apparatus for using electricity on these animals. Owing to the structural requirements necessary in the abattoir for its use on large animals, the use of this method has only been practicable in the Isolation Slaughterhouse, but there is every hope that it may be possible to employ it for the stunning of cattle in the main slaughter halls in the near future. Calves, sheep and pigs are all stunned by the electrical method.

The construction of a pen for casting cattle for Jewish slaughter has also been carried out successfully.

A charge of 1d. per head for cattle and pigs, and ½d. each for sheep and calves is made by the Corporation for this service. The number of animals mechanically stunned during the last 3 years was as follows:---

1932	 	 	42,890
1933	 	 	49,969
1934	 	 	181,958

INSPECTION OF FOOD, OTHER THAN MEAT.

The food supplies at the wholesale fish and fruit markets, wholesale imported meat shops, wholesale provision premises, retail markets and railway sidings were inspected for soundness. Certificates were issued to commission salesmen for the food condemned and the goods removed for destruction. 2,008 visits were made during the year.

POULTRY AND GAME.			FISH	Fruri	ANI	D VEGI	TABLES.	Provisions etc.
Turkeys Fowls Rabbits Grouse Eggs	 	$1\\34\\1460\\6\\126$	24 tons, 10 cwts. 1 qr. 22 lbs.	Pears Tomatoes Lettuce	· · · · · · ·	··· ·· ··	33 cases. 17 ,, 7 ,, 45 crates. 10 crates. 14 crates. 3 baskets.	Canned goods :- 3,641 tins.

Poultry, Game, Fish, Fruit and Vegetables, Provisions, &c., destroyed as being unfit for human consumption during the year:--

Shell fish dealers were advised by the Medical Officer of Health to purchase their supplies of mussels where they had been relaid for purification. Samples were taken for bacteriological examination when consignments were received from other sources because of the danger of sewage pollution.

ABATTOIR LABORATORY.

This laboratory was used for the examination of a large number of samples of milk, sputum, blood and food inspected during the year.

PROSECUTIONS.

For an offence against the Public Health (Meat) Regulations.

One defendant fined 10/-

For an offence against the Movement of Swine Order.

One defendant fined $\pounds 10/0/0$ and costs.

I wish to thank the members of the staff for the satisfactory manner in which they carried out their duties, and the Chief Constable and Markets Superintendent for their co-operation in the administration of the Diseases of Animals Acts.
