THE URBAN DISTRICT COUNCIL OF SHERINGHAM

REPORT OF THE MEDICAL OFFICER OF HEALTH FOR THE
YEAR ENDED 31ST. DECEMBER, 1959.

To The Chairman and Members of
The Urban District Council of Sheringham.

I have much pleasure in presenting to you the Annual Public Health Report for 1959. As my duties commenced in the latter half of the Year, it is obvious that I cannot speak from first hand experience for the earlier months. I am, therefore, particularly grateful to Mr. Sershall for the assistance and co-operation which I have received in making this report a complete record of the Year's happenings.

Topography.

The Urban District of Sheringham is situated on the North Coast of Norfolk, in a region of wide open heaths, bounded to the North of the town by the North Sea and to the South by a low range of wooded hills. It adjoins the Erpingham Rural District on three sides and has on its outskirts such picturesque places as the Roman Camp, Pretty Corner and the village of Upper Sheringham.

During the Summer months the resident population is greatly increased by an influx of visitors resorting to Sheringham for the bracing air, fine sands, golf links and scenery. It is one of the driest places in the British Isles as the air is extremely dry and bracing and consequently is highly recommended as a health resort.

The fishing industry in Sheringham still flourishes and is particularly well known for the excellence of its crabs and lobsters, although this industry is now largely superseded by the town's rapid development as a holiday centre and the increasing class who resort to Sheringham for its natural beauties and facilities.

General Statistics.

Area in acres	929.
Population (Estimated).....	4,650.
Number of inhabited houses.....	1,749.
Total Rateable Value.....	£72,496.
Product of a Penny Rate.....	£288. 17. 4.

THE URBAN DISTRICT COUNCIL OF BERTHOVA

REPORT OF THE MEDICAL OFFICER OF HEALTH FOR THE
YEAR ENDING 31st DECEMBER, 1933.

To the Chairman and Members of
The Urban District Council of Berthova.

I have much pleasure in presenting to you the Annual Public Health Report for 1933. As my duties commenced in the latter half of the year, it is obvious that I cannot speak from first hand experience for the earlier months. I am, therefore, particularly grateful to Mr. Campbell for the assistance and co-operation which I have received in making this report a complete record of the year's happenings.

Geography.

The Urban District of Berthova is situated on the North Coast of Norfolk, in a region of wide open heath, bounded to the North of the town by the North Sea and to the South by a low range of wooded hills. It adjoins the neighbouring Rural District on three sides and has on its outskirts such picturesque places as the Roman Camp, Pretty Corner and the village of Upper Berthova.

During the summer months the resident population is greatly increased by an influx of visitors resorting to Berthova for the bracing air, fine sands, golf links and scenery. It is one of the driest places in the British Isles as the air is extremely dry and breezy and consequently is highly recommended as a health resort.

The fishing industry in Berthova still flourishes and is particularly well known for the excellence of its crabs and lobsters, although this industry is now largely superseded by the town's rapid development as a holiday centre and the increasing class who resort to Berthova for its natural beauties and facilities.

General Statistics.

Area in acres	323.
Population (Estimated)	4,670.
Number of inhabited houses	1,743.
Total Rateable Value	£72,436.
Product of a Penny Rate	£288. 17. 4.

VITAL STATISTICS.

<u>Births.</u>		<u>M</u>	<u>F</u>	<u>Total</u>
<u>Live Births</u>	Legitimate	36	31	67
	Illegitimate	<u>2</u>	<u>2</u>	<u>4</u>
		<u>36</u>	<u>33</u>	<u>69</u>

This gives a birth rate of 14.8 per 1,000 (corrected 18.8) of the estimated population compared with a rate of 16.5 for England and Wales. The illegitimate births comprised 2.9% of the total.

Still Births There was just one male still birth, which gives a rate of 14 per 1,000 births; the National figure is 20.7, the lowest ever recorded. There were no illegitimate still births.

Infant Mortality Deaths of infants under 1 year of age:-

	<u>M</u>	<u>F</u>	<u>Total</u>
Legitimate	1	-	1
Illegitimate	<u>1</u>	<u>-</u>	<u>1</u>
	<u>2</u>	<u>-</u>	<u>2</u>

Infant Mortality Rate is 29.0

" " " (England and Wales) is 22.0

The National figure is the lowest on record.

Causes of Death. The number of deaths and their causes as recorded by the Registrar-General are shown below:-

Tuberculosis, respiratory	1
" other	-
Syphilitic disease	-
Diphtheria	-
Whooping cough	-
Meningococcal infections	-
Acute poliomyelitis	-
Measles	-
Other infective and parasitic diseases	-
Malignant neoplasm, stomach	1
Malignant neoplasm, lung, bronchus	3
Malignant neoplasm, breast	2
Malignant neoplasm, uterus	2
Other malignant and lymphatic neoplasms	6
Leukaemia, aleukaemia	-
Diabetes	-
Vascular lesions of nervous system	5
Coronary disease, angina	11
Hypertension with heart disease	3
Other heart disease	16
Other circulatory disease	2
Influenza	-
Pneumonia	4
Bronchitis	1
Other diseases of respiratory system	-
Ulcer of stomach and duodenum	-
Gastritis, enteritis and diarrhoea	-
Nephritis and nephrosis	-
Hyperplasia of prostate	1
Pregnancy, childbirth, abortion	-
Congenital malformations	-
Other defined and ill-defined diseases	5
Motor vehicle accidents	1
All other accidents	1
Suicide	-
Homicide and operations of war	-
Total number of deaths	<u>65</u>

Total	187	187
Legitimate	178	178
Illegitimate	9	9

This gives a birth rate of 14.8 per 1,000 (corrected 16.8) of the estimated population compared with a rate of 16.5 for England and Wales. The illegitimate births comprised 5.3% of the total.

Small Births There was just one male still birth, which gives a rate of 14 per 1,000 births; the National figure is 20.7, the lowest ever recorded. There were no illegitimate still births.

Infant Mortality Deaths of infants under 1 year of age:-

Total	1	1
Legitimate	1	1
Illegitimate	0	0

Infant mortality rate is 29.0

" " " (England and Wales) is 22.0

The National figure is the lowest on record.

Causes of Death The number of deaths and their causes as recorded by the Registrar-General are shown below:-

1	Tuberculosis, respiratory
-	" " other
-	Syphilitic diseases
-	Diphtheria
-	Whooping cough
-	Fungal diseases
-	Acute poliomyelitis
-	Measles
-	Other infectious and parasitic diseases
1	Malignant neoplasm, stomach
2	Malignant neoplasm, lung, bronchus
2	Malignant neoplasm, breast
2	Malignant neoplasm, uterus
6	Other malignant and lymphatic neoplasms
-	Lacerations, abrasions
-	Diphtheria
2	Various lesions of nervous system

-	Genital malformations
2	Other defined and ill-defined diseases
1	Motor vehicle accidents
1	All other accidents
-	Strikes
-	Hostilities and operations of war
63	Total number of deaths

VITAL STATISTICS -(Continued)

Causes of Death -(Continued).

The total number of deaths is appreciably less than last Year (85). Heart disease accounts for approximately half of the total (49%); while Cancer was responsible for 21%. This is in accordance with the National trend; these two groups of disease are firmly established as the leading causes of death in Britain today. It is gratifying to note that once again there were no deaths from maternal causes, and apart from the one death from respiratory Tuberculosis, no deaths from infectious conditions.

The death Rate per 1,000 of the estimated population was	14.0
1958 figure	18.3
1957 figure	13.2
Corrected death rate for 1,000	" " " 9.1
National Rate	11.6

INFECTIOUS DISEASE.

The notifications received during the Year are tabulated below:

Disease	Age unknown	Under							Total
		1	1-2	3-4	5-9	10-14	15-24	25+	
Measles	-	2	18	25	81	3	1	1	131
T.B. Pulmonary	-	-	-	-	-	-	-	2	2
Total	-	2	18	25	81	3	1	3	133

This low incidence of infectious disease is very satisfactory, the only serious illness recorded being the two cases of Pulmonary Tuberculosis.

No cases of food poisoning were notified, which, in a town dependent upon its catering industry, speaks well for those concerned with the handling of food.

TUBERCULOSIS.

In addition to the two cases of Tuberculosis notified, there were also three inward transfers, i.e. cases of Tuberculosis who have come to live in the district, so that the total number of cases on the Tuberculosis register at the end of the Year stood at 43.

	Pulmonary		Non-Pulmonary		Total
	Males	Females	Males	Females	
New cases	-	2	-	-	2
Inward transfers	1	1	-	1	3
No. of cases on Register at 31. 12. 1959.	15	24	-	4	43

POLIOMYELITIS.

No cases of poliomyelitis occurred during the Year. With the hot dry Summer that was experienced in 1959, one would have expected a high incidence, but in the whole administrative County of Norfolk, only three paralytic cases occurred. I feel sure that the poliomyelitis vaccination programme has played a large part in producing this result, and in that case the tremendous amount of work which has been put into this scheme has been well worth while.

The number of persons vaccinated against the disease during 1959 is as follows:-

Causes of Death - (Continued)

The total number of deaths is appreciably less than last year (97). Heart disease accounts for approximately half of the total (49); while Cancer was responsible for 21%. This is in accordance with the National trend; these two groups of diseases are firmly established as the leading causes of death in Britain today. It is gratifying to note that once again there were no deaths from natural causes, and apart from the one death from respiratory tuberculosis, no deaths from infectious conditions.

1957	1956	1955	1954	1953	1952	1951	1950
14.0	16.7	17.5	18.1	18.2	18.3	18.4	18.5
11.6	13.1	13.5	13.6	13.7	13.8	13.9	14.0

TUBERCULOSIS

The notifications received during the year are tabulated below:

Age Group	1-2	3-4	5-9	10-14	15-24	25+	Total
Male	2	18	25	31	2	1	139
T. B. Pulmonary	-	-	-	-	-	2	2
Total	2	18	25	31	2	3	141

The low incidence of infectious diseases is very satisfactory, the only serious illness recorded being the two cases of pulmonary tuberculosis. No cases of food poisoning were notified, which, in a town dependent upon the catering industry, speaks well for those concerned with the handling of food.

TUBERCULOSIS

In addition to the two cases of tuberculosis notified, there were also three latent tubercles, i.e., cases of tuberculosis who have come to live in the district, so that the total number of cases on the tuberculosis register at the end of the year stood at 43.

No. of cases on Register at 31.12.1957	Latent Tubercles		Non-latent Tubercles		Total
	Male	Female	Male	Female	
12	5	1	-	-	18
31	-	-	1	1	33
43	5	1	1	1	43

TUBERCULOSIS

No cases of poliomyelitis occurred during the year. With the hot dry summer that was experienced in 1956, one would have expected a high incidence, but in the administrative County of Hereford, only three paralytic cases occurred. I feel sure that the poliomyelitis vaccination programme has played a large part in producing this result, and in that case the tremendous amount of work which has been put into this scheme has been well worth while.

The number of persons vaccinated against the disease during 1957 is as follows:-

DIPHTHERIA IMMUNISATION - (Continued).

The various antigens used were as follows:-

	<u>Primary</u>	<u>Booster</u>
Triple antigen (Diphtheria/Pertussis/Tetanus)	247	10
Combined antigen (Diphtheria/Pertussis)	5	-
Single antigen (Diphtheria only)	-	1
	<u>252</u>	<u>11</u>

IMMUNISATION AGAINST TETANUS.

The following table relates to persons immunised against tetanus (excluding those protected with tripple antigen) in Area No. 2 during 1959:-

Age at date of immunisation	Under 1	1 - 4	5 - 14	Over 15	Total
Tetanus toxoid only	2	23	105	127	257

SMALLPOX VACCINATION. AREA NO.2.

The number vaccinated is almost the same as last Year:-

Age at date of vaccination	Under 1	1	2	3	4	5 - 14	15 & over	Total
Primary	192	8	2	-	2	4	24	232
Re-vaccination	-	3	1	-	4	14	85	107

Appendix - (Page 3).

B.C.G. Vaccination.

Heaf tests were carried out at Sheringham Secondary Modern School among children born in the Years 1944, 1945 and 1946. Negative reactors were vaccinated with B.C.G. Of the 247 children eligible, 163 consent forms were returned by parents, giving an acceptance rate of 66%.

No. skin tested	-	151
No. found positive	-	16
No. found negative	-	125

The various antigens used were as follows:-

10	247	Triple antigen (Diphtheria/Tetanus)
-	2	Combined antigen (Diphtheria/Tetanus)
$\frac{1}{11}$	$\frac{1}{11}$	Single antigen (Diphtheria only)
	<u>250</u>	

IMMUNIZATION AGAINST TETANUS

The following table relates to persons immunized against tetanus (excluding those protected with triple antigen) in Area No. 2 during 1953:-

Total	Age at date of immunization				Tetanus toxoid only
	Under 1	1 - 4	5 - 14	Over 15	
257	5	22	102	128	

SMALLPOX VACCINATION - AREA NO. 2.

The number vaccinated in each of the years:-

Total	Age at date of vaccination					
	Under 1	1	2	3	4	5 & over
107	-	2	1	-	4	82
222	192	8	2	-	4	24

Appendix - (Part 2).

B.C.G. Vaccination.

Heat tests were carried out at Birmingham Secondary Modern School among children born in the years 1944, 1945 and 1946. Negative reactions were vaccinated with B.C.G. Of the 247 children eligible, 187 consent forms were returned by parents, giving an acceptance rate of 75%.

No. skin tested - - 171
 No. found positive - - 16
 No. found negative - - 155

For the purpose of carrying out the service provided by the Norfolk County Council under the National Health Service Act of 1946, the Cromer Urban District, the Sheringham Urban District and the Erpingham Rural District are combined to form County Area No. 2. These services include midwifery, the care of mothers and young children, vaccination and immunisation, home nursing, mental health, prevention of illness, care and after care, home helps and the ambulance service.

Maternity and Child Welfare. The town is served by an infant welfare clinic held twice a month at the Youth Centre, Norfolk Road. The domiciliary service is provided by a District Nurse/Midwife and a full time Health Visitor, both of whom are in attendance at the clinic, together with the Medical Officer.

All children under five are visited regularly in their homes by the Health Visitor, who takes over from the midwife when the baby is 2 weeks old. Children of five years and over come under the supervision of the school nurse.

Vaccination and Immunisation. This is carried out by the Assistant County Medical Officer and by the General Practitioners. Sessions for vaccination and immunisation against smallpox, diphtheria, whooping cough, tetanus and poliomyelitis are arranged at clinics, schools and General Practitioners' surgeries.

School Medical Service. This takes up a considerable amount of time as every one of the 28 schools in the area is visited annually and on those occasions a full examination of all children in the appropriate age group is carried out. They are seen during their first year at school, at 10 years and before leaving; if any defects are discovered, they are referred for treatment or investigation. Children in whom there is thought to be a need for supervision are seen every year. Apart from the routine visits, many special visits to schools are made for such purposes as immunisation, mental ascertainment, examination when transport to school is believed necessary, and so on. The vision of all pupils is tested at 8 years as a routine.

General Welfare. These services are administered in the district by the Local Welfare Officer, who is in attendance and available for interview at:-

Sheringham U.D.C. Offices 2. - 2.30 p.m. Tuesday.

ENVIRONMENTAL HEALTH.

For some years there has been growing apprehension about the danger of bathing in Sea-water polluted by sewage. As this is a field in which epidemiological studies have been almost totally lacking, it has been a difficult task for Medical Officers of Health to advise their Councils as to whether a serious hazard to the health of the community existed. It is only too easy to subscribe to majority views, which, on health matters, are usually based solely on ignorance. What is needed is an authoritative statement based on facts and rational thinking, and this is now available. The Medical Research Council's Memorandum on Sewage Contamination of Bathing Beaches in England and Wales is the result of five years scientific study of this problem and its conclusion is this:- "The Committee's studies suggest that, with the possible exception of a few aesthetically revolting beaches round the coasts of England and Wales, the risk to health of bathing in sewage-contaminated Sea-water can, for all practical purposes, be ignored".

The results of the investigation are reassuring and should go a long way towards relieving anxiety about any presumed danger of contracting infectious diseases from sea-bathing. There is a point, however, which should be made quite clear. The investigation was concerned solely with the hazards to health of sea-bathing; the fact remains that bathing in sewage-polluted water is aesthetically unpleasant and, to many people, revolting. If one wishes to make a case against this coastal pollution, then the health aspect cannot be used as evidence because, as far as enlightened human knowledge goes, there is no danger. One must rely the consideration of what is aesthetically undesirable and on the loss of amenity.

In conclusion I would like to place on record the very great assistance that I have received in the compilation of this report from the staff of the Local Health Office, to whom I am most grateful.

Your obedient Servant,

P. G. HOLT.

M.B., Ch.B., D.P.H.

August, 1960.

For the purpose of carrying out the services provided by the Norfolk County Council under the National Health Service Act of 1948, the Greater Urban District, the Metropolitan Urban District and the Metropolitan Rural District are combined to form County Area No. 2. These services include maternity, the care of mothers and young children, vaccination and immunization, mental health, prevention of illness, care and after care, home help and the ambulance service.

Immunization and Child Welfare. The town is served by an infant welfare clinic held twice a month at the Youth Centre, Norfolk Road. The domiciliary service is provided by a District Nurse/Midwife and a Full Time Health Visitor, both of whom are in attendance at the clinic, together with the Medical Officer.

All children under five are visited regularly in their homes by the Health Visitor, who takes over from the midwife when the baby is 2 weeks old. Children of five years and over come under the supervision of the school nurse.

Vaccination and Immunization. This is carried out by the Assistant County Medical Officer and by the General Practitioners. Sessions for vaccination and immunization against mumps, diphtheria, whooping cough, tetanus and poliomyelitis are arranged at clinics, schools and General Practitioners' surgeries.

School Medical Services. This takes up a considerable amount of time as every one of the 28 schools in the area is visited annually and on these occasions a full examination of all children in the appropriate age group is carried out. They are seen during their first year at school, at 10 years and before leaving; if any defects are discovered, they are referred for treatment or investigation. Children in whom there is thought to be a need for supervision are seen every year. Apart from the routine visits, many special visits to schools are made for such purposes as immunization, mental assessment, examination when transport to school is believed necessary, and so on. The vision of all pupils is tested at 6 years as a routine.

General Welfare. These services are administered in the district by the Local Welfare Officer, who is in attendance and available for interview as:-

Spending U.D.C. Offices 2 - 2.30 p.m. Tuesday

GENERAL INVESTIGATION

For some years there has been growing apprehension about the danger of bathing in sea-water polluted by sewage. As this is a field in which epidemiological studies have been almost totally lacking, it has been a difficult task for the Medical Officers of Health to advise their Councils as to whether a serious hazard to the health of the community existed. It is not too easy to subscribe to majority views, which on health matters, are usually based solely on experience. What is needed is an authoritative statement based on facts and rational thinking, and this is now available. The Medical Research Council's Memorandum on Sewage Contamination of Bathing Beaches in England and Wales is the result of five years' scientific study of this problem and its companion is this:- "The Committee's studies suggest that, with the possible exception of a few exceptionally revolting beaches found the coast of England and Wales, the risk to health of bathing in sewage-contaminated sea-water can, for all practical purposes, be ignored."

The results of the investigation are reassuring and should go a long way towards relieving anxiety about any presumed danger of contracting infectious diseases from sea-bathing. There is a point, however, which should be made quite clear. The investigation was concerned solely with the hazards to health of sea-bathing; the fact remains that bathing in sewage-polluted water is aesthetically unpleasant and, to many people, revolting. If one wishes to make a case against this coastal pollution, then the health aspect cannot be used as evidence because, as far as enlightened human knowledge goes, there is no danger. One must rely on the consideration of what is aesthetically undesirable and on the loss of amenity.

In conclusion I would like to place on record the very great assistance that I have received in the compilation of this report from the staff of the Local Health Office, to whom I am most grateful.

F. G. HOLT,

M.B., Ch.B., D.P.H.

August, 1960

SANITARY CIRCUMSTANCES OF THE AREA

(The Report of the Surveyor and Public Health Inspector)

1. Water. - The Eastern Gas Board serve water to all the properties within the Urban District by a piped supply. The collecting ground, pumping station and reservoirs are situated in the Sheringham Woods, a situation which is isolated and enclosed approximately half-a-mile South of the Town.

The water is derived:-

- (a) From springs situated within the collecting grounds and stored in reservoirs.
 - (b) From two deep wells sunk in chalk approximately 400 feet deep. The water is pumped into a reservoir at a higher level to supply by gravitation the high-lying parts of the Town.
- (i) (a) Quality of Water. - On behalf of the Eastern Gas Board, the Counties Public Health Laboratory carried out monthly bacteriological examinations and half-yearly chemical analysis of the treated water as supplied in this Urban District during the period under review, all of which proved to be of a very high standard of purity. Certificates giving the result of these bacteriological and chemical examinations are exhibited in the Showroom of the Eastern Gas Board's premises in Sheringham, for the perusal of the general public. Chlorine residue tests are carried out daily on the Spring and Well waters, both treated and untreated.
- (b) Quantity of Water. - The quantity of water supplied in the Urban District is sufficient for all purposes during dry weather. The quantity of water obtained from the various springs naturally varies a little during the Summer and dry weather, but the level of the water in the wells varies little however much it is pumped and has never shown signs of failing.
- (ii) The water supplied within the Urban District is not liable to plumbo-solvent action, as the p.H Reaction of the water is neutral or on the alkaline side of neutrality. All the water service pipes are laid on in galvanised wrought iron.
- (iii) No action has been found necessary in respect of any form of contamination of the water supply.
- (iv) (a) Number of dwelling-houses supplied direct from public water mains 1,768.
- Number of population supplied from public water mains 4,650.
- (b) Number of dwelling-houses supplied by means of stand pipes 51.
- Number of population supplied by means of stand pipes 150.

2. Drainage and Sewerage. - The Urban District is sewered throughout with a system needing improvement as it is not capable of dealing with excessive and sudden rainfall.

The Council's Consulting Engineers have submitted schemes for:-

- (a) The provision of a 24" dia. C.I. pipe Sea outfall 367 yards long to replace the present defective and worn out outfall pipe, and
- (b) Relieving the main sewers at points of surcharge.

A Ministry of Housing and Local Government Public Inquiry on the above schemes was held in Sheringham on the 5th. February, 1958, resulting in the Minister requiring further float tests in connection with scheme (a). Scheme (b) is to be held in abeyance until after the completion of scheme (a).

SANITARY INSPECTION OF THE AREA

(Continued)

(e) Number of inspections and visits in connection with the duties of Surveyor:-

Number of Building Plans submitted for approval	61.
" " " " approved	60.
" " " " disapproved or withdrawn.. .. .	1.
" " " " for houses and bungalows.. .. .	9.
" " " " conversions	9.
" " " " additions and alterations	16.
" " " " garages	8.
" " " " petrol filling stations	1.
" " " " workshops	1.
" " " " showroom	1.
" " " " bathrooms	14.

Visits in connection with inspection of:-

Foundations	24.
Damp proof courses	16.
General Building Byelaw inspections	171.
Number of drain tests carried out in new buildings	30.

Number of new houses erected during the period:-

By the Local Authority	Nil.
By other persons	10.
Conversion of premises - in family units	11.

Number of applications for Discretionary Grants	3.
" " " " " approved	2.
" " " " Standard Grants	6.
" " " " " approved	6.
" " Inspections and visits in connection with Discretionary and Standard Grants	23.

- (f) Shops. No action under this heading has been found necessary.
- (g) Camping Sites. There are no camping or caravan sites in the Urban District.
- (h) Smoke Abatement. No action under this heading has been found necessary.
- (i) Swimming Baths and Pools. There are no swimming baths or pools open to the public in the Urban District.
- (j) Eradication of Bed Bugs. No evidence has been found of bed bugs in this Urban District.

Inspection and Supervision of Dood.

(a) Milk Supply. There are no milk producers or cowkeepers within the Urban District.

Number of retail purveyors	11.
Number of Dealers Licences to use the special designation "Tuberculin Tested" and "Pasteurised" milk	7.
Number of Dealers Licences to use the special designation "Pasteurised" milk	4.
Number of Pasteuriser's Licences issued by the Norfolk County Council	1.

Forty-seven samples of Pasteurised milk have been taken during the period by the Norfolk County Council Medical Officer's Department, from the Sheringham premises and vehicles of East Coast Dairies Ltd., and all samples satisfied the prescribed tests.

Ice-Cream. Eighteen samples of Ice Cream were taken during the period from Retailers in the Urban District and submitted to the Public Health Laboratory Service, Norwich, for bacteriological examination, resulting in seventeen samples being Provisional Grade I, and one sample Provisional Grade II.

Inspection and Supervision of Food
(Continued)

- (b) Adulteration, Chemical and Bacteriological Examination of Food. The appropriate Authority under this heading is the Norfolk County Council.
- (c) Nutrition. No special work in the dissemination of knowledge on this subject has been considered necessary.
- (d) Shellfish. No shellfish are gathered within the area of the Urban District.
- (e) Food Hygiene Regulations. Inspections of food premises in the Urban District have been made and it has been unnecessary to take any statutory or legal action in this matter.
- (f) Meat Inspection. There are eight butchers shops within the Urban District.

One Slaughterhouse is licensed in the Urban District, which is owned and used by a Sheringham butcher for the supply of meat to his retail business in the Town. This Slaughterhouse has satisfactory lairage and hanging facilities for its present use and the slaughtering and dressing of carcasses is carried out in a satisfactory manner.

Two Sheringham butchers use a Slaughterhouse situated in the adjoining Rural District for their meat supply, the remainder purchase their meat from fresh meat wholesalers.
