Number of cases receiving pre-hospital care	...	...	...	...	...	...	...	...	...	9	
Total number of cases receiving community care	...	...	...	...	...	...	...	...	...	43	

(c) Mental subnormality in the community

At the beginning of the year the number of cases was	...	...	...	...	...	...	...	...	...	74
Two new cases were reported and two patients were discharged from hospital, making a total of	...	...	...	...	...	...	...	...	...	78
During the year 1 patient was admitted to hospital, 2 left the area and 4 were removed from the register, leaving a total number of patients on the register at the end of 1965 of	...	...	...	...	...	...	...	...	...	71
Total number of patients in hospitals for sub-normals at the beginning of the year	...	...	...	...	...	...	...	...	...	49
One patient was admitted, 2 patients were discharged from hospital and 1 patient died, leaving a total number of patients in hospital of	...	...	...	...	...	...	...	...	...	47
During the year 2 children were admitted for short-term care	...	...	...	...	...	...	...	...	...	...

(d) Training Centre, 1965

There were 37 trainees attending the Training Centre at the end of 1964. Four new trainees were admitted to the Centre during the year and four left the Centre, leaving a total of 37 trainees on the register.

Trainees are conveyed to and from the Centre daily by coach, and a hot mid-day meal is provided, for which a charge of 1/-d. per day is made. The remainder of the charge is met by the Health Committee.

During the year an outing was arranged for the trainees to Weston-Super-Mare by the Solihull Parents' Association, and the Senior boys and girls spent an enjoyable day at Warwick.

At Christmas, the pantomime was thoroughly enjoyed by a large audience of parents and friends.

MENTAL HEALTH, 1966

(a) Admissions to Hospitals

Mode of Admission	<i>No. of Patients</i>	
Compulsory admission under the Mental Health Act, 1959 ... ..	40	
Informal admissions ... ..	173	213
During the year 1 patient was admitted for treatment and 4 patients admitted for observation were detained for further treatment		
<b>Total Number of Discharges</b>		
Discharges to Patient's Home ... ..	176	
Discharges to Old People's Homes ... ..	2	
Died in hospital ... ..	19	197
Remaining in hospital at the end of 1966		106

(b) Community Care

Of the 176 discharges from hospital, 122 required no after care.

Number of cases receiving after care at the end of 1965 ... ..	62	
Number of new cases added ... ..	54	116
Number of cases requiring no further after care and removed from the list ... ..	64	64
Total number of cases receiving after care ... ..	52	
Number of cases receiving pre-hospital care ... ..	8	
Total number of cases receiving community care ... ..		60

After care visits made by the Mental Welfare Officers during the year ended December, 1966 were as follows:—

After care visits — Mentally Ill patients ... ..	1781
After care visits — Sub and Severely Sub-normal patients	607
Other visits including investigations ... ..	734
Total number of visits made	3122

(c) Mental subnormality in the community

At the beginning of the year the number of cases was ... ..	71	71
Six new cases were added 4 transferred in and 5 discharged from hospital, making a total of ... ..		86
During the year 3 patients were admitted to hospital and 1 left the area, leaving a total number of patients on the register at the end of 1966 of ... ..	82	
The number of patients in hospital at the beginning of the year was ... ..	47	
Three patients were admitted to hospital, and 1 died, leaving a total number of patients in hospital at the end of 1966 of ... ..	49	
During the year, one patient was admitted twice and 2 other patients were admitted for temporary care to give their parents a much-needed break		

(d) Training Centre, 1966

There were 37 trainees attending the Training Centre at the end of 1965. Four new trainees were admitted to the Centre during the year and 1 left, leaving a total of 40 on the register.

Trainees are conveyed to and from the Centre daily by coach and taxi. A hot meal is provided, for which a charge of 1/-d. per day is made. The remainder of the charge is met by the Health Committee.

At Christmas the pantomime by the trainees was thoroughly enjoyed by a large audience of parents and friends. The parents were informed during refreshments that this was the last time the trainees would attend at this Centre, as this would be closed and the children would attend the new all-purpose Centre which would be opened after the Christmas holidays.

	During the year 5 children were admitted to hospital for short-term care.	

(d) **Training Centre, 1967**

The new all-purpose, 70 place, Junior Training Centre, sited in Haslucks Green Road, Shirley, was completed in 1966 and opened for trainees on the 9th January, 1967. This new Centre replaced the old wooden building at Knowle which had been in use for a number of years.

The Centre has its own kitchen which supplies dinners daily for the trainees and staff.

At present adult trainees also attend this centre.

The trainees are conveyed to and from the centre daily by coach.

There were 43 trainees on the register at the beginning of the year. Three new cases were added and three cases were transferred into the Borough, and one case was accepted from another authority. Unfortunately, one trainee was withdrawn from the centre because of behaviour difficulties, leaving a total number on the register of 49.

The centre was open for 192 days during the year and the average attendances of trainees was 40.95 daily.

At Christmas a special show was given by the trainees which was thoroughly enjoyed by a large audience of parents and friends; afterwards a display of the trainees' work was on show.

## AMBULANCE SERVICE, 1968

Total number of patients carried:- 36,475

Total number of miles travelled:- 163,365

Type of Case	Patients	Mileage
Emergency Accident	821	4,435
Emergency Maternity	364	2,584
Emergency Other	2,014	20,870
Hospital Service	29,942	130,421
Maternity	3,193	1,382
Infectious Diseases	1	6
School Children	-	-
Other	140	409
Non-patient carrying	-	3,258

### VEHICLES

At 31st December, 1968 the fleet statistics were as follows:-

Regn. No.	Type	Make	Year	Mileage
GXC. 739 C	Amb.	Morris	1965	19,434
JXC. 999 D	Amb.	Morris	1966	13,210
9889 UE	Amb.	Bedford	1961	15,458
5283 WD	Amb.	Bedford	1961	15,460
5286 WD	Amb.	Bedford	1961	16,941
5288 WD	Amb.	Bedford	1961	17,751
3800 WD	Large dual purpose vehicle	Bedford	1961	19,398
RXC. 894 E	Large dual purpose vehicle	Ford	1967	23,443
VXC. 517 F	Large dual purpose vehicle with lift	Bedford	1967	17,316
Ex Civil (GXC. 208 C)		Commer	1965	Into service 1969
Defence (ALF. 100 B)		Mini Bus	1964	4,954 Into service October, 1968

Two vehicles were purchased from Civil Defence Headquarters, one solely for Ambulance Department and one to be used jointly between Children's Department and Ambulance Section.

## HOME HELP SERVICE

The Home Help Service operating in Solihull provides help in cases of maternity, sickness, convalescence, old age and infirmity or any emergency in the household due to illness.

An analysis of the cases dealt with is given below:-

Year	Aged 65 or over	Aged under 65 chronic sick and tuberculous	Maternity	Others	Total No. of hours worked by Home Helps
1965	168	9	95	53	60,782
1966	155	3	84	17	62,960
1967	183	7	80	60	67,050
1968	190	10	86	57	67,959

The standard charge at the end of 1968 for the Home Help Service was 5/3d. per hour. Reduction of this charge in part is based on an approved scale.

## HANDICAPPED PERSONS

	Handicapped persons on Register	Car Badges issued to Disabled Drivers	Holidays arranged by the Authority		No. of people given Financial assistance for adaptations to their homes
			Individual	Group

## BLIND WELFARE, 1968

The services for the blind include home visiting, teaching of crafts and of Braille and Moon.

Fortnightly craft classes are held at The Manor House, Solihull, and on the second Tuesday, virtually every month, a social is also held at The Manor House.

Annual events include the Christmas party, the Bulb Show and various summer outings.

Voluntary help is obtained from many sources including the Inner Wheel who very kindly give a garden party every summer for members of the social club for the blind.

SANITARY CIRCUMSTANCES OF THE AREA

WATER

The Borough is supplied with mains water by the water undertakings of the Cities of Birmingham and Coventry, more than 90% coming from Birmingham.

ESTIMATED NUMBER OF HOUSES, FLATS AND SHOPS WITH LIVING ACCOMMODATION SERVED BY:-

Year	Birmingham	Coventry
1965	29,827	1,959
1966	30,916	2,018
1967	31,962	2,070
1968	32,805	2,212

SAMPLES FROM WATER MAINS

As a matter of routine, each water supply was sampled twice during each year. Samples were submitted for both Chemical Analysis and Bacteriological Examination and all proved satisfactory.

Typical results of the chemical analyses are shown below:-

	Birmingham Water Mains	Coventry Water Mains
<i>Results expressed in parts per 1,000,000</i>		
Appearance...	Bright, few small particles	Bright, few small particles
Ammoniacal Nitrogen	0.028	0.
Albuminoid Nitrogen	0.02	0.092
Chlorine in Chlorides	13.9	26.1
Nitrate Nitrogen	0.3	0.2
Oxygen absorbed from permanganate at 27°C in 4 hours	1.0	0.8
Total Solids dried at 100°C	60.	205.
Nitrite Nitrogen	0.	0.
pH	6.8	7.6
Free Chlorine	0.	0.
Radioactivity	0.	0.
Electrical Conductivity at 20°C	77 micromhos	247 micromhos

BLIND WELFARE, 1968

The water supplied to Solihull by the Coventry Water Undertaking is a river-derived supply, and in consequence the quality of the water varies with the river flow, although it remains suitable for drinking purposes at all times.

The fluoride content of the City of Birmingham water is stated to be 0.9 p.p.m., and that of the City of Coventry, nil.

NUMBER OF HOUSES SERVED BY PUBLIC WATER MAINS, 1965

(a) *Direct to houses.*

The estimated number of dwelling houses, flats and shops with living accommodation at the end of the year was 31,859; of this number approximately 31,786 were connected direct to the mains.

(b) *By standpipes.*

12 houses were served by mains water from 6 standpipes or taps in outbuildings.

*Rural Water Supplies.*

At the end of the year, 41 wells serving 61 houses were in active use.

During the year, 3 houses previously served by 3 wells were connected to public mains, and 4 houses previously served by 4 wells were demolished.

*Results of Samples of Rural Water Supplies.*

Routine samples have been taken for supervisory purposes and a number following complaints. The number of samples submitted to the Public Analyst or Bacteriologist was as follows:—

	<i>Chemical and Bacteriological</i>	<i>Bacteriological only</i>
No. of samples submitted ... ..	6	15
No. satisfactory in both tests ... ..	6	-
No. unsatisfactory in both tests ... ..	-	-
No. satisfactory in chemical tests only	-	-
No. satisfactory in bacteriological tests only ...	-	13
No. unsatisfactory in bacteriological tests only	-	2

The unsatisfactory water samples were from wells chiefly of the shallow type.

*Drainage and Sewerage.*

The local sewerage system has been further extended by the laying of 1,900 yards of foul sewer and by 4,260 yards of surface water sewer, a combined total of 3.5 miles. The arrangements for sewerage and sewage disposal are adequate.

*Closet accommodation and Cesspools.*

During the year 3 pail closets were converted to water-closets connected to the public sewer and £255.17.6d. was paid by the Council to owners of properties in the form of grants towards the cost of conversion. 2 cesspools serving 2 houses were discontinued following connection of the properties to the public sewer.

The Borough Engineer and Surveyor, who is responsible for the emptying of pail-closets and cesspools, states that at the end of 1965, 85 pail-closets and 206 cesspools were in use in the Council's area and the number of properties drained to cesspools was 281. The majority of these pail closets and cesspools were situated where sewers were not available.

**Public Cleansing.** NUMBER OF HOUSES SERVED BY PUBLIC WATER MAINS, 1932

The Council, through the Borough Engineer and Surveyor, undertake the removal of house refuse from all premises within the Borough, the ash bin method of storage being general and the system of disposal that of controlled tipping.

**Housing.**

Number of houses built during the year, including flats:—

Council Houses ... ..	316
Private houses ... ..	913

Inspection of Dwelling Houses during year:—

Total number of dwelling houses inspected for housing defects (under Public Health or Housing Acts) ... .. 84

Number of dwelling houses (included above) which were inspected and recorded under the Housing Consolidated Regulations 1925 and 1932 ... .. 11

Number of dwelling houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation ... .. 11

Number of dwelling-houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation... .. 73

**Houses Demolished or Closed.**

Number of houses demolished as a result of procedure under the Housing Acts ... .. Nil.

Number of persons displaced as a result of above ... .. Nil

Number of houses closed ... .. Nil

Number of persons displaced as a result of a Closing Order ... .. Nil

**Permanent Dwellings.**

During the year 11 notices were served under the Housing Act inviting owners to appear before the Council when demolition of their property was being considered. Demolition Orders were made later in respect of 6 of these houses.

**Temporary Dwellings.**

No demolition action was taken during the year under the Housing Act.

**Repairs.**

Number of houses made fit after informal action ... .. 7

Number of houses made fit after formal action ... .. 2

*Application for Certificates of Disrepair.*

1. Number of applications for certificates ... ..	4
2. Number of decisions not to issue certificates ... ..	Nil
3. Number of decisions to issue certificates	
(a) in respect of some but not all defects ... ..	Nil
(b) in respect of all defects ... ..	4
4. Number of undertakings given by landlords under Paragraph 5 of the First Schedule	4
5. Number of undertakings refused by Local Authority under proviso to paragraph 5- of the First Schedule ... ..	Nil
6. Number of certificates issued ... ..	Nil.

*Caravans.*

There is only one site licensed for caravans, and on this, 32 caravans may be stationed.

This site was first approved in 1948, and only a few improvements were necessary since then to bring the conditions on the site to a very good standard. The caravan dwellers themselves had the water supplies extended to taps over the sinks, replacing the 5 standpipes previously used. One caravan dweller installed a water closet and had it connected to the drainage system instead of using the toilet provided in the sanitary block situated some distance away. This may lead to similar improvements in other caravans, which are now larger than those originally sited.

On one occasion, 14 caravans drew on to land in the district, but as the land was in the ownership of the Council they were soon removed.

*(a) Direct to houses.*

The estimated number of dwelling houses, flats and shops with living accommodation at the end of the year was 33,007; of this number approximately 32,934 were connected direct to the mains.

*(b) By standpipes.*

12 houses were served by mains water from 6 standpipes or taps in outbuildings

*Rural Water Supplies.*

At the end of the year, 41 wells serving 61 houses were in active use.

*Results of Samples of Rural Water Supplies.*

Routine samples have been taken for supervisory purposes and a number following complaints. The number of samples submitted to the Public Analyst or Bacteriologist was as follows:-

	<i>Chemical and Bacteriological</i>	<i>Bacteriological only</i>
No. of samples submitted ... ..	3	6
No. satisfactory in both tests ... ..	3	-
No. unsatisfactory in both tests ... ..	-	-
No. satisfactory in chemical tests only ... ..	-	-
No. satisfactory in bacteriological tests only ... ..	-	5
No. unsatisfactory in bacteriological tests only ... ..	-	1

The unsatisfactory water samples were from wells chiefly of the shallow type.

*Drainage and Sewerage.*

The local sewerage system has been further extended by the laying of 2,041 yards of foul sewer and by 2,929 yards of surface water sewer, a combined total of 2.8 miles. The arrangements for sewerage and sewage disposal are adequate.

*Closest Accommodation and Cesspools.*

During the year no pail closets were converted to water-closets.

The Borough Engineer and Surveyor, who is responsible for the emptying of pail-closets and cesspools, states that at the end of 1966, 85 pail-closets and 200 cesspools were in use in the Council's area and the number of properties drained to cesspools was 269. The majority of these pail-closets and cesspools were situated where sewers were not available.

*Public Cleansing.*

The Council, through the Borough Engineer and Surveyor, undertake the removal of house refuse from all premises within the Borough. The dustbin method is the general system of storage, and controlled tipping, at one central tip, is the system of disposal. In the case of larger blocks of flats and commercial premises, the container system of collection is in use.

Housing.

Number of houses built during the year, including flats:—

Council houses	...	...	...	...	169
Private houses	...	...	...	...	847

Inspection of Dwelling Houses during year:—

Total number of dwelling houses inspected for housing defects (under Public Health or Housing Acts)	...	...	...	...	...	31
Number of dwelling houses (included above) which were inspected and recorded under the Housing Consolidated Regulations, 1925 and 1932...	...	...	...	...	...	5
Number of dwelling houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	...	...	...	...	...	5
Number of dwelling houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	...	...	...	...	...	26

Houses Demolished or Closed.

Number of houses demolished as a result of procedure under the Housing Acts	...	...	...	...	...	7
Number of persons displaced as a result of above	...	...	...	...	...	21
Number of houses closed	...	...	...	...	...	Nil
Number of persons displaced as a result of a Closing Order	...	...	...	...	...	Nil.

Permanent Dwellings.

During the year 5 notices were served under the Housing Act inviting owners to appear before the Council when demolition of their property was being considered. Demolition Orders were made later in respect of all of these houses.

Temporary Dwellings.

No demolition action was taken during the year under the Housing Act.

Repairs.

No. of houses made fit after informal action	...	...	...	...	...	24
No. of houses made fit after formal action	...	...	...	...	...	2

Public Cleansing.

The Council, through the Borough Engineer and Surveyor, undertakes the removal of house refuse from all premises within the Borough. The dustbin method is the general system of storage, and controlled tipping, at our central tip, is the system of disposal: in the case of larger blocks of flats and commercial premises, the container system of collection is in use.

**Application for Certificates of Disrepair.**

1. Number of applications for certificates	4
2. Number of decisions not to issue certificates	Nil
3. Number of decisions to issue certificates	
(a) in respect of some but not all defects	Nil
(b) in respect of all defects	4
4. Number of undertakings given by landlords under Paragraph 5 of the First Schedule	3
5. Number of undertakings refused by Local Authority under proviso to paragraph 5 of the First Schedule	Nil
6. Number of certificates issued	Nil

**Caravans.**

There is only one site licensed for caravans, and 32 caravans may be stationed. This site was first approved in 1948, and the facilities provided are of a very high standard.

On three occasions during the year, itinerant caravan dwellers were found to have sited their caravans on unlicensed land within the Borough.

A total of 25 caravans was involved. Informal action was taken, resulting in the caravans leaving the district.

NUMBER OF HOUSES SERVED BY PUBLIC WATER MAINS, 1967

(a) *Direct to houses.*

The estimated number of dwelling houses, flats and shops with living accommodation at the end of the year was 34,105; of this number approximately 34,032 were connected direct to the mains.

(b) *By standpipes.*

12 houses were served by mains water from 6 standpipes or taps in outbuildings.

*Rural Water Supplies.*

At the end of the year, 41 wells serving 61 houses were in active use.

*Results of Samples of Rural Water Supplies-*

Routine samples have been taken for supervisory purposes and a number following complaints. The number of samples submitted to the Public Analyst or Bacteriologist was as follows:-

	<i>Chemical and Bacteriological</i>	<i>Bacteriological only</i>
No. of samples submitted ... ..	6	-
No. satisfactory in both tests ... ..	2	-
No. unsatisfactory in both tests ... ..	3	-
No. satisfactory in chemical tests only ... ..	1	-
No. satisfactory in bacteriological tests only ... ..	-	-
No. unsatisfactory in bacteriological tests only ... ..	1	-

The unsatisfactory water samples were from wells chiefly of the shallow type.

*Drainage and Sewerage.*

The local sewerage system has been further extended by the laying of 2,445 yards of foul sewer and by 5,053 yards of surface water sewer, a combined total of 4.26 miles. The arrangements for sewerage and sewage disposal are adequate.

*Closet Accommodation and Cesspools.*

During the year 1 chemical closet was converted to a water-closet.

The Borough Engineer and Surveyor, who is responsible for the emptying of pail-closets and cesspools, states that at the end of 1967, 83 pail-closets and 198 cesspools were in use in the Council's area and the number of properties drained to cesspools was 262. The majority of these pail closets and cesspools were situated where sewers were not available.

*Public Cleansing.*

The Council, through the Borough Engineer and Surveyor, undertake the removal of house refuse from all premises within the Borough. The dustbin method is the general system of storage, and controlled tipping, at one central tip, is the system of disposal. In the case of larger blocks of flats and commercial premises, the container system of collection is in use.

*Housing.*

NUMBER OF HOUSES SERVED BY PUBLIC WATER MAINS, 1931

Number of houses built during the year, including flats:—

Council houses	266
Private houses	832

Inspection of Dwelling Houses during the year.—

Total number of dwelling houses inspected for housing defects (under Public Health or Housing Acts)	153
Number of dwelling houses (included above) which were inspected and re-recorded under the Housing Consolidated Regulations 1925 and 1932	4
Number of dwelling houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	4
Number of dwelling houses (exclusive of those referred to under the preceding sub head) found not to be in all respects reasonably fit for human habitation	149

*Houses Demolished or Closed.*

Number of houses demolished as a result of procedure under the Housing Acts	11
Number of persons displaced as a result of above	21
Number of houses closed	Nil
Number of persons displaced as a result of a Closing Order	Nil

*Permanent Dwellings.*

During the year 4 notices were served under the Housing Act inviting owners to appear before the Council when demolition of their property was being considered. Demolition Orders were made later in respect of all these houses.

*Temporary Dwellings.*

No demolition action was taken during the year under the Housing Act.

*Repairs.*

Number of houses made fit after informal action	10
Number of houses made fit after formal action	

*Application for Certificates of Disrepair.*

1. Number of applications for certificates	...	...	...	...	...	...	...	...	...	1
2. Number of decisions not to issue certificates	...	...	...	...	...	...	...	...	...	Nil
3. Number of decisions to issue certificates										
(a) in respect of some but not all defects	...	...	...	...	...	...	...	...	...	Nil
(b) in respect of all defects	...	...	...	...	...	...	...	...	...	1
4. Number of undertakings given by landlords under Paragraph 5 of the First Schedule	...	...	...	...	...	...	...	...	...	1
5. Number of undertakings refused by Local Authority under proviso to paragraph 5 of the First Schedule.	...	...	...	...	...	...	...	...	...	Nil
6. Number of certificates issued	...	...	...	...	...	...	...	...	...	Nil

*Caravans.*

The one site, licensed for 32 caravans, was closed during the year owing to the re-development of the site by the owners for permanent dwellings.

Some of the caravan dwellers were rehoused by the Council, and the remainder found their own caravan sites or alternative housing accommodation.

On 11 occasions during the year, itinerant caravan dwellers were found to have sited their caravans on unlicensed land within the Borough. Informal action was taken, resulting in the caravans leaving the District.

## NUMBER OF HOUSES SERVED BY PUBLIC WATER MAINS, 1968

### (a) *Direct to houses.*

The estimated number of dwelling houses, flats and shops with living accommodation at the end of the year was 35,072; of this number approximately 35,017 were connected direct to the mains.

### (b) *By standpipes.*

3 houses were served by mains water from one tap in an outbuilding.

### *Rural Water Supplies.*

At the end of the year, 36 wells serving 52 houses were in active use.

### *Results of Samples of Rural Water Supplies.*

Routine samples have been taken for supervisory purposes and a number following complaints. The number of samples submitted to the Public Analyst or Bacteriologist was as follows:—

	<i>Chemical and Bacteriological</i>	<i>Bacteriological only</i>
No. of Samples submitted	5	7
No satisfactory in both tests	1	-
No. unsatisfactory in both tests	3	-
No. satisfactory in chemical tests only	1	-
No. satisfactory in bacteriological tests only	-	2
No. unsatisfactory in bacteriological tests only	-	5

The unsatisfactory water samples were from wells chiefly of the shallow type.

### *Drainage and Sewerage.*

The local sewerage system has been further extended by the laying of 5,049 yards of foul sewer and by 7,608 yards of surface water sewer, a combined total of 7.21 miles. The arrangements for sewerage and sewage disposal are adequate.

### *Closet Accommodation and Cesspools.*

The Borough Engineer and Surveyor, who is responsible for the emptying of pail-closets and cesspools, states that at the end of 1968, 65 pail-closets and 180 cesspools were in use in the Council's area and the number of properties drained to cesspools was 229. The majority of these pail closets and cesspools were situated where sewers were not available.

### *Public Cleansing.*

The Council, through the Borough Engineer and Surveyor, undertake the removal of house refuse from all premises within the Borough. The dustbin method is the general system of storage, and controlled tipping, at one central tip, is the system of disposal. In the case of larger blocks of flats and commercial premises, the container system of collection is in use.

Housing.

Number of houses built during the year, including flats:-

Council houses	173
Police houses	7
Private houses	787

Inspection of Dwelling Houses during the year:-

Total number of dwelling houses inspected for housing defects (under Public Health or Housing Acts)	107
Number of dwelling houses (included above) which were inspected and recorded under the Housing Consolidated Regulations 1925 and 1932	29
Number of dwelling houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	29
Number of dwelling houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	78

Houses Demolished or Closed.

Number of houses demolished as a result of procedure under the Housing Acts	15
Number of persons displaced as a result of above	35
Number of houses closed	1
Number of persons displaced as a result of a Closing Order	Nil

Permanent Dwellings.

During the year 29 notices were served under the Housing Act, inviting owners to appear before the Council when demolition of their property was being considered. Demolition Orders were made later in respect of 25 of these houses, and one Closing Order was made.

Temporary Dwellings.

No demolition action was taken during the year under the Housing Act.

Repairs.

Number of houses made fit after informal action	43
Number of houses made fit after formal action	-

RENT ACT, 1957.

*Application for Certificates of Disrepair.*

1. Number of applications for certificates	...	...	...	...	...	...	...	...	...	Nil
2. Number of decisions not to issue certificates	...	...	...	...	...	...	...	...	...	Nil
3. Number of decisions to issue certificates										
(a) in respect of some but not all defects	...	...	...	...	...	...	...	...	...	Nil
(b) in respect of all defects	...	...	...	...	...	...	...	...	...	Nil
4. Number of undertakings given by landlords under Paragraph 5 of the First Schedule										Nil
5. Number of undertakings refused by Local Authority under proviso to paragraph 5 of the First Schedule.	...	...	...	...	...	...	...	...	...	Nil
6. Number of certificates issued.	...	...	...	...	...	...	...	...	...	Nil

*Caravans.*

There were six occasions in the year when the Council's area was visited by itinerant caravan dwellers, and a total of 21 caravans was involved. This compares with two occasions in 1967 with only 13 caravans involved.

This year saw the introduction of new legislation (Caravan Act, 1968) which was designed to stop "harassment" of caravan dwellers by occupiers of land; and to require Local Authorities to provide suitable permanent sites for these wanderers. Councils must provide sites within their own boundaries OR they may financially assist adjoining Councils to provide them.

INSPECTION AND SUPERVISION OF FOOD, 1965

*Milk Supply.*

Thirty two Dealers (Pre-Packed Milk) Licences were operative during 1965 as follows:-

Retail Dairymen ... ..	2
Shopkeepers retailing milk ... ..	30

*Milk Samples.*

The following table gives the results of milk samples submitted for bacteriological, phosphatase and turbidity tests.

	UNTREATED		PASTEURISED		STERILISED		TOTALS	
	Satisfactory	Unsatisfactory	Satisfactory	Unsatisfactory	Satisfactory	Unsatisfactory	Satisfactory	Unsatisfactory

INSPECTION AND SUPERVISION OF FOOD, 1968

*Milk Supply.*

62 Dealers (Pre-packed Milk) Licences were operative during 1968 as follows:—

Retail Dairymen	...	...	...	2
Shopkeepers retailing milk	...	...	...	60

*Milk Samples.*

The following table gives the results of milk samples submitted for bacteriological, phosphatase and turbidity tests.

	UNTREATED		PASTEURISED		STERILISED		TOTALS	
	Satisfactory	Unsatisfactory	Satisfactory	Unsatisfactory	Satisfactory	Unsatisfactory	Satisfactory	Unsatisfactory
NO. OF SAMPLES	0		79		25		104	
Methylene Blue Test	1	1	74	3	1	-	75	3
Phosphatase Test	1	1	79	-	1	-	80	-
Turbidity Test	1	1	2	-	23	-	25	-

ICE CREAM, 1965/68

**Manufacturers.**

During the years, 1965/68, there were no manufacturers of ice-cream in the Borough.

**Vendors.**

	1965	1966	1967	1968
Registered and retailing ice cream...	134	141	168	193
New registrations during the year ...	2	7	27	25
Registrations transferred ...	10	6	3	4

The methylene blue test was used for estimating the bacteriological quality. The results of tests were divided into four grades. Samples were submitted to the test and graded as follows:—

	Grades:			
	1	2	3	4
No. of samples 1965 ...	10	1	2	Nil
No. of samples 1966 ...	15	6	1	Nil
No. of samples 1967 ...	8	1	Nil	Nil
No. of samples 1968 ...	10	1	Nil	Nil

Grade 1 is the highest grade and ice cream placed in Grades 1 and 2 are regarded as satisfactory.

*Analysis of ice cream for Fat Content, Sucrose and Milk Solids.*

No. of samples 1965 ...	13	-	Satisfactory
No. of samples 1966 ...	20	-	Satisfactory
No. of samples 1967 ...	6	-	Satisfactory
No. of samples 1968 ...	7	-	Satisfactory

By the Food Standards (Ice Cream) Regulations, 1959, Ice Cream is required to contain not less than 5% fat and 7½% milk solids other than fat. In the case of Dairy Ice Cream, Dairy Cream Ice or Cream Ice, the fat must be milk fat. The results of sampling show that ice cream sold in the area has a higher solid content than the legal standard.

During the years, 1965/68, one slaughterhouse was licensed for the killing of cattle, sheep and pigs and the Regional Office of the Ministry of Agriculture, Fisheries & Food was advised accordingly. The Ministry's Veterinary Officer inspected the slaughterhouse premises and was satisfied that they complied with the Slaughterhouse Regulations.

The hygienic conditions in the slaughterhouse were closely supervised, and all animals killed were inspected and marked in accordance with the Meat Inspection Regulations, 1963.

**Slaughtermen.**

Annual licences were issued as below, entitling the holders to slaughter cattle, sheep and pigs.

Year	No. of slaughtermen
1965	5
1966	4
1967	9
1968	6

Frequent inspections of premises at which food is stored or manufactured were made by the Public Health Inspectors. Every opportunity is taken to discuss with persons employed in these premises the various requirements of the Food Hygiene Regulations.

Lectures were given to students, local associations, staff of food premises, etc.

Milk	-	64
Miscellaneous Food and Drugs	1	179

Of these, 63 samples of Milk and 170 informal samples of other Food and Drugs were reported as genuine.

The results of unsatisfactory samples of food and drugs found as a result of routine sampling were as follows:-

<i>Sample No.</i>	<i>Article</i>	<i>Nature of Contravention</i>	<i>Remarks</i>
4628	Rich Game Soup with Red Wine	Not specific in list of ingredients.	Manufacturer agreed to alter label.
17	Instant Low Fat Milk	Unsatisfactory label	Of foreign manufacture. Importer agreed to alter label to comply with the Dried Milk Regulations, 1965.
19	Untreated Milk	Deficient of 30% fat.	Sample from automatic vending machine. Farmer/Retailer advised of the need for the proper mixing of the milk from all cows. Repeat samples satisfactory.

Sample No.	Article	Nature of Contravention	Remarks
38	Pork Sausages	Low in meat content — contained 56%.	Referred to manufacturer. Repeat samples satisfactory.
77	Minced Chicken in jelly.	Low in chicken content — contained 64%	Referred to manufacturer who referred it to the British Food Manufacturing Industries Research Association for experimental work to be carried out. Investigations still proceeding.
112	Frosting Mix	Contained an emulsifier not permitted under the Emulsifiers and Stabilisers in Food Regulations, 1962.	Of American manufacture. Referred to the Ministry of Agriculture, Fisheries and Food, and the Importer. Importer agreed to cease importation.
165	Minced Chicken in jelly	Low in chicken content — contained 58%	Referred to manufacturer. (Different brand to sample No.77 above).
184	Minced Beef	Contained preservative	Formal sample taken — see sample No.187.
187	Minced Beef	Contained preservative — 155 p.p.m. Sulphur-dioxide	Formal sample. Council resolved that a Warning Letter be sent to the retail shop manager.
213	Parrish's Chemical food.	Unsatisfactory label	Manufacturer agreed to alter label.
223	Sweets	Contained 4 p.p.m. lead	Repeat samples satisfactory (Below maximum permitted lead content of 2 p.p.m.)

*Complaints received from members of the public*

Total number of complaints received	...	...	...	78
Number of complaints where samples were submitted to the Public Analyst for examination	...	...	...	40
Number of complaints where samples were examined in the Department	...	...	...	38

All the complaints were satisfactorily disposed of by Informal Action taken with Importers, Manufacturers, or Retailers, with the exception of the following, which were reported to the Council for consideration:—

Sample No.	Article	Remarks	Action
2	Cheese	Contaminated with mould	Warning
3	Bread	Contained a splinter of wood	Warning
60	Cornflakes	Contained a piece of metal	Warning
63	Ice Lolly	Contained black foreign matter	Warning
83	Corned Beef	Contained pieces of solder	Warning

Sample No.	Article	Remarks	Action
90	Bread	Contaminated with mould	Warning
93	Faggots	Contaminated with mould	Warning
95	Ham	Contaminated with maggots	Warning
-	Sausage Rolls	Contaminated with mould	Warning
117	Chocolate Eclair	Contaminated with mould	Warning
144	Crumpets	Contaminated with mould	Legal proceedings. Fine of £15 with £2 2.0d. Advocate's Fee.
145	Bread	Contained a cigarette end	Legal proceedings. Fine of £25 with £3 13.6d. Costs and £2 2.0d. Advocate's Fee.
-	Milk	Contained a spider	Warning.

#### Other Food Preparation Premises, 1965

Routine inspections of commercial kitchens, works canteens and of vehicles from which food is sold were made during the year.

#### Food Premises.

##### (1) Number of food premises in the area by type of business:-

Category	No. of premises	No. fitted with washhand basins	No. to which Reg. 19 applies	No. fitted with sinks

FOOD AND DRUGS ACT SAMPLING, 1966

The work done during 1966:—

	Total number of samples taken	
	Formal	Informal
Milk	2	42
Miscellaneous Food and Drugs	1	156

Of these, 44 samples of milk and 152 samples of Other Food and Drugs were reported as genuine.

The results of unsatisfactory samples of Food and Drugs found as a result of routine sampling were as follows:—

Sample No.	Article	Nature of Contravention	Remarks
232	Blackcurrant Health Drink	Contained excess S.O. <sub>2</sub> of permitted quantity. Also size of letters on label less than ½".	Manufacturers changed label to conform with requirements. Also altered amount of added S.O. <sub>2</sub> to the permitted quantity.
315	Orange Juice	Label unsatisfactory. Contained words claiming presence of Vitamin C. Amount of Vitamin C not declared.	Of Foreign manufacture. Retailers cleared all stocks and not re-ordering. Importers asking producers to alter labels.
364	Pork Sausage	Meat content 61% and low in lean meat content.	Manufacturers altered recipe and operating procedures. Repeat samples satisfactory.
380	Mince-meat flavoured with Brandy.	Soluble solids 62% instead of 65% minimum under Preserves Order, 1953.	Manufacturers using a higher proportion of dried fruit in place of raw apples and raw sugar which occasionally affects the % of soluble solids.
385	Chocolate Dietetic Wafer.	Unsatisfactory Label. Sodium declared 3.3 mg/wafer. Found 6 mg. Fat declared 8.58 mg/wafer, Found 7.0 mg.	Chief Chemist of the Foreign Manufacturers stated:— The even spreading of the chocolate and cream filling over the wafers is difficult to control hence the amount on 1 wafer may vary causing discrepancies on analysis. Accepted by Public Analyst.

*Complaints received from members of the public.*

SWIMMING POOLS

1965.

No major improvements were effected to either the Council-owned or privately owned open-air public swimming pools in the district.

In June, a new indoor swimming pool was opened. It has a main pool, with a diving pool to the side at one end of the main pool, and a learners' pool separated from the main pool. The main pool is 110 ft. x 42 ft. with a capacity of 260,000 gallons, and has a complete turnover every four hours. The learners' pool is 42 ft. x 24 ft. with a capacity of 18,500 gallons, and has a complete turnover every three hours. Both pools have separate systems of water treatment.

Spot checks were taken regularly during the Summer at the three pools by the Public Health Inspectors in order to ascertain whether the chlorine content was in accordance with the requirements of the Council's Bye-Law. The alkalinity of the water was also checked. If variations were found, they were immediately corrected.

No contravention of the other Bye-Laws was noted during the year.

1966.

The Council-owned Malvern Park open-air swimming pool and the Tudor Grange indoor swimming baths operated satisfactorily throughout the year. In particular, the Tudor Grange swimming baths opened the previous year proved to be a great attraction and obviously fulfilled a need of the residents.

1967/68.

The Council-owned Malvern Park open-air swimming pool and the Tudor Grange indoor swimming baths operated satisfactorily.

Routine checks on the chemical condition continued to be carried out on the waters of the pools by the Public Health Inspectors.

1965/68.

Periodically, samples were submitted to the Public Analyst and the Public Health Laboratory Service for more detailed chemical analysis and bacteriological examination of these waters and also swimming pool waters at schools and a large commercial premises.

No. of samples	Bacteriological & Chemical	Bacteriological
1965	4	9
1966	6	9
1967	9	13
1968	9	9

All proved satisfactory.

PART VIII OF THE ACT, 1965/6/7/8

Outwork: Sections 133 and 134.

No lists of outworkers, as required by Section 133 (1) (c) (2) were received from occupiers of factories situated within this District.

Visits were made to outworkers' premises in this District notified by other Councils. In no instance was outwork being carried out in unwholesome premises.

## ATMOSPHERIC POLLUTION, 1965

Smoke Control Orders Nos. 5, 6 and 7 mentioned in last year's report were duly confirmed by the Minister of Housing and Local Government. Orders Nos. 5 and 6 will come into operation on 1st July, 1966, whilst Order No. 7 came into operation on 1st December, 1965.

During the year the Council approved the making of Smoke Control Orders Nos. 8, 9, and 10, which were confirmed by the Minister of Housing and Local Government, and come into operation next year.

	<b>Totals</b>	<b>611</b>	<b>1,973</b>	<b>27</b>

\* New Housing estates.

As mentioned in last year's report, parts of areas affected by Smoke Control Orders Nos. 34 and 66 made by Birmingham City Council were transferred to this Authority upon boundary changes. In order to comply with the administrative requirements of the Exchequer so that the Council could receive the Exchequer grant of 4/10ths of the approved costs of the conversions and adaptations, it will be necessary for this Council to make new Orders so as to include these houses.

### *Measurement of Atmospheric Pollution.*

The amount of the monthly deposit of dust and grit from the atmosphere has been ascertained by the use of four Deposit Gauges situated in various parts of the County Borough, and over the past six years an average level of this type of atmospheric pollution has been obtained. It is now felt that the use of these gauges for this purpose could be discontinued and used for specific monitoring purposes around factories to record dust and grit emissions from boiler chimneys and industrial processes.

One Lead Peroxide Candle which was sited at Knowle for 6 years was also discontinued as the readings had remained fairly constant during this period. The measurement of sulphur-dioxide by this means in the Olton and Shirley districts was continued, however.

This Council is one of the constituent authorities of the Warwickshire Clean Air Council, from whom Lead Peroxide candles and Deposit Gauges are borrowed. The apparatus surplus to our needs is returned to the Council and other apparatus can be borrowed when required.

Measurement of the daily amount of smoke and sulphur-dioxide continued at the Council House and an improvement was made during the year by the replacement of the single-port daily smoke and SO<sub>2</sub> volumetric apparatus by an 8-port instrument, which only requires the changing of the filter papers and drechsel bottles once weekly.

The average daily amounts of smoke and sulphur-dioxide, as measured by the apparatus at the Council House, once again showed a slight downward trend, but the average monthly levels of sulphur-dioxide showed an increase at the Olton and Cranmore sites. The sulphur-dioxide recordings at Velsheda Road have shown a decided decrease during the seven years the Lead Peroxide Candle has been sited there.

The sulphur-dioxide gas in the atmosphere comes into contact with the Lead Peroxide on the candle, where it interacts with the latter chemical forming the compound lead sulphate. By estimating the sulphate content of the candle, it is possible to assess the total monthly gaseous sulphur-dioxide in the atmosphere, and thus the level of gaseous pollution per day.

Average milligrammes per day, per 100 sq.cms.

Year	Olton	Velsheda Road	Cranmore Road	Greswolde	Earlswood
1959	1,86	1,63	1,10	0,65	0.64
1960	2,13	1,40	1,30	0,66	0.74
1961	1.77	1,14	1.23	0.58	0.62
1962	1.91	1.37	1.23	0.67	0.64
1963	1.88	1.26	1.29	0.66	0.76
1964	1.63	1,14	1.10	0.55	Discontinued
1965	1.90	1.09	1.40	Discontinued	

DAILY TEST FOR SMOKE AND SULPHUR-DIOXIDE

The apparatus is situated at the Council House and air from outside is drawn through a filter paper and passed through a solution of hydrogen peroxide. The "smoke" particles in the atmosphere are collected by the filter paper and the density of the stain is measured by means of an electric reflectometer in order to calculate the average daily amount of smoke which is expressed in microgrammes per cubic metre of air. The amount of sulphur-dioxide present in the air is calculated by the amount of sulphuric acid which has been formed by the oxidation of the hydrogen-peroxide solution, and is expressed in microgrammes per cubic metre of air.

## ATMOSPHERIC POLLUTION, 1966

By the 31st December, 1966, 10 Smoke Control Orders were in operation covering 5,173 dwellings and 2,519 acres.

During the year 3 further Smoke Control Orders were submitted to the Minister of Housing and Local Government for confirmation. The total number of dwellings covered by these Orders was 1,057 having an acreage of 118,075.

Smoke Control Orders Numbers 12 and 13 included properties transferred from the City of Birmingham to this Authority when the latter became a County Borough in April, 1964. A number of these properties had already been subject to Smoke Control Orders made by the City of Birmingham and awaiting the Minister's confirmation. This procedure was recommended by the Ministry to regularise the position so that an application by this Council for loan sanction could be granted.

### *Measurement of Atmospheric Pollution.*

As a member of the Warwickshire Clean Air Council this Authority has continued to assist in their survey of the general level of atmospheric pollution. Three Lead Peroxide Candles are situated at Olton and Shirley for the measurement of concentrations of Sulphur Dioxide and an 8 port Daily Volumetric Apparatus is in the Council House for the daily measurement of smoke and Sulphur Dioxide.

These instruments indicated that there was a continuation in the slight downward trend of the Sulphur Dioxide in the atmosphere.

### *Industrial Smoke, 1966*

Observations were made from time to time of chimney stacks serving industrial boiler plants. In 9 cases the attention of the occupiers of factories was drawn to the excessive emission of black smoke. No formal action was necessary.

During the year, several complaints were received of scrap dealers setting fire to motor vehicles on open land, which resulted in legal proceedings being instituted against 2 dealers.

In the first case, the defendant was found guilty and a Nuisance Order was made with costs of £5 5.0d. In the second case, the defendant pleaded that he was not responsible for the fire and the case was dismissed.

These cases were difficult to deal with as they had to be dealt with under the provisions of the Public Health Act which required the proving of a Nuisance. The scrap dealers, having some knowledge of this fact, set fire to the vehicles either when the smoke was blown across open country or during the hours of darkness.

ATMOSPHERIC POLLUTION, 1967

By the 31st December, 1967, 13 Smoke Control Orders were in operation covering 6,230 dwellings and 2,637 acres.

During the year 2 further Smoke Control Orders were submitted to the Minister of Housing and Local Government for confirmation. The total number of dwellings covered by these Orders was 1,378, having an acreage of 188.

*Measurement of Atmospheric Pollution*

As a member of the Warwickshire Clean Air Council, this Authority has continued to assist in their survey of the general level of atmospheric pollution. Three Lead Peroxide Candles are situated at Olton and Shirley for the measurement of concentrations of Sulphur Dioxide and an 8 port Daily Volumetric Apparatus is in the Council House for the daily measurement of smoke and Sulphur Dioxide.

These instruments indicated that there was a continuation in the slight downward trend of the Sulphur Dioxide in the atmosphere.

*Industrial Smoke, 1967.*

33 observations of industrial smoke emissions were made during the year. In 6 cases verbal notifications was given to the occupier of the premises which were emitting smoke so as to contravene the provisions of the Clean Air Act, 1956. In each case the warning was sufficient and no formal action was necessary.

Smoke nuisances occurred from time to time which came under the jurisdiction of the Public Health Act, 1936, as amended by Section 16 of the Clean Air Act, 1956. These nuisances were caused by the burning of motor vehicles on open land by scrap dealers. Although several occurrences were investigated, it was only possible to institute legal proceedings against one person. This person, who incidentally had been prosecuted during 1966, was fined £8 with £5 5.0d. costs.

Year	Average Daily Sulphur Dioxide
1968	12.9
1967	14.8
1966	10.7
1965	11.1
1964	12.0
1963	12.2
1962	10.9
1961	10.0
1960	13.1
1959	12.7

## ATMOSPHERIC POLLUTION, 1968

By the 31st December, 1968, 15 Smoke Control Orders were in operation covering 7,608 dwellings and 2,825 acres.

During the year 1 further Smoke Control Area was submitted to the Council for the making of an Order. The total number of dwellings covered in the Area was 1,317 having an acreage of 177.08.

### *Measurement of Atmospheric Pollution.*

As a member of the Warwickshire Clean Air Council, this Authority has continued to assist in their survey of the general level of atmospheric pollution. Three Lead Peroxide Candles are situated at Olton and Shirley for the measurement of concentrations of Sulphur Dioxide and an 8 port Daily Volumetric Apparatus is in the Council House for the daily measurement of smoke and Sulphur Dioxide.

These instruments indicated that there was a continuation in the slight downward trend of the Sulphur Dioxide in the atmosphere.

### *Daily Test for Smoke and Sulphur Dioxide*

<i>Average Daily Smoke Year</i>	<i>Microgrammes per cubic metre</i>
1959	62.6
1960	66.4
1961	62.7
1962	74.2
1963	72.5
1964	66.8
1965	61.2
1966	48.25
1967	35.2
1968	36.6

### *Average daily Sulphur Dioxide*

1959	125
1960	151
1961	100
1962	109
1963	125
1964	120
1965	115
1966	105.5
1967	97.6
1968	78.9

### *Industrial Atmospheric Pollution, 1968*

Observations were carried out on 24 occasions throughout the year on chimney stacks serving factory premises. On only 7 occasions were contraventions of the Clean Air Act, 1956, noted, and the excessive emissions of dark smoke were abated following informal approaches to the firms concerned. The most persistent offending chimney was that of Solihull Hospital, the cause being continual overloading of the boilers. As the hospital is to be rebuilt and will be supplied by a new boiler installation of adequate size in the near future, no action has been taken by this Department.

A paper manufacturing company was found to be incinerating large quantities of waste paper and an investigation revealed that it was coated with Polyvinylidene Chloride. This substance when burned gave off a harmful emission of either Phosgene Gas or Hydrochloric Acid Gas, depending upon combustion conditions. The company have now been persuaded to make alternative arrangements to dispose of their waste products in a manner which does not involve burning.

Property inspected	Business and	Local	Hydrochloric	Total
1. On survey	1130	10	1140	1140
2. On request	0	0	0	0
Total	1130	10	1140	1140

At the end of the year there were 7 properties in force.

No sewer treatment was carried out during 1968.

In 1967, 113 properties were listed and 10 in 1968.

**RATS AND MICE DESTROYED**

The following table shows the number of rats and mice destroyed in the following category of properties:

Type of property	Number of rats destroyed				Number of mice destroyed			
	Non-Agricultural	Agricultural	Hydrochloric	Total	Non-Agricultural	Agricultural	Hydrochloric	Total
1. Total number of properties inspected	100	7	107	107	100	7	107	107
2. Number of properties inspected on request	0	0	0	0	0	0	0	0
3. Number of properties inspected on survey	100	7	107	107	100	7	107	107
4. Number of rats destroyed by (a) traps	80	2	82	82	80	2	82	82
(b) other	20	5	25	25	20	5	25	25
5. Number of mice destroyed by (a) traps	70	2	72	72	70	2	72	72
(b) other	30	5	35	35	30	5	35	35

Continued reference was placed on "Rats", with a mixture of bait and water traps as the main method of control.

No sewer treatment was carried out during 1968.

In 1967, 113 properties were listed and 10 in 1968.

### RATS AND MICE DESTRUCTION, 1965

The two Rodent Operatives carried out the work shown in the following summary of surface treatments.

Properties Inspected	Type of Property				
	Private	Business and Industrial	Local Authority	Agricultural	Total
a. On request	667	61	19	12	759
b. On survey	1130	4	-	6	1140
c. Treated	1616	63	14	18	1711

Continued reliance is placed on "Warfarin" with oatmeal as the base. Excellent results were obtained with this poison which is recommended by the Ministry of Agriculture, Fisheries and Food.

At the end of the year, there were 5 contracts in force.

#### *Sewer Treatments.*

No sewer treatment was carried out during the year.

### RATS AND MICE DESTRUCTION, 1966/7/8

The two Rodent Operatives carried out the work shown in the following summary of surface treatments.

	Type of Property					
	1966		1967		1968	
	Non-Agricultural	Agricultural	Non-Agricultural	Agricultural	Non-Agricultural	Agricultural
1. Number of properties in district	35,053	44	36,857	47	36,857	47
2.a Total number of properties (including nearby premises) inspected following notification	905	5	742	2	566	6
b Number infested by (i) Rats	870	-5	697	2	548	-6
(ii) Mice	23	-	31	-	10	-
3.a Total number of properties inspected for rats and/or mice for reasons other than notification.	1,415	8	990	12	524	21
b Number infested by (i) Rats	1,248	8	833	12	428	21
(ii) Mice	7	-	6	-	3	-

Continued reliance was placed on "Warfarin", with a mixture of barley and maize meals as the base. Excellent results were obtained with this poison, which was recommended by the Ministry of Agriculture, Fisheries and Food.

#### *Sewer Treatment.*

No sewer treatment was carried out during 1966.

In 1967, 133 manholes were baited and 139 in 1968.

The total number of shops in the area at the end of 1965 was 946.

OFFICES, SHOPS AND RAILWAY PREMISES ACT, 1963 - 1965

The Act deals with conditions affecting the health, safety and welfare of persons employed in offices, shops and certain railway premises and in many respects its provisions are similar to those in the Factories Acts which have been in operation for many years.

During the inspections of the premises concerned, attention had to be given to the state of cleanliness, possible overcrowding, the sufficiency of temperature, lighting, sanitary conveniences, ventilation and washing facilities, supply of drinking water, accommodation for clothing (not worn during working hours), seats for sedentary workers, eating facilities where meals are partaken in shop premises and the provision of a first aid box. The training of persons working at dangerous machines and the fencing of these machines are also within the purview of the Act.

It is incumbent on employers of persons in premises covered by the Act to display either an Abstract of the Act and the Regulations made thereunder, or a book with this information, or to give to the persons employed an explanatory book dealing with the scope of the Act.

Generally speaking, employers were most co-operating in dealing with requests to comply with requirements of the Act after inspection had been made.

Between August 1964 (when the Act came into force) and the 31st December, 1965, a total of 225 premises had been inspected out of an approximate number of 800 premises registered. The number of registered premises to be inspected will be increased with the occupation of shops and offices in the Central Area and shops in the Dorridge Development Area by approximately 200.

The first full year's work under the Act was completed during the year ending 31st December, 1965, and a report thereon, as follows, was forwarded to the Ministry of Labour.

"The main difficulty experienced in the administration of the Act is the shortage of personnel to carry out the number of inspections required within a reasonable period. There is also the continued failure of many occupiers to register premises, which makes it difficult to determine the actual number of inspections outstanding and the consequent amount of time which needs to be allocated for work under this legislation. Another difficulty is that occupiers frequently complain that they have to wait considerable periods of time before they can get contractors to undertake necessary alterations and decorations.

*Cleanliness.*

In the main, conditions were found to be reasonable. A large proportion of those already inspected required redecoration or cleansing of the decorations of one or more of the rooms. The dirtiest premises were shops selling hardware, and next in order came staff and rear rooms at ladies' hairdressing establishments. The cleanest premises (apart from those in newly completed developments) were those to which the Food Hygiene (General) Regulations 1960 applied and where frequent routine visits were made by the Public Health Inspectors.

*Overcrowding.*

Some overcrowding was found to exist in office accommodation. Many of the cases reported have received attention and the remainder outstanding are being resolved either by the re-arrangement of personnel, or by building extensions, or the firm concerned arranging to move to larger premises.

### *Temperature.*

Although many shops were found to have adequate heating facilities, a considerable number were discovered where a temperature of 60.8°F could not be maintained. One bakery firm protested that in view of the large number of customers entering the shop, the door was almost constantly open and, in consequence, it was difficult to maintain the required temperature. Following discussions with the firm's management, it was agreed to experiment with different forms of heating in different shops. They eventually installed "off peak" electric storage heaters in the shop in question, and a survey carried out in December showed that it was possible to maintain the required temperature.

The problem of heating Butchers' Shops was investigated. In the main, these were without heating in the actual shop. The trade considered that a temperature of 60.8°F was harmful to the meat. However, during June and July, 1965, a survey of a number of butchers' shops revealed that meat was being displayed in large quantities at temperatures up to 73°F.

Many instances were found where, although the room temperatures were between 61° and 65°F employees complained of feeling cold.

### *Ventilation.*

The problem posed is "What is adequate ventilation?" and after due consideration, it was felt that it depended upon the circumstances. As far as offices were concerned, it was thought that three air changes per hour were desirable. Ventilation in shops was provided mainly by small fanlights over doors as well as through the doorways when the doors were opened by customers. Difficulties found in practice were that shops often had windows fixed for security reasons and that ladies' hairdressing establishments invariably suffered from excessive humidity. Both these difficulties were being overcome by the installation of extraction fans. A further problem which arose was in a Betting Shop. The employees were in an office separated from clients by a wall containing metal grills. The office window had to be secured as a precaution against burglary. The provision of an extraction fan only induced badly vitiated air from the customers' section, despite additional extraction units being installed in that section. The answer was found by replacing the extraction fan in the office by an impeller type - this supplied adequate fresh air for the staff, and the vitiated air in turn was induced into the customers' area and then exhausted into the open air.

### *Lighting.*

*General Impression:* The standard of artificial lighting in office premises (including toilets, stairs and passages associated with the offices) was generally higher than in shops. The selling areas in shops, however, were the best illuminated. In 1965 light meter readings were taken in all premises during daylight, and the combination of natural and artificial lighting was often found to be reasonable. When repeat readings were taken in the late afternoon of the winter months of 1965 when the main source of lighting was artificial it was found that lighting generally was inadequate. It is hoped that National Standards will be introduced in the near future.

Natural lighting was usually found to be best in offices. Shops, although provided with large windows, frequently had this source of light restricted by display goods.

Generally speaking, staircases were poorly illuminated and so, too, were staff, stock and warehouse rooms.

### *Recommended standards of Lighting.*

This authority has recommended to occupiers of premises the standards suggested by the Illuminating Engineering Society. In addition, suggestions have been made that redecoration of rooms, cleaning of light fittings and re-orientation of desks may bring about the necessary improvement in the lighting. Where small businesses wish to carry out their own improvements, the Inspectors revisit when requested and check the lighting improvements stage by stage so that the businesses are not involved in undue expenditure.

### Excessive Glare

Several instances of excessive glare have been noticed and dealt with. Only one was due to reflection. The remainder were due to the actual light fittings themselves.

One of the methods used for assessing glare is that if the source of light can be seen below an angle of 30° from eye level – obtained by looking upward when the flat hand is held at eyebrow level – by a person when he is at his normal working position, then it is assumed that the light source could cause glare. Use is also made of the "Tick Guide" published in the British Lighting Council's "Guide on How to Avoid Discomfort from Glare".

Finally, the general impression gained by the Inspector is also used.

### Inspections during the month of November, 1965.

In response to the request in L.A.Circular 9 (supplement 1) for light meter readings in office premises during November, 1965 the following information was obtained:—

(a)	– 5 lumens/sq.ft.	...	...	...	...	Nil
(b)	+ 5 to 10 lumens/sq.ft.	...	...	...	...	15
(c)	+ 10 to 15 lumens/sq.ft.	...	...	...	...	4
(d)	+ 15 to 25 lumens/sq.ft.	...	...	...	...	9
(e)	+ 25 lumens/sq.ft.	...	...	...	...	11

Readings of 5, 10, 15 and 25 were placed in (b), (c), (d) and (e) respectively. (The illumination value for offices recommended by the Illuminating Engineering Society is 30 lumens per sq.ft.).

### Sanitary Conveniences.

This authority informed occupiers of premises to apply standards as laid down in the Regulations. Very little difficulty arose in enforcing satisfactory provisions. It was found that many of the older premises were without ventilated lobbies. The chief criticism by Inspectors was that ventilation was available to the toilets by means of windows, but in most cases the windows were found to be closed and the ventilation non-existent.

One particular premise was occupied by a Television Rental firm with a permanent staff (mixed sexes) of 4. On occasions, as many as 9 other employees were on the premises during the day; one toilet was provided. The firm in question was requested to provide an additional toilet but refused. The Inspector involved asked the staff for their opinions about adequacy, but these were not obtained, other than from a female receptionist who said that "at times it was a little difficult". In the absence of further complaints it was decided to take no further action.

### Washing Facilities.

Little difficulty was experienced in obtaining these facilities.

### Drinking Water

This authority considers that a supply of drinking water available in a w.c. compartment is not hygienic, but permissible as the section of the Act is worded. Where this has been encountered the occupiers of premises have been advised to provide an alternative source of water supply on the grounds of hygiene and lack of availability to other assistants when the toilet is in use. No objections or refusals to these recommendations have so far been reported.

### Accommodation for Clothing.

Small shops were frequently found to be without this facility. It has been impossible to obtain a uniform standard because of the variable circumstances at the various premises.

### Seating.

Some unsatisfactory seating was found and dealt with.

### *Facilities for Eating.*

Some shops were found to be in need of these facilities. Unfortunately, existing floor space was often inadequate for storage purposes and it has been necessary to wait for firms concerned to apply for Planning Permission to enlarge their premises.

### *Floors, Passages and Stairs.*

Floor boards were often found to be badly worn, and worn linoleum and ragged carpets frequently noted. An occasional staircase was found to be without a handrail and the stairs obstructed with stock.

### *Dangerous Machinery*

Dealing with the fencing of machinery produced an entirely new field of work. The inspectorial staff attended lectures at an Industrial Training Centre and talks given by members of Her Majesty's Factory Inspectorate. Many cases of unguarded machinery were dealt with during the year. Only one firm declined to provide adequate guards, and this was in a lift motor room. The firm (of national repute) claimed "safety by position". Advice from the Factory Inspector was sought and eventually the firm was informed that this Council could not agree with the contention, but in the circumstances no further action could be taken for the time being.

This authority was in a difficult position in advising adequate fencing of gravity-fed meat slicers when manufacturers were found to be unable to supply suitable guards. However, towards the end of the year, some guards were being fitted.

One unusual case arose. The manager of a branch grocery shop informed an Inspector that as he was under 18 years of age he could not legally clean the dangerous machine. This particular problem was overcome after six months when the manager attained his eighteenth birthday.

### *Prohibition of Heavy Work.*

The only case under this heading concerned the handling of 56 lb. bags of pre-packed coal in a shop. The firm was advised to provide a suitable trolley.

### *First Aid.*

Almost all premises were without a suitable First Aid Box. Difficulties continually arose with food premises when they had not been equipped with the appropriate Box. Letters were sent to the manufacturers of all First Aid Boxes on sale within the Borough advising them of the difficulties which arose over the sale of a Box which did not comply with the Food Hygiene (General) Regulations, 1960. As a result, some manufacturers included a slip in their products advising the occupiers of food premises that additional requisites were required. Others did not co-operate in any way. In an attempt to overcome this difficulty all occupiers of food premises were sent a list of the necessary contents for their First Aid Box in order that they should comply with all existing regulations.

### *Prosecutions.*

There have been no prosecutions under the Act.

OFFICES, SHOPS AND RAILWAY PREMISES ACT, 1963 - 1966

Further registrations continue to be received, the majority from newly erected shops being completed. Several registrations were cancelled during the year due to the change of occupiers. The new occupiers frequently were husband and wife with no employees and, in consequence, were not required to register the premises. No doubt the Selective Employment Tax had some bearing on this.

In some instances, no registrations had been effected until the Inspector had visited the premises to carry out the initial inspections.

*Inspections.*

Inspections were continued throughout the year, but due to unfortunate illness to staff and the need to carry out re-inspections following the general inspections made the previous year, the figures are less than those in 1965. Public Health Inspectors engaged on the duties under the Act report that occupiers are continuing to be co-operative and assistants in shops seem to be more aware of the provisions of the Act. "Stage whispers" have been heard on several occasions, expressing the hope that the Inspector does something about "so-and-so".

Larger firms seem to have paid more attention to the provisions of the Act than smaller firms. Some companies which started off on the right foot in 1964 have not always maintained the high standards which they began with. Abstracts, thermometers and seats in some instances have disappeared, and First Aid Kits are continually depleted.

*Operation of General Provisions of the Act.*

The following is an analysis of the Contraventions found on inspection.

<i>Section</i>	<i>Contravention</i>

#### Temperature.

The obvious exemption for a temperature of 60.8° F. in a greengrocer's shop has not deterred the Public Health Inspectors from persuading managements to provide such forms of heating as infra-red strip heaters, and in two cases occupiers of premises have been persuaded to provide shop fronts to what were otherwise open-fronted shops.

The 16°C provision can only be satisfactorily examined during the winter months, but inspections are made throughout the year. It is becoming the practice of the Inspectors who are engaged on this work to note the form of heating and the number of units provided, and if the Inspector is doubtful whether the heating is adequate, occupiers are advised to consider the problem before a winter inspection proves the inadequacy. In addition, the recorded units of heating available readily determines whether additional heating has been provided or not when the Inspector revisits.

#### Drinking Water.

This Authority was pleased to receive Circular 9 (Supplement 3) which supported the view already put into practice locally, namely, that drinking water installations should not be within the water closet cubicle.

#### Lighting.

Following the National Survey in November, 1965, it was hoped that regulations should be introduced to standardise the levels of illumination. Obviously where different standards apply in neighbouring areas they present difficulties to Inspectors who are trying to maintain a cordial relationship with occupiers of premises who have been required to spend in some cases, large sums of money. Inadequate artificial lighting provided the second largest number of contraventions during the year, and the greatest number of defects that were rectified. In most cases artificial lighting has been improved by the replacement of tungsten filament bulbs with fluorescent tubes. Occupiers in some cases who had been satisfied with their poor lighting, thanked Inspectors for making them improve the level of illumination.

*Clothing Accommodation.*

This seems to present some occupiers with problems which they are not keen to satisfactorily resolve. Some occupiers prefer to provide small electric heaters underneath coat pegs, and the heat given off could just be felt approximately 2 inches above the unit.

*Seating.*

A problem which has not been entirely resolved was that found at a large departmental store, where the Inspector was told by assistants that there were staff instructions that they were not to use seats in the store. The Company have denied this, however.

Another problem which has been found is that the trading habits of customers seem to prefer self-service and shops are being converted to meet this demand. This type of shop lay-out leads to difficulties with the provision of suitable and adequate seats. The only solution which seems acceptable at this time would appear to be a hinge seat provided adjacent to the cash till. The seats are only used if the till is situated at the end of the sales gondola and seldom, if ever, where the seat and till are situated in the middle of the sales display.

*Accidents.*

Not all notifications are investigated and of those that were, the following was of interest:—

In a public house, a brewery delivery man fractured his left wrist when he was hit by a barrel of beer which had tipped off a steel table at the foot of the delivery chute. The table should have been secured, but in this case it had not, and it up-ended. The Brewery were asked to re-site the door openings on to the chute area and to make the metal table a fixture.

*Prosecutions.*

There have been no prosecutions under the provisions of the Act.

*Registration.*

Some 103 new registrations were received during the year. Of these, 66 were changes of occupiers. The net increase in registrations at the end of the year was 37. During the course of initial inspections, it was found that many occupiers of premises had not registered with the Local Authority, so it could be assumed that the total number of registered premises is incomplete. The total number of registered premises does not indicate the actual number of premises in the Borough to which the Act could apply. The Central Area Redevelopment is almost complete, but now that further redevelopment is taking place in other parts of the Borough, there will be additional premises for inspection.

*Inspection.*

In June, a Technical Assistant was appointed and trained in the duties involved, enabling additional inspections to be made. During the year, the number of "general inspections" was 129 and the total number of visits to premises was 716. This increase in the rate of progress is encouraging.

*Operation of General Provisions of the Act.*

The following is an analysis of the contraventions found on inspection and contraventions abated.

Section No.		Contraventions	Abated
4	Cleanliness ... ..	262	198
5	Overcrowding ... ..	3	NIL
6	Temperature ... ..	73	21

50	Provision of Abstracts ... ..	78	99
	Other Defects ... ..	194	178
	Total ... ..	1,309	1,125

8 reported accidents were investigated.

*Ventilation.*

An inspection of a "launderette" revealed that it was, in fact, a dry cleaning establishment operated on a self-service basis. An office situated on the first floor was found to be badly affected by perchlorethylene fumes. These fumes were gaining access by two routes. The access to the office area was by an open staircase from the machine area at the rear of the shop and was responsible for the greatest pollution. The fan on the exhaust system from the cleaning machines was inadequate and fumes were escaping to the interior of the building. The exhaust ducting terminated below

one of the office windows and, under certain conditions, fumes were gaining entrance to the office via the window. Advice from the local Factory Inspector was obtained. The present position is that the staircase was walled up, and a more powerful exhaust fan installed; the office use strictly limited, and the window kept closed. While conditions have been improved to a point which is acceptable for the time being, the firm are being persuaded to extend the exhaust trunking above the roof level.

It is felt that the existing legislation is inadequate in so much that no guidance is contained in any Regulations.

### Accidents.

An increase in the number of reported accidents to persons whilst loading and unloading vehicles was noted. These accidents were entirely due to carelessness and no action was taken. Not all notifications were investigated but of those that were, the following one is of interest:—

A person who cut a finger on a bacon slicing machine was interviewed and the accident was found to be the result of carelessness. Further enquiries revealed that the standard of training in grocery shops belonging to this multiple concern was inadequate. The usual method of training persons to operate clean slicing machines was one of "follow your leader". Whilst this in principle may be a good idea, it is fraught with a danger that anyone with a flaw in his training is perpetuating the error in his trainees. Manufacturers of slicing machines have printed instructions, either in booklet or card form, and originally each machine was supplied with one. Over the years, however, the majority have been lost or misplaced.

The grocery firm have been informed that sufficient precautions were not being taken by the Company to reduce to a minimum the danger associated with slicing machines, and a suggestion made that they should send their staff on a refresher course and display near to the slicing machines the manufacturers' instruction cards.

### Prosecutions.

During the course of the year a prosecution was successful against the proprietor of a ladies' hairdressing salon. The proprietor was charged under Section 8 for inadequate lighting in the rear room of the premises, under Section 16 for a defective floor in the hairdressing salon, under Section 24 for not providing a first aid kit, and under Section 50 for failing to provide and display an Abstract of the Act. The defendant pleaded guilty to the offences under Sections 16, 24 and 50 and not guilty under Section 8. The Magistrates, after hearing the evidence, were satisfied that the case presented by the Council in relation to the inadequate lighting was proved and found the defendant guilty on all four cases. He was fined a total of £20 (£5 in each case) and 5 guineas costs.

OFFICES, SHOPS AND RAILWAY PREMISES ACT, 1963 - 1968

*Registration.*

Some 115 new registrations were received during the year. Of these, 43 were changes of occupiers. There was a net decrease of 51 in the total number of registered premises at the end of the year, the reasons for this reduction being the demolition of 13 premises, the Selective Employment Tax, and expiration of leases on property.

*Inspection.*

There was an excellent improvement in the number of visits to premises during the 12 months. 235 initial inspections were made which showed an increase of 182% over 1967, and the 3491 visits of all kinds was an increase of 487% on the previous year. This progress, if maintained during 1969, should ensure that all premises will then have been inspected by the end of the year.

*Operation of the General Provisions of the Act.*

The following is an analysis of the contraventions found on inspection and contraventions abated.

<i>Section No.</i>	<i>Contraventions</i>	<i>Abated</i>
4 Cleanliness ... ..	128	98
5 Overcrowding ... ..	4	11
6 Temperature ... ..	73	121

	1,207	1,376
Totals ... ..	1,207	1,376

19 reported accidents were investigated.

*Overcrowding.*

Section 5 states that no room in premises to which the Act applies shall, while work is going on there, be so overcrowded as to cause risk of injury to the health of persons working in it. For the purposes of determining whether a room is overcrowded, the space occupied by furniture, furnishings, fittings, machinery, plant, equipment, etc. must be taken into account as well as the number of persons expected to be working in the room at any one time. It also states that each person shall be entitled to not less than either 40 sq.ft. of floor space per person or 400 cb.ft. of air space person (ceiling heights above 10 ft. to be ignored) and that shall not apply to a room to which members of the public are invited to resort.

This means that banking halls are exempt from the floor areas and cubic capacities referred to in Section 5(2), but this Authority has considered that this sub-section was a good enough "yardstick" to apply to these premises in determining "permitted numbers". However, banks have embarked on modernisation programmes which result in high anti-bandit counter screens being erected and increased mechanisation. The new screens do not extend to ceiling level and in consequence the customer area has to be taken into account. It has not, as yet, been felt that conditions are such as to cause risk to health, but the general effect is claustrophobic by comparison with previous conditions.

#### *Ventilation.*

The increase in the growth of dry cleaning establishments has been watched closely because of the dangers associated with the discharge of waste products to atmosphere. During the year a new cleaning fluid called Trichlorotrifluoroethane was utilised at one premises. This was found to be ten times less toxic than Perchloroethylene, the normal cleaning fluid.

#### *First Aid Provisions.*

Occupiers of premises to which the Act applies were found generally to have provided the necessary First Aid Kit, but in the majority of cases the contents were depleted. The first exemption certificate under the provisions of Section 24(7) was granted during the year.

#### *Accidents.*

30 accidents were reported during the year, but only 19 were investigated. The following were of particular interest.

1. A grocery firm had two accidents to staff whilst using horizontal slicing machines; the second occurrence resulted in legal action.
2. Another grocery firm received daily deliveries by their own vehicles, the goods being transported on a trolley called a "roll pallet" - these pallets were run on to the tail-gate of the vehicle and lowered by mechanical means to ground level. The goods were secured on the roll pallets by means of side framework, the open ends being secured by straps. The company's Standing Instructions were that the driver should stand on the hoist section and steady the pallet during its descent. On the occasion in question the driver failed to carry out his duty and the pallet ran to the end of the platform and the leading wheels came off the edge. The jolt caused a container weighing over 150 lb. to be ejected; it fell several feet and struck a warehouseman in the chest, causing severe cardiac bruising.
3. An accident reported from catering premises was investigated. A female assistant fell and struck her head against a washing-up machine and suffered concussion. The actual cause of the accident was not discovered but it was felt that two contributory factors were - inadequate ventilation causing excessive condensation coupled with the badly worn shoes of the Assistant. The Company have since installed a satisfactory ventilation system.
4. A butcher stabbed himself in the thigh just below the groin with a knife whilst cutting meat. This accident occurred in a supermarket belonging to a national concern. As a result of this accident, the firm are issuing the necessary protective aprons to all their establishments.

#### *Prosecutions.*

A prosecution was instituted against a grocery firm following an accident to a 16 year old youth whilst he was engaged in cleaning a horizontal bacon machine. Investigation revealed that he had not had any training in handling machines and was, in fact, responsible for operating a gravity feed slicing machine. Evidence was laid under Sections 18 and 19 of the Act, and fines of £5 and £10 respectively were imposed, with an Advocates Fee of £5 5.0d.

ANIMAL BOARDING ESTABLISHMENTS ACT, 1963.

6 annual licences were renewed during the years 1965, 1966 and 1967, and 5 during 1968, to persons whose premises were approved for keeping dogs and cats. Premises relating to new applications are inspected by the Council's Authorised Veterinary Officer and a Public Health Inspector.

Re-inspections showed that the catteries and kennels were well maintained.

No new applications were received.

REPORT BY THE CHIEF PUBLIC HEALTH INSPECTOR, 1965

*Contribution by J. S. Forman.*

After a number of years as Deputy Chief Public Health Inspector to this Authority, I was promoted to Chief Public Health Inspector as from the 1st April, 1965, following the retirement of Mr. E. Vaughan. Mr. G. N. Dean, a member of the Department, was promoted to my former position as from the same date. These promotions are very much appreciated.

Having collaborated with Mr. Vaughan for a number of years, the change of Chief Public Health Inspector was effected very smoothly.

Mr. Vaughan served this Authority very loyally, and besides dealing efficiently with day-to-day matters and adopting high standards in the realms of public health hygiene, he was far-seeing in recommending the Council to adopt certain policies, as, for example, the extension of water mains in the rural parts of the District, and the restriction of licensed caravan sites. These high standards will be maintained as far as the availability of staff will permit.

The last occasion that another Public Health Inspector was appointed was in 1954, when the population was approximately 72,000. The population is now approximately 100,000 and since that appointment the duty of enforcing the provisions of the Food Hygiene Regulations made under the Food and Drugs Act, 1955, the Clean Air Act, 1956, and the Offices, Shops and Railway Premises Act, 1963, not to mention a number of the minor enactments, has made great demands on the work of the Public Health Inspectors, so reducing the time available for routine inspections.

Unfortunately, the position consequent upon staff shortage was accentuated by the vacancy created by my appointment remaining unfilled at the year's end, despite advertisements relating to the vacant position. I hope that the vacancy will be filled shortly and also that the Council will approve the appointment of another person, either a qualified Public Health Inspector, or a Technical Assistant who can be trained to undertake one or two specific duties, such as those relating to Smoke Control Areas or the Offices, Shops and Railway Premises Act.

I wish to acknowledge, with thanks, the support given to me by the Chairman and Members of the Health Committee, the co-operation by the Medical Officer of Health and Chief Officers of other Departments, and the loyal support of my Deputy, the Public Health Inspectors and clerical staff.

During this, my first full year as Chief Public Health Inspector to the County Borough, steady progress was maintained in the work carried out by the Public Health Inspectors.

As the growth of the County Borough increases, so does the number of premises such as offices, shops, food preparing premises and factories, and this involves the Department in an increasing number of inspections. This, in turn, has meant that the routine inspections of the older type of premises are not as frequent as would be desired, but it is hoped that in the near future, authority will be given for the employment of Technical Assistants. These Technical Assistants would be trained within the Department and employed exclusively on work in connection with the inspection of offices and shops, and premises in Smoke Control Areas, thus enabling the Public Health Inspectors to devote more time to duties for which they are qualified.

A close co-operation existed between the planning section of the Borough Engineer and Surveyor's Department and the Public Health Inspectors. As a result of this, all relevant plans were inspected and steps taken to ensure that at the planning stage, requirements of the appropriate legislation were incorporated, which was to the benefit of the developer and the Department.

Many complaints from the public regarding foreign bodies and moulds in foodstuffs continued to be received. This may well be due to the fact that residents in the County Borough were becoming more aware of the activities of the Department. The policy of the Council which provided for a warning to be given on the first occasion to the person or firm responsible for the complaint, rather than the institution of legal proceedings, sometimes made it possible to secure improvements in manufacturing processes to prevent a recurrence of the cause of the complaint. On other occasions, some manufacturers were persuaded to adopt a coding system for their products indicating the dates of manufacture. Such a code was more acceptable to the Food Industry than the actual date, because with the increase in the number of self-service food shops, a customer would naturally choose a commodity with the latest date, leaving wholesome food on the shelves which may eventually have to be destroyed.

During the year the Council continued with its programme to create Smoke Control Areas. Three Orders, covering 1,057 dwelling houses, were made. This was very encouraging, as even without an interruption in the programme, it is estimated that it will take another 20 years before the whole of the County Borough becomes "smokeless", unless the staff is increased so that the work can be expedited.

Householders in the County Borough are becoming increasingly aware of the advantages of installing modern heating appliances, and, encouraged by the payment of grants in approved cases, they are more receptive to visits by the staff in connection with smoke control.

The fact that grants are available to householders who carry out necessary work in Smoke Control Areas has resulted in almost daily enquiries from all parts of the County Borough seeking information relating to grants. Unfortunately, financial assistance can only be given within the area defined by the Council's Smoke Control Order and providing the Ministry of Housing and Local Government confirm the Order.

It is interesting to note that the smoke recording instrument at the Council House has recorded a reduction of approximately 30% since 1962. This instrument is surrounded by Smoke Control Areas to a depth of approximately 1/3rd mile on the south, 1 mile on the west, 2½ miles on the north and 2 miles on the east. It would appear that the establishment of Smoke Control Areas by the Council is an important project which will ultimately have a beneficial effect on the health of the residents in the County Borough.

My thanks are due to the Chairman and Members of the Health Committee and other Members of the Council for their support and encouragement in carrying out my duties, and to the staff of other departments for their ready co-operation.

Finally, I would thank Dr. I. M. McLachlan, Medical Officer of Health and my other colleagues in the Department for their support, and in particular the Public Health Inspectors who carry out their duties with zeal at all times.

I have pleasure in submitting my report for the year, 1967.

Midway through the year, the Council gave authority for the employment of two Technical Assistants, the fulfillment of a hope expressed in my 1966 Annual Report. With their arrival, opportunity was taken to reorganise the duties of the Public Health Inspectors.

One Technical Assistant is wholly employed with the inspection of offices and shops, other than food preparing premises, and the other Technical Assistant is wholly employed on work in connection with Smoke Control Areas. Their training was arranged in the Department, and within a reasonable period, they were able to accelerate the work under the Offices, Shops and Railway Premises Act, 1963, and the Clean Air Act, 1956, so allowing the Public Health Inspectors to concentrate on work for which they trained and qualified. As a result there has been an increased number of inspections of food premises, etc.

In common with many other local authorities, assistance was given to the Regional Office of the Ministry of Housing and Local Government in the carrying out of a survey in the Midlands Conurbation to assess housing standards by seconding a Public Health Inspector to work in other areas for a limited period. As part of this survey, a Public Health Inspector from another authority inspected a number of houses in this Borough. Much useful information was gained of the standards which may be adopted in future housing legislation.

Among the more interesting problems dealt with by this Department was one concerned with the fumes from a dry cleaning plant. It was found during a routine inspection that the fumes from the exhaust duct of this plant were discharging to the atmosphere immediately below windows giving ventilation to the office immediately above and affecting the health of the office occupant. With the assistance of a Regional Inspector of Factories, arrangements were made to carry out tests on the staff and of the atmosphere. Before these could be carried out, however, there was a change of manager, and structural alterations were made to the shop which resulted in a material improvement of the conditions which existed. The Factory Inspector considered that such circumstances would be reported to the Ministry of Labour suggesting that the making of Regulations to control the discharge of fumes from dry cleaning plants be considered.

Noise complaints continued to take a considerable amount of time. Some of the problems were difficult to solve and involved protracted investigations and observations, often during the late evening and early morning when the background noise had considerably reduced. A number of complaints referred to the loading and unloading of vehicles during the night which disturbed the sleep of nearby residents, but with the co-operation of the firms involved, who re-arranged the delivery schedules, the nuisances were abated. Reminders of the arrangements were sometimes necessary to the management to prevent the gradual build-up of noise to its former level. Although the Noise Abatement Act gives a defence when the best practicable means are taken to prevent noise, often a better solution would have been possible if greater powers were available under Planning legislation. In the case of industrial premises, recommendations are always made to the Borough Engineer and Surveyor when it is felt that the occupancy of the building may give rise to excessive noise.

It will be observed that the summaries of the Visits and Work Done by the Public Health Inspectors is shown in a different form. This is due to the fact that a new recording system was brought into use during the early part of the year.

I wish to acknowledge the excellent co-operation which exists between the Medical Officer of Health and myself and the assistance given by my deputy and the Public Health Inspectors at all times, often at short notice, to carry out their duties. Officers and staff of other departments have also willingly collaborated with me.

Finally, I would express my gratitude to the Chairman and Members of the Health Committee and the Members of the Council for their interest and continued support.

Midway through the year, the Council gave authority for the employment of two Technical Assistants, the establishment of a post expressed in my 1956 Annual Report. This their initial opportunity was taken to recognize the choice of the Public Health Inspectors... The Technical Assistant is wholly employed with the inspection of offices and shops, other than food premises, and the other Technical Assistant is wholly employed on work in connection with Public Health Inspectors. Their training was arranged in the Department, and within a reasonable period they were able to accept the work under the Offices, Shops and Railway Premises Act, 1957, and the Clean Air Act, 1956, so allowing the Public Health Inspectors to concentrate on work for which they trained and qualified. As a result there has been an

increased number of inspections of food premises, particularly the smaller premises, and a number of other public health duties have been undertaken. It is common with many other local authorities, assistance was given to the Midlands Commission on essential housing standards by appointing a Public Health Inspector to work in other areas for a limited period. As part of this survey, a Public Health Inspector to work in other areas for a limited period. As part of this survey, a Public Health Inspector to work in other areas for a limited period. As part of this survey, a Public Health Inspector to work in other areas for a limited period. As part of this survey, a Public Health Inspector to work in other areas for a limited period.

Among the more interesting public health duties with which the Department was concerned with the former from a by planning plan. It was found during a re-inspection that the time from the address that water pipes were distributed to the premises immediately below ground level was not satisfactory. With the assistance of a Regional Inspector of Factories, Workshops and other premises, the staff and of the manufacturer these could be corrected. However, there was a made to carry out work on the staff and of the manufacturer these could be corrected. However, there was a change of manager, and structural alterations were made to the shop which resulted in a material improvement of the conditions which existed. The factory inspector considered that such improvements would be required in the future of a shop suggesting that the making of alterations to correct the drainage of the premises by cleaning pipes be considered. The factory inspector considered that such improvements would be required in the future of a shop suggesting that the making of alterations to correct the drainage of the premises by cleaning pipes be considered.

Noise complaints continued to take a considerable amount of time. Some of the problems were difficult to solve and involved protracted investigations and operations. Often during the late evening and early morning when the background noise had considerably reduced. A number of complaints related to the loading and unloading of vehicles during the night which disturbed the sleep of nearby residents, but with the co-operation of the firms involved, who re-arranged the delivery schedules, the nuisances were abated. Remedies of the arrangements were sometimes necessary to the management to prevent the gradual build-up of noise to its former level. Although the Noise Abatement Act gives a defence when the best practicable means are taken to prevent noise, often a better solution would have been possible if greater powers were available under Planning legislation. In the case of industrial premises, recommendations are always made to the Borough Engineer and Surveyor when it is felt that the occupancy of the building may give rise to excessive noise.

It will be observed that the committee of the Vice and Work Day by the Public Health Inspector is shown in a different form. This is due to the fact that a new recording system was brought into being during the early part of the year and a great deal of the time during the year was spent in the study of the new system. It is hoped that the new system will be of benefit to the public.

I wish to acknowledge the excellent co-operation which exists between the Medical Officer of Health and myself and the assistance given by my deputy and the Public Health Inspectors, other officers, and other staff in carrying out their duties and all of other departments who have willingly collaborated with me in carrying out my duties.

Finally, I would express my gratitude to the Chairman and Members of the Health Committee and the Members of the Council for their interest and continued support.
