TODMORDEN RURAL DISTRICT COUNCIL.

Hebden Bridge, 17th February, 1897.

Gentlemen,

I have the honour to submit my Nineteenth Annual Report, on the general state of health, and causes of sickness and death, in your District for the year 1896.

Appended to this Report are five Tables, together with three special ones, A, B and C, drawn up in accordance with orders from the Local Government Board and West Riding County Council, and giving such information as they desire.

Table 1 shows the number of deaths from seven principal Zymotic Diseases for ten years.

Table 2 shows mortality from all causes for ten years, at subjoined ages.

Table 3 shows births, deaths, birth-rates, death-rates, and number of deaths under one year, with rate per 1000 births, for ten years.

Table 4 shows mortality from different classes of disease for ten years.

Table 5 shows the births, deaths from all causes, and from certain special causes, with birth-rates and death-rates, in each quarter of 1896.

I estimate the population to the middle of the year to be 4,850, an increase of 50 on that of the preceding year.

The births registered have been 113, viz., 76 males and 37 females, equal to an annual birth-rate of 23·2 per 1000. The number of births registered and rate for the year 1895 were respectively 116 and 24·1 per 1000. The birth-rate keeps fairly high for a Rural District.

The annual death-rate is low, and has averaged about 15 per 1000 for the last ten years. During the year, 73 deaths, 31 of whom were males, and 42 were females, giving an annual rate of mortality per 1000 of 15, were recorded. The number of deaths and rate for the preceding year were 76, and 15.8 per 1000. Two deaths out of these 73 are attributed to the principal Zymotic Diseases, giving a Zymotic mortality of 0.4 per 1000 per annum, against four deaths and a Zymotic death-rate of 0.8 per 1000 for the year 1895.

Of the 73 deaths, nine of which are uncertified, 12 were those of infants under one year old, against 13 infants out of a total mortality of 76 for the previous year. The rate of infant mortality measured by the proportion of deaths under one year to births registered, is equal to 106·1 per 1000. The proportion of deaths among this class for the year 1895, to every 1000 births registered, was equal to 112·0 per 1000. Five deaths were those of children over one but under five years old; three were deaths over five and under 15 years; three were deaths 15 and under 25 years; eighteen were deaths 25 and under 60 years; and thirty-two were deaths 60 years and upwards. One case of sudden death was investigated by a Coroner's jury.

The Infectious Diseases reported to me under the "Notification Act" have been 24, viz., Scarlet Fever 17, Typhoid Fever 5, Diphtheria 1, and Erysipelas 1. Seven of these only were sent to the Fielden Hospital, and more than two-thirds were left at home to spread in the various localities in which they occurred.

The Fielden Hospital for Infectious Diseases was opened on the 24th July, 1895, and the Todmorden Rural District Council had the privilege of sending the first patient into it. It is well adapted, in my opinion, for the treatment of all cases of Infectious Disease arising within our District, except those of Smallpox, which are provided for at the Sourhall Hospital. It is disappointing after a year's trial to find, with such an excellent establishment as we have at Lee Bottom, that so few patients have availed themselves of it. If this Institution had not been presented to Todmorden by private beneficence, the Authorities would have been obliged to provide one at a very great cost to the ratepayers. We have now an Isolation Hospital built under the advice and guidance of leading sanitary experts. The drainage arrangements are imperfect, but these defects will admit of remedy when a scheme of sewerage has been completed for the neighbourhood. In a professional point of view, I desire to show that the difficulties of attending fever cases at the Fielden Hospital to medical men living in Hebden Bridge are great. A Typhoid case usually requires a period of six weeks daily attention. The distance from Hebden Bridge to Lee Bottom and back is about seven miles, which means travelling 50 miles a week for one patient. This is a great strain on the private work of any single man. In the interest of the public, and with the hope of attracting more Infectious Fevers to the Hospital, where every facility exists for their comfort and careful treatment. I beg to suggest, for this and other reasons, to the Combined

Authorities, that a single Medical Officer could do the work equally well, if not better, than a number of medical men following their individual cases there. Internal arrangements and general management would be more satisfactory. Difficulties which have occurred heretofore with regard to stimulants and diet, would be avoided, and the Medical Officer would be responsible to the various Councils who appointed him. This appointment need not interfere with any patients desiring their own medical attendant, whose services they could obtain by special and private agreement. Until some change of this nature is accomplished, I am afraid the efficacy and usefulness of the Fielden Hospital, for isolating and treating infectious diseases, as far as our district is concerned, will be limited.

Scarlet Fever commenced in Erringden in March, and spread to Heptonstall, Blackshaw, and Wadsworth, during the course of the year. Seventeen cases were notified, and four were sent to the Hospital. The disease was not of a severe type, and no deaths resulted.

Typhoid Fever.—We had five cases of this disorder during the year, three of which were treated at the Infectious Hospital. Three of these occurred in one house, in which grave sanitary defects were found; another happened where untrapped drains existed, and for the fifth I am unable to account.

A case of *Diphtheria* was reported at Pecketwell, and an untrapped drain was found close to the house.

An outbreak of *Measles* began in Colden on the 24th February, and spread rapidly until the 19th March. I visited the school on the latter date, and found 43 children absent, directly or indirectly, from this cause. The school was closed for three weeks, with the most favourable results, and no case was heard of in that district afterwards. Every precaution was adopted before the school was closed, but without any encouraging effect. There was a previous epidemic of Measles in the Colden District in June, 1894.

Influenza was prevalent during the first quarter of 1896, and two deaths are directly ascribed to it.

Of the remaining specified causes of death, four are due to Phthisis, nine to Heart Disease, and seventeen to Inflammatory Lung Affections, the latter in excess of preceding years.

The Inspector's Report is also appended, which will show the amount of sanitary work completed in the year 1896.

I have the honour to be, Gentlemen,

Your obedient Servant,

J. LAWSON, B.A., M.B., Univ. Dub.,

Medical Officer of Health.

The Todmorden Rural District Council.

TABLE C. 1896.

Todmorden Rural Sanitary District Council.

MEDICAL OFFICER OF HEALTH-J. LAWSON, M.B. SANITARY INSPECTOR-Mr. EMMETT SMITH.

WATER SUPPLY --

Quantity-Adequate from private supplies.

Quality—Generally good. Action on Lead?—None reported.

Any extensions or change during 1896?—Two new wells.

SEWERAGE-

System-Single.

Ventilation by lampholes and manholes. Special flushing arrangements?—None.

Extensions or improvements during 1896?—220yds in Blackshaw.

Treatment adopted—Chemical precipitation for Heptonstall.

SCAVENGING-

Are the privy middens, &c., cleansed by Sanitary Staff, by Contractors, or by Tenants? - Sanitary Staff in Heptonstall. Is the present system satisfactory?—Yes.

ADOPTIVE ACTS, BYE-LAWS, AND REGULATIONS-

Date of adoption. Infectious Disease Notification Act, 1889-1st February, 1890. Infectious Disease Prevention Act, 1890lst August, 1891. Public Health Acts Amendment Act, 1890-Regulations under the Diaries, Cowsheds, and Milkshops Orders, None.

REGULATED BUILDINGS, TRADES, &c .--

Number. General Legal Registered. Inspected. Condition. Proceedings (if any.)

... ...

Common Lodging Houses None Fair 79 Canal Boats ... 79 Slaughter Houses ... 2 Satisfactory Bakehouses None Dairies ... Cowsheds ... 125 Fair Milkshops Offensive Trades

Schemes before Local Government Board-None.

Local Government Board Enquiries-None.

Local Government Board Inspections - None.

SPECIAL REPORTS-

Number made by Medical Officer of Health during 1896-23rd March, 1896.

Have copies been forwarded to the County Council?—Yes.

BIRTHS-(a) Number of each Sex -76 Males and 37 Females.

- (b) Number Illegitimate, included in the above—7.
- (c) Any information as to Still-Births? No.
- DEATHS-(a) Number of each Sex-31 Males and 42 Females.
 - (b) Number Uncertified, included in the above 9.

DEATH RETURNS-

What correction (if any) is made for non-residents dying within the District?—None.

Are any Returns obtained of deaths of residents occurring in public institutions (Workhouses, Hospitals, &c.) outside the District?—No.

ISOLATION HOSPITAL-

Any action during 1896?-No.

SANITARY WORK-

Number of Houses built during 1896—5.
House to House Inspection during 1896—None.
Total Number of Nuisances in hand at close of 1895—None.

Reported during 1896—82. Abated during 1896—72.

Total Number of Summonses, or other Legal Proceedings—1. House Drainage—Number of Sinks disconnected during 1896—35. ,, trapped during 1896—35.

CLOSETS-

Number constructed during 1896—7. Kinds—3 Pails and 4 Water Closets.

What action has been taken in regard to the following matters:—
Houses unfit for habitation—None.
Overcrowding—None.
Seizure of Unsound Food—None.
Prosecutions—1.
Samples under the Sale of Food and Drugs Acts—None.
Prosecutions—None.

River Pollution—None. Smoke Abatement—None. Workshops—None. Schools—None. Burial Grounds—None.
