REPORT of the Medical Officer of Health

FOR THE YEAR ENDING 31st DECEMBER, 1945.

Section A .- Statistics and Social Conditions.

Statistics.

Area. -22,011 acres.

Population.-17,100.

Number of Inhabited Houses (end of 1945) according to Rate Books:—5,069.

Rateable Value.-£81,613.

Sum Represented by a Penny Rate.—£320 9s. 5d.

Social Conditions.

Coal-mining and its By-products, along with Agriculture are the chief industries; consequently the District is partly urban and partly rural. Such people as work in mills, etc., at Dewsbury, Ossett, Wakefield, etc., are transported to and fro by the excellent road and rail facilities.

Vital Statistics.

Live BirthsLegitimate	Total 371 22 393	M. 194 11 205		Birth-rate per 1,000 of the estimated resident population 22.91
Still BirthsLegitimateIllegitimate	10 1 11	8 - 8	1	Rate per 1,000 total (live and stillbirths) births 29.4
Deaths	172	98	74	Death-rate per 1,000 of the estimated resident population 10.0

Section B.—General Provision of Health Services for the Area.

Public Health Officers.

Medical Officer of Health (part time) :

K. S. MACDONALD-SMITH, M.B., Ch.B., F.R.C.S. E.

Sanitary Inspector:-Thos. H. BRIDDICK, A.R.San.I., F.S.I.A.

(Certificate of the Royal Sanitary Institute for Inspector of Nuisances. Certificate of the Royal Sanitary Institute for Inspector of Meat and other Foods. Diploma, Sanitary Training College, London, for Sanitary Inspection, Law, Science and Hygiene. Diploma, Sanitary Training College, London, for Meat, Food and Drugs Inspection).

Additional Sanitary Inspector :- E. HEALD, M.S.I.A.

Laboratory Facilities.

The examination of sputum, swabs and other pathological specimens is carried out by the County Laboratory. Milk is also examined for tubercle bacilli and bacterial content by the County Laboratory, while water and food stuffs are submitted to the Public Analyst, Mr. Richardson, of Bradford.

Ambulance Facilities.

There are two motor ambulances for the removal of infectious disease patients to Carr Gate Hospital, and one for smallpox patients, which meet the requirements of the districts.

For non-infectious cases and accidents an arrangement has now been made for the use of Emergency Ambulances in the Rural Area. This is a welcome addition to the Ambulance Service for the District, as during the night it is sometimes impossible to obtain a private ambulance.

Nursing at Home.

- (a) General Nursing: -No arrangements by the Council.
- (b) Nursing of Infectious Cases:—No arrangements for nursing at home.

Clinics and Treatment Centres.

All clinics and treatment centres are under the jurisdiction of the West Riding County Council. Diphtheria immunisation is carried out by the Medical Officer of Health and private practitioners.

Hospitals and Other Institutions.

- (a) General Infectious Diseases:
 - (1) Carr Gate Isolation Hospital, Wakefield.
 - (2) Cardigan Smallpox Hospital, Wakefield.
- (b) Voluntary Hospitals:

The hospitals used by the inhabitants in the area for accidents and general diseases are:—

- Clayton Hospital, Wakefield.
 General Infirmary at Leeds.
- (3) Hospital for Women at Leeds.

The Council has made no arrangements for the admission of patients into these voluntary institutions.

Some bodies of workmen, e.g., coal miners, make contributions at fixed intervals, e.g., weekly, to these voluntary institutions whereby their claim to admission, free treatment, etc., is secured.

(c) County Council Hospitals:

White Rose County Hospital, Wakefield. Staincliffe County Hospital, Dewsbury. Walton Hall Maternity Hospital, Walton.

Hospital Accommodation.

Hospital, Zymotic Diseases.

The Carr Gate Hospital at the time of its erection was sufficient for the needs of the area, but the time has arrived when it should be enlarged and modernised.

The hospital is governed by representatives from the Rural District of Wakefield, the Urban District Council of Stanley and the County. Borough of Morley.

Persons suffering from Diphtheria, Scarlet Fever and Enteric Fever from these districts are admitted and treated in this hospital.

Occasionally, other infectious diseases, e.g., measles, pertussis, mumps, are admitted, but as a rule accommodation will not allow their admission. Usually their admission follows as a result of doubtful diagnosis, segregation being carried out until diagnosis is established. Accommodation suffers as a result of the absence of an observation block.

Accommodation is provided for cases of erysipelas at the Carr Gate Isolation Hospital and the County Hospital, Wakefield.

Authorities and Authorities vehalt in thought yours of the state of the s

Cardigan Smallpox Hospital.

This hospital is governed by a Smallpox Joint Hospital Board, comprised of representatives from the City of Wakefield, the Wakefield Rural District Council, the Urban District Councils of Stanley, Methley, Horbury and Rothwell, and the County Borough of Morley.

At the present time it is leased to the West Riding County Council and used as a sanatorium. The County Council has entered into an agreement to vacate immediately these premises should an outbreak of smallpox occur in any of the above districts.

Sanitary Circumstances of the Area.

Water.

All houses in the district, with the exception of 37 isolated houses, have a piped supply of water laid on.

Drainage and Sewerage.

Sewers are still required in the parishes of Warmfield-cum-Heath, Sharlston, Crofton, Crigglestone, Sitlington, Bretton, Woolley, Notton and Wintersett.

In the parish of Warmfield-cum-Heath with the exception of the new Council Houses the whole of the houses drain into cesspools or open ditches.

In the hamlet of Warmfield the conditions are very unsatisfactory. Several of these open ditches are for the greater part of the year full of stagnant sewage, some of them within a few feet of the public footpath.

Spring Hill Area in the Parish of Crofton drains into the brook which flows through that part of the district. A scheme for its drainage is held in abeyance during the war.

In the Parish of Sharlston, Foulby Area is developing and here cesspools are constructed to take the drainage from all the houses.

This area is one in which developments would rapidly proceed if there was an efficient sewer constructed.

Woolley Moor, Dennington and Great Cliffe, in the Parish of Crigglestone, are unsatisfactorily sewered. At Dennington the house drains discharge into the brook, at Great Cliffe part of the houses discharge into an open ditch and the remainder into the covered drain discharging into the stream near the Railway Station.

The same state of the found of Cookin Street and the same and the same of the

All sewage works in the district are quite satisfactory and the sewage conveyed thereto has been treated in an efficient manner, with the exception of the Parish of Sitlington. Reconstruction of the sewage works at Horbury Bridge is suspended until the end of the war.

947 houses are not connected to the sewers. These drain into cesspools and ditches.

Rivers and Streams.

There were no complaints from the West Riding of Yorkshire Rivers Board regarding any of the affluents from the sewage works except Horbury Bridge Sewage Works.

Pollution of rivers and streams is prevalent in Crigglestone and Crofton. This pollution taking place through the house drainage finding its way direct without treatment.

Closet Accommodation.

Types of Closet Accommodation in the District.

Water Closets	 	 	 3814
Slop Closets	 	 	 -
Tub Closets	 	 	 69
Privy Middens	 	 	 497
Dry Ashpits	 	 	 16

Prevalence of, and control over, Infectious and other Diseases.

Infectious Diseases.

Scarlet Fever.

59 cases of Scarlet Fever were notified during the year.

The attack rate per 1,000 population was 3.45.

Notification of all infectious diseases is chiefly given by telephone. This expedites the removal of the patients to the Isolation Hospital and to a large degree minimizes the spread of infection.

59 cases were treated in the Isolation Hospital, and there were no deaths.

Diphtheria.

10 cases of Diphtheria were reported and all these were removed to the Isolation Hospital; there were no deaths.

The attack rate per 1,000 of the population was 0.58.

Verminous Persons.

Arrangements for cleansing of verminous people, clothing, bedding and all textile articles likely to contain vermin, are made with the City of Leeds when the occurrence arises. The infested articles are steam disinfected and, during the occupier's stay at the cleansing station, the premises are fumigated. It was necessary to take action in respect of one verminous woman during 1945.

Disinfection.

This is carried out at every place where a notifiable infectious disease has occurred, and where there has been a death from Tuberculosis. Houses in which active cases of Tuberculosis reside are disinfected periodically—every 3 months. Disinfection is also done when a tuberculous person leaves home and enters a sanatorium.

The method employed is formalin sprayer and lamps.

This work is done by a trained workman under the supervision of the Sanitary Inspector.

Prevention of Blindness.

It was not found necessary to take any action during the year for the prevention of blindness or for the treatment of persons suffering from injury or any diseases of the eyes.

Report of the Sanitary Inspector

FOR THE YEAR 1945.

Gentlemen,

I respectfully submit my Annual Report for the year 1945.

I am,

Your obedient Servant,
THOS. H. BRIDDICK, A.R.San.I., F.S.I.A.,

Sanitary Inspector.

WARRIED BURAL DISTRICT COUNCIL.

Report of the Sanitary Inspector

Centlemen

I respectfully submit my vinual Besort for the sker targ

Disinfections.

Disinfections are carried out by workmen specially trained for this work and the method adopted is spraying with Formaldy-hyde and Formalin Lamps. During the year 149 disinfections were carried out by this method. In the case of Verminous houses, de-infestation is done by spraying with a special insecticide and fumigation with sulphur candles.

Disinfectants are supplied free for use in houses where a case of infectious disease has occurred and where Tuberculosis patients reside. Stores for the supply of disinfectants are situated in each of the Townships and supplies are issued on the production of a note signed either by myself or the disinfector.

The wasteful manner in which it was used in the past compelled me to curtail the issue of fluid disinfectant.

The following disinfections were carried out during 1945 :-

						DI	SEA	SES			
DISINFECTION	is	Tuberculosis	Scarlet Fever	Diphtheria	Pneumonia	Enteric	Vermin	Cerebro-Spinal Fever	Scabies	Other Cases	Total
Private Dwelling Houses		2	63	17	_	_	39	1	2	_	124
Schools		-	-	_	-	-		-	-		-
Day Nursery		_	1	_	-	-	-	-	-	_	1
Maternity Homes		_		-	_	_	-	-	_	24	24
TOTAL		2	64	17	_	-	39	1	2	24	149

The result of the disinfections for zymotic diseases has been very satisfactory and no secondary cases have occurred that could be traced to the inefficiency of the method adopted.

The total number of houses disinfected for tuberculosis during the year was 2.

Disinfestation.

39 houses were found to be infested with bugs during the year.

Food and Drugs.

No samples were submitted to the Public Analyst during the year.

Cowsheds, Milk Shops, Dairies.

On the 31st December, 1945, there were 32 wholesale producers, 76 producer retailers and retailers.

1,733 visits were made during the year to farms and dairies; the average number of dairy cattle kept in the district was 1,181.

Milk.

1,699 samples of milk produced in the district were submitted for examination.

Of the 1,699 samples of milk, 1,572 were submitted to the National Milk Testing Advisory Laboratory, Leeds. 82 samples were submitted for Biological examination for Tuberculosis to the West Riding County Council Laboratory, and 45 samples were taken by the West Riding County Council Inspectors at "Accredited" farms and examined in the County Laboratory.

The reports on these samples of milk are :-

National Milk Testing Laboratory.

,176		Category	A	=	74.81%
280	72	,,	В	=	17.82%
116			C	=	7.37%

West Riding County Council, Biological Examination for Tubercle Bacillus.

These 82 samples were taken from 76 herds and the results were 71 negative and 5 positive. 6 samples were repeat samples as the Guinea-pigs inoculated died too early to give a satisfactory diagnosis. Representing 93.42% negative and 6.58% positive.

Accredited Farms.

Of the 45 samples from "Accredited "farms, 30 were reported satisfactory, and 15 unsatisfactory.

6 14 oz. tins Borden's Evaporated Milk (decomposition).

3 15 oz. tins Soloman's Pilchards (decomposition).

1 16 oz. tin So-Tast-ee Mixed Vegetables (decomposition).

1 14½ oz. tin Sunshine Evaporated Milk.

3 141 oz. tins Springtime Evaporated Milk.

6 141 oz. tins Pet Evaporated Milk.

1 entire Pig Carcase and Organs (11 stone) (moribund).

1 Pig (Tuberculosis).

1 Pig Liver (Cirrhosis).

In the district there are 29 Fish Friers. The conditions at one of these premises was found unsatisfactory. Improvements were effected and the premises were made satisfactory.

Petroleum and like Substances.

26 premises are licensed for the storage of Petroleum. There were no accidents during the year and no contraventions of the Petroleum Act discovered.

Canal Boats.

There are no Canal Boats registered in the district. Canal Boats worked in the district are chiefly day boats on which there is no sleeping accommodation. These boats pass through several districts on their journeys.

SURVEY OF THE HOUSING CONDITIONS AND OVERCROWDING.

A few alterations have occurred since the date when the Housing Survey was completed, but they will not in any way affect the main problems of the present day housing conditions. Minor changes of various characters continually occur, but the greatest problems remain. Houses shown as empty may have been occupied and surplus families may have changed their address. With these few exceptions the conditions prevailing may be accepted as a comprehensive picture of the whole of the district for the year 1945.

The Tables I have prepared give comparisons and present the undesirable features which require your consideration and will enable you to formulate your future housing programme. In Circular 64/44, 1944, and Circular 67/45, 1945, the Minister of Health desires Local Authorities to prepare and submit their housing programmes in accordance with the recommendations of the Rural Housing Sub-Committee, 1944, within twelve months of cessation of hostilities in Europe. I respectfully apologise for my failure to place this report in your hands before the date required, but the delay has been due to circumstances beyond my control.

In the Rural Housing Sub-Committee's Report and Ministry of Health Circular 64/44, 1944, it is recommended that the Survey should be as comprehensive as possible and carried out on a nation-wide scale based on a reasonably uniform standard and the results classified in a uniform manner. This I have endeavoured to do.

The classification recommended in the aforementioned Report and Circular is as follows:—

Category	Condition of Dwelling	Normal Action
(1)	Satisfactory in all respects	No Action.
(1)	Minor Defects	Informal Action or Public Health Acts.
(3)	Requiring repair, structural alteration or improvement	Section 9 or Section 11, Housing Act, 1936.
(4)	Re-conditioning	Section 11, Housing Act, 1936.
(4) (5)	Unfit for habitation and beyond repair	Section 11 and Section 25, Clearance Areas, Housing Act, 1936.
(6)	Overcrowding	Provision of New Houses.

OF THE HOLDINGS CONDITION - LING

The late of the state of the st

The same of the sa

Description of the Principle of the Prin

With this information you will be in a position to make the necessary plans and draw up a long-term programme.

In the district the conditions which I have tabulated prevail in houses which I consider come within the provisions of the Housing Acts:—

(1)	Overcrowded Houses	 191
(2)	Houses in good state of repair	 3,328
(3)	Houses requiring repairs	 847
(4)	Houses unfit for human habitation	 720
(5)	Houses for re-conditioning	 _
(6)	Houses with more than I family	 558

You will note I have not shown any houses for re-conditioning. In my opinion it would be a waste of labour and material to attempt to re-condition any of the houses I have scheduled as not repairable at a reasonable cost. There are no houses dealt with in this report of historical interest in the area which warrant preservation.

Although re-conditioning of houses may be advocated and practicable in some circumstances, I have yet to be convinced that where structural decay is prevalent, houses can be reconditioned to such a degree as to eliminate all dangers to health. There are a few houses in your area which were re-conditioned a few years ago and which I have been compelled to include in my report as now unfit for human habitation.

I now place before you the information I have collected during the Housing Survey. In the following Tables I have endeavoured to give you a complete picture of the housing conditions throughout the district as a whole and a picture of each Parish.

It will now be seen from the foregoing Tables the problems that lie before you and the amount of work and planning that will be involved to eliminate the undesirable features attached to Housing alone.

Tables 11—23 have been prepared so that it will be seen how each Parish has its own housing problems and those problems will have to be dealt with, either singly or by grouping two or more contiguous Parishes together.

Those latter Tables give the number of persons residing in the house, the size of the house in which they reside and the Overcrowding at a glance. Figures on the left side of the zig-zag line are the overcrowded families and the greater the distance from this line the greater are the overcrowded conditions in those houses.

When compiling these Tables I have taken the total number of persons resident in the house, even though they are not all of the same family as the householders.

These additional families have been taken into consideration and included as requiring a house of their own in the same way as individual overcrowded families when compiling Tables 24-35. Tables 10, 24—35 may be somewhat confusing and difficult to follow, but I considered it the most appropriate table for assessing the minimum number of houses and the size of house the people living in undesirable conditions require.

The number of houses required to abate Overcrowding, provide a house for each individual family and a suitable house for those families living in houses unfit for human habitation is 1,364.

To reach the conclusion that this is the minimum number of houses required, I have assumed that where small families are living in Council Houses too large for their requirements, they will be removed to smaller houses.

Table 36 shows the number of Council Houses I consider too big for the requirements of the present family, and the occupiers of these should be placed in smaller houses and the large Council Houses used for larger families.

Many of the housing problems I have placed before you cannot be dealt with immediately and I should be glad to have your decisions as to which of the problems priority should be given. You have before you for consideration Overcrowded Houses, Houses in a state of Disrepair and Houses Unfit for Human Habitation; in addition, there are the undesirable features on which I reported some time ago; the inadequacy of sewers in some districts; water mains in other parts, which should be relaid without undue delay, and parts of the district with privy

ni independenti del la compania del mante del la compania del

middens, which should be converted into water closets, and which was suspended shortly after the commencement of the War. Plans were complete for this work to be done at the time of suspension and will have to be reconsidered at some early date.

The Preliminary Survey having been completed, it is essential that a detailed inspection be made of all the houses requiring repairs and appropriate action taken to prevent them from falling further into disrepair.

There is a statutory obligation on all Housing Authorities to arrange for a periodic inspection from time to time of all houses in the district, and it is recommended that it should be carried out at least once every five years. This alone is no mean task, some houses will not require much attention, others will occupy many hours before they can be finally disposed of and placed in the category of houses in a good state of repair. The preparation of plans for dealing with houses in Clearance Areas and the detailed inspection necessary involves work extending over many months. There are 1,567 houses which come within the categories of disrepair and demolition, and 3,502 to be inspected at least once every five years, a total of 5,069.

Scavenging.

The total cost of house refuse collection and cleansing of cesspools and the collection of waste paper, rags and bones was £4,607 3s. 0d. throughout the district for the year 1st April, 1945, to 31st March, 1946. The income to the Cleansing Department was £724 7s. 7d., giving a net cost of cleansing of £3,882 15s. 5d. The average cost per house was 15s. 3\frac{3}{4}d.

The amount paid in wages was £3,309 13s. 1d., petrol £389 5s. 3d., leaving a balance of £183 17s. 1d. for tyres, spares and general maintenance.
