OFFICE OF THE COUNTY MEDICAL OFFICER OF HEALTH,
SHIRE HALL, WARWICK.

To the Warwickshire County Council.

MR. CHAIRMAN, LADIES AND GENTLEMEN,

I have the honour to report on the Health of the County of Warwickshire for the year 1949.

One of the objects of a report of this nature is to point out where ill health still occurs; where possible this has been described in areas, in age groups and by cause.

At the end of the year the National Health Service Act, 1946, had been in operation for 17 months and the new schemes were beginning to bring benefits to the people.

The birth rates for the County in 1947, 1948 and 1949 were 20.77, 18.24 and 17.22 respectively. The number of live births in 1949 was 431 less than in 1948.

There were 7 deaths of women in consequence of or associated with childbirth, and this gives a maternal mortality rate of 0.83 per 1,000 total births; no death was the result of sepsis.

The stillbirth rate in 1949 was 19.4; the trend of this rate during recent years is set out in Table 2, and it will be seen that the 1949 figure is the lowest yet attained.

Illegitimate births numbered 416, which is 5% of all births in the County. 19 illegitimate infants died, and this gives an illegitimate infant mortality rate of 45.7 compared with 60.7 in 1948. The stillbirth rate for illegitimate infants was 28.0 in 1949 and 38.2 in 1948.

Infant Mortality.

During 1949, there were 237 deaths of infants under 1 year of age. This represents an infant mortality rate of 28.8 per thousand live births, the lowest rate ever recorded in the County.

Some idea of the value of the maternity and child welfare services and those sections of the hospital and general practitioner services which are specially concerned with infant health can be obtained by a study of recent trends in infant mortality. The rates for both Warwickshire and England and Wales during the last 40 years are plotted in Fig. 1. This shows that there has been a fairly continuous decrease in infant mortality throughout this period, so that the rate in 1949 was only 33% of that in 1910; it also shows that the rate for Warwickshire has been consistently lower than that for England and Wales.

This marked reduction in infant mortality rate means that there are hundreds of children alive to-day who, but for improved standards of care and treatment available to mothers and infants, would not have survived the first year of life. The saving of infant lives is represented in Fig. 2, which compares the number of infant deaths since 1919 with the number which would have occurred in the same period had there been no improvement in the infant mortality rate. It reveals that during the last 30 years 5,700 Warwickshire infants have been saved—an achievement surely well worth all the efforts responsible for it.

There is, however, room for further progress. If the infant deaths are divided into those occurring during the first month of life (neonatal deaths) and those at ages from 1 to 12 months, it is found that the reduction in the infant mortality during the first month of life has been relatively small. Figure 3 illustrates this point; it shows yearly average numbers of deaths for triennial periods in the early 1920's, the early 1930's, and 1947-49. The reduction in deaths of infants 1-12 months old since 1920 is quite striking, whereas the number of deaths under 1 month of age remains above the level of 150 per year. If the neonatal mortality rate could be reduced as much as the rate at ages between 1 and 12 months, the further saving of infant lives would be very considerable.

Neonatal mortality is very closely bound up with the health of the mother and there is scope here for working for a far higher standard of maternal health. The neonatal mortality rates and the stillbirth rates are generally considerably higher in social class V than in social class I. It should therefore be possible by further efforts to bring about lower mortality rates in social class V.

Premature Births.

The most common cause of neonatal deaths is prematurity, and therefore in order to reduce the neonatal death rate, every effort should be made to reduce the number of deaths attributed to this cause. In the last 8 years the proportion of all premature babies who survived for at least 4 weeks has increased from 63% to 72%, which is a marked improvement. No pains should be spared in the care of premature babies, so that this percentage surviving may be increased still further.

Tuberculosis.

This year 431 persons were notified as suffering from pulmonary tuberculosis and of these 17 were discovered by mass radiography. In 1948 the figure was 457, and of these 38 were discovered by mass radiography.

During the last 30 years, the County death rate from tuberculosis has declined fairly steadily; in the early years of the war the downward trend was arrested, but it has been resumed since 1946 when the death rate was 0.5 per 1,000 of the population. In 1947 and 1948 it was 0.45 and in 1949 it dropped sharply to 0.36 per 1,000, which is less than half the County's rate in 1921. Trends in death rates and notification rates for both pulmonary and non-pulmonary tuberculosis are shewn graphically in Figure 5.

Until 1940, the tuberculosis notification rate also declined, although more slowly than the death rate. Since 1940, however, when the notification rate was 0.87 per 1,000 of the population, there has been a gradual rise to a rate of 1.22 per 1,000 in 1949. This does not necessarily mean that there are more cases of tuberculosis in the County; the combination of a falling death rate and a rising notification rate suggests that notification is becoming more complete and that a higher proportion of cases are now notified at an early stage, when the chances of recovery are greater. Direct comparison with past years is difficult but it is of interest that of 138 cases of pulmonary tuberculosis notified during 1949 and attending the Coventry clinic, 55% were classified in the least serious group (RA1).

Analysis of the deaths in 1949 according to when the cases were notified shows that 14% of the deaths from pulmonary tuberculosis occurred in persons who had not been notified before death, 30% in persons notified in 1949, that is, only a short time before death, and a further 21% in persons notified in 1948. It is likely that many of these cases were in an advanced stage when they were notified.

B.C.G. immunisation has been approved by the Ministry of Health and it is probable that it will be introduced in the near future. We are busy laying the foundations of a scheme which will include isolation of children who have been exposed to risk of heavy tuberculosis infection.

Infectious Diseases.

The number of cases of diphtheria notified during the year was 20. It was the lowest ever recorded in the County; there was only one death, a child who had not been immunised. The distribution of the 20 cases according to sanitary district and whether or not they had been immunised is given in Table 18.

It is of interest to record that in 1949, 6,337 children completed a full course of primary immunisation (in 1948 the figure was 7,035). The number of booster doses given increased from 3,276 in 1948 to 5,002 in 1949.

The two years (1947 and 1948) with high figures for scarlet fever have been followed by a low year in 1949, as was expected. Deaths are now rare, the last one being in 1946.

The number of notifications of measles was about average. As usual there were more notifications of this than of any other disease. There were 2 deaths.

The number of notifications of whooping cough (1,235) was slightly higher than the average. There were 5 deaths.

Poliomyelitis.

During 1949 there were 64 notifications of poliomyelitis and polioencephalitis and 7 deaths. These numbers are considerably higher than would be expected in an average year, but the number of notifications was only half that in 1947. An attempt was made to obtain details of the progress of the cases notified and of the age of those affected, and the details

of 61 of the cases are given in Table 21. It will be seen that some paralysis occurred in about two-thirds of the cases, but this was not always permanent.

Figure 4 illustrates the number of cases of Poliomyelitis notified each month during the last three years.

Smallpox.

Smallpox has fortunately been a rarity in this country for some 20 years. While experiencing this immunity, however, it is essential that local authorities should be prepared for possible outbreaks. The Ministry of Health has accordingly instituted on a Regional basis certain control measures for dealing with any cases or suspected cases of smallpox which may arise.

During 1949 precautionary measures were taken in connection with the incidence of smallpox on board the S.S. "Mooltan" which arrived in port on 2nd April, certain presumed contacts residing in the County being kept under surveillance for the prescribed period, during which no cases occurred.

Venereal Diseases.

The number of persons attending Venereal Disease Clinics decreased during 1949. At all hospitals there has been a steady decline in the number of new cases of venereal disease treated each year since 1946, when the total for all hospitals was 569, compared with 228 in 1949. There has always been a substantial number of people who report at clinics and are found not to be suffering from venereal disease; this number has not fallen as rapidly as the number who are suffering from the disease. In 1946, non-sufferers numbered 579, or 50% of the total first attendances, and in 1949, 396 or 63% of the total first attendances.

In 1949, excluding the Birmingham General Hospital, 102 patients ceased to attend without completing treatment; this is a slight increase on the 1948 figure, but less than 20% of them were in an infective condition at the time of default. All defaulters were followed up, either by the hospital or by the County's Social Worker. The latter investigated 167 cases, 124 of whom were defaulters from all hospitals, including the Birmingham General. The remaining 43 included contacts and new cases referred by other social workers. A high proportion of the 167 who were visited subsequently attended clinics.

Report of the Senior Dental Officer on the Dental Treatment of Expectant and Nursing Mothers and Pre-School Children during the Year 1949.

"In my report for the year 1948, reference was made to the steps which had been taken to make dental treatment available to expectant mothers and young children. During 1949 the public became more aware of the facilities offered and there has been a slight increase in the numbers treated, but the strength of the dental staff still remains so very depleted that no great advance can be made in this service for the present. Parents are, however, encouraged to bring their younger children to the school treatment centres. The object of this is two-fold.

Firstly, it is our desire to get the child accustomed to dentists and dental treatment before any drastic surgical interference is necessary. It so often happens that a child's first experience of the dental chair is the wholesale extraction of several badly decayed teeth, an operation which is not likely to inspire the child with enthusiasm for undergoing dental treatment. If he is first brought at a very young age, when there is less probability of any extractions being required, it is far easier to gain his confidence by the simple remedial treatments necessary and one can encourage him to take a pride in the care of his own teeth. A child of three or four years of age, whose teeth have not already deteriorated, is usually very receptive of suggestions on the care of his teeth and this is the age when his education in dental hygiene should start.

The second object of early treatment is to ensure, as far as possible, that the milk teeth shall last until the time is due for their replacement, and it is astonishing how many parents do not yet realise that a child's milk molars are not normally replaced until he is ten or twelve years of age, and that their early loss often results in a crippled permanent dentition. The conservative treatment of the first teeth is exacting and time consuming, but it will pay dividends in the long run by ensuring the better preservation of the permanent teeth."

Nurseries and Child Minders Regulation Act, 1948.

This Act, which came into force on the 30th July, 1948, places a duty upon local health authorities to keep registers of, and empowers them to supervise premises where children are received to be looked after for the day or a substantial part of the day, and persons who, for reward, receive into their homes children under the age of five.

Under the Act, premises used as day nurseries, or persons receiving children into their homes, and thereby acting as child minders, must be registered with the County Council. Certain conditions must be satisfied before registration is effected.

During 1949 inspections were made in five cases where applications had been received for registration under the above Act. Certificates of Registration were issued in respect of all the applications, in one case certifying that the premises were suitable for the purpose of receiving children, and in the other four cases certifying that the applicants could receive children into their homes.

Nursing Homes Registration.

Under the National Health Service Act, 1946, the functions relating to maternity and child welfare in the Boroughs of Leamington, Nuneaton and Sutton Coldfield passed to the County Council. In consequence, the Council deemed it preferable for the registration of nursing homes to be administered by the same authority, and accordingly the powers delegated under the Public Health Act, 1936, to the three Borough Councils, were withdrawn as from April 1st, 1949.

No new registrations were effected during 1949 and no registrations were cancelled. Particulars of the nineteen homes registered at the end of the year are set out in Table 15.

Milk and Dairies Administration.

The year 1949 marked the end of the traditional sanitary supervision of milk production and the beginning of a new central administration under the Ministry of Agriculture, with delegated powers to the recently constituted County Agricultural Executive Committees. During 1949 two Acts of Parliament, four sets of Regulations, one Order and two sets of Amendment Regulations brought about sweeping changes in administration, and introduced an entirely new service for the supervision of milk production generally and for production licences under new Special Designations Regulations. Thus, the duties under Special Designations Regulations which have been the province of the County Council since they were introduced under Orders made by the Ministry of Health in 1922, are now dealt with by the Ministry of Agriculture.

The duty for the control of tuberculosis and other infected milk remains with the County Council, and the Milk Special Designations Act of 1949 imposes new duties for the supervision of Pasteurised and Sterilised milk. The Act provides that ultimately all milk will be sold for consumption under one of three Special Designations, namely "Tuberculin Tested," "Pasteurised" and "Sterilised" milk, and this is to be accomplished by "specifying" areas in which only those grades of milk will be permitted for sale.

The production of milk—perhaps the most vulnerable of all foods—has thus passed out of the hands of Health Authorities, but these Health Authorities still have a duty to ensure the safety of the milk to the public through the measures already mentioned.

The routine work of the section of my department dealing with milk declined on the 1st October, 1949, due to these administrative changes, but our responsibility is clear. Since we no longer have control over production, we must concentrate on the tasks that are now assigned to us to safeguard public health interests. The duties under the Pasteurised and Sterilised Milk Regulations must be adequately dealt with to see that these processes are properly carried out under licence, and our work in connection with the control of infected milk supplies must be increased and improved. Already considerable improvements to existing premises and plants have been agreed by negotiation, and the number of plants is likely to increase considerably within the next few years.

County Ambulance Service.

During the year, the County Ambulance Service has continued to meet heavily increasing demands for journeys necessary within the scope of Section 27 of the National Health Service Act, 1946. As a result of the calls made upon the service, the mileage has steadily

risen, the total for 1949 being 363,373 miles greater than that for 1948. County vehicles covered 1,011,602 miles during 1949, and carried 80,515 cases. In addition, the W.V.S. Hospital Car Service covered 98,395 miles, mainly on the conveyance of school children to clinics. This was 9% of the total mileage for 1949.

Comparison with previous years is as follows :—

Year.	County Vehicles.		W. V.S. (from 1-4-48).		Total cost (financial year).
	No. of cases.	Mileage.	Mileage.		
1946	... 35,867	... 394,967	... —	... —	... £40,170
1947	... 42,783	... 462,354	... —	... —	... £65,533
1948	... 53,133	... 700,395	... 46,229	... —	... £91,298
1949	... 80,515	... 1,011,602	... 98,395	... —	... £94,598

One satisfactory feature of the increased mileage is that for the first time since the year 1946, the cost per mile has shown substantial reduction—the net cost for the financial year ending 31st March, 1950, being 1/7.62d. per mile.

I should perhaps mention that this heavy burden placed upon the Service has been due to some extent to the recent opening of other Hospitals and Auxiliary Units.

In the circumstances, it became necessary to ask the Minister of Health for an overall increase in the vehicle establishment and this was increased from 70 vehicles to 80 vehicles and 200 whole-time personnel.

Under the terms of Section 24 of the National Health Service (Amendment) Act, 1949, which was given statutory effect from the 16th December, 1949, it became the Council's financial responsibility to return all patients from Hospitals and Convalescent Homes to their home addresses within or outside the County—providing the removal was necessary within 3 months of entering Hospital.

The Amendment, however, permits the Authority carrying out the return journey to make a charge to the sending Authority at the rate of 2/- per mile for an ambulance, and 6d. per mile for a car.

An application was received in May through the National Union of Public Employees requesting that consideration be given to bringing all ambulance personnel employed by the Council, fully within the provisions of the Local Government Superannuation Act, 1937.

Full consideration was given to this application as it was thought that if the post of driver/attendant was superannuated it would tend to decrease the high personnel turn over and attract men who would regard the work as a career.

The Council passed the necessary statutory resolution for the admission of driver/attendants and mechanics to the Superannuation Scheme and for convenience it was decided that the two classes of employees should become contributory members as from 1st April, 1950.

In summing up this report I will refer to the three places where most active work is still needed. First, anti-tuberculosis work in all its forms—housing, nutrition, early diagnosis and treatment, isolation of advanced cases and rehabilitation of those capable of benefiting; the second place is the improved health of the expectant mother, which should bring about a lowered still-birth rate, a lowered premature birth rate, a lowered neonatal mortality rate and possibly other benefits to the surviving children which are at present not ascertainable. Poliomyelitis is a third problem, but here we are in a weaker position owing to lack of sufficient knowledge. This problem is comparatively small from a statistical point of view, but I am convinced that many parents (who fear that their children may become infected) suffer from a degree of mental stress which is not justified by the actual risk of infection. Nevertheless, until this disease is mastered, fear will persist in the minds of all those who have the welfare of children at heart.

MIDWIFERY.

At the end of 1949, there were 242 midwives practising in the County, as follows :—

Domiciliary.

Employed by County Council	92
In private practice	17
							109

Institutional.

Employed by the Hospital Management Committees under the National Health Service Act	114
Employed by Nursing Homes	19
						133
						242

The number of cases attended during the year was as follows :—

	<i>Domiciliary.</i>		<i>Institutional.</i>		<i>Total.</i> 1949.
	1949.	1948.	1949.	1948.	
As Midwives	2,691	2,758	5,600	4,088	
As Maternity Nurses with Doctors	560	708	1,191	1,770	
Total	3,251	3,466	6,791	5,858	10,042
Number of cases in which Midwives sought medical aid	679		106*		785

*This figure may be incomplete.

	1949.	1948.	1947.
Institutional confinements	...	70%	66%
Domiciliary confinements	...	30%	34%
			42%

HEALTH VISITING.

At the end of 1949, the County employed 40 Health Visitors, who combined health visiting with school nursing. The following is a summary of visits made by them during the year:—

	<i>Number of First visits.</i>	<i>Total number of visits.</i>
Expectant mothers	138	1,238
Children under 1 year	9,609	42,213
Children 1-5 years	4,234	53,384
Other cases	5,304	10,627
TOTAL		107,462

HOME NURSING.

86 District Nurses were employed in the County at the end of 1949; the majority of these nurses combine home nursing with midwifery. 6,814 cases were attended during the year, and 135,082 visits were made in the course of home nursing; these figures do not include nursing carried out in the first six months of the year by four of the district nursing associations who held delegated powers until 1st July, 1949.

THE CARE OF THE UNMARRIED MOTHER AND HER CHILD.

ANTE-NATAL AND POST-NATAL CARE.

Hostel Accommodation.

	<i>No. of beds.</i>	<i>No. of mothers admitted.</i>	<i>Average length of stay (days).</i>
Ante-Natal Hostel, 2, Guild Street, Stratford-on-Avon	25	107	16.7
Post-natal Hostel, Rother Street, Stratford-on-Avon	16	105	13.5

On 18th April, 1950, the Rother Street post-natal hostel was closed, and the Guild Street premises became the combined ante-natal and post-natal hostel. It was originally planned that when it was necessary to vacate Rother Street, the Guild Street hostel should be adapted to house 18 cases, half mothers and babies and half ante-natal cases. In July, 1949, however, the Ministry of Health stated that they could only pass a building which catered for long term accommodation of mothers and babies, and that therefore they required the provision of a room for isolation purposes and a separate night nursery for the babies. Consequently, the proposal to accommodate 18 cases had to be modified, and the combined hostel has now only 11 places.

DAY NURSERIES.

Atherstone and Kenilworth.

The day nursery section of the dual nursery at both Atherstone and Kenilworth was closed on the 31st March, and the whole of the premises are now used for nursery school purposes.

Holbrook Avenue, Rugby.

The nursery school section of the dual nursery at Holbrook Avenue, Rugby, was closed on the 31st March, and the whole of the premises are now being used for the day nursery. There are 40 places available and the nursery will be used for training nursery students.

The day nurseries now administered in the County are as follows :—

<i>Nurseries.</i>	<i>No. of Places.</i>
Leamington No. 1, Portland Place	40
Leamington No. 2, Tachbrook Road	40
Nuneaton, Merevale Avenue	40
Rugby, Holbrook Avenue	40
Shirley, Marshall Lake Road	40
Warwick, Priory Road	40
	240

The accommodation at No. 1 Day Nursery, Victoria Lodge, Portland Place, Leamington Spa is entirely unsuitable and this nursery will ultimately be closed.

The Children's Department assumed responsibility for the two residential nurseries at Rugby and Wilnecote on 1-4-50.

Since November, 1949, the following principles have been adopted in assessing the need for admitting children to day nurseries :—

- (i) That, as a general principle all children under the age of two should be cared for at home by their mothers.
- (ii) That, only cases of real need should be catered for in the day nurseries, real need being defined as :—
 - (a) A mother with an illegitimate child wishing to care for the child by her own efforts.
 - (b) A mother with a child deprived of her husband's support.
 - (c) A mother with a child whose husband is away from work owing to ill-health.
- (iii) That a number of places should be kept for short term stay in day nurseries to enable expectant mothers or mothers who are temporarily incapacitated through illness to be relieved of the care of their children.

Exceptional cases which do not fall within these categories may be admitted by special permission of the County Medical Officer of Health.

Nursery Nurses' Training Scheme.

	<i>No. of Students.</i>
In training at 31-12-48	22
Enrolled during 1949	15
Passed County Examination during 1949	18
Passed R.S.I. Examination during 1949	8
Employed in County Nurseries after training	11
Employed elsewhere or privately	4
Still in training at 31-12-49	29

Since these figures were recorded we have made plans for a new training organisation which has been approved by Committee.

Assistance given to Tuberculosis Cases.

In accordance with the provisions of the National Health Service Act, 1946, and the scheme approved by the County Council, free extra rations (fats, milk, cheese, eggs, bacon) have been provided in necessitous cases where a form RG.48 has been issued by a Medical Practitioner. Bedding, clothing, etc. have also been given in certain necessitous cases.

CONVALESCENCE.

In accordance with the provisions of the National Health Service Act, 1946, and the scheme approved by the County Council, children under 5 and adults have been sent to convalescent homes in various parts of the country for periods of recuperative convalescence where this has been recommended by a Medical Practitioner and no medical or nursing attention has been required.

DOMESTIC HELP SCHEME.

In accordance with the provisions of the National Health Service Act, 1946, and the scheme approved by the County Council, arrangements have been made in the 7 areas for the services of Domestic Helps to be available where there is sickness in the home, during confinements, and in other special circumstances. Unfortunately, owing to the difficulty in securing the services of suitable women, the scheme is not yet comprehensive and it is not possible to provide a Domestic Help in every case requiring assistance, particularly in the more rural areas.

INSPECTION AND SUPERVISION OF FOOD.

Milk (Special Designations) Regulations, 1936-1948.

The following are particulars of licences granted and milk samples examined during the period, 1st January, 1949, to 30th September, 1949 :—

New licences granted during the year.

To use the designation "Tuberculin Tested" in relation to production, bottling, and sale by retail	4
To use the designation "Tuberculin Tested" in relation to production ...	65
To use the designation "Accredited" in relation to production	15
Total	84

Of the "Tuberculin Tested" licences issued, 24 were upgraded from "Accredited."

During the period 51 licensed producers, who failed to comply with the Regulations, were interviewed and the following action taken :—

Producers formally warned ...	20
Licences suspended	4
Licences revoked	24
Licence voluntarily surrendered ...	1
Refusal to renew	2

Many licensed producers responded to advice and informal warnings following unsatisfactory milk samples and conditions.

Licences in operation on 30th September, 1949 :—

Authorising the designation "Tuberculin Tested" in relation to production, bottling and sale by retail	14
Authorising the designation "Tuberculin Tested" in relation to production	277
Authorising the designation "Accredited" in relation to production, bottling and sale by retail	9
Authorising the designation "Accredited" in relation to production	327
Total	627

Milk Samples :—

<i>Samples taken.</i>	<i>Satisfactory.</i>	<i>Unsatisfactory.</i>
"Tuberculin Tested"	970	256
"Accredited"	1259	423
Advisory	129	63
School Milk	50	—
	2408	742

24% of the samples failed to comply with the prescribed tests.

Figures for previous complete years :—

1948	14%
1947	26%
1946	23%
1945	18%
1944	23%
1943	23%
1942	28%
1941	24%
1940	34%

It should be observed that the figures for 1949 relate to the first nine months of the year only. The tests applied to milk samples are subject to experimental error and are influenced by atmospheric conditions, and by recording the first nine months only an unusually high proportion of samples relate to spring and summer months, during which exceptional and consistently high temperatures were experienced. These factors to some extent account for variations in previous years, but the ten-year period for which figures are given record steady improvement in milk sample results.

Milk (Special Designations) (Pasteurised and Sterilised Milk) Regulations, 1949.

All licensing.

On the 1st October, 1949, all licensing previously undertaken by the County District Sanitary Authorities for the heat-treatment of milk became the responsibility of the Food and Drugs Authorities. In this connection 7 pasteurising dairies came under the supervision of the County Health Department.

The following are particulars of "official" milk samples taken during the period 1st October, 1949, to 31st December, 1949 :—

				<i>Satisfactory.</i>		<i>Unsatisfactory.</i>
Pasteurised	24	...	8
Total	32		

School milk samples taken during the year gave the following results :—

				<i>Satisfactory.</i>		<i>Unsatisfactory.</i>
Pasteurised	125	...	34
Tuberculin Tested	15	...	3
Other	13	...	1
Total	153	...	38

Tuberculous Milk.

Food and Drugs Act, 1938.

189 samples of milk were taken for biological examination during the year, 2 of which were found to contain living tubercle bacilli.

44 notifications of tuberculous milk were received from various sources and referred to the Divisional Veterinary Officer of the Ministry of Agriculture and Fisheries, with the following results :—

Herds under investigation at end of 1948	8
Infected herds during 1949	44
						—
						52
Herds subsequently reported free from tubercle infection during 1949	...					36
						—
Herds still under investigation at the end of 1949		16
						—
Cows found tuberculous and slaughtered under the Tuberculosis Order as a direct result of these investigations	49
						—

MENTAL HEALTH.

1 Administration.

(1) *Constitution and Meetings of Mental Health Sub-Committee.*

The functions of the Council relating to the Mental Health Service are delegated to the Mental Health Services Sub-Committee of the Health Committee, this Sub-Committee consisting of fifteen members. Four meetings of the Sub-Committee were held during the year.

(2) *Staff employed in the Mental Health Service.*

The Chief Administrative Officer of the Mental Health Services Sub-Committee is the Mental Health Officer, Mr. H. J. KOTCH, who has supplied this section of my report. By arrangement with the Birmingham Regional Hospital Board, Dr. HENRY BROUGHAM LEECH, M.B., B.C.H., M.D., the Acting Medical Superintendent of Weston Colony, has continued to act as Medical Adviser to the Committee. The medical staff of the Health Department have, of course, also been available when required in connection with the Mental Health Service.

Eight Duly Authorised Officers are engaged in the County, one of these officers being located in each of the seven areas of the County, with the remaining officer located at headquarters. One female Visitor is employed for the visitation of mental defectives in the County.

The Council's Occupation Centres are staffed in each case by a Supervisor and an Assistant Supervisor, with part-time assistance for domestic duties and guiding the patients.

(3) *Co-ordination with Regional Hospital Boards and Hospital Management Committees.*

The Council's Mental Deficiency Visitor has continued to supervise, on behalf of the Hospital Management Committees, the mental defectives who have been placed on licence within the County. There were thirty-four of these patients under supervision in the County at the end of the year.

(4) *Training of Mental Health Workers.*

The series of lectures by the Regional Psychiatrist of the Birmingham Regional Hospital Board to the Council's Social Workers was continued during the year.

The Assistant Supervisor of the Occupation Centre at Nuneaton completed the year's course arranged by the National Association for Mental Health for the training of Occupation Centre Supervisors during the year. After a further short period of duty at the Nuneaton Centre, she took up an appointment with another Authority.

Arrangements were made for the Supervisor of the Warwick Occupation Centre to attend a Refresher Course for Occupation Centre staffs during the year.

2 Work undertaken in the Community.

(1) *National Health Service Act 1946; Prevention, Care and After-Care.*

The Psychiatric Out-Patient Clinics arranged and staffed by Specialists of the Birmingham Regional Hospital Board have continued to be held at hospitals within the County. The after-care of patients discharged from mental hospitals in the area has continued to be undertaken by the Social Workers attached to the Central Hospital, Hatton, with assistance, when required, from the Council's Officers.

Responsibility has been accepted by the Local Health Authority for the maintenance of certain patients placed in After-Care Homes through the Mental After-Care Association after treatment at the Central Hospital, Hatton.

(2) *Lunacy and Mental Treatment Acts 1890-1930—Work undertaken by Duly Authorised Officers.*

The following is a summary of the cases dealt with by the Duly Authorised Officers in the County during the year:—

Patients dealt with under the Lunacy Acts	207
Patients dealt with under Section 1 of the Mental Treatment Act, 1930					160
Patients dealt with under Section 5 of the Mental Treatment Act, 1930					14
					<hr/>
					381
					<hr/>

(3) *Mental Deficiency Acts, 1913-1938.*

(i) *Ascertainment.*

(a) *Number of defectives.*

The number of cases ascertained as at the 31st December, 1949, excluding patients maintained in, or on licence from, institutions for mental defectives, was as follows :—

	M.	F.	T.
Under guardianship	27	36	63
In "places of safety"	—	—	—
Under statutory supervision	154	134	288
Under voluntary supervision	105	79	184
Under investigation	5	4	9
In the Central Mental Hospital, Hatton	80	80	160
	<hr/>	<hr/>	<hr/>
	371	333	704

(b) *Cases reported during the year.*

There were forty-five new cases reported to the Committee during the year and these were dealt with as follows :—

	M.	F.	T.
Admitted to institutions	3	—	3
Placed under statutory supervision	10	10	20
Placed under voluntary supervision	8	4	12
Died or removed from area	2	2	4
Found not to be defective	2	—	2
Remaining under investigation at end of year	2	2	4
	<hr/>	<hr/>	<hr/>
	27	18	45

(c) *Defectives awaiting vacancies in institutions.*

There were sixty-seven cases awaiting admission to institutions for defectives at the end of the year. Although many of these cases are of an urgent nature, considerable difficulty is being experienced in obtaining vacancies owing to the lack of institutional accommodation.

(ii) *Guardianship and supervision.*

The patients under guardianship, on licence from institutions and under statutory or voluntary supervision within the County are supervised by the Committee's Officers.

(iii) *Training.*

The training of defectives at the Council's Occupation Centres at Nuneaton and Warwick, has continued successfully during the year. At the end of 1949 there were forty-three defectives in attendance at these two Centres.
