### BOROUGH OF WEDNESBURY.

# REPORT

Upon the HEALTH OF WEDNESBURY, for the year 1919, by WALTER GARMAN, M.D., Edin., Medical Officer of Health.

> To the Mayor and Members of the Wednesbury Town Council.

Mr. Mayor and Gentlemen,

I have pleasure in presenting a Report upon the health of Wednesbury for the year 1919.

The figures upon which the various rates are based apply only to the civil population, and are independent of the men on military service. These latter are dealt with separately by the Registrar General, and making allowance for the deduction, the population is fixed at 30,329 for the death rate, and 31,594 for the birth rate.

### I.---VITAL STATISTICS.

The births registered during 1919 numbered 724 (males 395, females 329), which represents a birth -rate of 22.9 per 1,000 of the population. The natural increase of the population by excess of births over deaths was 297. The deaths from all causes numbered 427, in which are included 89 occurring in Public Institutions outside the town. These figures give a death-rate of 14.07 per 1,000 of the population.

The deaths of children under five years of age numbered 114, or 26 per cent. of the total deaths. Of these 73 were under one year of age, a figure which is at the rate of 100 per 1,000 births. The following table furnishes an analysis of mortality under tive years of age :---

	1915	1916	1917	1918	1919
Premature birth	15	21	12	10	16
Bronchitis and Pneumonia	39	17	36	53	41

### TABLE VIII.

For comparison the statistics with regard to Wednesbury and England and Wales are given in the following table :---

	Rate per 1 popul	Rate per 1,000 Births	
	Birth-rate	Death-rate	Deaths under one year
England and Wales	18.5	13.8	89
96 Great Towns, including Lon- don, population exceeding		112000	
50,000	19.0	13 8	93
20,000-50,000	18.3	12.6	90
London	18.3	13.4	85
Wednesbury, population 31,594	22.9	14.0	73

From the foregoing figures, the Council will be enabled to judge of the health of the town during the year.

Some reference may be expected to the Influenza epidemic of last year, which had not entirely subsided in December. As a matter of fact it persisted well into the first quarter of 1919, during which it caused 17 deaths. The disease then ceased to be epidemic, but never quite disappeared. During the second quarter there was one death, with two deaths in both the third and fourth quarters. The disease may at present be regarded as endemic, and with a tendency to occasional epidemic development.

Apart from the prevalence of the disease, there has been a marked mitigation of its type with a corresponding fall in the mortality average.

### GENERAL SANITARY WORK.

Under this heading there is little or nothing to report. The prohibitive cost of building materials, together with the scarcity of labour persisted, and practically all sanitary improvements were retarded.

I am,

Mr. Mayor and Gentlemen,

Yours faithfully,

WALTER GARMAN, Medical Officer of Health.

# SANITARY INSPECTOR'S REPORT, FOR THE YEAR 1919.

To the Mayor and Members of the Wednesbury Town Council. Gentlemen.

INTRODUCTION.

I beg to submit my Thirteenth Annual Report as Sanitary Inspector for the Borough of Wednesbury, viz., for the year ended 31st December, 1919.

The Report is again condensed, only indispensable information being included.

The general sanitary work has been retarded by the prohibitive cost of building materials and the scarcity of labour, which has prevented many sanitary improvements from being carried out, particularly with regard to privies and ashpits.

### GENERAL SANITARY WORK.

### MISCELLANEOUS INSPECTIONS.

Over 3,100 visits and inspections have been made, including house-to-house inspections, and investigation of complaints, and 1,700 re-inspections were made during the time the work was in progress. A large number of defects were discovered, and measures were taken as far as possible to remedy the defects. The sanitary improvements resuling therefrom are set out in table 3.

### NOTICES SERVED.

Two hundred and six preliminary or intimation notices have been served. A large number of letters were also sent to owners and occupiers, requesting them to carry out certain sanitary improvements. Sixty-eight Statutory notices were served by order of the Council. Particulars of the notices are set out in table 2. Many interviews have in addition taken place at the office or on the properties with owners, agents or builders.

### DRAIN TESTING, Etc.

Thirteen tests were made of the drains and sanitary fittings of 7 premises, comprising thirteen dwelling houses and two works.

### PRIVY AND WATER CLOSET ACCOMMODATION.

During the year 46 privies and 28 middens were abolished, and re-placed with 50 water closets and portable receptacles for the house refuse as follows :--45 privies converted into water closets. 1 additional water closet, 2 privies re-built and converted into water closets, and 42 additional water closets were provided in connection with factories and workshops.

The following Table I. gives the number of sanitary conveniences in the Borough, and particulars of the work of abolishing the privies and ashpits, and the substitution of water closets and portable galvanised iron dust bins.

### YARDS AND SANITARY CONVENIENCES USED IN

### COMMON.

Many occupiers pay little attention to the yards, approaches to, and the walls, floors, seats and fittings of the sanitary conveniences, and every opportunity has been taken of impressing upon the tenants their responsibility of keeping their premises in a sanitary state.

### HOUSING OF THE WORKING CLASSES.

Having regard to the overcrowded state of many of the houses, the high prices of materials, and the labour difficulty, it was not deemed desirable to make more than 48 formal representations under the Housing, etc., Acts.

### 

Houses built during the year	-+
Houses represented as unfit for human habitation	38
Houses represented for demolition	10
Thoroughly repaired	
Closed	
Demolished	3
No. under repair	5
Under consideration pending lapse of notice	29

Schemes respecting unhealthy areas :---

No. of schemes	 	 	1
No. of houses	 	 	11

The Housing Schemes for the provision of 256 new houses are well in hand, and when these are provided, it may be possible to deal in some degree with the existing houses that cannot, for various reasons, be made reasonably fit for human habitation.

### INSPECTION OF FACTORIES AND WORKSHOPS.

The factories, workshops and outworkers' premises have been periodically visited, and the regulations respecting cleanliness, ventilation, etc., have been carried out. Sixteen notices were received from the Home Office Inspectors respecting defects at factories and workshops, which were remediable under the Public Health Acts. In several instances sanitary work of some magnitude was executed in order to comply with the notices served.

### INFECTIOUS DISEASE.

The cases of infectious disease notified were visited and revisited from time to time during the progress of the disease. Printed and verbal instructions were given for preventing the spread of the disease, and the necessary disinfection was carried out at the termination of the disease.

### INSPECTION OF SLAUGHTERHOUSES AND FOOD SUPPLIES.

There are now 13 slaughterhouses on the register, four of which are subject to annual licence. The slaughterhouses have been periodically visited. The vendors in several cases have voluntarily destroyed food when their attention was called to its unwholesome condition.

Periodical visits have also been made to butchers, fish, game, poultry and greengrocer's shops. The food exposed for sale was, with few exceptions, of fair quality.

### HORSE AMBULANCE.

Sixty-four persons, 52 suffering from illness and 12 from accident, were removed in the ambulance. The total amount received for the hire of the ambulance was  $\pounds 27$  7s. 0d.

### CLEANSING AND THE REMOVAL OF HOUSE REFUSE.

The work of the removal of house refuse, was, until 30th September, 1919, carried out by the Contractor, but since that date, the work has been carried out by direct labour, viz., by the Council's own workmen and carts. The work of removing the refuse from the dust bins was in a very disorganised state, but it is hoped that shortly the work will be carried out in a more efficient manner, and there will be little cause for complaint. To improve the general sanitary condition of the Borough, the Town Council have adopted a system of removing house refuse weekly from all premises provided with dust bins. For the convenience of the Public, the Town Council have arranged to supply the standard galvanized iron dust bins as cheaply as possible.

### I am,

Mr. Mayor and Gentlemen,

Your obedient Servant,

HERBERT TOPPING, Assoc. ROYAL SAN. INST.,

Sanitary Inspector, Certificated Meai and Food Inspector.
