SCHOOL MEDICAL SERVICE.

To the Chairman and Members of the Education Committee.

MR. CHAIRMAN, LADIES AND GENTLEMEN,

I have the honour to submit to you the Annual Report on the work of the School Medical Service during 1938.

Infectious disease was generally less prevalent than in the previous year. As far as the West Bromwich Schools are concerned the spot-light of possible prevention, though not obvious to all parents, remains focussed on diphtheria. There were 127 cases of which 8 proved fatal. In March an immunisation campaign was commenced and with the excellent help of head teachers approximately 2,000 children were immunised, or practically one sixth of all the school children in the town.

The recommendations of the Board of Education, following on the inspection made in late 1937, were considered further. It was decided not to hold periodical nutrition surveys but to rely on a regular graphic recording of heights and weights of all school children. This scheme involves the plotting of both height and weight measurements each term. Importance is attached to the maintenance, throughout school life, of a normal increment and a "West Bromwich" normal curve is printed on each card for comparative purposes. The "West Bromwich Normal" was calculated over a large number of cases and was described in my annual report for the year 1936. The scheme has proved of great interest to teachers and to the children; the value has been shown in the improved ascertainment and reference of children by head teachers to the medical officers.

The orthopaedic scheme was transferred to Hallam Hospital at the suggestion of the Board of Education, and Mr. J. B. Leather was appointed part-time Consultant and Operative Orthopaedic Surgeon. A further recommendation was carried out when two electric dental engines were installed. The possibility of providing an open-air school was considered, but deferred for twelve months.

I would draw your attention, once again, to the number of children who were found to fall much short of the general average standard of nutrition (Table "B", Page 36). The sub-normal group numbers 642 against 583 last year, but the "D" group, or those who fall very much short of the average nutrition, numbers 72, while 43 was the figure for 1937. You have amended the income scale for free milk, which now brings in many cases previously excluded, but I am doubtful whether even this will prove sufficient and it may become necessary, after further trial, to investigate other means of solving this serious problem. The Manager of the Unemployment Exchange informs me that within the Borough there are over 2,000 persons unemployed and another 2,000 persons on short time.

It is with regret that I have to report that the erection of the much needed Stone Cross Clinic has not yet commenced. The preparations have been completed and loan sanction obtained.

The cost to the rates of the School Medical Service, for the financial year 1937-1938, was £2,390, or £45 more than in 1936-37, and £81 less than in 1935-36. The number of children on the rolls has fallen from 12,864 in 1936 to 12,543 in 1938.

I have to thank the Director of Education (Mr. L. G. Rose) and his staffs for supplying certain information relevant to this report. It is also my pleasant duty to place on record acknowledgment of the help and courtesy which I have received from members of the Committee and also the efficient service of my staff.

I have the honour to remain,

Your obedient servant,

W. S. WALTON.

2, Lodge Road, West Bromwich. School Medical Officer.

REPORT.

I.-STAFF.

Owing to marriage the clerical staff was deprived in September of the services of Miss R. I. Turner. By a slight rearrangement the vacancy was filled by Miss Shakespeare, who until then was Dental Attendant. Miss M. Adams, Junior Clerk, was promoted to this latter post.

II.-CO-ORDINATION.

The arrangements for the co-ordination of the School Medical Department with other Health Services and Voluntary Agencies in the Borough were given in detail in the Report for 1932 and have continued on the usual lines.

THE SCHOOL MEDICAL SERVICE IN RELATION TO PUBLIC ELEMENTARY SCHOOLS. III.—SCHOOL HYCIENE.

During the year the Local Education Authority completed the programme of modernising the old Council Schools in the Borough, under the provision of Circular 1444.

Consequent on Slum Clearance and reduced numbers the Board of Education gave their consent to the re-modelling and re-organisation of Greets Green School in two Departments for Junior Mixed and Infant pupils.

A re-allocation of accommodation has been effected; electric light has been installed; interior sanitation for the Staff and separate flush pedestals have been provided for the pupils, and ventilation and light have been improved.

The roof of the School has been re-tiled, cloak-room accommodation has been improved and extended, and provision made for Nursery Instruction in the Reception Room in the Infants' Department.

IV .- MEDICAL INSPECTION.

The arrangements for medical inspection were similar to previous years. The three code groups, Entrants, Intermediates, and Leavers were dealt with. The number of visits to schools for the purpose of carrying out routine inspection was 143.

The figures relating to medical inspection are shown in Table I., page 34. The number of routine medical inspections was 3,661, as compared with 3,702 during 1937, and the number of special inspections and re-inspections was 8,818 in 1938, against 9,126 during 1937. 1,002 children were re-examined during the year, of whom 483 showed improvement.

V .- FINDINGS OF MEDICAL INSPECTIONS.

The detailed figures relating to the number of defects found as a result of medical inspection are printed in Table II., pages 35-36. The term "special" refers to medical examinations, at either schools or clinics, of children presented for some reason other than for routine medical inspection. Practically all such cases were dealt with at the inspection clinics held two afternoons per week at the Central Clinic, one afternoon at Hamstead, and one morning at Charlemont.

Routine Medical Inspections.

The following table shows, over a period of three years, the percentages of children found to have defects requiring treatment (excluding malnutrition, dental diseases and uncleanliness).

Code Groups.	W	est Bromwich	1.
	1936.	1937.	1938.
Entrants	 11.69	13.73	12.57
Intermediates	 12.72	14.62	15.01
Leavers	 19.33	19.04	20.38
All Groups	 14.35	15.99	16.12

The table set out below shows the percentages (excluding uncleanliness and dental diseases) for the corresponding three-year period ten years ago.

Code Groups.	We	st Bromwich	1.
	1926.	1927.	1928.
Entrants	 30.5	20.2	21.9
Intermediates	 24.3	23.7	27.8
Leavers	 29.8	23.7	24.7
All Groups	 28.5	22.2	25.1

(a) Malnutrition.

It will be seen from Table II. B. that out of 3,661 children examined, 642 or 17.54% were of slightly subnormal nutrition while 72 or 1.97% were badly nourished. The comparative figures for 1937 were 583 or 15.75%, and 43 or 1.13%.

(b) Uncleanliness.

In view of the arrangements for routine cleanliness inspections by the nursing staff, figures showing the state of cleanliness at routine medical inspection are not given in

Table II. A clearer conception of the work undertaken, and the findings at such surveys compared with 1937, will be obtained from a review of the following summary in conjunction with the figures given in Table VI., page 42.

Cleanliness Surveys.	1937.	1938.
Number of examinations of	1001.	1000.
children	32,113	30,413
Number of individual children		
found unclean	1,264	1,030
Number of visits to Schools	201	183
Number of visits to Homes	285	199

(e) Minor ailments and diseases of the skin.

As stated in Table II., pages 35-36, 29 defects of this nature were found at Routine Inspections and 380 at Special Inspections. Two cases of ringworm of the scalp were found but impetigo and scabies were, unfortunately, rather prevalent.

(d) Visual defects and external eye disease.

Out of 3,661 children examined at Routine Inspections, 267, or 7.29%, were found to have squint or defective vision; 43, or 1.17%, had external eye disease.

(e) Nose and throat defects.

Details are shown in Table II., pages 35-36. It will be observed that of 3,661 children examined at Routine Inspections, 364 were found to have defects of this nature.

(f) Ear disease and defective hearing.

Details are shown in Table II., pages 35-36.

(g) Dental defects.

A perusal of Table V., page 42, shows that the dentists devoted 50½ half days to inspection and inspected 9,766 children; of these 6,588 required treatment.

(h) Orthopædics and postural defects.

Nine cases of spinal curvature were discovered during the year. These were postural defects of slight character and were recommended for remedial exercises at Hallam Hospital.

(i) Heart disease and rheumatism.

3,661 children were examined at Routine Inspections, 36 cases of organic heart disease and 45 cases of anaemia were discovered.

(i) Tuberculosis.

Ten cases of either definite or suspected pulmonary tuberculosis and 6 cases of non-pulmonary tuberculosis were discovered as a result of routine or special inspections during the year. All of these were notified to the Tuberculosis Department for appropriate action.

(k) Other defects and diseases.

Details of the incidence of other defects are to be found in Table II.

VI.-FOLLOWING-UP.

Medical Officers, School Nurses, Head Teachers and Attendance Officers shared in the work of following-up defects.

The number of visits by Nurses to homes in this connection was 666; 330 visits were paid to schools.

Under the scheme for cleanliness inspections, Nurses made 199 visits to homes, and carried out 1,764 reexaminations in schools.

Thanks are due to the Head Teachers for the personal interest they have taken in the children recommended for treatment, and for the efforts made in persuading hesitant parents to accept the treatment offered.

VII.—ARRANCEMENTS FOR TREATMENT.

(a) Malnutrition.

All cases of malnutrition requiring additional nourishment falling within the Authority's income scale were recommended for free milk under the Scheme, particulars of which were given in the Report for 1934.

(b) Uncleanliness.

It was not found necessary during the year to treat any cases at the Cleansing and Disinfecting Station. No legal proceedings were taken by the Education Committee in connection with cases of uncleanliness.

(c) Minor ailments and diseases of the skin.

The Education Committee provided treatment for minor ailments and skin diseases at the following centres:-

THE CENTRAL CLINIC.

Lombard Street West. Open Daily.

SUB-CLINICS.

Hill Top ... Monday afternoon.

Friday morning.

Boulton Road Tuesday morning.

Thursday morning.

Greets Green Tuesday morning.

Thursday afternoon.

Charlemont Monday morning. ...

> Wednesday morning. Friday morning.

Hamstead ... Friday morning. Nurses carry out treatment at all these Clinics. On Tuesday and Friday afternoons a Medical Officer attends at the Central Clinic, on Wednesday morning at Charlemont, and alternate Friday afternoons at Hamstead. The Sessions each week at which a Medical Officer attends are combined Inspection and Minor Ailments Clinics.

From Table IV., Group 1, page 40, it will be seen that 2,328 cases of minor ailments and 1,338 cases of skin disease were treated during the year, compared with 1,890 and 1,208 respectively during the previous year.

The arrangements for treatment of ringworm by X-ray were amended during the year. This work is now carried out at the Birmingham & Midland Skin Hospital. Two cases were treated in 1938.

(d) Visual defects and external eye disease.

An Ophthalmic Clinic is held at the Central Clinic eight times during the year, at which cases of defective vision and special eye diseases are dealt with by the Ophthalmic Specialist. In addition, the Deputy School Medical Officer carries out refractions on one session per week at the Central School Clinic.

From Table IV., Group II., it will be observed that out of a total of 423 cases of defective vision and squint dealt with during the year, 416 accepted treatment under the Authority's Scheme. This compares with the previous years, as follows:—

1933.	1934.	1935.	1936.	1937.	1938.
665	655	559	470	424	416

During 1938, 310 pairs of spectacles were supplied under the scheme.

The treatment of external eye diseases is carried out at the Minor Ailments Clinics, 315 defects were dealt with (vide Table IV., Group 1).

(e) Nose and throat defects.

Particulars were given in detail in the Report for 1932. During the year 131 cases were dealt with at Hallam Hospital.

(f) Ear disease and defective hearing.

The Ear Clinic was continued on Monday mornings at the Central Clinic by the School Medical Officer: 177 children attended, of whom 38 were reported as cured. The total number of children treated for ear defects at the various clinics was 315.

Very favourable results were attained in the treatment of ear disease by zinc ionisation. There is no doubt that the period of treatment is very definitely shortened. The number treated by this method during the year was 28, of whom 15 were cured.

(g) Dental defects.

The Dental Surgeons report as follows:-

The outstanding feature of the School Dental Service during the year has been the increase in the conservancy work. The total number of fillings done in the year was 7,115, an increase of 1,676 since 1937, and compared with 1935 the figure has risen from 2,593, while the number of extractions has diminished by 600 during the same period. These remarkable figures are a sure indication that the parents of West Bromwich are realising the value of conservative treatment. As it was impossible to finish the treatment of many cases in one visit there was a corresponding rise in the number of attendances made.

The children now in the Junior Schools are showing the good results of constant care of the teeth from babyhood, first at the Infant Welfare Centres and then in the Infant Schools. These children should pass into the Senior Schools with their teeth in good condition and the need for dental treatment, with consequent loss of school time, will be much lessened as time goes on. Already, since the present dental scheme was inaugurated in 1935, the number of children found at the inspections to have perfect teeth has increased considerably, and this is most noticeable round about the 10 and 11 age groups.

The parents, too, are becoming more interested in the care of the children's teeth. Thanks for co-operation are due to the School Medical Officers, who are able to point out the injurious effects of bad teeth on general health. It is very noticeable that parents who "do not believe in dental treatment" often are converted to it by a doctor's advice.

The treatment of pre-school children was continued, 186 cases being dealt with during the year. All children treated under the Maternity and Child Welfare Scheme will start their school life without any dental troubles, consequently they will be less liable to minor ailments such as colds, and to infectious diseases, thus avoiding loss of school time.

Again, several children have been fitted with dentures. In these cases it is usually found that some defect in the diet is a contributory cause of bad calcification of the teeth. On enquiry there is generally a history of refusal to eat fruit and

green vegetables. This may not be the cause of the poor dentition but it seems to be a feature which is present in almost every case.

There has been an improvement this year in the keeping of appointments, though greater punctuality would save much waste of the children's school time.

(h) Orthopædics and postural defects.

The treatment of orthopaedic defects at the West Bromwich and District Hospital was continued until the latter part of the year, when the scheme was amended and transferred to the Hallam Hospital, still under the supervision of Mr. J. B. Leather, the Orthopaedic Surgeon.

The Tuberculosis Committee accepted responsibility for one boy and one girl who received operative treatment at the Woodlands apart from the Orthopaedic Scheme.

(k) Treatment by Artificial Sun-light.

An Ultra-violet Light Clinic is held in the Anti-Tuberculosis Dispensary at the Health Department, Lodge Road. Maintenance charges are borne jointly by the Tuberculosis, Maternity and Child Welfare, and Education Committees. Each Committee contributes according to actual usage based on the number of exposures.

Treatment is administered by the Tuberculosis Sister who is in charge of the Clinic. The Medical Officer of Health attends on Wednesday afternoons, when all new cases are seen and cases under treatment reviewed.

Cases referred by School Medical Officers, except cases of tuberculosis, are treated on Monday and Friday afternoons.

The following table indicates the conditions for which treatment was given and the progress made.

Summary of Work and Results of Treatment at Ultra-Violet Light Clinic During 1938.

VIII.-INFECTIOUS DISEASES.

There has been no alteration during the year in the arrangements for the control of infectious diseases in schools.

The Diphtheria Immunisation Clinic was continued at the Central School Clinic, on Saturday mornings.

During the early part of the year a campaign advertising the benefits of Immunisation was commenced. Through the medium of head teachers, leaflets and the press, the attention of parents was drawn to the facilities offered by the Corporation. As a result approximately 2,000 children were immunised. Most of the head teachers entered enthusiastically into the promotion of the scheme, and as the organisation of this treatment involved considerable disturbance of the normal routine in the schools, I am very grateful to them for their splendid co-operation. In connection with the control of Diphtheria 430 throat swabs taken from school children were examined bacteriologically by your Medical Officers, of these 44 were positive.

Tabulated below are figures showing the incidence of the Notifiable Infectious Diseases during the four quarters of the year. These refer to school children only. The subjoined part of this table, giving figures for Non-notifiable Infectious Diseases, was compiled from the Weekly Sickness Returns sent in by Head Teachers.

Incidence of Infectious Diseases.

Disease.	1st Quarter	2nd Quarter	3rd Quarter	4th Quarter	Total 1938	Total 1937
Scarlet Fever	19	14	25	54	112	76
Diphtheria	33	33	30	31	127	143
Erysipelas	-	_		1	1	5
Pneumonia	9	6	2	3	20	22
Meningococcal						
Meningitis	-	_	-	2	2	-
Sonnè Dysentery	4	2	_	_	6	-
Measles	8	16	5	5	34	432
Whooping Cough	37	22	7	16	82	300
Chicken-Pox	23	31	12	69	135	610
Mumps	24	17	6	21	68	280
Influenza (including					100000	4200000
colds)	2585	2658	1210	2167	8620	10383

Scarlet fever was more prevalent during the year. The disease was of a fairly mild type and there were no resultant deaths. The number of cases of diphtheria remains high and it is regrettable to report that there were eight deaths. Measles, chicken-pox, whooping cough and mumps were much less prevalent during the year.

It was not found necessary to issue a certificate under Article 23b of the Education Code.

Mortality in School Children.

The table which follows is of interest; it deals with the causes of death of children between the ages of 5 and 15 years.

There was one death from drowning and three from traffic accidents during the year.

Causes of Death in School Children, 1938.

Disc	ease or other		Number.	Percentage of deaths from all causes		
Common Infectious - Diseases	Measles Scarlet Fever Diphtheria Whooping Co				$\left\{\begin{array}{c} -\\ 21\cdot 05 \end{array}\right\}$	21.05

IX.-OPEN-AIR EDUCATION.

There are no Open-air Schools in the Borough, but in some cases instruction is given during the summer months in the school playgrounds or in adjacent parks. Such instruction only touches the fringe of what might be possible.

X .- PHYSICAL TRAINING.

Report of the Physical Training Organisers. (Mr. A. F. Probst and Miss M. B. Harrison).

(a) General.

We are pleased to report that Physical Education continues to develop satisfactorily in the Schools, there being a great improvement in foot-work and foot mobility, which is due to a further supply of plimsolls from the grant made by the Education Committee for footgear. This provision of suitable foot-gear has been a long felt necessity and already the good results shown, prove its value. The schools which now have a change of clothing for physical training as well as plimsolls are approaching the ideal.

During the year, Refresher Courses were held in the Secondary School Gymnasium on Wednesday afternoons for teachers from Infants, Junior and Senior Schools in the Borough, and the co-operation of Head Teachers in allowing members of their Staffs to leave School early in the afternoon in order to attend, is greatly appreciated.

Attention was given during these classes to special foot exercises both for mobility and strengthening of foot muscles and it is hoped that with their inclusion into the physical training lesson there will be less evidence of flat feet in the Schools.

(b) Youth Organisation.

This Organisation in West Bromwich has grown considerably since its establishment about two years ago, most organisations in the town being affiliated to it. The Youth Organisation has been of great help to these clubs, in some cases finding Playing Fields and in others Leaders to take classes.

Much work was put in for the second Rally held in Dartmouth Park last September. Many more enthusiastic young people took part this year than last, and it was very disappointing that heavy rain spoilt the Rally, but the performance was carried through to the end, for which all participating deserved congratulation for their enthusiasm.

During November last, two Representatives from the Central Council of Recreative Physical Training again visited West Bromwich. Their visit was a very useful one and we gratefully appreciate the help they gave in visiting existing classes and also in holding Leaders' and Open Classes in the town.

(e) Swimming.

1938 saw the opening of the new Swimming Baths with the extended facilities they now provide for the Elementary Schools. From May until the end of September the "Learners' Bath" and the "Second Class Bath" were reserved throughout the week during School hours for the exclusive use of school children. In the "Learners' Bath" the number in each class was 25 plus two helpers, and this proved very satisfactory both from the teaching point of view and from results. In the "Learners" section, by the end of the season, 1,307 had been taught to swim. Detailed results are as follows:—

Number	to	swim	two	Lengths	("Learners"	Bath")	622
,,,	,,	,,		Length	,,	,,	163
,,	,,			Width	,,	,,	272
,,		,,	a fev	v strokes	,,	,,	250

During the coming Season it is evident that much greater use will be made of the "Second Class Bath" as there are now children in the Schools who are ready to progress to more advanced swimming. The results for the year 1938 in the "Second Class Bath" are as follows:—

Number	to	swim	100	yards	291
,,	,,	,,	50	,,	207
				Total	498

The Teachers responsible have shown keenness and ability in Class Instruction, and the good results prove the efficiency of their work.

A detailed report on the Swimming Scheme was submitted to the Education Committee in September 1938.

In conclusion we wish to express our sincere appreciation to the Chairman and Members of the Education Committee—to the Director of Education for his helpful advice, and to his Staff for their kind assistance in many ways. Our thanks are extended to all Head Teachers and their Assistants for their close co-operation in all branches of Physical Education.

XI.-PROVISION OF MEALS.

(a) Provision of Milk under the Authority's Scheme.

The scheme for the provision of free milk for necessitous malnourished children continued in operation throughout the year.

Under the scheme each child receives one pint of milk daily—half-a-pint each morning and afternoon. Children receiving free milk are examined at three-monthly intervals

by one of the School Medical Officers and a weekly record of height and weight of each child is kept by the Head Teachers. There is no provision for issue of free meals.

At the end of December, 1938, 222 children were receiving milk under the scheme, as compared with 130 children on the corresponding date in the previous year.

REPORT ON NUTRITION.

By Dr. J. G. S. McQUEEN.

The investigation into the beneficial effect of the provision of milk in school, which was carried out last year, was continued during 1938. Two groups of children were compared, one of which was in receipt of free milk in school while the other had no milk.

As before the letters B. C. and D., represent the Board of Education's classification of "normal," "slightly subnormal" and "bad nutritional state" respectively, and "stationary" means no gain in weight or a gain less than that which is usual over a given period. "Improved" means a gain at least as much as usual, while "Very much improved" means a gain considerably more than is usual.

For the purpose of comparison in the following tables the figures are given for 1937 and 1938.

Comparison of Progress of Children Receiving Milk with those not taking any Milk.

	1	Stationary					Improved				Very much Improved				
	В.	C.	D.	Т	otal	В.	C.	D.	T	otal	B.	C.	D.	Г	otal
On Free Milk															
1937	1	16	8	25	27%	1	27	12	40	42%	2	21	6	29	31%
1938		28	16	44	31%		39	17	56	39.5%		27	15	42	29.5%
Not having any milk in School															
1937		2	19	21	40%		2	18	20	35%		3	8	11	21%
1938		7	7	14	54%		4	5	9	34.5%		3		3	11.5%

It will be seen that the figures for 1938 continue to show the superiority of the children having free milk over those not having milk. Thus 69% of the former group showed improvement while only 46% of the latter group improved and 29.5% of the children having milk showed great improvement as against only 11.5% of the children who did not have milk.

Undernourished Children	or Br	covery ought ward	Remain		Adva	Retro- gressed	
	C.	D.	C.	D.	C-B.	D-C.	C-D.
Having Free Milk					1928		
1937	61	30	88.5%	56.6%	3.28%	43.3%	8.2%
1938	95	47	55.79%	40.42%	42.1%	59.57%	2.11%
Not having any milk in School						Seaters (Date of	
1937	9	53	66.6%	71.7%	11.1%	28.3%	22.2%
1938	14	12	64.28%	50%	35.71%	50%	

Consideration of the movements of children within the various nutritional classes as shown in the above table, does not yield such conclusive evidence of the superior improvement of the children having milk, but even here the figures are in their favour.

It will be noticed that while the number of children in receipt of free milk, whose records are available for analysis, has increased, the number of undernourished children who have no milk in school has decreased to such an extent that it is doubtful whether it is sufficient for the purpose of this analysis. This is undoubtedly due to the higher home-income level at which free milk becomes available for undernourished school children since the scale was revised in March. As a result of this, and of the continued popularity of the Assisted Milk Scheme, there are now very few children indeed who are undernourished and are still not in receipt of milk.

In order to make sure that the ascertainment of malnutrition among school children in the Borough is complete, a scheme has been introduced whereby each child is weighed and measured by the teacher three times each year at intervals of four months, the results being recorded on a card which will follow the child throughout his school life. The reverse side of this card is provided with graphs showing the average height and weight curves of West Bromwich school children. It is intended that each child's own height and weight curves will also be plotted on the graph and so will be readily comparable with the average curves. Any child whose height and weight shows a marked departure from the average will then be reported to the School Medical Officer for investigation. It is hoped that this card will act as a guide to the teacher in referring cases, but is not intended to preclude the reference of cases for other reasons.

While the primary object of the scheme is the ascertainment of malnutrition, the records provided by the cards will undoubtedly make an interesting study as they accumulate.

(b) Provision of Milk under the Voluntary Scheme.

The supply of milk to school children under Section II. (i) of the Milk Act, 1934, was continued during the year and 3,777 children partook of approximately 780,233 bottles of milk which were supplied as against 700,800 bottles during 1937.

Thanks must be given to the Head Teachers for their continued co-operation in the administration of these schemes, which have entailed a substantial addition to the routine work in the schools.

XII.—CO-OPERATION OF PARENTS, TEACHERS, SCHOOL ATTENDANCE OFFICERS AND VOLUNTARY BODIES.

(a) Co-operation of Parents.

The continued and increasing appreciation of parents in the efforts of the School Medical Service for the welfare of their children is clearly manifested by the fact that 74% attended at Routine Medical Inspections. There appears to be a definite desire on the part of parents to have the defects of their children remedied.

(b) Co-operation of Teachers.

Once again the greatest tribute must be paid to the valuable assistance rendered by teachers to the School Medical Department. The success of the work of any School Medical Service depends on the support of teachers to an extent which is fully realised only by those connected with that service, and it is pleasing to find that the support accorded in West Bromwich is of a most cordial nature.

1. Medical and Dental Inspections.

Much careful help has been rendered by Head Teachers to the Medical Officers, Dentists and Nurses in ensuring that these inspections run smoothly, and that the parents and children are admitted to the Medical Officer and Dentist in a systematic manner. In this way is the goodwill and cooperation of the parent engendered, the examination carried out with efficiency, and valuable school time saved.

2. Following-up.

The painstaking work undertaken by Teachers to encourage parents to have defects corrected is referred to in another part of this Report.

3. Medical and Dental Treatment.

There is still a tendency on the part of some Head Teachers to regard the Clinic as being solely concerned with minor ailments. The Clinic, when Medical Officers are in attendance, is also an Inspection Clinic, viz., open to give advice to Teachers and Parents in a very large variety of cases, even although there is no facility for the treatment of certain of these cases at the Clinic.

(e) Co-operation of School Attendance Officers.

The School Attendance Officers continue to prove of great assistance in many directions. Lists of cases of long absence from school are submitted periodically and these have proved of the greatest help in bringing to the notice of the Department certain cases of exceptional children.

(d) Co-operation of Voluntary Bodies.

During the year the Cinderella Club has rendered valuable assistance to the Department by sending 3 necessitous cases to convalescent homes for periods varying from two to six weeks.

The Poor Children's Welfare Society has given noteworthy assistance by sending 24 cases for a period of one month to the North of England Children's Sanatorium, Southport, during the year. In addition, this Society distributed 396 pairs of boots to necessitous children, making a total of 7,375 pairs since the Society was registered in 1925. The distributions were continued at the Central Clinic, Lombard Street West.

By permission of the Education Committee the members of the Rotary Club again arranged for 40 poor boys to go to a seaside camp.

This Camp is stationed at Swanage in Dorsetshire, and is situated in a very healthy and picturesque position on the Downs above the town, overlooking Swanage Bay and Poole Harbour. The climate is very bracing and it is most gratifying to see the gradual improvement which takes place in the health of the boys after they have been in residence only a few days. To be able to wander over the Downs at will and to enjoy the stretches of good sand, which nearly always are available in Swanage Bay, is a great thrill for boys who are visiting the seaside for the first time.

Numerous excursions are arranged, such as visits to Corfe Castle, Durlston Head, Bournemouth, etc., and every endeavour is made to make the holiday of educational value. The Camp is supervised by Rotarians who volunteer to look after the boys for varying periods during the fortnight they are resident in Swanage.

The Camp is undoubtedly of very great benefit from the health point of view to those boys who are fortunate enough to be selected, and it is hoped that it will be possible in the future to extend the facilities so that a larger number of boys may have the opportunity of enjoying a fortnight's holiday at the Camp.

The boys partaking in this beneficial holiday were selected from eight senior departments by the S.M.O. in consultation with the Head Teachers, and preference was, in each case, given to boys of inferior health.

The National Society for the Prevention of Cruelty to Children continued to give valuable assistance, especially through the medium of Chief Inspector Pine.

XIII.—BLIND, DEAF, DEFECTIVE AND EPILEPTIC CHILDREN.

The number of children within the scope of the above definitions is printed in Table III., pages 37-39. The Table shows the position at 31st December, 1938, and the children referred to are resident within the Borough or are maintained at the expense of the Education Authority in Special Schools or Institutions outside the area.

(a) Ascertainment and Disposal.

This work has continued on the usual lines during the year.

Blind Children.

Two partially blind children are in the Royal Institution for the Blind, at Birmingham.

Deaf Children.

There are 4 cases of total deafness, 2 boys and 2 girls—all of whom are in the Birmingham Royal Institution for the Deaf.

Mentally Defective Children.

Formal examinations as to Mental Deficiency were carried out in 44 cases, and 18 were re-examined; the findings at these examinations were as follows:—

Imbeciles—Notified to Authority	
Low-grade Feebleminded	l—notified to
Local Control Author	rity 1 1
Feebleminded	19 15
Dull and Backward	18 1
Normal	4 —
	Totals 44 18

The 11 children shown in Table III. as being at no school or institution having attained the age of 14 years had left school. Seven had obtained situations, 1 was unemployed, while 3, who are physically unfit to work, remain at home under supervision.

Epileptic Children.

Two children—1 boy and 1 girl—were maintained at Maghull Colony, Liverpool, during the year. One shown at no school or institution remains at home under parental supervision.

Tuberculous Children.

Of the 4 children shown as "at Certified Special Schools" at the 31st December, 1938, 1 was in the Woodlands and 3 in the Forelands Certified Hospital Schools. Of the three shown "at other Institutions" 2 were in the Borough Sanatorium, and 1 in Hallam Hospital.

Delicate Children.

It should be noted that the group of 83 contains the majority of children who, in ideal circumstances, would be accommodated in open-air schools.

Crippled Children.

Of the 2 children shown as being in Special Schools, 1 is maintained by the Authority at the Halliwick Cripples' Home, London, and 1 at the Heritage School of Arts and Crafts, Chailey. Of the 6 children shown as at no school or institution, 4 are undergoing orthopaedic treatment, which necessitates their temporary exclusion; two are so crippled as to be unfit for any school at present.

(b) Supervision of Mentally Defective Children not in Special Schools.

It will be observed from Table III. that 11 presumably educable mentally defective children are at no school or institution, particulars of these cases are given under the heading, "Mentally Defective Children."

The Table below shows the disposal of children who have passed through the Special Day School for Mentally Defective Children.

(c) Special Schools.

Junior Practical School

Report by Miss D. Griffin (Headmistress).

The Junior Practical School is fed by the various elementary schools of the Borough, with pupils of ages ranging from 7 to 12+, whose abilities are as varied as their ages.

In the teaching of arithmetic a common ground for all methods can be found in counting and picture numbers. In Reading, however, a common ground is difficult to find. Some of the pupils of this school have been taught by the Phonic System; some by the sentence method; some by the Look-and-Say method; some build words; some recognise odd words; some have no knowledge of reading at all. In all cases the child continues to read along the lines in which progress has been made already, and progresses at his own rate. The range of ability and attainments is very great, for among our fifty pupils are children who recognise no more than two or three letters, and others who can read a newspaper intelligently.

The greatest difficulty met with in the teaching of reading is the fact that the older pupils object to the necessary simplicity of the first steps in reading; and some have been failures so long that they are afraid of the initial effort.

Two cases in particular have been taught to read by very irregular methods. The first, a boy, aged 12+ on admission knew a few letters by name but could connect no sounds with them, nor could he build any words. His one interest was football, and the scores and scorers were his chief topics of conversation. An advertisement novelty in the form of a map of England gave him a basis for his football interest. Towns and cities with teams were marked and he could always supply, verbally, the title of United, City, Town, etc. From this reading of town names a desire to read arose, and before leaving school at 14 he could read fluently school readers and items from the daily papers.

The second boy, also aged 12+ on admission, had no knowledge of letters at all and at the sight of a reader became sullen and obstinate. He frequently visited the cinema and went round the various theatres feeling the hoardings—if they were sticky the programme had been changed. In a free modelling lesson he made the words Rin-tin-tin in plasticine and lost some of his nervousness in telling of the dog's tricks. Following this, film stars' names were modelled and then written. From this peculiar beginning, within eighteen months, this boy became a fluent reader.

These two cases were outstanding successes. Our pupils do not always make such spectacular progress, but in every case every child is given a chance to develop to a normal standard of reading, no matter what irregular methods are used.

XIV.—FULL-TIME COURSES OF HIGHER EDUCATION FOR BLIND, DEAF, DEFECTIVE AND EPILEPTIC STUDENTS.

Under arrangements made by the Education Committee, one blind pupil is being trained in the Birmingham Royal Institution for the Blind, and one epileptic at Maghull Colony, Liverpool.

XV.-NURSERY SCHOOLS.

There are no Nursery Schools in the Borough.

XVI.—SECONDARY SCHOOLS AND OTHER INSTITUTIONS OF HIGHER EDUCATION.

(a) The Municipal Secondary School.

This is a mixed school, the ages of the pupils ranging from 11 to 18 years. At the end of the year there were 258 boys and 195 girls on the rolls.

(b) The Kenrick Technical College.

This is a boys' school and the ages range from 13 to 15 years. The number on the roll at the end of the year was 38.

(e) The Ryland Memorial School of Arts and Crafts.

There is a Junior Art Department for full-time day pupils at this school. It is a mixed school and the ages of the pupils in this department range from 12 to 15 years. The number on the roll at the end of the year was 42; 23 boys and 19 girls.

I .- Medical Inspection.

The arrangements were similar to the previous year. Details of the number of pupils examined and the defects found are shown in Table II., pages 42-43.

II.-Medical Treatment.

The Authority does not generally provide any form of treatment for children attending these schools. Necessitous cases are, however, occasionally treated at the Ophthalmic Clinic, and glasses provided at contract prices. The cost of glasses is recovered from the parents. Two such cases were dealt with during the year. In addition, 12 pupils received Dental Treatment.

The attention of the Supervisors of Physical Education is drawn to defects, such as flat feet and postural defects, which are amenable to treatment by special exercises.

XVII.—PARENTS' PAYMENTS.

(a) 1. Orthopædic Treatment, Out-patient and In-patient.

2. Operative treatment for Tonsils and Adenoids.

Charges are made for treatment in accordance with family income and collection is in the hands of the Borough Treasurer.

(b) Spectacles and Dental Fees.

The actual cost of spectacles is charged to parents, but financial assistance is given in necessitous cases. Payments are made at the Central School Clinic; arrears are referred to the Borough Treasurer for collection.

Dental fees are charged, except in necessitous cases, at the rate of 3d. per visit, payment being made at the time of treatment. The following are the amounts received during the year:

				£	s.	d.	
Spectacles			 	90	12	9	
Dental			 	53	8	6	
Orthopaedic Tonsils and	Defe Ader	cts)	 	42	2	3	

XVIII.-HEALTH EDUCATION.

This work was continued as outlined in detail in the Report for 1933.

In connection with the National Health Campaign, special efforts of publicity were made with regard to bringing to the notice of the general public the provisions of the School Medical Service.

Grateful acknowledgment is made once more to the services rendered by the local Press.

XIX.—SPECIAL INQUIRIES.

There were no Special Inquiries during 1938.

XX.-MISCELLANEOUS.

Employment of Children.

The following Table gives particulars of licences and registrations for the year 1938:

(a) Employed Children (12-14).			
No. of Registrations:	Boys.	Girls.	Total.
Errands and Light Duties	113		
Child Performers No. of Licences surrendered:	. 3	56	59
Newspapers or Milk Delivery Errands, etc	104	2	104 39
(b) STREET TRADING BY YOUNG PERSONS			
No. of Licences issued No. of Licences surrendered		_	_2

(c) Investigating Patrols.

No. of I	Patrols undertaken	 	 54
No. of C	Offences reported	 	 33
No. of V	Warning Notices issued	 	 14
No. of F	Employers interviewed	 	 19

(d) Prosecutions.

None.

- (e) Medical Inspection.
 - (i) Child-performers are inspected by the Medical Officer before being allowed to take part in theatrical performances.
 - (ii) Employed children whose physical fitness is in doubt are referred to the Medical Officer for examination.
- (f) ACCOMMODATION FOR CHILD PERFORMERS.

 No complaints have been received regarding lodgings or accommodation for Child Performers.
