Urban District of Woodhall Spa

ANNUAL REPORT

of the

MEDICAL OFFICER OF HEALTH

1953

*With Compliments
of
The Medical Officer
of Health*

Health Offices,
Horncastle.

Horncastle Rural District.
Horncastle Urban District.
Woodhall Spa Urban District.

WOODHALL SPA URBAN DISTRICT COUNCIL

Annual Report
of the
Medical Officer of Health
1953

PUBLIC HEALTH OFFICERS OF THE COUNCIL

Medical Officer of Health

S.A. O'HAGAN, M.B., Ch.B., D.P.H.

Sanitary Inspector

N.R. BOLTON, M.S.I.A., A.R.S.I.

The Medical Officer of Health serves also Horncastle Urban and Rural Districts and as Assistant County Medical Officer.

The Sanitary Inspector also holds the appointments of Surveyor and Water Engineer.

The Highways; Sewerage and Public Health Committees deal with the majority of Public Health matters although a separate Water Committee and Parks and Playing Fields Committee deals with water supplies and swimming baths.

The Council of the Urban District of Woodhall Spa.

Mr. Chairman and Members,

I have the honour to present my Annual Report for 1953.

The report follows the pattern of the last few years, being prepared in accordance with skeleton instructions from the Ministry of Health.

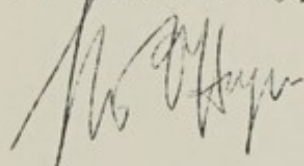

Certain factors are outstanding. Firstly the persistently low birth rate which has only once in the post-war years reached anything like the national level. This is true, even when the age structure of the population is taken into account. In general a low birth rate is of poor economic significance. The death rate remains unchanged by any significant amount, as does the age-distribution of deaths.

There were no outbreaks of serious infectious disease, although measles, whooping cough and scarlet fever made their appearance in due season.

The County Council's scheme for whooping cough immunization came into operation during the year. The figures for vaccination and Diphtheria immunization are exceptionally good - practically every baby is immunized and 5 out of every 6 are vaccinated.

In short, the overall picture of the Spa's health is good.

Yours faithfully,

Medical Officer of Health.

STATISTICS

AREA OF URBAN DISTRICT:	1874 acres
REGISTRAR GENERAL'S MID-YEAR ESTIMATE OF RESIDENT POPULATION:	2100.
DENSITY OF POPULATION:	1.12 persons per acre
NUMBER OF INHABITED DWELLINGS:	
Houses -	554
Flats -	40
Temporary Dwellings, Caravans, etc. -	4
RATEABLE VALUE OF URBAN DISTRICT:	£12,749.
SUM REPRESENTED BY PENNY RATE:	£50.

VITAL STATISTICS

BIRTHS

Live Births			
Legitimate	Male	10	
	Female	<u>8</u>	
	Total	<u>18</u>	
Illegitimate		Nil	
Crude live birth rate per thousand estimated population		8.6	
Standardized live birth rate per thousand estimated population		10.4	
Live birth rate, England and Wales		15.5	

One still-birth was registered in 1953 and the total birth rate is thus

Crude	9.05
Standardized	10.95

Of the births attributed to Woodhall Spa, 13 were registered in the Urban District, and are presumed to have occurred in domiciliary practice. This is 68.5% and reflects confidence in the maternity service of the district.

Deaths

Male	12
Female	<u>22</u>
Total	<u>34</u>

Crude death rate per thousand estimated population 16.2

Standardized death rate per thousand estimated population 11.7

Death rate, England and Wales per thousand estimated population 11.4

Age at Death

Years	Under 1	1/4	5/14	15/24	25/34	35/44	45/54	55/64	65/74	75 and Over
Deaths	1	0	1	0	0	0	2	6	5	20
% of total 1953	2.9	0	2.9	0	0	0	5.8	17.6	14.7	58.8

The death of the child under one year was due to prematurity. The other causes of death at ages under 65 were -

Cardio Vascular disease	5
Cancer of breast	1
Suicide	1
Encephalitis	1

It is worthy of comment that anxiety and emotional stress are regarded as important predisposing causes of cardio vascular disease, whilst their relation to suicide is obvious. Thus 6 out of 9 premature deaths may be regarded as, in some measure, related to the stresses of daily life.

There is, of course, a progressive increase in the deaths in the 75 + age group, mainly due to the degenerations of old age. Even in this age-group, the stress diseases claim a high proportion of victims for, as age advances beyond maturity, abilities fail and the daily round, formerly done without effort, becomes more and more of a strain.

1941
1942
1943

The first part of the report is devoted to a general survey of the situation in the country.

The second part contains a detailed analysis of the economic situation in the country.

The third part contains a detailed analysis of the social situation in the country.

The fourth part contains a detailed analysis of the political situation in the country.

The fifth part contains a detailed analysis of the cultural situation in the country.

The sixth part contains a detailed analysis of the international situation in the country.

The seventh part contains a detailed analysis of the future of the country.

Causes of death as shown in the Registrar General's short list.

<u>Short List No.</u>	<u>Cause of Death</u>	<u>Male</u>	<u>Female</u>	<u>Total</u>

INFECTIOUS DISEASES

The spring brought with it measles followed by whooping cough and scarlet fever during the summer term.

Actual notifications for these diseases were as follows :-

Whooping Cough	33
Measles	25
Scarlet Fever	11
Pneumonia	7

The cases of scarlet fever occurred from the end of April to the second week in June and affected an infants class. There were 3 additional cases notified from Stixwold, earlier in April. Two of these were in the same class as the subsequent cases in the Urban District; and probably represent the path by which the organism entered the school.

No evidence was found of a chronic streptococcal carrier at the time and no further cases followed.

The outbreaks of measles and whooping cough were also basically school-spread and only 2 cases of measles and 4 of whooping cough were in children under 2 years. This is important, since the effects of these diseases are very much more dangerous in the first two years of life. Because of this, when an older child in any family gets measles, many doctors prefer to postpone or modify the infection in any infants subject to infection by means of an injection of human serum, gamma globulin or mother's blood. This confers only temporary immunity lasting, usually, until the next epidemic two years later. In a healthy infant, by delaying the administration of serum, a mild attack of measles may be allowed and the disease is therefore "over".

In the case of whooping cough, active immunization, giving some degree of lasting protection has been available under the County Council's scheme during 1953. It has not been so widely publicised as diphtheria immunization and no pressure is brought upon parents to have their children immunized. Nevertheless, there is a strong case for immunizing all children between the third and sixth months of life.

The first part of the document discusses the importance of maintaining accurate records of all transactions.

It is essential to ensure that all data is entered correctly and that the system is regularly updated.

The second part of the document outlines the various methods used to collect and analyze data.

These methods include surveys, interviews, and focus groups, each with its own strengths and weaknesses.

The third part of the document describes the process of data analysis and the tools used to facilitate this process.

Advanced statistical techniques are often employed to identify trends and correlations within the data.

The final part of the document provides a summary of the findings and offers recommendations for future research.

It is hoped that this document will provide a comprehensive overview of the research process and its various stages.

The data collected from these sources will be used to inform decision-making and to develop effective strategies.

By understanding the underlying patterns in the data, we can better predict future outcomes and address challenges.

The research team is committed to providing high-quality data and analysis to support our goals.

We will continue to explore new methods and technologies to improve the accuracy and efficiency of our data collection.

The results of this research will be shared with all stakeholders to ensure transparency and accountability.

We are confident that our findings will contribute significantly to the field and provide valuable insights.

The research team is grateful for the support and collaboration of all participants and stakeholders.

We look forward to continuing our work and to making further contributions to the field.

The research team is pleased to have completed this project and to have achieved our objectives.

We are proud of the hard work and dedication of all team members and look forward to future projects.

The following tables show the vaccination and immunization's carried out under the County Council's Scheme.

Diphtheria Immunization

Aged 0 - 5 years	5 - 14 years	Booster Doses Usually 5 - 14 years
24	0	21

Small Pox Vaccination

	Aged under 1	1 - 4 years	5 - 14 years	15 years +	Total
Primary Vaccinations	20	1	2	3	26
Revaccinations	0	0	0	4	4

Whooping Cough Immunization

This is only recommended at ages under 5 years.

Aged under 1	One+	2+	3+	4+	Total
0	4	0	2	2	8

These figures should be construed in relation to an average number of births per annum of 24.3. It will be seen at once that the response of parents to diphtheria immunization and vaccination is extremely good and that whooping cough immunization has not yet "caught on". This is a pity; whilst deaths from smallpox and diphtheria have been almost abolished, the nation loses a few lives every week from whooping cough, and much preventable ill-health, especially collapse of part of the lung can be attributed to it.

At present, the use of combined vaccine or double dosage for simultaneous diphtheria and whooping cough immunization has not been recommended and it may well be that mothers are unwilling to subject their tiny babies to more "pricks" than they feel to be absolutely necessary.

The following is a list of the names of the persons who have been appointed to the various positions in the organization of the National Association of Manufacturers.

Executive Committee

Chairman: Mr. J. P. Morgan
President: Mr. C. P. Nease
Secretary: Mr. J. B. Condit

The following is a list of the names of the persons who have been appointed to the various positions in the organization of the National Association of Manufacturers.

NATIONAL HEALTH SERVICE

General Medical and Nursing Services

Two doctors, a health visitor and a district nurse are based in the Spa and there is every indication that the service is popular and efficient.

As referred to above, the proportion of babies born at home is rather higher than in neighbouring districts. This is not due wholly to the lack of bad homes in Woodhall, for this is balanced by a lamentable habit of wealthier people to have their babies in nursing homes or hospitals, thus converting a physiological experience into something of an "operation" with all the bustle and excitement of "going in", and strange faces and surroundings for what is properly the most homely of all functions.

Health Services of the County Council

No clinic for the Maternity & Child Welfare or School Health services exists in Woodhall Spa and residents of the Spa make use of the clinic at Horncastle which provides services as listed below

Clinic	Day and Time	Attendance
Ante-natal	1st, 3rd & 5th Tuesday 10 a.m.	Casual
Infant Welfare	1st, 3rd & 5th Tuesday 2 p.m.	"
Ophthalmic)) Orthopaedic)) Dental)	By appointment	

Appointments for children of school age and under are made either by the Maternity and Child Welfare Officer, the School Medical Officer or the family doctor and in each case, both family doctor and the County Medical Officer's staff receive copies of Specialist's Reports, so that all may work together. It is found, however, that where a child is seen by a Specialist at the request of the family doctor, there are a few lapses when inconvenience is caused by non-receipt of the report by the School Medical Officer.

National Assistance Act, 1948, Section 47

No action was taken under this act during the year.

SANITARY CIRCUMSTANCES OF THE URBAN DISTRICT

Water Supply

In common with the rest of Eastern England, there was a deficiency of rainfall during the year so that for a considerable period, water could not be fed on to the largest of the sand filters which was built at a high level. This is fed from the dyke which normally supplies all three beds with a surplus of water but which falls in level rapidly when any prolonged drought occurs. Water from the storage ponds can then be allowed to gravitate to the two lower beds only.

During the year connections were fitted to the "Air Ministry" supply plant to allow it to feed into the town supply when required. This plant has its own chlorinating and alkali-dosing equipment and gives a very high quality water.

The main town supply was fitted with the rebuilt Candy chloramine apparatus, rebuilt and set to dose with chlorine and soda-ash. This is proving effective in sterilizing the water and rendering it more inert chemically, so that the rate of corrosion of metals used in the supply system and domestic plumbing will be markedly reduced.

Sewage Disposal

No further work has been done on the sewage works at Green Lane which continue to cause anxiety, for the works cannot run for any length of time on one filter bed, whilst neither the Surveyor nor myself would venture to say how long the old bed, with its walls cracked and bulging, will remain standing.

A scheme is being prepared for the modernization of the Sewerage system and disposal plant, although the estimated cost per head will be enormous. Some 300 yards of new sewer have already been laid.

There remain some 15 properties in the Spa which are not fitted with W.C.'s. Whilst 3 cesspools also remain. One, however, is upon a property which has been closed and awaits demolition.

Public Cleansing and Scavenging

It has not always been possible during this year to maintain as effective a service as the Council would wish. This is largely due to the need for keeping expenses down. Obviously more men and equipment could maintain a more frequent service but the cost would burden the rate payers still more.

There is scope for much more co-operation by householders for large quantities of refuse of a combustible nature is placed in ash bins so that there is insufficient space for ashes, etc. If householders made a rule of burning all combustible refuse, they would provide lighter loads, fewer journeys and consequently better service. The only ways they can obtain improved scavenging are by co-operation or else by paying for more men.

Swimming Pool, Jubilee Park

No difficulties of any great consequence were encountered during the season although in peak periods there was some shortage of cubicle accommodation.

The first part of the report deals with the general situation of the country and the progress of the war. It is a very interesting and well-written account of the events of the year.

The second part of the report deals with the military operations of the year. It is a very detailed and accurate account of the fighting and the results of the campaigns.

The third part of the report deals with the political and social conditions of the country. It is a very thoughtful and well-considered account of the state of the nation.

Summary of the Report

The report is a very valuable and interesting document. It gives a clear and concise account of the events of the year and is well worth reading.

The report is a very well-written and interesting document. It gives a clear and concise account of the events of the year and is well worth reading.

Conclusion

The report is a very valuable and interesting document. It gives a clear and concise account of the events of the year and is well worth reading.

Chlorination to break-point is practical only with the plant running almost continuously for the whole 24 hours. This is the inevitable result of a 19 hour turnover time with the chlorinated water fed back at only one point. The chlorine gradient drops steeply along the length of the path and free chlorine is not infrequently absent from the deep water near the draw-off grille.

The absorption of chlorine in a pool varies with many factors but the number of bathers is the most important variable factor.

The Removal of perspiration, etc. from the skin by the shower before entering the bath should be an invariable rule, whilst an adequacy of W.C.'s is essential if occasional gross pollution is to be avoided.

FOOD

Meat

Under the Ministry of Food arrangements, Woodhall Spa has been supplied from Horncastle abattoir and depot.

It is anticipated that a similar arrangement will obtain when meat control is released in July, 1954.

Ice Cream

The trend in this trade is towards wholesale manufacture and despatch to retailers pre-packed. This is much to be preferred, since by its nature, ice cream is liable to convey various diseases and the responsibility of the small maker is out of proportion to the profit. There are no large scale manufacturers in the area. Sampling shows a very satisfactory state of the ice cream offered for sale.

Meat Products

No manufacturer of meat products takes place in the Spa: such supplies as are required being derived either from the famous firms or from Horncastle. In either case, a satisfactory standard is maintained.

Other Food Premises

It is regrettable but inevitable that with the Sanitary Inspector employed largely upon surveying work, the sanitary inspecting, which rarely shows spectacular results, suffers. No inspection is recorded of food premises other than milk distributors, bakehouses and ice cream manufacturers. A small quantity of foodstuffs were inspected and were voluntarily surrendered by their owners.

That the quantity is small is probably due to inspection at the larger centres before reaching the smaller shops in Woodhall.

Housing

A further 17 houses were completed during the year, comprising 12 Council Houses and 5 private ones, compared with 6 and 3 in 1952.

The replacement of unserviceable housing is not a major problem in Woodhall and, whilst it serves partly as a dormitory for Lincoln, there is not a great demand for Council houses.

Caravans

With the increasing availability of houses, the number of caravans on permanent sites has decreased markedly, only 2 remaining.

The Caravan Club has paid two visits to the Spa, in force, and has demonstrated the usefulness of the mobile caravan and that there is an immense difference between the owner-user of a mobile caravan, and the series of holiday tenants of static vans on some holiday sites. The visitors have been most welcome. So far, no approach has been made by the Camping Club for similar facilities but, no doubt, they would be equally welcome.
