REPORT.

To the Right Worshipful the PRESIDENT, the Worshipful the TREASURER, and the GOVERNORS of the Royal Hospital of Bethlem.

My Lords and Gentlemen,

In conformity with annual practice, we lay before you our Report for the year 1850, which presents points of unusual success, although modified, like other successes, by some drawbacks, which, however, are very easily accounted for, as will appear in the course of this brief recital.

The number of curable patients admitted during the year was 344, consisting of 135 males, and 209 females.

The number of patients of this class remaining in the Hospital at the close of the preceding year, including those out on leave, were 209, making together more than the average number of curable cases.

CURED.

The number of patients of this class discharged cured during the year has been 197, consisting of 74 males, and 123 females: being 26 more than in the preceding year, and considerably more than the usual average of the number discharged cured; this year may therefore be regarded as the most successful year that has hitherto occurred, particularly when it is borne in mind that 29 cases have been discharged as disqualified by paralysis and other impediments to cure, and a few have been removed by their friends before the period of their residence in the Hospital had terminated.

UNCURED.

There have been discharged from the curable establishment 82 uncured patients, consisting of 26 males, and 56 females falling short by 8 of the number discharged uncured in the preceding year.

DEATHS.

The number of curable patients who have died has been 31, which considerably exceeds the usual average, but the causes which have led to this result will be obvious when it is remembered that many have been received almost, if not altogether, in a dying state, from motives of charity, which, though it may have infringed in some measure upon the strict letter of our regulations, has been a source of great consolation and relief to the families of the sufferers, and has met the approval of a large majority of Governors present at such admissions.

The following table contains a more particular account of these deaths, as well as those which have occurred among the incurable and criminal patients, amounting in all to 41, including several patients who had been in the Hospital many years.

PARTICULARS OF PATIENTS who have DIED during the year 1850, as Reported by the Physicians to the Bethlem Sub-Committee.

	1						

It appears, upon a careful review of the foregoing table, that 14 patients have been admitted who have died within five weeks after their admission, and who, in fact, were in a sinking state when admitted, but who were nevertheless received, as previously stated, from motives of charity. This at once accounts for one-third of all the deaths, in addition to which 4 incurable patients have died after long residences, one of them reaching 29 years, and another 26, and one criminal patient after 30 years' residence.

There have also been a few cases of that intractable disease, Phthisis.

We here subjoin a general synopsis of particulars, which is annually prepared with great accuracy, and which displays, at one view, in a clearer light than can be otherwise detailed, many interesting facts and circumstances; and minute statistical details are furnished by other authorities.

HEALTH.

Although so many deaths have occurred from the causes to which we have already referred, it must not be argued that the Hospital generally has been in an unhealthy condition, or that any particular epidemic has prevailed. On the contrary, very little sickness has occurred beyond that general average of illness and infirmity which must attach to so many insane patients in the course of a year.

GENERAL TREATMENT.

Many indulgences have been introduced during the last year: an improved dietary, which has given very general satisfaction; in the dining-rooms fire-places have been placed, and a more commodious arrangement of the tables has been made.

Gas also has been introduced, by which the cheerfulness of the Hospital has been greatly increased; and a much more agreeable window has been introduced, to some extent, in the basement, on the female side, combining sufficient strength with a light and airy appearance.

CLASSIFICATION OF PATIENTS.

Much attention is paid to the arrangement of the cases according to their various grades, and we are only desirous of pressing one point on your notice, which appears to us to assume an increasing importance. We refer to some separate accommodation for the basement Patients on the male side as far as regards their airing grounds;

at present the tranquil classes are intermixed with the excited of their fellow patients, whose restless habits must militate against, not only their comfort, but their cure. It is very different on the female side, where several sub-divisions exist.

At no great cost a separate ground might perhaps be constructed.

PUPILS.

The attendance of Pupils during the early part of the year was satisfactory, although not numerous. Lectures were delivered in the months of May and June, and the average attendance of auditors amounted to 10. Considering the limited attention which such a subject is likely to draw, and the numerous avocations of medical students, this is as extensive a theatre as we can reasonably expect.

AMUSEMENTS AND OCCUPATIONS.

The Patients have been employed as far as their malady will admit, and have pursued their indoor recreations with interest. The average number of Patients employed has been 246, being 113 males, and 133 females.

DIVINE SERVICE.

The average number attending the chapel has been 70 males, and 76 females, amounting to 146. Great propriety of demeanour prevails during these services, much more than might reasonably be expected. Many aged, and some despondent cases, derive consolation from their regular attendance.

RESTRAINT.

The average number under restraint has been very small indeed. It has amounted only to $\frac{37}{365}$ per diem, being about one-half of the preceding year, and a thirtieth part of what it was seven years ago. Still it is occasionally unavoidable, but it is only employed to prevent greater evils. Only 4 patients have been placed under any mechanical restraint in the course of the whole year, and 2 of these arose from surgical necessity.

INCURABLES.

On the 31st December, 1850, the number of Patients of this class was 75, consisting of 38 males, and 37 females.

During the year one male and two females have been admitted, and three males and one female have died.

Three Patients yet remain of those removed from the old Hospital in Moorfields, two of whom are males and one female.

CRIMINALS.

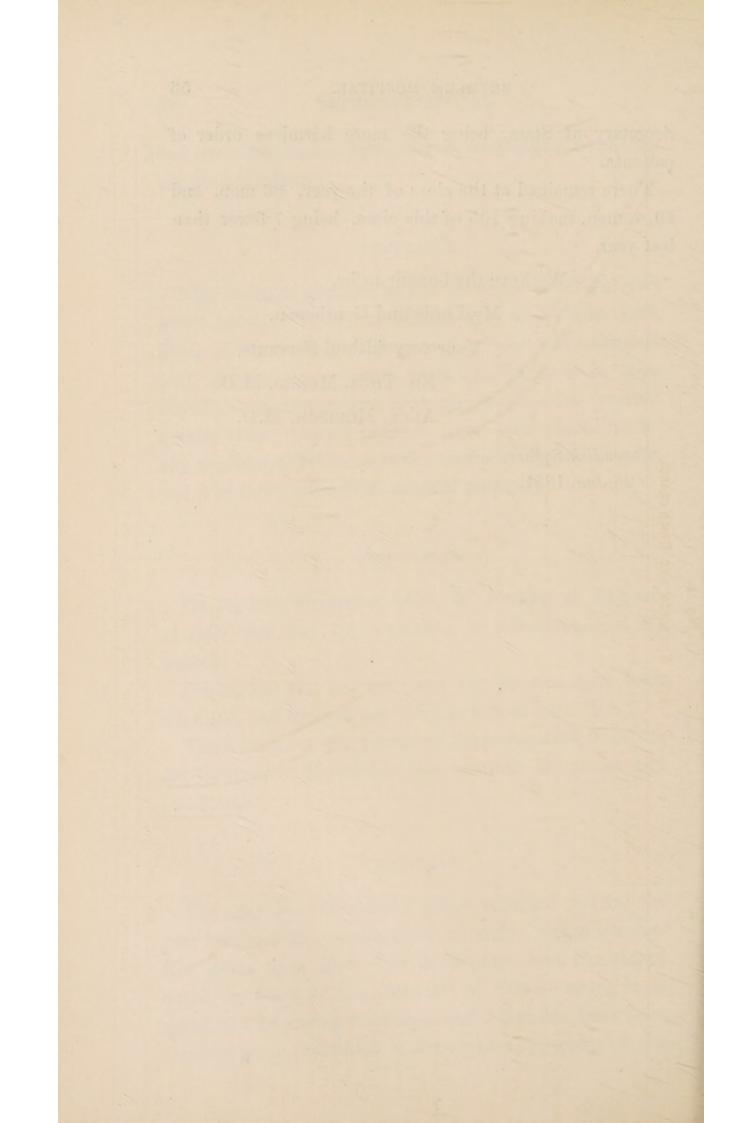

The number of Criminal Patients admitted during the year has been 28, consisting of 23 males, and 5 females. Six males have died, four males have been discharged cured, by order of the Secretary of State, having recovered, and 25, being 20 males, and 5 females, have been removed to an institution in the country, by order of the Secretary of State, being the more harmless order of patients.

There remained at the close of the year, 86 men, and 19 women, making 105 of this class, being 7 fewer than last year.

We have the honour to be,

My Lords and Gentlemen, Your very faithful Servants, ED. THOS. MONRO, M.D. ALEX. MORISON, M.D.

Cavendish Square, 25 Jan. 1851.

£504 0 0

The Hospital is repaid by Government on account of Criminal Lunatics, the wages of seven male and two female attendants, with an allowance of $\pounds 35$ per annum each for maintenance and clothing.

The wages of male attendants commence at any amount not exceeding £20 per annum, and after they are raised to £20, they increase, if their conduct be satisfactory, £1 for the second and third years, and £1. 10s. yearly afterwards, until they become £40 per annum, after which no further increase is allowed. Female attendants commence at any amount not exceeding £18 per annum, and after they are raised to £18, they increase with like restriction £1 yearly until they become £25 per annum, after which no further increase is allowed. The wages of male attendants were permitted, previous to the year 1841, to increase to £60 per annum.
