Newcastle-upon-Tyne City Lunatic Asylum.

REPORT, 1885.

1st January, 1886.

THE Committee of Visitors of the Newcastle-upon-Tyne City Lunatic Asylum have, in pursuance of the provisions of the "Lunatic Asylums Act, 1853," to make the Twenty-first Annual Report to the Magistrates of the condition and management of the Institution.

On the 31st December, 1884, the number of patients on the books was 273 (viz., 134 male and 139 female). The admissions during 1885 were 78 (viz., 38 male and 40 female), and they were chargeable in the following manner :—

	Mal	e. Fe	mai	le.	Total.	
As Private Patients	0		0		0	
To the Newcastle-upon-Tyne Union	37		40		77	
To the Commissioners of Prisons	1		0		1	
To "Out County" Unions	0		0		0	
	38		40		78	

The discharges were 53 (viz., 25 male and 28 female), and the deaths were 24 (viz., 14 male and 10 female).

The average number daily resident was 276 (viz., 136 male and 140 female). The number discharged recovered was 30, or 38.46 per cent. of the admissions, and the percentage of deaths of the average number daily resident was about 8.7, and of the total number under treatment about 6.8.

The number remaining on the books on the 31st December, 1885, was 274 (viz., 133 male and 141 female), being an increase of 1 as compared with last year. Of this number, 4 are chargeable as private patients as against 4 last year; 269 are chargeable to the Union of Newcastle-upon-Tyne, as against 268 last year, and 1 is chargeable to the Commissioners of Prisons as against 1 last year.

The Committee, in accordance with the terms of the statute under which their Board is constituted, have regularly visited the Asylum during the year, and have always found it in good order. The patients, who have an opportunity of making any statement to individual members of the Committee, invariably appear comfortable, tidy, and well cared for.

Last year the Committee reported that the continued increase in the number of patients rendered it necessary for them to make arrangements for a very extensive addition to the Asylum.

The Magistrates confirmed their report, and, at a special meeting of the Bench called for the purpose, an order was given to them to provide accommodation for 170 patients of both sexes. Plans for this, and for the needful addition to the kitchen, chapel, and laundry were prepared; and, after advertising for tenders, the Committee selected that sent in by Mr. Walter Scott, of Newcastle, to execute the whole of the work for the sum of $\pounds 22,527$ 7s. 1d. The operations were begun in the end of July, and at the date of this report the female wing is already far advanced.

The purchase of the 35 acres of land, which was in progress at the date of the last report, has been completed at \pounds 300 per acre. It was obvious to the Committee that if the past were any guide to the future, the Asylum estate would soon be surrounded by dwelling houses. and that the purchase of land (if at any future period it were required for such additional buildings as might then be necessary) would be impossible, and that the old estate was under any circumstances by no means too large. This view, they are gratified to find, has been taken by the Commissioners in Lunacy, as will be seen by a reference to the entry made by them at their visit on the 20th of November.

Circumstances having from time to time called attention to the Asylum drainage as being defective, advantage was taken of the extension of the Asylum and the necessary connections between the new and the old drains, to have the old system thoroughly inspected. The Committee requested Mr. W. G. Laws, the Newcastle Corporation Engineer, to examine them, and his report is at the date of writing under their consideration.

Mr. David Ireland having received an appointment at the Newcastle Dispensary, resigned his situation here as Assistant Medical Officer, and Mr. George Nicol Henry, M.B., was appointed in his place.

The Committee have again much pleasure in recording their satisfaction at the manner in which their Medical Superintendent, Dr. Wickham, his Assistant, and the other Officers of the Institution have discharged their respective duties, and also their Chaplain, Dr. Bowlan.

On the 4th of September the Committee were deprived by death of the valuable services of one of their number, Mr. Alderman Gregson, who joined the Board in 1875. He was a man of great energy and natural ability, and, being an accomplished medical man, with extensive experience of public duties, having been for many years a Magistrate, in the Town Council, and on the Board of Guardians, he often proved himself most useful in their deliberations. The Committee desire to record their regret at his death.

The Committee will shortly receive the Annual Medical Report from Dr. Wickham, which, with the Statistical Tables, and a Statement of the Receipts and Expenditure under the Maintenance Account, shall be printed and circulated amongst the Magistrates.

> THOMAS HEDLEY. WM. H. STEPHENSON. W. B. WILKINSON. THOMAS WILSON. J. G. FENWICK. B. PLUMMER,

ENTRY BY THE COMMISSIONERS IN LUNACY.

NEWCASTLE-UPON-TYNE CITY LUNATIC ASYLUM, NOVEMBER 20TH, 1885.

Considerable progress has been made in the additions to this Asylum. The new wing for female patients is almost ready for the joists for the first floor, and the excavations for the foundation of the new wing for males are almost completed. In view of the increase in number of the patients which these additions preshadow, and of the building of dwelling houses in the vicinity of the Asylum, we are very glad to learn that 35 acres of land have been purchased adjoining the former eastern boundary of the Asylum estate.

The extension of the Asylum has also suggested to the Committee the propriety of a thorough revision of the existing drainage and sewerage of the building, with the object of adopting such improvements as the advance of sanitary science within the last few years dictates. We trust that the engineer employed in this work has high qualifications, and that the flushing and ventilation, and facile means of clearing away accidental obstruction in the sewers will be carefully provided.

The Asylum is less crowded than it was when our colleagues visited in 1884, the patients being now 272, of whom 1 man is away on leave; there are but 5 private cases. On the male side are 133 patients; in the female division, 139. One pauper lunatic chargeable to this locality is at Fisherton House, Salisbury. We cannot but think that a more liberal exercise by the Visitors of their statutory power in granting allowances to patients on probation would facilitate such trials, and so increase the number of discharges on recovery. Those discharges have since July 28th, 1884 (the date of the Commissioners' last visit), been 48; the total discharges, 82; the deaths, 36.

The rate of mortality for the year 1884 was 10.9 per cent. upon the average daily number resident. For the interval between this and the previous visit of members of our Board, the mortality has not exceeded 9 per cent. per annum. Postmortem examination was made, we are informed, in every instance where permission could be obtained, viz., in 25 of the 36 deaths. The causes of death assigned were those usual among the insane, but in two cases coroner's inquests were held, one upon a man suffering from acute mania, who died somewhat suddenly from pneumonia; the other upon a male patient who died a fortnight after admission of acute mania. In the last-mentioned case there had been fractures of ribs, supposed to have occurred through the man's violence before his reception. The post-mortem examination of his body was made by a medical gentleman unconnected with the Asylum, and the appearances showed that the fractures had not contributed to the death.

The admissions into the wards since 28th July, 1884, have been, including readmissions, 45 on the men's side, 49 on the women's. The condition of the patients (whom we saw in their wards, in the laundry and sewing room, and at dinner) may be made the subject of a very favourable report. No one was secluded or under restraint, and all were quiet during our inspection. Those in bed were two men and five women. One of the latter had injured her hands by battering the sides of the padded room in which she was.

There was on table a good meal of fish and potatoes for dinner, and soup for the infirm and a few others. A mixture of citric acid, lemon juice, sugar, and cream-of-tartar is the beverage substituted here for beer.

The wards were, while we were in them, in good order, and quite free from offensive odours, but the waste-pipes of the sinks are not yet disconnected from the sewers, a work which we understand will be included in the contemplated improvements. In the general bath-room for females no curtains have yet been provided, and we noticed some towel rollers still accessible as dangerous weapons in the hands of patients.

The new wings will provide the alternative exits (desired by our colleagues in 1884) from the southern dormitory in each division. From the northern we see no difficulty in carrying out their recommendation, in which we concur.

The mortuary should, we think, be enlarged, so as to provide separate receptacles for the dead of each sex. Its floor has been improved by substituting cement for planks.

The W.C.s of the laundry are now under better supervision, and by the erection of a wall the laundry is now thoroughly enclosed.

The staff of day attendants is the same as at last visit, viz., 12 men and 11 women, not including artizans and laundry maids. They are 1 to 11 male and 1 to 12 female patients. For night duty there is still only one person of each sex; and there is not any special or continuous night supervision here of the epileptic or the suicidally-disposed. The present number of the former is 20 men and 8 women. The extensions now in progress provide dormitories and single rooms specially arranged for the night supervision of these classes, and we look forward to their future better oversight.

The returns of employment show an improvement upon those of the last visit, giving now a proportion (including 34 males and 20 females acting as ward cleaners) of upwards of 70 per cent. of the whole number. Deducting ward cleaners, the proportion is upwards of 50 per cent. of each sex. Of the men, 44 work on the land and at the farm, and 20 in the shops; and of the women, 47 do needlework, and 29 are engaged in the kitchen and laundry. The patients at divine service last Sunday were 210, an equal number of males and females. There has been a second Sunday service in the chapel since January, 1884. Having regard to the number of Roman Catholic patients, 40 to 50 we understand, we think that the ministrations of a priest of their own faith should be arranged for them. His visits to individuals do not appear to meet the requirements of this section of the patients under care and treatment.

No patient is, we are told, confined to the airing courts except through bodily infirmity, and the boundary walk is much used for exercise. 102 patients daily go beyond the courts. Walking beyond the estate is suspended during the winter months.

138 patients were present at the last Associated Entertainment.

19 patients are at present registered as being under medical treatment. According to the Medical Journal there has been no

necessity for mechanical restraint, and seclusion has been limited on the female side to two patients on four occasions for 32 hours. Among the male patients this mode of treatment seems to have been comparatively frequent, 17 men having been secluded on 232 occasions for a total duration of 1,099 hours. One dangerous epileptic, however, was secluded upon 147 of the occasions and for 835 of the hours.

The maintenance weekly charge for paupers is now 9s. 11d.

CHARLES PALMER PHILLIPS, Commissioners JOHN D. CLEATON, in Lunacy.

THE MEDICAL SUPERINTENDENT'S REPORT.

TO THE COMMITTEE OF VISITORS.

6th January, 1886.

MR. CHAIRMAN AND GENTLEMEN,

I have the honour to submit the Twenty-first Annual Report, with the Statistical Tables for 1885.

On the 1st of January, 1885, there were on the books of the Asylum 273 patients (viz., 134 men and 139 women); and on the 31st of December there were 274 (viz., 133 men and 141 women). The average number daily resident was 276 (viz., 136 men and 140 women); and the total number under treatment was 351, as against 282 and 374, respectively, in 1884.

The admissions were 78 (viz., 38 men and 40 women).

The discharges were 53, of which number 30 were "recovered," 16 were "relieved," and 7 were "not improved." The percentage of the recoveries calculated on the admissions was 38.5 (viz., 39.5 men and 37.5 women). The 23 "relieved" and "not improved," comprise cases which were sent to other Asylums, or which were sufficiently benefited to be sent to the Union Workhouse or to the care of relatives.

The deaths were 24 (viz., 14 men and 10 women) and represent a per-centage of 8.7 (viz., 10.3 men and 7.1 women) of the average numbers resident, and of 6.8 of the total number under treatment.

The general statistics of the Asylum are as follows:-Since it was opened in June, 1865, there have been 1,681 admissions (viz., 889 men and 792 women) of whom 186 were "re-admissions"—that is to say, they had been at least once before certified as insane and sent to this Asylum. Many of the remainder may have been in other asylums—and it is known of some that such is the case; and of the 186 "re-admissions" themselves, not a few refer to the same patient as being admitted over and over again. Of the 1,681 admissions 547 (viz., 249 men and 298 women) or a per-centage of about 32:54 have been discharged "recovered;" 429 (viz., 220 men and 209 women) have been discharged "relieved" or "not improved;" and 431 (viz., 287 men and 144 women) have died—leaving, as has been said, 274 patients on the books on the 31st December, 1885.

Of the admissions, it will be seen by Table V. that 31 were cases of mania, 31 of monomania, in which term is included melancholia, and 14 were cases of dementia, the latter being a high proportion, and suggestive of a low recovery rate.

Respecting the general bodily health of the "admissions," I have to call attention again to the large and apparently increasing number of cases suffering from *cardiac* disorder, no less than 46 of the total of 78; and of this number, I regret to say, that not more than 9 can be considered as curable.

Table VI., giving the causes of death, does not call for any special remark.

Table VII. shows, as usual, that the recent cases are the more curable, and also more fatal to life than those of longer standing. Of the 30 "recoveries," 25, or about 83 per cent. were discharged within twelve months of their admission, and all the "recoveries," except one, were cases which had not been here for more that two years. The deaths, as described in Table VII., follow much the same rule; and both the sets of figures are corroborated by the details of Table VIII.

Table IX. shows that insanity is most active in the prime of life, 61 of the 78 cases being aged from 21 to 50.

Table X. gives the conditions as to marriage in the admissions, discharges, and deaths. The admission columns show that 35, or about 45 per cent., were "married," the same number and proportion were "single," and about 10 per cent. were "widowed" or "unknown." Of the 30 "recoveries," the "married" were 20, or 66.6 per cent., and the "single" were 10, or 33.3 per cent. The "widowed" do not appear in the "recoveries" this year. Of the 24 deaths, 16, or 66.6 were "married," and 6, or 25 per cent., were "single," while those who were "widowed" only contributed 2, or about 8 per cent. to the total. According to the census returns of 1881, the proportion of married, single, and widowed, to the whole population of England and Wales, excluding all under 15 years of age, was about 55, 37, and 9 per cent. respectively. According to this, the "married" furnished fewer "admissions" in 1885 than they ought to have done, while the single furnished more, the widowed being in nearly the proper number. The "married" "recoveries" are also considerably in excess of the due proportion, the excess being met by a deficiency in the "single" and "widowed" cases. Of the deaths, the "married" cases come badly off, being much above their proper average, and the excess is made up by a corresponding deficiency in the "single" cases, the "widowed" being nearly right.

Table XI., giving the cause of the insanity in each of the admissions, discharges, and deaths during the year, shows that in a considerable number the malady was distinctly traceable to physical cause. Intemperance in the use of alcholic stimulants figures in 5 (or about 6.4 per cent) of the 78 admissions. It will probably always be a vexed question whether the intemperate habits are the cause of the insanity, or the insanity is the cause of the intemperate habits. As the result of many years' careful study of the causes of insanity, I can only remark that in the great majority of those particular cases which have come under my own notice, the evidence is in favour of the conclusion that the insanity causes the intemperate habits. The reverse only happens when there is already some disease which is due to impaired nutrition. Perhaps it is for that reason that the descendants of a drunkard are more liable to insanity than the drunkard himself.

The Tables giving the weight on admission and on discharge "recovered," and the average number daily employed are given again this year.

I have the pleasure to report favourably of the general conduct of the officers and servants during the past year.

I beg leave to thank you for all your kindness and courtesy towards myself.

I have the honour to be,

Mr. Chairman and Gentlemen,

Your most obedient servant,

R. H. B. WICKHAM.
