That the expenditure of the past quarter has been as follows :---

And the present balance due from the Treasurer is on the Maintenance Account £2389. 12s. 1d.—and to the Treasurer on the Building Account £127. 11s. 6d.

The number of Patients in the Asylum at the close of last year was 505, the present number is 509. There is vacant accommodation in the Asylum for 12 males and 4 females.

The Buildings of the Asylum are, as the Surveyor reports, in a satisfactory state of repair. The Nurses and Attendants have conducted themselves generally to the satisfaction of the Visitors, there having been only two dismissals of Attendants for misconduct during the year. At the beginning of this year the weekly cost of maintenance was reduced from 9s. $7\frac{1}{2}d$. to 9s. 4d. and a further reduction was made to 8s. 9d. in June last. As the land belonging to the Asylum was insufficient to afford employment to the ablebodied Lunatic Paupers, the Visitors rented five acres of land for this year, and they have reason to be satisfied with the experiment, as it has afforded the required employment with some gain to the funds of the Asylum.

The Visitors have pleasure in reporting that they continue to be satisfied with the care and skill of the Superintendent, Mr. Ley, and the present medical Officer, Mr. Davies, and the rest of the Officers and Attendants of the Asylum.

THE COMMISSIONERS IN LUNACY REPORT.

SALOP COUNTY ASYLUM, THURSDAY, 22nd SEPT. 1870.

Since this Asylum was visited on the 14th September in last year, 114 patients have been admitted, 59 males and 55 females. 57 have been discharged, 31 males and 26 females, of whom all but 9 of the former, and 2 of the latter, are entered as recovered; and 48 have died, 21 in the male and 27 in the female division. One inquest was held, in the case of an Epileptic who died during a fit; but there was nothing unusual in any of the deaths, the principal having been from causes ordinary in Asylums, and especially so in Asylums containing, as this does, so large a proportion of paralysed and feeble cases. More than two-thirds of the whole number were from general palsy, epilepsy, and senile decay.

We went over all the wards vesterday, and saw therein 50^6 patients, 237 males and 269 females; there being also one female absent on trial. These numbers leave so few vacant beds, that the question of additional provision will soon have to be considered; and we see much that would be satisfactory in a proposal submitted lately to the chairman of the committee by Mr. Ley, for conversion into dormitory space of the attics of No 6, male and female wards, if corresponding day-room space were at the same time obtained by construction of a large associated dining-room, which is much Connected with this also is a suggestion for the wanted here. erection of a small detached hospital for infectious cases, which we regard of the greatest importance, the necessity for it having lately shown itself in a case of scarletina among the nurses, which, by timely isolation, was happily limited to one person; and with much satisfaction we have learnt that, by a resolution adopted at the last committee meeting, the gas works so frequently objected to in these entries, will immediately be removed, and the necessary supply

obtained from Shrewsbury. This will admit of what so long has been matter of urgent necessity here, the provision upon that site of new tailor's and shoemaker's and other shops, whereby the opportunities of regularly and profitably employing patients will be most beneficially attended, and an additional boon will also be conferred by conversion of the existing tailor's and shoemaker's shops into a general bath room on the male side, corresponding to that on the female division, which has been found so great an advantage. All the inmates of both divisions were singularly quiet at the time of our visit, and emphatic as was the praise bestowed in the last Commissioner's entry upon the arrangements for the sick, who are unhappily on both sides so large a part of the inmates-addition, if possible, should now be made to it-with the same cheerful surroundings, substantial addition has been made to the comforts. Special infirmaries for paralytic cases have been supplied by suitable' conversion of a dormitory in each division connected with No. 6 wards respectively. Earth closets of better construction than we have yet met with, both moveable and stationary, and which do not appear to be attended by any inconvenience in the working, have been placed in the hospital accommodation on both sides ; the lavatories and baths have been increased; many new chairs of easiest shape have been placed; and immense improvements has been made in the airing courts more particularly connected with these wards. That of the male infirmary, No. 5, has been enlarged and very beautifully planted, and into that of No. 6, on the female side, as many as five and twenty full grown trees have been transplanted from the pleasure grounds in front of the Asylum, which we were glad to see open to the patients vesterday and to-day. There are nearly 150 patients altogether who are unable, from their infirmities, ever to get beyond their airing courts, and the importance of what has been thus done for them, since the last visit, can hardly be overrated. We cannot say that we think the condition of the occupants of the ordinary wards on the male side of this Asylum, as we found them yesterday, comparable to that on which we found the female patients generally. They were not all as a rule, so well clothed, nor were their clothes or their persons so uniformly well attended to. There is, indeed, a marked difference; and we are constrained to add that it seemed to us to be mainly accounted for by the fact that the class of the attendants is inferior to that of the nurses, less qualified for the duties, and less under discipline in the discharge of them. Making enquiry as to this, we learn that generally the remuneration is more satisfactorily proportioned on the female than on the male side, and the changes therefore necessarily more frequent on the one than the other, nearly half the number in the male division having been changed in the comparatively brief interval since we last visited; and these changes

having comprised the loss of a very valuable head attendant. There is no subject that will better reward the immediate attention of the committee than that of the sufficiency of wages to obtain the services of men properly qualified for asylum duty, and in leaving it we ought not to omit to say, in connection with the advantages possessed by the female over the male patients in this respect, that the present Matron of this Asylum is evidently a most efficient officer.

When the new workshops are provided, we shall expect to have a better report to make of the profitable uses to which the labour of the male patients is applied, and it is satisfactory to learn meanwhile that the five acres of ground for potatoe planting having been rented by the committee since last year, the employment out of doors has been rendered thus far so much more remunerative that we may hope such opportunity will continue to be afforded, and will lead to what has been wanted so much—a permanent addition to the land of the Asylum.

About 100 thus work out of doors, and 40 at various trades; while of the women, 39 are in the laundry and kitchen, and 88 engaged in sewing, knitting, and needlework.

The Chapel attendance averages upwards of 250, in nearly equal numbers on Sundays; 222, the females being about 20 more than the males on work days.

Something less than 200 is the number that take part in the associated entertainments, for which, and for regular exercise beyond the Asylum grounds, opportunities seem to be given with fair regard to the requirements of the patients in these very important respects. We saw an excellent dinner served yesterday in the female division, and the same in quality and abundance was at the same time in progress on the other side.

From the medical records, which are most carefully and efficiently kept by Mr. Davies, so long the most attentive Assistant Medical Officer here, we have to report that there has been no restraint since the last visit; that the seclusion has been limited to 28 males and 21 females. The instances in the former division being 172, and in the latter 60; and that the numbers at present taking medicine are 18 men and 22 women. Notwithstanding the great many sick of both sexes, there were few in bed; and we here take occasion to mention, with much satisfaction, the rule which admits of patients being visited by their friends, not on any fixed days merely, but every day of the week, including Sundays, subject only to the proper conditions imposed by the Medical Superintendent.

Of the manner in which that gentleman continues to discharge his various and very responsible duties, we cannot speak too highly; as to the general visitation and management, we have to state that monthly meetings are held for general business, when also the wards are always visited and patients when recovered are discharged, while an additional visit is made to the wards, at least once in the interval between these monthly meetings, by a visitor specially appointed out of those who represent Salop.

.

JOHN FOSTER, ROBERT NAIRNE. COMMISSIONERS IN LUNACY.

THE SUPERINTENDENT'S REPORT.

GENTLEMEN,

I have the honor to submit to you the twenty-sixth Annual Report of this Asylum, to which are annexed the usual Statistical Tables, giving detailed information concerning the number of patients admitted, discharged, or died, and other matters connected with the history of the Asylum during the past year.

The customary Financial Statement is likewise submitted.

On the 1st of January, 1870, there were resident in the Asylum 508 patients, 236 men and 272 women. Since that period, 99 new cases have been admitted, making altogether a total of 677 patients who have been under care and treatment; of this number 56 were discharged recovered or relieved, and 42 died. The admissions and removals have therefore so nearly balanced each other, that on the 31st of December, only one patient remained in excess of the number resident at the commencement of the year. These figures however do not represent the increase in the average population of the Asylum, which was 20 more than in 1869; the excess being principally on the female side. The highest number in the house at any time was 514, the lowest 501.

Contrary to the experience of former years, the number of males admitted exceeded the females, there being 51 of the former and 48 of the latter: the majority of these admissions were sent from the various Unions and Parishes in the two Counties, the number chargeable to Shropshire being 71, and to Montgomery 28. Three criminal patients were received from the County Gaol, and one patient belonging to that class was transferred from the Broadmoor Asylum, under the provisions of the recent Criminal Act. Two males and two females, whose places of settlement were found in this County, were transferred from other Asylums, they were cases suffering more or less from incurable mental disease.

Twelve males and nine females, or about one-fifth of the total number of admissions, were patients who had formerly been under treatment in this Asylum, of whom eight males and six females had been discharged recovered. The length of time between the previous discharge and relapse varied from three months to eight years, the average duration being about three years.

The admissions, as in former years, were of a very unsatisfactory character, the standard of health particularly among the males, being remarkably low. The number suffering from severe organic nervous disorders was unusually large, and raised the proportion of that class so much, that the accommodation provided for those patients, was, in both divisions, quite inadequate to the demand. In my last Annual Report I adverted to the number of Epileptics resident in the Asylum; during the past year no less than twelve others were admitted, five of whom are Imbeciles from birth, the remaining seven are all demented cases, for whom there is no possibility of doing anything more than endeavouring to preserve them from injuring themselves or others. Eleven males and three females were suffering from General Paralysis, and three males and four females from other Organic Brain mischief. The youngest case admitted was that of a boy aged 12, an imbecile from birth, sent from the County Infirmary, with a fractured thigh; his injury did well, and he happily was removed to Earlswood, where he will receive that special care and training which his case demands,

The duration of the Mental Disease previous to admission varied considerably; in nearly fifty per cent. it had existed for more than twelve months before Asylum treatment was sought. As a rule it may be fairly stated, that if the early symptoms of insanity are unaccompanied by noisy conduct or any tendency to violence, patients are kept at home or in the workhouse until the more turbulent characteristics of the disease manifest themselves, then and not until then, are they transferred to the Asylum, arriving often in a condition precluding all possibility of recovery. The history of some of the admissions of last year practically illustrates this fact; in three instances, patients suffering from curable forms of Mental Disease were allowed to remain at home until from long continued refusal of food and improper treatment, they became so exhausted that when brought to the Asylum they died soon afterwards from want of rallying power. It is painful to reflect that the majority of those admitted are hopeful insane. The cases probably curable, form certainly not more than thirty per cent. of the total number, and of these sixteen have been discharged before the close of the year.

Among the admissions were twenty-nine cases in whom suicidal impulse was present in a marked degree. Of the twelve males of this class, five had made attempts at self-destruction previous to admission by cutting their throats, two had endeavoured to drown themselves, and three had attempted strangulation. Of the fifteen females, ten have attempted suicide in different ways, the others had threatened, but were prevented from carrying out their intentions. The homicidal tendency was present in fifteen instances.

The number of patients discharged during the year amount to fifty-six, of whom twenty-four males and twenty-three females were recovered, and seven males and two females were relieved. The number of recoveries are in the ratio of forty-seven per cent. on the admissions. The average duration of residence varied from one month to four years. In the majority of cases the progress towards convalescence commenced soon after admission, and continued without intermission until perfect recovery was attained. Two females recovered, one after a sojourn of four and the other of two years, in the former case the insanity was caused by Epilepsy, in the latter by General Bad Health and Domestic Troubles. Both these cases are remarkable instances of the importance of not relaxing our efforts for the cure of any patient, no matter how long may have been the duration of residence or the apparent hopelessness of their condition. In only one case did the duration of insanity previous to asylum treatment exceed twelvemonths-in seventy-four per cent. the duration was under one month,-a conclusive proof, if any were needed, of the efficacy of early treatment. The forms of Mental Disorder among these recoveries were chiefly Mania and Melancholia, in two cases complicated with Epilepsy. The causes of the insanity were principally Hereditary Taint, and the Predisposition from previous attacks. Of the total number who recovered, seven males and ten females were cases who had on previous occasions been under treatment in this Asylum.

The number discharged relieved was seven, four males, and three females, of these, three were removed to the care of their friends, one was sent to the Workhouse, and three were transferred to other Asylums.

The mortality during the year amounted to forty-two, which gives a death-rate of 8.31 per cent. on the average number resident, and 6.20 on the total number under treatment. So low a deathrate has not occurred for many years, and is much below the mean average mortality of this Asylum. A somewhat unusual feature in connection with it is, that the death-rate for the both sexes is equal. A very large proportion of those who died were persons of advanced age, thirty-three per cent. were above the age of 60, four were

between 80 and 90, and three were between 70 and 80. The average age at death for the males was 50, and for the females 55; this exceptional low mortality and the general freedom from disease that has characterized the past year may fairly be attributed 1stto the greater attention paid to the quality, quantity, and preparation of the dietary; 2nd—to the more efficient sanitary arrangements; and 3rd-to the more careful watching and nursing of the feeble, helpless, and depraved. It is worthy of note that considering the number there are suffering from General Paralysis in the Asylum, the mortality among that unfortunate class has been of late singularly small; probably they were favored by the comparatively mild winter of last year, for as a rule a severe winter is not only generally attended with an increase in the mortality among all classes in an Asylum, but among the helpless and demented, exceeding low temperature is always rapidly fatal.

Eight cases or about nineteen per cent. of all the whole mortality arose from deaths which occurred in cases admitted during the year. Among the males, six patients died from General Paralysis, one of these had been resident more than seven and another more than four years. Four males died from Epilepsy, one of these had been in the Asylum more than twenty-four years, was subject to furious manical attacks, and was notably an uncertain and dangerous lunatic. The decay of old age was fatal in three instances, all of whom had been incurably demented for years. Phthisis, and Disease of the Heart and Lungs, were the causes of death in five patients, one of whom was an imbecile from birth. Among the females, Phthisis was fatal in six instances, and occurred with one exception in patients who had long been resident in the Asylum. They were all of the demented class, of low mortality and imperfect organization; one of them a congenital imbecile was only 15 years of age. Senile Decay occurred in seven cases, and in two other cases it was accompanied with Organic Cerebral Disease. Four of these patients were above the age of 80. Two patients died from Epilepsy, in one of whom the disease was Congenital. Exhaustion from Mania was rapidly fatal in one instance, a middle-aged woman who was brought from the Workhouse in a low typhoid condition from long continued abstinence. A woman aged 79, died after a lengthened sojourn of over twenty-four years, she was quite demented, but was perhaps the most persistently destructive and methodically dirty patient in the Asylum.

Of the 509 patients remaining in the Asylum at the end of 1870, only twenty-one males and twenty-nine females are thought to have any chance of recovery; the other 459 patients are probably incurable, whose detention in an Asylum is necessitated either from their known suicidal or dangerous tendencies, or from some peculiarities connected with their mental condition. No less than thirty-four are idiots or imbeciles from birth, many of these are epileptic, and all are more or less unsuitable for residence either with their friends or in the wards of a Workhouse. The proportion of epileptics, as I before remarked, is gradually increasing, and now amount to about one-fifth of the whole number of the inmates, a proportion which may be estimated as being in excess of the average in other Asylums. With this class improvement is rarely expected, and the painful nature of their malady render them unfit to be at large. More than thirty of each sex are quite demented, many of these are suffering from the daily increasing infirmities of declining power and life. Thirty-four males and sixteen females are paralytics, the bulk of whom are helpless, some are quite bed-ridden, and all require the most careful supervision and the most assiduous and tender nursing. In round numbers there are now resident more than a hundred of each sex-imbeciles, epileptics, paralytics, and demented, who do Among the many patients admitted whose insanity is nothing. complicated with known suicidal tendences; there are several in whom this distressing impulse is always more or less persistent. Ι am thankful to say that no fatal result has occurred during the past year, although we have had to guard against several threatened attempts at self-distruction. One case which nearly proved fatal caused us considerable anxiety, and illustrates in a marked degree the latency of the suicidal impulse and the devices which lunatics have resort to to accomplish their end. In June last, a male patient had craftily stolen a knife from the scullery of his ward, and in order to elude detection had buried it in the kitchen garden, where he was in the daily habit of working. He was a quiet industrious man, rather taciturn and reserved, but was not suspected of harbouring suicidal tendences—his mental condition was daily improving, and so favorable was his progress that on the morning of the day on which he made the attempt upon his life, he was told he should be removed into the convalescent ward, and was cheered with the prospect of ultimate discharge. Possibly the idea of changing his ward quickened the latent suicidal impulse; for before returning from his work in the garden the patient disinterred the knife where he had kept it concealed for more than three months, brought it into the ward, and immediately after dinner went into the closet and cut his throat. He was for a long time in a critical condition, but good nursing in the end saved his life. As the wound healed, his mental state improved, the suicidal propensity passed away, the patient became most anxious for his own recovery, and was unfeignedly sorry for what he had done.

A case of Scarlet Fever occurring in one of the female attendants in August last, created some anxiety on account of the difficulty experienced in isolating a patient in a building so crowded and so intercommunicating. Happily the means taken, although causing considerable inconvenience, were effectual in preventing the spread of the contagion. In reporting the case to your notice and urging the desirability of having some permanent and separate provision made for the treatment of contagious diseases, I ventured to suggest to the Committee a mode of enlargement of the Asylum, which if embraced would not only attain the object I had in view, but would provide increased bed-room accommodation for about seventy patients, without any additional building, and at a cost not exceeding £600. The details of this scheme having been brought before your notice so recently, it is not necessary for me to recapitulate them here. Owing to the increasing accumulation of Chronic cases and the low mortality of the past years, the Asylum is now almost full. At the end of 1870, the vacant accommodation was for twelve males and four females, but to-day the female wards are not only full but contain four patients in excess of their maximum complement. It is obvious that unless some marked diminution in the number be effected, the question of finding some additional accommodation must be before long entertained. It is open to grave doubt whether the existing vacancies on the male side will be sufficient for the requirements of that sex for the current year; this cannot be determined with actual certainty, but it appears probable that as the admissions during the past twelvemonths were so much below the average, there will be a compensating increase in the number demanding relief during the current year. As a general rule it may be stated that an increase of pauperism in the district is usually followed by an increase of lunacy; judging from the severity of the present winter, the numbers of labourers and others out of work, the enhanced prices of provisions, and the possible advent of an epidemic disease, there is I fear a probability of a grave augmentation in the numbers demanding Poor Law relief in the two counties. Be this as it may, the practical question remains. The Asylum on the female side is overcrowded, and without some modification of its structural details it will be impossible to accommodate more than our actual numbers. It will be remembered that after the completion of the Nos. 5, male and female new buildings, accommodation was found in December, 1865, for two hundred and twenty-nine males and two hundred and thirty-nine females, or a total of four hundred and sixty-one patients. In 1866, the South wing of No. 1, female, was connected to the No. 5, female ward by a building which afforded additional dormitory accommodation for thirteen patients, bringing the total number of beds to four hundred and seventy-four. No

other building has been erected since that period, but certain minor structural alterations and a total re-arrangement of the wards have allowed space for a further increase of fifty-one beds, thereby bringing the total number for which accommodation can be found from four hundred and sixty-one in 1865, to five hundred and twenty-five in 1870. There is a limit to the elastic powers of an Asylum, and for many grave reasons it would be unwise to herd lunatics too closely together; as it is, the superficial area and cubical space allotted to each patient in the associated dormitories is only sufficient for the due preservation of health; in some of the sleeping apartments where the more helpless and degraded of the patients are located, the area might with advantage be increased.

The Table on the following page has been constructed to shew the distribution of the patients throughout the different wards, with the cubical and superficial space allotted to each in their respective dormitories.

There is nothing new to report with regard to the general management of the Asylum, and the moral treatment of the patients. Our statistical records show that the number employed during the past twelvemonths has been as large as in former years, and in no preceding period has so much been done towards the permanent improvement of the airing courts and grounds. The produce from the Farm and Garden bear ample testimony to the amount of care and attention bestowed upon them. Agricultural labour is certainly the most beneficial, and probably is the most valuable kind of work to which we can devote the energies of the patients. To the majority it is the only labour to which they have been accustomed, and the only employment in their changed mental condition to which they are suitable. When properly carried out its importance as a means of cure and alleviation cannot be over-estimated. The amount of work done by individual patients is generally not large, as the majority either from physical weakness or mental peculiarity are incapable of sustained exertion, but their united labour amounts notwithstanding to something considerable, and proves itself an element in the economical administration of an Asylum, worthy of being utilized to a much greater extent than what it really is. The renting for a limited period, by the Visitors, of five acres of land adjoining the Asylum, marks the first step towards a better developement of the patient's labour. The ground in question was planted with potatoes, and considering the dry season the yield has been fairly abundant. If the tubers do not become unsound under keeping during this rigorous winter, we shall probably have a supply sufficient for our wants until next season. The manure

collected from the Earth Closets has been fairly tested during the past year, and has yielded results most satisfactory both as regards quantity and weight of the crops. The substitution of Earth Closets for Water Closets practically solves the vexed question of the proper disposal of Asylum sewage.

With regard to the other points of treatment and the amusements and recreations of the patients, it will be unnecessary to recapitulate what has so frequently been noticed in former reports. Theatrical representations and Concerts were given in the early part of the year, but to a great extent our efforts in that direction were paralyzed by the loss of some of our best performers. The Band continues very efficient, and the usual dances have been held always once and frequently twice a week. Entertainments are so necessary and so important a part of the general plan of treatment that I regret that more cannot be done to develop and extend what is obviously productive of so much benefit to the patients. The Library has been increased by the donation of several volumes of books from Mr. Evton, and through the liberality of Mr. LLoyd of the Knolls, and the assistance of his gardener, Mr. Wilson, the male South airing court has been well planted with forest trees. The male infirmary airing court has been enlarged by the formation of a new walk, and by taking into it the belt of trees on its Western side. The female South airing ground has been remodeled and laid out, and in the spring of the year about twenty-five full grown chesnut trees were transplanted from the front associated airing ground and placed so as to form an avenue around the broad walk. All those patients whose mental condition would allow of more extended exercise have been permitted to join the country walking parties which take place weekly. Some patients have had leave granted them for short periods to visit their friends; to all classes this indulgence has a great effect in lessening that feeling of detention and confinement which the inmates of Asylums so frequently experience and complain of. To the more hopeful class these probationary assences are useful in testing their power of selfcontrol, and in determining their fitness for final discharge.

The full services in the Chapel on Sundays and on Wednesdays and Friday evenings have been conducted throughout the year as usual, and have been well attended by the patients.

I have the honor to remain,

GENTLEMEN,

Your obedient Servant,

H. ROOKE LEY.

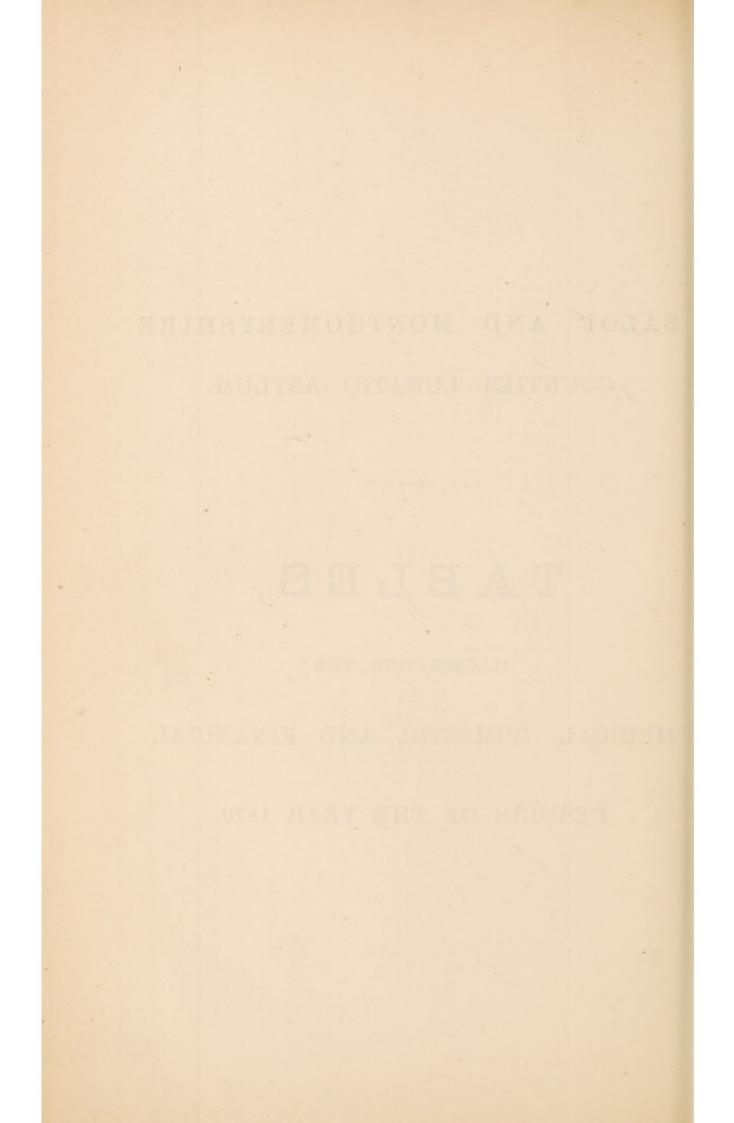

SALOP AND MONTGOMERYSHIRE COUNTIES LUNATIC ASYLUM.
