REPORT
OF THE
COMMITTEE OF VISITORS
OF THE
County Lunatic Asylum,

PRESENTED TO THE
COURT OF QUARTER SESSION,

*Held at TAUNTON, in the said County, on TUESDAY, the 31st day of
DECEMBER, 1873.*

THE VISITING COMMITTEE of the Asylum have to report that there has been no prevalent illness during the past year, and that the health of the patients has been remarkably good.

There are now in the Asylum 273 males, and 279 females ; in all 552.

The general state and condition of the Asylum is satisfactory.

The Repairs and Improvements internally have been continued under the superintendence of the Building Committee.

The numbers admitted during the last year have been, Males 101, Females 77 ; in all 178.

The excess of Males over Females is remarkable ; many of them have been sent in in extreme old age, when they ought to have been left in the Workhouse or with their friends.

It should be remembered that the Asylum is an hospital for the treatment of acute cases of Lunacy, and that generally it is most important that insane persons who have no property, and whose friends cannot maintain them, should be sent immediately to the Asylum, for on this their cure mainly depends; on the other hand, it is most improper that the poor should be sent there to die, because they are troublesome to the medical man who has charge of the Workhouse, or to the Officers there, and the guardians ought to have proper persons to attend to them.

There is now room for 286 on the female side and 7 beds vacant, and in consequence of the very remarkable increase in the number of males, there is room for only 14 on that side. The remaining male private patients will be removed and the London patients when necessary.

The Bath contract for Males has been continued for another year.

The management of the Asylum, and the conduct of Dr. Medlicott, Mr. Dove, and Mr. Masterton, who have been his assistants, of the Chaplain, the Clerk, and the attendants, has been satisfactory, and especially the medical care of the patients, to which Dr. Medlicott has given particular attention. It is believed that in this respect, and in recording the symptoms, treatment, and results of insanity in the Case books, this Asylum is among the best.

The Commissioners in Lunacy, when they visited the Asylum, made a minute in which they expressed their satisfaction.

In consequence of the rise of prices during the last year, the charge on the Unions has been increased from 9s. 4d. to 9s. 11d. for June Quarter, and to 11s. 1d. for the remaining quarters.

The Committee feel it their duty to inform the Court that a demand has been made on them for arrears of income tax by the Surveyor of Taxes amounting to £480. The figures are taken from the Asylum reports, and the tax is charged on the profits made by the Asylum from the excess charge for the patients not belonging to the County, for the whole of the 26 years since the opening of the Asylum. The Committee has postponed its consideration of this demand until the next meeting, and will be happy to receive any advice from the Court which may enable them to avoid payment of the whole or a part of this heavy charge.

The North Wings of No. 3 on each side have been raised ; the whole cost has been £1048 19s. 4d., of which £1018 has been voted by Quarter Sessions, and the rest will have to be paid out of the Building fund.

The Committee have postponed the detached building to the east of the Asylum for the present, and are proceeding with the new Infirmary on the female side. A contract has been made with Mr. Ashman for £7640, which is considerably in excess of the estimate, amounting to £5540.

His tender was the smallest sent in excepting one, which was £18 less, by a person of whom the Committee knew nothing, and they gave it to Mr. Ashman, as he has executed other work to their satisfaction.

The long negotiations for providing a Cemetery, which have often been mentioned, and for which the Court has granted £500, are now, it is hoped, approaching their end, and the Bishop, it is expected, will soon consecrate so much of the ground bought as is marked out for the Cemetery.

In the autumn Dr. Medlicott received a violent kick from a patient named Joseph Sargent, an epileptic, a criminal

lunatic belonging to Clifton Union, who has since been removed. The kick caused internal injury, and Dr. Medlicott had to submit to two very severe operations, and his life was in danger. He is now sufficiently recovered to attend to his duties, and it is hoped that he will suffer no permanent injury.

Mr. Dove, who has been for two years assistant Medical Officer, obtained leave of absence in July to enable him to make a voyage to Australia for the benefit of his health, and has since sailed in charge of the emigrant ship "Salisbury," to Wellington, New Zealand. Mr. Masterton, who attends to his duties in his absence, has so far conducted himself to the entire satisfaction of Dr. Medlicott.

The Committee propose that they be reappointed, and that the name of Mr. Badcock be omitted at his request.

TWENTY-FIFTH ANNUAL REPORT
OF THE
SOMERSET
COUNTY LUNATIC ASYLUM,
FOR THE YEAR 1872,

BY C. W. CARTER MADDEN-MEDLICOTT, M.D.,
RESIDENT PHYSICIAN AND SUPERINTENDENT.

THE Medical Superintendent has the honour to submit to the Committee of Visitors, the Twenty-sixth Annual Report.

On the 31st December, 1872, the numbers in the Asylum were 237 males; 276 females: total 513.

The Admissions during the year have been 101 males; 77 females: total 178.

The Discharges during the year have been 65 males; 74 females: total 139;—of these have been discharged “Recovered,” 24 males; 42 females.

The Deaths during the year have been 35 males; 21 females: total 56.

The average population during the year has been 262 males; 289 females: total 551.

The numbers in the Asylum this day (31st December, 1873), are 273 males; 279 females: total 552.

It is matter for congratulation that the sanitary condition of the Asylum, and the general health of the patients have

been remarkably good during the last year. Although a considerable amount of building operations have taken place, no casualties have occurred to any of the patients who were employed.

There have been various structural alterations in the Asylum during this period. Some of these were necessary to fulfil the requirements of the Commissioners in Lunacy, others again have been demanded to meet the increasing wants of this large hospital for the insane.

Chief among the structural additions has been the room gained by raising the north wings on each side of the Asylum one story. This gives accommodation for eleven extra single rooms on the male and female divisions of the house.

Supplementary to this have been various minor works, having reference chiefly to renovations, such as re-flooring, re-plastering, re-cementing, and re-slating. Some important alterations have also been required at the Gas Works, but mainly in connection with the enlargement of the "purifying house."

ADMISSIONS, DISCHARGES, DEATHS.

The following analysis gives the chief points of interest in these returns :—

ADMISSIONS.

The number of admissions during the year has amounted to 178 (101 males and 77 females).

A fair number of acute cases of insanity have been admitted, but it is much to be deplored that, as a matter of course, persons simply in a state of second childhood continue to be brought to the Asylum, and greater than ever therefore is the necessity for enforcing a better and wiser discretion in signing certificates of lunacy.

Many cases could be adduced where persistent warnings of grave mental disorder (demanding yet not obtaining immediate medical treatment) have been totally disregarded, whilst on the other hand, the imaginary grievances of ordinary dotage have been transformed into thorough alienation.

In the 1st Quarter, admitted 42 cases; 22 males; 20 females.

„	2nd	„	„	42	„	29	„	13	„
„	3rd	„	„	52	„	29	„	23	„
„	4th	„	„	42	„	21	„	21	„
Total				178		101		77	

DISCHARGES.

The proportion of recoveries has been for the males 23·7, and for the females 54·5 per cent. on the admissions. Among the discharges during the year have been a few patients, who after admission were found “not insane.” Notice of similar cases has been referred to in previous annual reports. They have for the most part been *criminals*, generally old offenders, who unfortunately had not yet learnt the art of self-discipline and control, but who nevertheless were decidedly simulating insanity.

Others again have been discharged, who, from their extreme age (one patient being 86 years old, and another 84), were obviously unfitted for asylum treatment, and indeed should never have been admitted at all.

No more cases have been sent to the Unions, their dietetic arrangements generally not proving satisfactory, or in any way encouraging. If with advanced age medical extras are needed for sane paupers, it is certainly true that the ordinary diet of workhouses is not applicable for the pauper or aged insane.

It is only proper to state that some of the discharges, and especially those in the case of lunatics recovering from the acute stages of insanity, have been remarkably satisfactory. Patients as a rule, however, on discharge are by no means indifferent to their chances of relapse. Too much sympathy, therefore, can scarcely be exhibited in such cases, either for the criminal hovering between vice and virtue, or for the pauper lunatic struggling against the superstitious prejudices with which he is too often regarded.

DEATHS.

The mortality has been 56, or 10·3 per cent. both sexes, on the average numbers resident.

There is nothing that calls for special notice in the obituary of the past year, save the fact that on the one hand many patients have been admitted in a semi-moribund state, frequently emaciated by privation and disease, whilst on the other, very aged people have been made out insane, and have been brought to the asylum only to die.

There is no doubt that there is a clear want of reform in this matter, and future legislation will have to remodel the defect. As the case now stands, persons extremely advanced in years, (in fact only undergoing the penalty of natural decay), are unfortunately *manufactured* insane, and it is fully open to question whether this should not be regarded

as criminal neglect, entailing as a matter of course a prosecution at common law. Every year patients are admitted to the asylum upwards of 80 years of age.

In the 1st Quarter there were 18 deaths; 10 males, 8 females.

OCCUPATIONS AND AMUSEMENTS.

It will be seen by reference to the “Statistical Tables” that the patients as usual have been actively employed at useful labour of various kinds throughout the year. The importance and great remedial value of occupation in the successful treatment of insanity cannot be too often insisted upon. Handicraft labour, therefore, has been duly encouraged, thus proving a means of cure, as well as defraying a portion of the cost of maintenance.

No further vindication of the beneficial effects of occupation need be given. A visit to the workshops in the Asylum will prove its effects on mental tranquillity; and here *en passant* it may be observed, that many of the articles in the workshops are excellent samples of the skill attained by insane persons. As a matter of course many patients were proficient workmen prior to their becoming insane, but it is also proper to state that others have been taught different trades whilst in the Asylum. A few who were agricultural labourers, entirely ignorant and uninstructed, and who refused to work on the farm or garden, were transferred to

the workshops, and there became more tranquil, to say nothing of attaining remarkable skill and efficiency as carpenters, cabinet makers, carvers and turners, upholsterers, blacksmiths, shoemakers, &c.

Occupation thus very materially lessens the tedium of residence, and besides fulfilling a most important function in itself, inculcates habits of order and industry, and enables many a patient to earn an honest and comfortable livelihood on discharge.

There have been in addition the usual series of amusements, comprising various out- and in-door games. During the summer and autumn months cricket and football were played, whilst in the winter dramatic representations took place, as also the weekly dances, together with exhibitions of the magic lantern, &c., &c.

MEDICAL TREATMENT.

Whilst so-called "moral" means have been adopted, to avoid irritation, and to distract the mind from morbid to healthy objects of attention, medical treatment has not been neglected.

The Asylum containing persons physically as well as mentally debilitated, has been regarded as a *hospital* for the insane, and the general management has been conducted on the principles of ordinary hospital practice. The varying phases of disease, and the different modes of diagnosis, have therefore been clinically studied, and that treatment adopted which appeared the most important auxiliary for the control of intercurrent or individual diseases.

It is unnecessary in this place to specify medical details, but it may be generally stated, that no attempt has been made to attach extreme importance to the use of any particular drug in the treatment of insanity. The reign of empiricism in this department has passed. Indeed, it is sufficient to add that remedies have been employed for the mitigation of distressing or exhausting symptoms, exactly as they occur in the practice of the hospital physician.

A few casualties have occurred during the year demanding surgical measures. There is nothing, however, calling for special observation as regards the treatment employed, which consisted in the use of antiseptic dressings (carbolyzed protective, and gauze), also Professor Lister's improved spray producer, for spraying wounds antiseptically.

Although much has been done to revolutionise the condition of the insane, it is indisputable that only within the last few years medical treatment has become a more distinct element in lunacy practice. This change has coincided with a growing tendency to disregard mental symptoms not founded on impaired bodily health. The nervous and highly strung natures so often met with in asylums, too impressionable for either their own or others' happiness, and too often relegated to the care of *charlatans*, are just those requiring medical treatment. Unfortunately, however, diseases of the nervous system, at once the most obscure, and perhaps the most afflicting of all, are just those which most defy the art of the physician.

Independently, moreover, of these affections, many patients are the presumptive inheritors of other forms of grave constitutional disorders, and the greater therefore is the duty of the asylum physician to treat insanity as the *delirium* of chronic disease.

In conclusion, the Medical Superintendent begs to return his most grateful acknowledgments to the Committee of Visitors for the confidence and support tendered him in the discharge of his arduous and responsible duties.

REPORT
OF THE
REV. R. P. WOOD, CHAPLAIN.

To the Visiting Justices of the Somerset County Lunatic Asylum.

GENTLEMEN,—

I have not found my work in the Asylum so entirely different from parish work as I expected. There have always been some, though very few, who might be treated as sane. In their case the chief difference has been that, since they soon went away, it could rarely be known whether any good impression which seemed to be made was permanent.

There are others who, though unfit to be removed, evidently value the services in Chapel, are thankful for private ministrations, and are able to attend to both with understanding to a considerable extent.

Even in cases which seem almost hopeless, I think an indirect effect is produced. I have hardly ever heard bad language from those who, I am informed, are in the habit of using it. This must show that they have respect for my office, and that, in some degree, they know right from wrong. I believe the worst would be worse still if there were nothing to remind them, however dimly, of religion, which, perhaps, once had power over them.

The behaviour of the patients in the Chapel has been, on the whole, orderly, and they have seemed more attentive than might have been expected. The average number present at each service has been :—

			Men.	Women.
Sundays	128	170
Other Days	116	72

One of the most anxious parts of my work has been the determining who are fit for Holy Communion. I have thought it right to admit those who had been communicants when in health if they desired it and were well conducted; provided they had intervals of comparative sanity, or if their minds were weakened rather than deranged, and there was as much understanding concerning the nature of the sacrament as would be required from the most ignorant under ordinary circumstances. Some convalescents have also been communicants before, and have attended here. A few have been prepared and communicated for the first time at the Asylum Chapel. I found that Holy Communion was administered to the patients on the first Sunday in every month. I have continued the same practice, adding a celebration at an earlier hour on each of the great festivals when I could expect that a sufficient number of officers, servants, &c., would attend. The average number of communicants has been, patients, 7; others between 4 and 5.

The Alms have been £3 13s. 6d. Also 8s. 6d. on days when patients did not attend, and £2 1s. 6d. at Christmas, 1873, after the day of intercession for the success of Foreign Missions, which was sent to the Missionary Candidates' Association. £2 8s. 6d. has been given to patients leaving the Asylum.

From Advent last year till Easter there was service on Fridays at half past eight in the evening for attendants. The congregation was small. A few of the women came and also joined in the choir practice which preceded the service.

The Funerals have been, Men, 27 ; Women, 14.

The school, held three days a week for men and three for women, enables me to give a short religious instruction. It is listened to by the patients quietly, but the most I can hope is that one or two may sometimes understand and remember a little what they have heard. Their power of attention is *very* small. I hardly think that any new knowledge, either religious or secular is acquired ; probably, however, the slight mental exercise, and change of occupation may be beneficial, and those who had formerly been fairly instructed may be prevented from forgetting what they knew. It is to be noticed that the patients who are least disordered in mind and body do not attend school ; they are employed in the house, or in the fields and workshops.

Average attendance, Men, 16 ; Women, 11.

R. P. WOOD,

Chaplain.

Horrington, Nov. 20, 1873.
