THE

TWELFTH ANNUAL REPORT

OF THE

COMMITTEE OF VISITORS,

OF THE

COUNTY AND CITY OF WORCESTER PAUPER LUNATIC ASYLUM.

PRESENTED TO THE JUSTICES OF THE COUNTY AT EPIPHANY QUARTER SESSIONS, 1865, AND TO THE TOWN COUNCIL OF THE CITY, WITHIN TWENTY DAYS OF THE 20TH DECEMBER, 1864, PURSUANT TO THE 62ND SECTION OF "THE LUNATIC ASYLUMS ACT, 1853."

YOUR Committee continue to have their usual confidence in Dr. Sherlock and his management of the Asylum, and have also to report, that the conduct of the subordinate officers and servants of the establishment, has been satisfactory during the past year.

Your Committee fully reported last year as to the purchase of land from Lord Coventry, for enlarging Powick Churchyard, for the burial of the Patients dying in the Asylum. Since that time Lord Coventry's Agent has, by the opinion of Counsel, satisfied your Committee that the Deed of Conveyance could legally be cancelled, which has been done.

The land has been subsequently conveyed to the Parish of Powick, as part of their Churchyard, has been consecrated, and your Committee have contributed the purchase money and the cost of fencing.

We have pleasure in stating that we were enabled, in January

last, to reduce the weekly pay for the Patients, from 9s. to 8s. 6d. a week; and also, at our last meeting, to order a further reduction of 6d. per week from the 1st instant. The weekly pay, therefore, is now 8s.

The profit on the Abergavenny and Oxford Patients has been as large as anticipated by our last report, and the amount of gain for the three quarters ending Michaelmas, 1864, amounting to $\pounds 463$ 9s. 3d., has been transferred to the Repair Account, as will be seen by a statement of such account appended to this Report. The sum of $\pounds 154$ (the profit for the Christmas Quarter) will, when received, be transferred to the Repair Account in like manner. We have again no occasion this year to call on the County and City for any sum for Repairs, as the balance in hand and the future gain, will be more than adequate for the purpose.

We have, on former occasions, pointed out the great objections to as well as the insecurity in, the removal of Criminal Lunatics from the County and City Gaols to the County and City Asylum. The Government have built an Asylum at Broadmoor for Criminal Lunatics, but, as far as this Asylum is concerned, (and probably all others) have failed to afford the smallest relief or confer any benefit. In proof of this we copy the following Report of Dr. Sherlock on the subject :—

" County and City of Worcester Asylum, " Powick, 5th September, 1864.

" Gentlemen,

"The subject of the detention of Criminal Lunatics in this "Asylum has several times engaged your attention, and in your "Reports to Quarter Sessions you have adverted to this topic, and "recommended Government to adopt the plan of building an

" Asylum specially constructed for this class of persons.

"Similar views have been entertained by other authorities, and "in Ireland an Asylum has been in operation for some time for "the care of Insane Patients of the Criminal class.

"Some two years ago the Commissioners in Lunacy, in visiting this Asylum, stated that they wished specially to examine and have Reports of the cases of all the Criminal Lunatics " then under your supervision ; and mentioned that as the new "Asylum then about to be opened at Broadmoor could not ac-" commodate all the Patients of this class which were known to " exist, it would be necessary to make a selection of the cases " and transfer only such persons as, from the character of their " insanity and their dangerous or degraded propensities, ren-" dered their continuance amongst the general Insane population " of the country very injurious and undesirable. A few cases " were then considered specially adapted for removal to the " Criminal Asylum, on account of peculiarities of this character " and the Commissioners gave your Superintendent to under-" stand that such a representation would be forwarded to the " Home Office when the removal of Patients was contemplated.

"Lately, warrants were received for the transfer of two Pa-"tients to the new Criminal Asylum at Broadmoor, but these "referred not to those Patients whose cases were considered to "require in an especial degree the combination of Prison disci-"pline with Asylum care and treatment, but to cases of no great "severity, and whose friends resided in our own neighbourhood "The consequence of this departure from the plan specified by "the Commissioners in Lunacy has been, that cases urgently "requiring those special appliances which such an Institution. " as that at Broadmoor affords, are still detained here under "great disadvantages, and with some risk to themselves and " others, while two of a milder character are sent to an Asy-" lum, where they are separated from their friends, where their " privileges are curtailed, and their liberty of movement is more " circumscribed.

"In commenting on Criminal Lunatics, the opinions which "have been from time to time expressed regarding the necessity "for separating the Criminal from the ordinary Insane Patients "have been formed from a consideration of the class of Patients "who were recommended for removal to the Commissioners in "Lunacy, but whom you have still left in your Asylum; while "those for whom such provision was not so absolutely required "are made to be less favourably circumstanced, and are removed "to a stricter supervision and closer confinement.

"Had all the Patients of the Criminal class been removed to "the New Asylum at Broadmoor no complaint would have been "put forward, but in selecting the persons to be sent, regard " should have been had to the character of the Insanity, and the " peculiarities rendering such persons not adapted for residence " in an ordinary County Asylum.

> " I am, Gentlemen, " Your obedient Servant, " JAMES SHERLOCK,

> > " Superintendent."

The establishment at Broadmoor has, no doubt, been erected at a large cost, is carried on at large annual expense, and if no further relief than has been rendered to this Asylum has been given to others—if the Patients removed are of a class which might have been kept at the ordinary Asylums, without risk or much trouble, whilst those of a character totally unfitted for an ordinary Asylum are still left there, then the establishment at Broadmoor is perfectly useless, and the objections frequently urged on the subject have not been met.

It may as well be again urged that ordinary County Lunatic Asylums are entirely unfitted for the detention of Criminal Lunatics, that it is obviously objectionable and improper to place this class amongst those who are untainted with crime, and that it cannot be expected that the care and treatment of Patients of the Criminal class can be safely and beneficially undertaken and carried out in the several Asylums of the Country.

At present there are, at this Asylum, 9 Criminal Lunatics, (6 males and 3 females,) for whose removal no provision seems to be in prospect, although some of them are dangerous and of degraded propensities, and stood charged or were tried or convicted for such crimes as wilful murder, manslaughter, unlawfully wounding, larceny, and other offences.

Your Committee have held 12 meetings during the past year, at the Asylum, and the Sub-Committee have met there 6 times, the latter on each occasion seeing every Patient in the Asylum.

We would strongly recommend every Board of Guardians (by deputation) to visit, at least once a year, their Patients at the Asylum. Some Boards adopt this course, whilst others do not. On the 12th November last, two Commissioners in Lunacy visited the Asylum and made the following Report :---

"Worcester County Asylum,

" 12th November, 1864.

"We were yesterday occupied in an inspection of the Worcester "Asylum, during which we saw every Patient, and examined "all the Wards and Offices,

"The total number of Patients now on the books is 499, of "whom 181 are males, and 318 are females (1 male and 2 females "being away on trial). Comparing these numbers with those "found at the last visit, it appears that there has been a decrease "of 2 male Patients and an increase of 40 female Patients. The "large increase in the number of female Patients is to be ac-"counted for by the fact, that the Visitors have entered into a "contract with the County of Oxford for the reception of 30 "Patients of that sex, and that the whole number have been ad-"mitted.

"The total number of Patients admitted in the interval since our colleagues last visit (11 months), has been 62 men and 98 women; and the discharged have amounted to 57, of whom 32 were men, and 25 women; of the whole number discharged, 47 Patients were reported to be recovered.

"The mortality has been above the average in other County "Asylums, 32 men and 33 women having died since the 12th of "December last.

"There appear to have been no special causes for this large mortality beyond the fact that the Asylum contains an unusually "large proportion of feeble and paralytic cases; and 7 Patients "died within three weeks of their admission. Two inquests have "been held, the verdict in one case being 'Died from natural "causes,' and in the other 'Died from disease of lungs and brain.'

"In the latter case, that of a man who was removed from his "own home, it was found that several of his ribs were broken, "but the post-mortem examination showed that the injuries had "probably been inflicted previous to his admission into the Asylum "On the night previous to our visit, a male patient died sud-"denly in an epileptic fit.

"When examined, the inmates were remarkably quiet and "orderly; but two of them, one of each sex, were in seclusion, " Very few cases of seclusion are recorded in the Medical Journal, " and instrumental restraint has not been employed.

"We have made all the usual enquiries as directed by the 110th "section of the 8th & 9th Victoria cap. 100. The Asylum seems "to be under very careful visitation and management, and the "general arrangements as to the performance of divine service, "and for the occupation and recreation of the Patients are the "same as reported in former Reports.

"The Chapel is found to be too small for the whole number "who could attend the service on Sunday morning, but a second "service is now given in the afternoon, and at these two services "206 men and 306 women are present. About 133 Patients of "both sexes attend the week-day service, and 118 are present "at the daily family prayers which are read by the Superin-"tendent.

"The total numbers of Patients usefully and regularly em-"ployed are 105 men and 187 women.

"The entertainments in the recreation room have been kept "up with much success, and balls, plays, magic lantern, &c., are "given every week. At these parties from 150 to 200 Patients are "generally present.

"We have to report favourably of the personal condition and "clothing of the Patients.

"The bedding, which we carefully examined, was throughout "clean, but in some of the wards, and more especially in the "women's division, the blankets were old and thin, and not sup-"plied in sufficient quantity for the present season. There are no "under blankets on any of the beds in male wards, and a large "proportion of the women's beds are without them. There is "an unusually large number of beds covered with mackintosh "sheeting, upon which the sheet is laid without any under "blanket. This deficiency in the supply of blankets is very im-"portant, and should be remedied forthwith.

"We have made enquiries as to the number of inmates who are "regularly taken beyond the airing courts for exercise, and we "are of opinion that the number might be increased with ad-"vantage. As regards the cases of congenital idiots, this privilege "would be found to act most beneficially, and, considering the "large numbers of this class now in the Asylum, it seems desi" rable that some special system of training should be adopted " for their improvement.

"All the wards were clean and in good order, but some of the "dormitories appeared to be very imperfectly ventilated, and we "found on examination that in many cases the apparatus for "opening the windows was out of order. We recommend that "this be remedied at once, and also that the hot water taps in the "bath rooms be removed, or so protected that they cannot be "used by the Patients. Several fatal accidents have occurred "in other Asylums from the want of this precaution.

"With reference to the various suggestions contained in the "report of our colleagues at their last visit, we find that the sup-"ply of periodicals has been increased; that hand rails have been "fixed in all the staircases, and blinds put up in some, but not all "the dormitories; and that proper standings have been placed in "the washhouse.

"No arrangements have been made for the better washing of the "soiled linen and bedding.

"We noticed several Patients who appeared to be approaching convalescence, and we consulted with Dr. Sherlock relative to the case of a male criminal Patient who is now well in mind, and who we think should be reported to the Secretary of State for discharge as his sentence has expired.

"We are very glad to find that the Committee have invested Dr. "Sherlock with unlimited power over all the arrangements of "the Institution not involving pecuniary outlay, and the present "state of the Asylum and its inmates shows that he exercises "this power with ability and success.

> (Signed) {"W. G. CAMPBELL, "S. GASKELL."

Your Committee took that Report into their consideration at their meeting on the 5th December last, and made such orders thereon as seemed to them to be necessary.

In reference to that part of the Commissioners' Report which relates to the case of a Patient who died in the Asylum, on whom an inquest was held, and several of whose ribs were both before and after death found to have been broken, they state that, "the post-"mortem examination shewed that the injuries had *probably* been "inflicted previous to the Patient's admission;" we think it right to state that upon enquiries after the inquest conclusive evidence was given to us, as to how and when the injuries were inflicted *before* the Patient came to the Asylum.

We append to this Report a Debtor and Creditor Account of expenditure in respect of New Buildings and Furniture, and also in regard to Repairs, and a Statement of the Mortgage Debt. The sum of £323 will be required to be expended for various works during the ensuing year, according to Dr. Sherlock's estimate hereto annexed, and we propose to apply for that purpose the balance in hand on the New Buildings and Furniture Account.

Admiral Hastings retires and two new Visitors are to be elected for the County, in the room of Mr. Johnson, who has attended four meetings, and Mr. Watt, who has attended five meetings,

(Signed on behalf of the Committee)

T. G. CURTLER,

CHAIRMAN.

PATHOLOGICAL APPEARANCES OBSERVED IN THE BRAIN DURING THE YEAR 1864.

- OF THE 70 DEATHS WHICH OCCURRED DURING THE YEAR, POST MORTEM EXAMINATIONS WERE MADE IN 63 CASES, AND THE PATHOLOGICAL APPEARANCES CAREFULLY RECORDED.
- The calvarium was increased in density in 4 cases of chronic mania, 1 of mania with paralysis, 1 of mania with chorea, 3 of dementia, 5 of dementia with paralysis, 1 of dementia with epilepsy, 2 of melancholia, and 3 of general paralysis.
- The calvarium was increased in thickness in 1 case of mania with epilepsy, and 2 of idiotcy with epilepsy.
- The calvarium was increased in thickness and density in 2 cases of acute mania, 2 of chronic mania, 1 of mania with paralysis, 6 of dementia, 3 of dementia with paralysis, 2 of dementia with epilepsy, 4 of melancholia, and 5 of general paralysis.
- The calvarium was thinner than usual in 1 case of mania with epilepsy, 1 of mania with chorea, 1 of dementia, and 1 of general paralysis.
- The dura mater was adherent in 1 case of acute mania, 2 of chronic mania, 2 of dementia, 1 of dementia with epilepsy, and 1 of general paralysis.
- The membranes were thickened and opaque in 3 cases of acute mania, 2 of chronic mania, 1 of mania with epilepsy, 2 of mania with chorea, 1 of puerperal mania, 5 of dementia, 8 of dementia with paralysis, 3 of dementia with epilepsy, 2 of melancholia, 5 of general paralysis, and 1 of idiotcy with epilepsy.
- The membranes were congested in 1 case of acute mania, 1 of mania with epilepsy, 1 of mania with chorea, 3 of dementia, 1 of

melancholia, 2 of general paralysis, and 2 of idiotcy with epilepsy.

- The membranes adhered to the cortical grey substance in 3 cases of chronic mania, 1 of puerperal mania, 2 of mania with chorea, 3 of dementia, 3 of dementia with paralysis, 2 of dementia with epilepsy, 1 of melancholia, and 2 of general paralysis.
- The lining membrane of the ventricles presented a granular appearance in 1 case of acute mania, 1 of mania with epilepsy, 1 of mania with chorea, 2 of dementia, 1 of melancholia, and 4 of general paralysis.
- There were cysts in the choroid plexus in 1 case of chronic mania, 2 of dementia, 1 of dementia with paralysis, 1 of melancholia, 1 of general paralysis, and 1 of idiotcy with epilepsy.
- There was effusion into the sac of the arachnoid in 3 cases of acute mania, 4 of chronic mania, 1 of mania with paralysis, 1 of mania with epilepsy, 2 of mania with chorea, 1 of puerperal mania, 6 of dementia, 7 of dementia with paralysis, 3 of dementia with epilepsy, 7 of melancholia, 9 of general paralysis, 1 of idiotcy, and 1 of idiotcy with epilepsy.
- There was effusion into the ventricles in 3 cases of acute mania, 2 of chronic mania, 1 of mania with paralysis, 1 of mania with epilepsy, 2 of mania with chorea, 1 of puerperal mania, 8 of dementia, 7 of dementia with paralysis, 3 of dementia with epilepsy, 4 of melancholia, and 9 of general paralysis.
- There was a deposit of atheroma in the arteries in 1 case of acute mania, 2 of chronic mania, 7 of dementia, 6 of dementia with paralysis, 2 of dementia with epilepsy, 2 of melancholia, and 1 of general paralysis.
- The convolutions were shrunk and wasted in 2 cases of mania with epilepsy, 1 of dementia, 2 of dementia with paralysis, 1 of melancholia, and 1 of general paralysis.

- The brain was congested in 2 cases of acute mania, 1 of chronic mania, 3 of dementia, 1 of melancholia, 2 of general paralysis, and 1 of idiotcy with epilepsy.
- The grey matter was softened in 3 cases of acute mania, 6 of chronic mania, 1 of mania with paralysis, 2 of mania with epilepsy, 2 of mania with chorea, 1 of puerperal mania, 10 of dementia, 6 of dementia with paralysis, 3 of dementia with epilepsy, 5 of melancholia, 9 of general paralysis, 1 of idiotcy, and 2 of idiotcy with epilepsy.
- The white matter was softened in 2 cases of acute mania, 5 of chronic mania, 1 of mania with paralysis, 2 of mania with epilepsy, 8 of dementia, 7 of dementia with paralysis, 3 of dementia with epilepsy, 5 of melancholia, 8 of general paralysis, 1 of idiotcy, and 3 of idiotcy with epilepsy.
- The central ganglia were softened in 2 cases of acute mania, 5 of chronic mania, 1 of mania with paralysis, 2 of mania with epilepsy, 1 of puerperal mania, 9 of dementia, 3 of dementia with epilepsy, 8 of dementia with paralysis, 7 of melancholia, 10 of general paralysis, 1 of idiotcy, and 3 of idiotcy with epilepsy.
- The pons varolii was softened in 3 cases of acute mania, 4 of chronic mania, 1 of mania with paralysis, 2 of mania with epilepsy, 1 of mania with chorea, 9 of dementia, 8 of dementia with paralysis, 2 of dementia with epilepsy, 7 of melancholia, 8 of general paralysis, 1 of idiotcy, and 3 of idiotcy with epilepsy.
- The cerebellum was softened in 2 cases of acute mania, 5 of chronic mania, 1 of mania with paralysis, 2 of mania with epilepsy, 1 of mania with chorea, 9 of dementia, 8 of dementia with paralysis, 2 of dementia with epilepsy, 6 of melancholia, 9 of general paralysis, 1 of idiotcy, and 3 of idiotcy with epilepsy.

In 1 case of acute mania the crura cerebri were in a state of ramollissement.

- In 1 case of chronic mania the inferior part of the right anterior cerebral lobe and the surface of the cerebellum were in a state of ramollissement.
- In 1 case of chronic mania there was a tubercular deposit on the surface of the cerebellum.
- In 1 case of mania with epilepsy the membranes, blood-vessels, and nerves at base of brain were firmly matted together; and in in several parts the hemispherical grey matter was in a state of ramollissement.
- In 1 case of mania with epilepsy the right cerebral hemisphere was much smaller than the left; on its surface were several depressions of the size of pigeons' eggs; the parts surrounding them were shrunken and indurated, and presented a fibrous appearance on section.
- In 1 case of mania with chorea the fornix, crura cerebri and the superior and anterior portions of the medulla oblongata were in a state of ramollissement.
- In 1 case of mania with chorea there were patches of organised lymph on the surface of the arachnoid : there was also considerable atrophy of the encephalic mass.
- In 1 case of mania with paralysis the basilar artery, close to its bifurcation, was ruptured transversely, and about six ounces of blood effused into the arachnoid and ventricles.
- In 1 case of mania with general paralysis there was sanguineous effusion, to the extent of four or five ounces, into the substance of the left cerebral hemisphere, which was in a state of ramollissement.
- In 1 case of dementia the central commissures, basal ganglia, crura, pons, and several parts of the cerebrum were in a state of ramollissement.
- In 1 case of dementia pus was found in the arachnoid and ventricles: in the posterior cornu of left ventricle mingled with sanguineous

effusion. The central commissures, basal ganglia, crura cerebri, and pons varolis were in a state of ramollissement.

- In 1 case of dementia with paralysis in the left cerebral hemisphere were found the remains of a sanguineous effusion, surrounded by extensive ramollissement; in the right hemisphere was a clot of blood of the size of a bean.
- In 1 case of dementia with paralysis the whole cerebrum was much atrophied.
- In 1 case of dementia with paralysis there was considerable atrophy of the white cerebral substance : the medulla oblongata was divided into five longitudinal strands by ramollissement.
- In 1 case of dementia with paralysis the middle lobes of both cerebral hemispheres, the lower parts of the posterior lobes, and the upper portion of the cerebellum were entirely atrophied and their position occupied by serous effusion.
- In 1 case of dementia with paralysis the central ganglia on the right side were in a state of ramollissement.
- In 1 case of dementia with paralysis numerous cavities of the size of swan shot were found in the corpora striata.
- In 1 case of dementia with paralysis there was a line of ramollissement between the pons and medulla oblongata.
- In 1 case of dementia with paralysis the inferior cerebellar artery on the left side was completely occluded, for half an inch of its length, by atheromatous deposit; and the lower part of the left lobe of the cerebellum had undergone ramollissement and was to a great extent absorbed.
- In 1 case of dementia with epilepsy on the superior part of the right cerebral hemisphere were the remains of a sanguineous effusion surrounded by ramollissement.
- In 1 case of senile dementia, and 1 of dementia with paralysis, several cavities of the size of swan shot were noticed in the pons varolii.

- In 1 case of melancholia at the lower part of the left posterior lobe of the cerebrum was a small sanguineous effusion : the parts at the base of the brain were matted together by organised lymph.
- In 1 case of melancholia there was a small patch of sanguineous effusion on the upper part of the left cerebral hemisphere : the crura cerebri were in a state of ramollissement.
- In 1 case of melancholia the corpus striatum on the right side was in a state of ramollissement.

TWELFTH ANNUAL REPORT

OF THE

MEDICAL SUPERINTENDENT.

To the Committee of Visitors of the Worcester County and City Lunatic Asylum.

My LORD AND GENTLEMEN,—At the date of the last Annual Report there remained in your Asylum 461 Patients of both sexes— 184 males and 277 females; during the year there have been admitted 170 patients—67 males and 103 females—so that the total number under treatment during the year was 631. The discharges of the year are made up of 48 who recovered, 8 who were relieved, 2 who were removed unimproved, and 70 who died; which leaves 503 resident in the Asylum on the 31st of December, 1864, of whom 185 were males and 318 females. The average number resident in the Asylum throughout the year was 499—187 males and. 812 females. This information is given in Table I of the statisticsr

Early in the year thirty female Patients were received, undee contract with the Committee of Visitors, from the Asylum for the counties of Oxford and Berks. These cases were all chronic and not of a character likely to terminate in recovery. Eight similar

THE

cases have been admitted during the year : 3 from the Abergavenny Asylum, to replace patients belonging to it who died; and 5 from Oxford and Berks, to replace 4 of their number who died, and 1 whom, it was thought desirable should be transferred, so as to be nearer her relatives, on account of her declining health. In calculating the percentage of recoveries on the female admissions these patients are excluded.

The admissions from your own district was therefore 132 :--67 males and 65 females, which is 24 above the average number admitted in the eleven previous years during which your Asylum has been open for the reception of Patients. But since the year 1859, the number of annual admissions has been very nearly uniform with that of the current year, which cannot therefore be considered as exceptional or indicative of any excess in the frequency of attacks of insanity, or showing any tendency on the part of the community above the rank of the poor, to take advantage of the presence of the Asylum for the care and treatment of their friends.

It would appear that the change of law, whereby the expenses attendant on a Lunatic's maintenance in an Asylum is defrayed out of the Common Fund of the Union, and not by the individual Parish in which the Lunatic had acquired a settlement, may have somewhat contributed to sustain the high average of admissions observed of late years for your County and City, but the figures do not show this conclusively, as the numbers had risen before the time of the passing of the Act of Parliament referred to. Probably more of the increased demand for Asylum accommodation results from the fact that, in almost every part of the county, there are recovered Patients resident, who suggest to their neighbours and friends the propriety of sending those mentally affected from home to the Asylum, and tell them the advantage to be derived from such a step. In not a few cases received during the year, where the patients admitted had been previously in the Asylum, they have themselves suggested the propriety of returning to our care and

treatment, and have asked the authorities to make out the order and certificate requisite for their reception.

It will also be satisfactory for you to know that, in the majority of cases, the several Unions of this district, as well as the officers who act under them in this behalf, have shown a laudable disposition to meet the requirements of the Acts of Parliament in force for the placing of Lunatics in Asylums at an early stage of their disease ; and where exacerbations of mental disease have manifested themselves in persons under the care of their friends, or in the Union Workhouses, they have generally been sent here within a reasonable time. There is in consequence much less ground for complaint in respect of the admission of Patients, and we find as a rule, that when Patients reach us in a very reduced and diseased state they have been sent from their homes, where, owing to the mistaken kindness of their friends, they have been kept while in an insane state, and deprived of that necessary medical and moral treatment which such cases imperatively demand. Many so admitted were reduced by the effects of persistent acute nervous activity and excitement; others had been allowed to weaken their constitution by starvation, or had become subject to bodily disease through habits and practices incompatible with the preservation of health; and others have been permitted to fall into a sort of vegetative existence from want of active supervision. In all such cases the absence of proper care in the first instance has not only retarded, during that time, the recovery of the patient, but, we find, as a rule, such cases do not easily fall into the usages and appliances of Asylum life, nor adapt themselves to the altered circumstances consequent on their admission, and are restored to habits consistent with a rational state of mind only after much patient and concentrated exertion on the part of their attendants. But in not a few instances the disorder of their habits and their mental disturbance have become so confirmed that we are unable to effect recovery, and can only afford relief, having to rest satisfied with rendering the sufferer less repulsive to society and more amenable to control, while retained within the

influence of persistent discipline and a regulated system of life, such as can be secured in an Asylum.

Of those admitted it was judged after a consideration of their cases that 57 Patients-24 male and 33 females-presented a reasonable prospect of recovery, which is in the ratio of rather above 43 out of every hundred admitted.

The reason for assuming the other cases to be incurable were that five were Congenital Idiots; 17 had suffered from insanity for upwards of one year, and the greater number of these for periods varying from 5 to 20 years; 15 were subject to Epilepsy of a confirmed character; 6 had reached an advanced age and were in very feeble health; 8 were distinctly affected with General Paralysis of some standing; 11 were suffering from various forms of Brain Disease, attended with Paralysis and other grave lesions indicative of change in the structure of the Brain and other nervous centres; and 12 others were suffering from organic disease, of various kind and seat, of an incurable character, out of which their insanity had, probably, in many instances been evolved. Not a few of the latter class of Patients died within a very short period of their admission.

The recoveries calculated on the cases admitted during the year, who were probably curable, would reach the high ratio of 84.2 per cent.

Seven of the male admissions had been previously under treatment in the Asylum, and two of them had been discharged within less than twelve months of their re-admission. In the other cases years had elapsed between these occurrences. One male was admitted twice in the year: on the first occasion there was an informal certificate, which, not being amended in compliance with the term of the Act, the Patient was discharged subsequently by an order of the Commissioners in Lunacy, and re-admitted on a fresh order from the Union Authorities.

A male Patient was sent to us, from the Dudley Union, who had been apprehended by the police in a very agitated and violent state. It subsequently transpired that he had only recently escaped from an adjoining asylum, an attendant from which was sent to remove him within a few days after his reception.

Thirteen female Patients had been previously under care in this Asylum; and one of these cases, of a recurrent character, had been absent only about five months when she was returned to our care. Four cases had been at home for periods varying between one and two years: and the rest had continued, it was reported, of sound mind for longer periods of time.

A person who has been once attacked with insanity retains after recovery a greater predisposition to mental disease than the other members of the community. The same remark applies to various bodily diseases, and conduces to precaution, on the part of their friends and themselves, being adopted with the view of diminishing this liability to subsequent illness.

In the cases of the insane in asylums who are recovering and approaching convalescence, or who happen to be visited by their friends during an interval of comparative tranquility and coherence, such as is often observed to occur in the course of some forms of mental disease, it has generally been found difficult, if not impossible, to persuade or convince those interested in the welfare of the Patient, that a moderate residence in the Asylum is still necessary to restore stability and ensure a continuance of the improvement which has been effected. The arguments adduced to show that such a procedure is necessary are of no avail, and the relatives are constantly observed to lean to the opinion that the separation from their friends, and the cares and anxieties of the world are then injurious to their best interests; and the more the Patients dwell on such topics, and thus convince those conversant with insanity, of the premature nature of the proposed removal, the more do the friends insist and beg for its immediate adoption. They forget that the very means they are proposing to reapply are those which were present and intensified the early stages of their illness, and that out of

troubles connected therewith in many cases their insanity had arisen. Recovery and improvement were manifested subsequently to their removal from these agencies ; but they are unable to understand how a moderate continuance in the line of treatment adopted should have any further beneficial effect, although, at the time of making the statement, they must be aware of the benefits which had already resulted therefrom. They are unable to recognise in the irritability and earnestness of the patient any trace of remaining mental disease, or fail to comprehend that restlessness and disturbed nervous and mental enotions, which often remain after an attack of insanity has been in some measure recovered from. Hence their mistaken mode of action, and the frequency with which they attempt to urge the discharge of Patients at a date when removal from the Asylum would very often be disastrous and liable to be followed by an early relapse.

In some of the cases of re-admission referred to above, the friends had persisted in their efforts to effect their removal, at a time when it was very injudicious; and, even when their removal was permitted, it would have been more prudent to have deferred it for some weeks, that a more extended time of probation, and immunity from the responsibilities and duties of life, should have been afforded them.

In some of the above cases, also, the Patients had been removed by their friends, against the advice of every one competent to form an opinion, on their giving to your Committee the usual undertaking, that the patients on being discharged should be no longer chargeable to their Unions, but would be maintained by them, and properly taken care of, and prevented from doing any injury to themselves or others. The subsequent history of many of these cases, however, shewed that they found it impossible to accomplish what they had undertaken to perform, and they were again forced to apply for the re-admission of their relatives into the Asylum ; the character of their insanity having meanwhile become of a more dangerous type under their care and management. In Table IV it will be seen to what extent cases of chronic insanity still exist in this district. If we exclude from the statistics there given the congenital cases, and those received from the Abergavenny and Oxford Asylums, which were all of long standing, we have 22 Patients remaining, whose insanity at the date of their admission was of more than one year's duration. This is to be regretted, as in hardly any one of those can there be any reasonable hope of treatment and care resulting in their cure.

In Table XIII it will be observed that 19 of these admitted were over 60 years of age; and that 2 only of the persons discharged recovered had reached this period of life, which is found to accord with statistics of other Hospitals for the insane; we are, therefore, prepared to find that very few Patients admitted at these advanced periods of life recover. The greater number of those admitted this year, at this age, suffered under chronic disease, affecting the heart and lungs, which was not infrequently complicated with Paralysis, the result of degenerating changes affecting the coats of the bloodvessels supplying the brain and nervous centres, and leading to secondary disease therein. Such cases have been found to be peculiarly restless, and prone to wander about, particularly at night. They therefore occasion very great anxiety to those entrusted with their care, from the frequency with which they stumble and fall, and from the persistency with which, in their helpless and tottering state, they will attempt to move about, regardless of the danger and of the frequent bruises and falls which attend such attempts. Many of such cases obstinately refuse all sustenance, and believe themselves to be tormented by the presence of imaginary foes; rendering them irritable, anxious and very difficult to be dealt with by their nurses, from the suspicion with which they view the approach of every person. They often rally for a time, but experience repeated exacerbations under which they ultimately sink.

Fifty-four of the Patients admitted were known to have had attacks of insanity prior to that for which they were now received under care; 86 were suffering from mania, or general mental perturbation; 52 were observed to be demented; 16 were suffering from melancholia; 6 were monomaniacs; 8 were idiotic from birth; 1 case was feigning insanity; and one was suffering from maniacal delirium, which supervened on an attack of small pox in a person suffering from organic disease of the brain: 24 of the Patients were known to be epileptic; 8 were suffering from different forms of paralysis; and 4 others, at the date of their admission, presented the pathognomonic symptoms of general paralysis of the insane.

The average number of male Patients resident throughout the year ^{is} the same as during 1863: while in the female division the average has been increased by 64. The presence, however, of 60 female Patients, in the Asylum, from other counties, explains this large increase, and shews that the number of resident Patients, of your County and City, has been only exceeded by 4 when compared with the statistics of the previous year.

It is not, however, probable that the same results will be found to occur in subsequent years, except under peculiar circumstances ; for a reference to Table I affords the explanation—the discharges, removals and deaths have almost equalled the number of admissions of the current year, and consequently no considerable increase of the average number of Patients resident has resulted.

The recoveries of the year were 48 := 26 male and 22 females. This gives the ratio of recoveries upon admissions of 38.8 per cent. for the men, and of 33.8 per cent. for the females; for both sexes the ratio was 86.3. This per centage is rather above what has been usually obtained for the men; while the females have generally exceeded the result of this year's treatment, and showed a larger proportion of recoveries than the men.

In speaking of the admissions, the large proportion of incurable Patients received during the year has been already referred to, which explains how the average has declined.

Eight Patients were discharged improved, and 2 unimproved. This includes the Patients transferred from this to other Asylums, consequent on the charge of their maintenance falling on Unions in

other counties, to the Asylums belonging to which they were generally removed. A few cases in this list were removed by their friends on the undertaking authorised by Act of Parliament. Two of the former class were male criminal patients who were removed by an order of the Secretary of State, to the new Criminal Asylum at Broadmoor. They were both members of respectable families who resided in this county. One, a case of congenital imbecility, was found to be insane before his trial, and the other, a case of monomania, was acquitted on the ground of insanity. Both were undoubtedly insane at the time of their committing the acts which rendered them amenable to the law: and their conduct in this Asylum, and the character of their insanity subsequently, indicated no special reasons why they should have been selected for transfer to the Criminal Asylum. If we exclude the fact that they had been arrested for offences which were committed while in an insane state, and for which they could not be held responsible, no criminal charge could be sustained against them; and many Patients are constantly received into the Asylum, by the ordinary order of Justices, who have committed some illegal act, but the insane state of their mind being obvious at the time, they are sent here direct to receive that treatment which their case demands, and from want of attention to which their offence was owing.

The friends of such Patients are really deserving of the blame which accrues, rather than the Patient implicated, as in every such instance they must have been aware of the state of mind of their relatives, and should either themselves have placed them in an Asylum, or have given the necessary information to the Relieving Officer or Overseer of their parish, who would at once have intervened and removed the person to the Asylum under the usual certificates. Many of the other inmates of the Asylum in time no doubt come to be aware of the history of such cases as these, and in that respect only they are objectionable. The most repulsive, however, of this class of patients are persons of criminal and vicious habits, who have become insane while undergoing their sentences for crimes of which they have been convicted. The occurrence of insanity in such would naturally lead us to suppose that a special Asylum for their treatment was necessary, and that they should not be placed nor detained amongst the respectable, though poor, patients of their county. This class has been left here untouched, and consequently the evils often complained of still remain unremedied. It is, however, to be hoped that as the country now possesses an Asylum specially constructed for this class of patients, the most objectionable in a moral point of view will be in future removed there for treatment, and that no case of transfer will be ordered, such as those above-mentioned, unless they can receive and accommodate every Patient who is detained, under order of the Secretary of State, in the several County and Borough Lunatic Asylums of the country. The Superintendents of the various Asylums of England and Wales should have been consulted regarding the cases to be transferred, when it was determined that some of them should be so disposed of, It would have been impossible to have received there the whole of the Criminal Patients who were already in confinement, but the most dangerous and objectionable in a moral point of view, and those at present contaminating our existing institutions, might have been removed equally well with those who presented these characters in a less aggravated degree. At all events such a line of procedure would have avoided the irritation which has arisen in consequence of the character of the patients which were selected; and had cases of a more serious and criminal nature been draughted away, even in the same number, the greatest amount of relief which the circumstances admitted would have been afforded.

Table XVI shews the results which have already attended the treatment of the 170 Patients admitted during this year. Twentytwo have been discharged recovered; 5 have left the Asylum for other places of care; and 22 have died; leaving 121 remaining in the Asylum at the close of the year. The recoveries already accomplished bear a favorable comparison with what has taken place in former years. The deaths are far in excess of what we have found usually to prevail amongst those recently admitted ; and can only be accounted for when we consider the feeble and reduced state of the general health, and the worn-out condition of the majority of the year's admissions. From this it appears that 31.4 per cent. of the whole mortality arose from the deaths which occurred in those who were admitted during the course of the year. In further illustration of this point it will be well to direct your attention to Table XX, which gives the duration of residence in the Asylum, of those who have died. Forty-two of the deaths occurred before the patients had been twelve months under treatment; which is in the proportion of 60 per cent. of the entire mortality. Many (6) died before they had been two weeks in the Asylum; 5 before they had resided two months; 4 others under three months; 12 more before six months had elapsed; 10 others were under treatment less than nine months; and 5 more died in the intervening time, between the latter period and one year of residence.

The Registrar General, in speaking of the mortality of this year, for the whole of England and Wales, states, that seldom has the winter been more fatal, and reports that the death rate was increased to the extent of 1.5 per 1000, during this term, beyond the average of the last ten years; while in some situations, during the winter months, the average rate was nearly doubled. In the midland district the general health declined very much, aud epidemic disease prevailed for a considerable period, to an unusual extent, and was attended with a high rate of mortality. Fever of a typhoid character, scarlatina, and small-pox were present in Worcester, and in various parts of the County, and approached the Asylum on every side. Many cases occurred in the village, but providentially these diseases did not extend in an epidemic wave to our population. Cases, however, were admitted in which insanity had manifested itself during their course. One man was sent in from a distant Union in the county, who had been only recently suffering from small-pox; he was at the time in a dying state, and it would have been immediately dangerous to his life to have refused him admission. Several other cases, but not of so recent a

date, were admitted. While disease was thus prevailing, in an epidemic form, around the Asylum, the health of the infirm and feeble cases, at an advanced period of life, declined perceptibly : their vital powers were lowered; what ailments seized them were characterized by asthenia, and re-action was manifested feebly or not at all. Congestion of internal organs, especially those of the chest, were frequent; and diarrhœa, which in some cases took a dysentric type, was for some weeks very prevalent. About this time there occurred two cases of typhoid fever, in persons who had been long in reduced health, and who were suffering from chronic disease of several organs. Both these cases proved fatal: no others subsequently occurred. Probably the low temperature of the year, and the unusual drought had in great measure contributed to produce this state of the health of the general community; which, although it did not actually induce in the Asylum the epidemics which abounded in the district, yet was sufficient to lower the general standard of health of the many weakly members of our community, and induce a loss of tone in the vital powers, which favored the occurrence of disease such as has been indicated, and tended to increase the mortality of the year.

The deaths amounted to 70,—34 males and 36 females,—which gives a death rate of 14 per cent. on the average number of patients resident; or of nearly 11.1 per cent. on the total number who have been under treatment. This ratio was, for the men 18.1 per cent., for the women 11.5 per cent., of the average numbers resident. Since 1855 a ratio equally high has not been recorded. The average age of the men at the date of their decease was 47; and of the women 49: in both a higher average than prevails amongst the general community. 17 patients were over 60 years of age at the time of their death; 6 ranged from 60 to 65, 5 varied from 65 to 70, 5 from 70 to 75, and one woman had reached an age beyond this quinquennial period.

Of the diseases which proved fatal 41 were ascribed to lesions of the brain and cerebro-spinal system; the chief of which were general paralysis, paralysis, apoplexy, and epilepsy. In many of these were superadded diseases of other organs, which contributed, in a varying degree, to bring about the fatal termination. 18 deaths were ascribed to diseases affecting the organs of respiration and circulation; and prominent among these were phthisis, pneumonia, and cardiac disease. The remaining 11 were caused by diseases affecting the organs of assimilation and nutrition, to which must be added 1 from asphyxia during epilepsy, 2 from exhaustion from mania, 1 from cancer, and 1 from gangrene.

Two inquests were held during the year; 1 in the case of a female of very full habit of body, and at an advanced stage of life, who died suddenly from fatty degeneration of the muscular structure of the heart. In the other case an inquest was considered necessary from certain injuries having been detected in the Patient, prior to his decease; and which could only have resulted from violence, either accidental or wilful. The condition of the injured parts shewed that the violence had been inflicted at a date anterior to the man's entering the Asylum, and this was further confirmed by the testimony of a neighbour who witnessed the violence, and who had heard the Patient speak of it afterwards as likely to result in his death.

Table XVII shews the bodily condition and the state of the health of the Patients admitted, at the time when they reached the Asylum. In 37 of the cases the health was good; in 97 persons the health was indifferent and their condition reduced; and in the remaining 36 Patients the health was bad, and their state that of exhaustion, involving their lives in considerable danger, which was in some cases immediate, and terminated fatally within very short periods of time. The natural consequence of this has been already alluded to in reporting upon the large mortality of the year: it was in reality the chief factor in its production, as the general health of the majority of the chronic cases in the Asylum, not suffering from organic disease or the debility of old age, was good, and afforded no greater proportion of deaths than in former years.

In Table VI are given the various causes of Insanity, which were assigned by the friends and other persons who had an acquaintance with the antecedents of the Patients. The predominance of moral agencies, or influences operating through the mind, was manifested in 24 cases : in 104 persons the causes were supposed to be of a material character. The excess of numbers in the latter class continues to be steadily preserved in each successive year of the Asylum's history, and indicates the absence, in great measure, of those exciting or depressing passions, and changes of the public mind, which prevail to a much greater extent in the population of our large cities than amongst the residents of an agricultural district.

One case of an unusual character presented itself in a male Patient: he had become insane and epileptic after the free and continuous use of drink impregnated with lead. The specific symptoms, and the peculiar paralysis observed in such cases, were here present and prominent. Under treatment the man regained, in some months, both his bodily and mental health, and was discharged recovered. Some of the persons who had habitually used the same beverage were seized with similar symptoms; of whom some recovered without the supervention of insanity, and one died of the immediate and primary effects of the poison introduced into the system.

No change in the building of the Asylum has been necessary during the year. The furnishing of the new wing for females has been nearly completed : this was rendered necessary by the reception of the Patients from Oxford. The character, however, of the Abergavenny and Oxford Patients did not admit of their being placed in the new ward in any considerable number ; and they are generally located in our old wards. The airing court attached to this ward has also been much advanced, the surface is now laid down in grass, and the necessary walks have been formed to admit of the inmates taking exercise in it.

The rate of the maintenance charge to the Unions of the County and City has been lowered during the year by your Committee; and it will be satisfactory to remark that the weekly cost incurred in the maintenance of the Patients has also been lower, by three pence per head, than during the previous year. This rate of cost is considerably below the average of the several Asylums of the country.

Your Superintendent, in presenting this Report, has again to express his feelings of thankfulness in stating that he continues to be supported, in the discharge of his duties, by the constant advice and confidence of your Committee, and he trusts that similar results will attend his efforts in succeeding years.

JAMES SHERLOCK.

THE CHAPLAIN'S REPORT.

To the Committee of Visitors of the County and City of Worcester

Pauper Lunatic Asylum.

My LORD AND GENTLEMEN, —It is with much satisfaction that I am still able to give a favorable report of the working of the new system of double services, begun in the last quarter of 1863. I do not find the Chapel less numerously attended now there are two services than when there was only one. Indeed there is frequently not sufficient room for those who come, and my opinion is, that the Chapel will have to be enlarged at no distant period, if all who wish to attend are allowed to do so. The Reading-class also, between the services, seems to be as much appreciated as at first, which I did not expect.

Speaking now from considerable experience, I find the opinion which I held after my first year as Chaplain abundantly confirmed, namely, that the harvest here is as plenteous as in other parts of the Lord's vineyard. I remember being asked once by a member of your Committee, who has long been removed from among us,-"Well, what can you do with such poor creatures ?"-as if my office had been almost a sinecure, established as a decent tribute to the religious feelings of the community, and no more. And that this is still a notion widely prevalent among persons who know little about the insane, I have had repeated proofs since. They can only think of insanity in the lump, and fancy that insane persons are all equally without minds, rather than with minds more or less diseased,-a mode of argument, which, if applied to our bodies, would be thought very extraordinary indeed: My experience, however, has convinced me, not only that my office is no sinecure, but that there are very few cases of insanity, or even of idiotcy, where the influence of religion, inward or outward, can be considered as *nil*; and that there are some cases on the other hand where, owing to some peculiarity of disease, the mind is in a more favorable state for receiving religious truth than in a state of health. I therefore hold that my office is as important, my responsibility as great, and my work as varied, as difficult, and probably as productive, as that of any clergyman in his parish; and, as in other parts of the field, so here, no well-judged and well-timed labour will be thrown away : the more thoroughly the ground is cultivated, the more will it pay for the culture.

I cannot conclude this short Report without shewing, as a great cause for thankfulness, the general harmony, good feeling and attention to duty, noticeable among the officers and attendants of the Asylum, owing, I believe, in a great measure, under God, to the example, the judgment, and the paternal kindness of its Head.

I have the honor to be, my Lord and Gentlemen,

Your faithful Servant,

EDWARD HORTON, . Chaplain.

WORCESTER :

G. WILLIAMS, GOVERNMENT STEAM PRINTER, ADVERTISER OFFICE.
