REPORT.

IN presenting the Thirteenth Annual Report of this Institution to the Magistrates, it is obvious that the information it contains must principally be confined to the time, during which the management of it has devolved upon the present Director and Matron. The rules and regulations observed by Dr. and Mrs. Ellis, have been adhered to with very little deviation, all the servants having remained in their respective situations, with the exception of three, who went to the Middlesex Asylum. Of these, however, two have since returned, and have been reinstated in their former places.

Although more Patients have been admitted this year than in any preceding one since the establishment of the Asylum, the advanced price of meat, and of some other kinds of provision, together with the exhausted state of all articles of domestic utility, has rendered it necessary to raise the charge for Patients admitted into the Institution. By an order of the Magistrates, therefore, the weekly payment, which had

been reduced in the beginning of the year to six shillings, has been brought back to the former standard of six shillings and sixpence.

The number of Patients now in the House is 270, and there are several applications for admission.

Great advantage is found from the additional building, not only in decreasing the numbers in the mens' wards, but likewise in affording many other bed-rooms for the women. The basement floor of the front wing to the west, formerly occupied by the Farmer and Patients working in the land, is now appropriated to convalescent Females.

The new wing has been occupied about eight months, and the method of warming it, by means of a current of hot water passing through the day-rooms and galleries, has been made to answer, with less inconvenience than was expected.

The hot and unpleasant atmosphere, which at first was supposed to be occasioned by the fire and boiler's being in so confined a situation, has been discovered to proceed from the drying closet, which is situated under ground in the centre of the building. It therefore becomes an object of imperious necessity, that so great a nuisance, and one involving not less the comfort, than the health of the Patients, should be removed, without loss of time, to an outbuilding. This may be done at a trifling expense, as the building alluded to is at

present almost useless; and a few pipes to convey steam would render it entirely effectual for the purposes required.

An erroneous impression appears to have been made on the public mind, as to the prevalence of Dysentery amongst the Patients. Such an error is calculated to operate very prejudicially, not only by creating a painful apprehension in the friends of those already confined in the Asylum, but likewise by deterring such as can in any way maintain their insane relatives from resorting to the most probable means for their restoration. Instances of this kind have come under my own observation, and have been to me a source of regret. During a very hot summer and an unhealthy season subsequent to it, while the disease was both prevalent and fatal in the neighbouring Towns and Villages, my own and only child, a healthy boy of three years old, who fell a victim to it, was the only serious case in the Institution. Lately a few cases have occurred, and four emaciated patients, two of whom were already sinking when attacked, have died from it. One case of Dysentery now exists in the House; with this exception, the inmates in general are in a very healthy state.

The lighting of the Asylum by means of Oil Gas has become very expensive, from the failure of the Greenland Fisheries. The consumption is 300 feet of Gas every night in the Winter, and this requires 3 gallons of whale oil, or $3\frac{1}{2}$ gallons of linseed oil, at an average cost of ten shillings per

night. By an alteration in the apparatus, so as to make Gas from coal instead of oil, 500 feet of Gas might be made from 1 cwt. of coal, for which we are now paying five shillings per ton; thus 500 feet of coal Gas might be made at an expense of about sixpence.

In the months of June, July, and August, several furious maniacs were admitted, some of whom have continued until now in the same state of violent excitement. Lately, eight melancholics who have previously attempted suicide, have come in. This class presents the most distressing picture of human woe: their sufferings are quite inconceivable, and the constant anguish of mind they undergo, renders it a matter of surprise that their bodily health is so little impaired.

There is now a woman in the House who has been here two years, actuated by a constant propensity to self-destruction. The treatment of such cases is extremely difficult; on the one hand, employment and amusement of mind being essential to their recovery; whilst, on the other, scarcely any occupation can be found which does not afford them in some shape or other the means of carrying their fatal propensity into effect. Two, however, of the above-mentioned cases have been discharged cured.

It may not be unpleasant to those, whose sympathies are

excited for the unhappy subjects of this mysterious malady, to know, that it is a rare occurrence for a Patient to be discharged from this Institution, without expressing a wish to be permitted again to visit a place, endeared to them by so many indescribable associations, and not unfrequently, during divine service on a Sunday morning, is a visitor of this kind seen joining in the devotional exercises of these unfortunate and interesting individuals.

C. C. CORSELLIS, M.D.
DIRECTOR.

Wakefield, Dec. 31, 1831.
