REPORT

BY THE

ORDINARY MANAGERS

OF THE

ROYAL EDINBURGH ASYLUM FOR THE INSANE.

PRESENTED TO THE ANNUAL GENERAL MEETING HELD ON MONDAY
THE 23RD FEBRUARY, 1852.

THIS being the first General Meeting of the Corporation held under authority of the recent Act of Parliament, the Ordinary Managers have now, in conformity therewith, to present the Annual Report of their proceedings.

The average number of Patients in all Departments of the Institution during the year 1851, was 520,—being 23 more than in the year preceding.

The amount of ordinary Receipts by the Treasurer, during the year was,£14,290 14 1
And of ordinary Expenditure,.....12,532 3 7

Thus leaving a surplus Income of£1758 10 6

The Managers have great satisfaction in this result, considering the reductions which were made in the rates of Board for Patients of the poor class at the commencement of last year; and they have in consequence felt themselves enabled to make still further reductions. Much difficulty and frequent disputes having been caused by the regulations in regard to the proper clothing of Pauper Patients when admitted, it has been found advisable to adopt a new regulation, by which the Institution will in future defray the whole cost of clothing these Patients from the day of their admission.

2

The additional expense to the Asylum and consequent relief to Parishes and others from this change, may probably average about £300 a year. Experience having also shewn the difference of £5 in the rate of Board for the privileged and non-privileged classes of Patients to be greater than the amount of subscription for such privilege warranted, or than was expedient as regards the financial interests of the Institution, the Managers, after full consideration, came to be of opinion, that THREE POUNDS PER ANNUM would be a more suitable rate of difference between the two classes, and have accordingly determined to give effect to such an alteration from the 1st of April next; so that thenceforth, until further notice, the rates of Board in the Western Department will be,—

For Privileged Patients, £18

Unprivileged, £21

in each case without any charge for clothing.

As these reductions will affect the future income of the Institution to the extent of about SIX HUNDRED POUNDS per annum, the Managers have not deemed it prudent to carry them farther at present; but they propose again taking the matter into consideration in the month of July next, by which time they will be better able to judge whether any, and what further reduction may be made, having reference to the existing and prospective state of the Institution.

The Managers feel satisfied that the Asylum has derived much advantage from the appointment of one of their number as Official Visiting Manager, and recommend that this arrangement be still continued.

Various improvements have been effected in the Eastern Department of the Asylum during the past year. A large Billiard-room has been erected at the back of the House, which is found to be of much advantage in affording an agreeable recreation to the convalescent Male Patients, particularly in bad weather. The painting of the House has been completed, and it is in other respects rendered more comfortable than formerly.

The Reports which will be presented by the Physician and

Chaplain are referred to, for information in regard to all matters falling under their respective departments.

The Managers have now in conclusion to notice the Act of Parliament obtained last session, under which the affairs of the Corporation are now to be conducted, and which, although it had to undergo considerable changes from its original shape, they regard as being calculated to produce all the good effects which were desired.

The only circumstance which the Managers require specially to refer to, was their failure to obtain a legislative sanction to the arrangements for giving a direct representation in the management of the Asylum to the Metropolitan Parochial Boards,—the Chairman of Committees in the House of Lords having, notwithstanding the earnest remonstrance of the Managers, aided by the personal endeavours of the late Lord Provost when in London, refused to pass the clauses of the Bill framed for this object, under which *two* Representatives from the *City* Parish, *two* from the Parish of *St Cuthberts*, and *one* from the Parishes of *North Leith*, *South Leith*, or *Canongate*, were in future to form a part of the Board of Ordinary Managers. It is not, however, expected that any practical inconvenience will arise from this omission. If these Boards continue to recommend for election gentlemen in whom they have confidence, and of the same high character they have hitherto done, there is no reason to anticipate any reluctance on the part of the Corporation to admit them into the management.

The purposes of the Act as it stands are: (1.) To re-incorporate the Institution under the title of “THE ROYAL EDINBURGH ASYLUM FOR THE INSANE,” with the usual powers: (2.) To ratify the constitution of the Asylum as laid down in their Royal Charter of Incorporation, but altering the day of Annual Meeting from the last Monday of *January* to the last Monday of *February*; adding *both* Members of Parliament for the *City* to the list of Extraordinary Managers, and increasing the number of Ordinary Managers from *twelve* to *fifteen*: (3.) To provide for a rotation in the office of Ordinary Managers by the retirement of two annually from the top of

the list, who shall not be re-eligible for a year thereafter : (4.) To define and extend the duties and powers of the Medical Board, which had been left undefined in the original charter : (5.) To establish a separate Charitable Department of the Asylum for the administration of all legacies and other donations granted to the Corporation, including lapsed rights of presentation : (6.) To aid in providing a suitable fund to be at the disposal of this department by setting aside towards it, for a time, one-tenth part of the income derived from the Boards which amount to *Fifty Pounds* per annum or upwards ; and lastly, To authorize the Corporation to borrow, in a defined manner, a sum not exceeding *Thirty Thousand Pounds* in whole, to be applied in paying off their subsisting debts and liabilities, and in completing the Asylum Buildings according to the original design, as well as in erecting such other buildings as may be deemed necessary.

It will fall to the Annual Meeting, after electing the Ordinary Managers, to appoint from their number "the Charity Committee" above adverted to ;—in reference to which it may be remarked that the object thus sought to be accomplished, does not form a new feature in the Institution, the Managers having, even from its first establishment, exercised a discretionary power of admitting at a low rate of board, Patients belonging to the middle ranks of life, whose friends were unable to pay the ordinary remunerating rate of Board for them. Under the new arrangement, all such cases will in future be dealt with and relieved according to the discretion of the Charity Committee, and a great advantage will be gained by their being able to give a more considerate discrimination to each case as it arises, than the general body of Managers could possibly do, and thus to insure the most beneficial application of all charitable funds which may hereafter be bestowed on the Asylum. At the same time it may be observed, that the Committee is subject to the general control of the Ordinary Board, and must report annually as to its procedure.

THOMAS CLARK, D.D.,
Chairman.

ABSTRACT

OF THE

TREASURER'S ACCOUNTS FOR THE YEAR 1851.

I.—INCOME AND RECEIPTS.

1. ORDINARY.

Amount of Board for Patients, (exclusive of one Patient in the Institution whose Board was redeemed by a single payment,)	£13,388 18 4½

PHYSICIAN'S ANNUAL REPORT
OF THE
ROYAL EDINBURGH ASYLUM FOR THE INSANE,
FOR THE YEAR 1851.

READ AT THE ANNUAL MEETING OF THE CONTRIBUTORS, HELD ON THE
23RD FEBRUARY 1852.

AFTER a certain era in the history of a large Institution, such as this, the annual records of its progress must tend more or less to sameness and repetition. When the structure is completed, the house filled, and all the plans devised for the benefit of its inmates have been fully developed and put in active operation, the history of one year becomes nearly that of its predecessors. What is true of the record is liable to become equally true in regard to the facts. When a definite system of operations has been adopted, formed, it may be, upon the most approved models for the time, it is apt slowly to degenerate into a routine from which much of the original vigour and activity which characterised it gradually disappear. I am happy to be able to assure you, on this occasion, that the Institution under your management, has not yet arrived at this period of its history, and that I still have it in my power, as in former years, to report progress, and a continuance of zeal, activity, and increased efforts for the furtherance of those great ends for which the Asylum was founded.

General Results. The number of patients admitted during the past year was 248. At the close of the year 1850, there were 498 inmates, so that there have been 746 patients under treatment, since the date of the last Annual Report. Of these, 218 have been removed by death and otherwise, leaving at the close of the last year 516 patients in the house. The average number resident during the year was 520, being an average of 26 more than the previous year.

Of the patients removed, 111 were cured, being in the ratio of 44·8 per cent. to the number of admissions, or of 21·3 per cent. to the mean number resident.

The number of patients admitted into the Asylum since its foundation is 2670, and the number removed cured is 1100, being 41·2 per cent. of the whole, or 51·3 per cent. deducting those who still remain under treatment.

In the following table the general results of the year are given :—

TABLE I.—*General Results of the Year.*

	Males.	Females.	Total.
Number of inmates at the close of 1850,	246	252	498

258·4	261·8	520·2

Of the 57 patients reported as removed *uncured*, a considerable proportion were, I regret to say, removed to private asylums, for

the sake of economy, the rates of board at some of these establishments being lower than those presently charged in this Institution. These were mostly cases which had been one or more years under treatment, and while it is due to the parochial authorities who removed them, to say, that they seemed desirous to satisfy themselves that the cases were incurable, before consigning them to a less costly and probably less comfortable residence, and that they removed them generally with assurances of regret,—I cannot but express a hope that the prosperous condition of the financial affairs of the Asylum may enable you to fix the rates of board for pauper lunatics at such a sum as shall render competition on a small scale impossible, and secure for all the pauper lunatics of this part of Scotland, the numerous advantages and sources of happiness, if not always of cure, which a large public Institution such as this can alone afford.

The following table shews the period of residence in the Asylum of all the cases removed uncured :—

A large portion of the patients removed uncured, whose residence

had not extended beyond one year, were more or less improved, and several were in a state of hopeful convalescence. Their premature removal, originating mostly in the misplaced confidence or affection of friends, was followed in almost every instance by the usual result, confirmed insanity, aggravation, or relapse, and in one instance by suicide, shortly after removal.

The preceding table is, however, so far gratifying, that it contrasts favourably with the corresponding tables of former years, and shews that fewer cases have been removed uncured, and still fewer, in proportion, at an early stage, than in previous years. And so far, therefore, as statistics of this kind may be trusted on such points, we may venture to hope that the experience of past years, and of this Asylum, has not been lost upon the guardians and friends of the insane.

The next table shews the ages of those admitted, and of those discharged cured:—

TABLE III.—*Ages of those Admitted, and those discharged Recovered.*

Of the cases admitted under 20 years of age, four were cases of Idiocy, and several were complicated with epilepsy. All of these were of course incurable. This explains why the ratio of cures at that early age should be so low compared with former years, and with what might have been anticipated. Of these cases too, eight were formerly inmates of the Asylum, and had suffered from new attacks. It would seem as if insanity when it appears in early life

affects those only who have a strong predisposition to it. The exciting causes to which they are exposed increase in number and variety each year of their life, and relapses are almost certain to take place. If the transient griefs and terrors of youth can upset the reason, how can it be expected that the same mind can preserve its balance amidst the more poignant griefs and anxieties, or stronger passions of maturer years?

Not a few of the cases, as will be seen from the table, were at an advanced age at the time of their admission, 19 being between 60 and 80 years of age. Of these, one was in a dying condition, and expired a few hours after being received; and several of the others were in an advanced stage of decay, and survived only a few weeks.

This table exhibits all the forms of Insanity in nearly the same relative numbers as on former years. The cases of General Paralysis are fewer than formerly, so also are those of Puerperal Mania.

Many of the cases presented features of interest, but of a kind

rather psychological than practical. I shall not therefore dwell upon their details here, further than to state that, as has been before remarked, the current topics of the day gave colouring and form to the delusions of the disordered fancy. We have thus had no less than five individuals, admitted during the year, who believe themselves to be the victims of mesmeric agency—an agency certainly not less afflicting than the Satanic possessions and witchcrafts of former times—with which indeed some of the sufferers think it is identical. One sufferer believes himself to be in mesmeric relation of such an intimate kind with a whole family, that he experiences all the sensations of each member of it, eats and drinks (in imagination) when they do, and is sensible to the taste of what they each swallow at every meal. He is compelled to be an unwilling partaker of their very vices, and laments with horror that even during the innocence of retirement, or of sleep, he is pursuing unhallowed courses with parties at a distance, and feels all the bodily sensations of which they are the subjects.

Three of the inmates talked much of California, and of the bags full of gold which they had obtained from the diggings; and one of them arrived at the persuasion that his body was transmuted into gold. This insane optimism is commonly associated with the most unfavourable and hopeless forms of madness. Its victims, while they are rejoicing over unbounded wealth, and boasting of superhuman powers, are generally sinking rapidly into the most entire paralysis of every mental and voluntary function. Although the numbers of this class have been fewer than for the two previous years, we have now had added to our list of dignitaries two lords, two dukes, one Prince Albert, one angel, twelve divine personages, and one who claims to be greater than a divinity, calls himself "Thunderbolt," and who under the persuasion of his supernatural powers, previous to his admission constructed a boat made entirely of wood, without a single bolt of iron, in which frail bark he launched himself into the Firth of Forth during a storm, and suffered shipwreck on the coast of Fife.

I add here to the statistics of former years another table illustrative of the suicidal impulses which have been manifested by the patients admitted.

Of the 57 patients here enumerated who had attempted or meditated suicide previous to admission, ten continued to manifest a very strong desire for death after being received into the house, and many attempts to effect their purpose were made. Three of them threw themselves into the shallow pond which ornaments the grounds; one secreted a knife on her person; two attempted to hang themselves with their garters; two tried to strangle themselves; one to choke herself by swallowing the ends of her blankets, and another by bolting a large piece of meat; another cut her arm with a piece of glass; another his neck, and afterwards attempted to suspend himself from the top of a door; and another made numerous attempts by swallowing pins, doubling up silver forks to swallow, sharpening the blunted silver knives for the purpose of inflicting wounds, secreting scissors, with the same view, refusing her food, attempting to choke herself on the corners of the sheets and blankets, to strangle herself with strips of them, to open a vein, and to precipitate herself down the stair. Notwithstanding the number of cases of this kind, and the perseverance and cunning with which the efforts at self-destruction were made, it is with gratitude that I have it in my power to record that no accident has occurred in the Institution during the past year in consequence.

Causes. Of the causes of Insanity in those admitted during the past year, Intemperance figures as usual as the most frequent, as will be seen from the table which follows; the disease being ascribed to it, (deducting the cases in which the cause was unknown) in 24 per cent. of the admission, or, deducting the females, in 30·4 per cent. of the male patients. Next in order in point of frequency comes Mental Excitement. Most of these cases were attributed to what is very erroneously called Religious Excitement, inasmuch as the excitement is generally caused by the absence of religion, and by the superstitious fears of an ignorant and ill-regulated mind. One of the cases included under this head was that of a young lady whose mind gave way under the excitement caused by preparations for her own marriage to the object of her affections; in another the excitement arose from the acquisition of a sum of money, and in a third from over exertion to realize money.

Reverse of fortune, and Domestic griefs come next in the order of frequency. Of these cases one was caused by the dissipation of a wife, two by the death of husbands, and others by the loss of near relatives. In almost all such cases there exist other causes acting more or less remotely, predisposing to, or as the immediately exciting causes of, the disease. Sudden loss of fortune very often is accompanied by recourse to artificial stimulants, and domestic quarrels and unhappiness follow in the train of evils.

The influence of Sympathy in producing Insanity was strongly illustrated by several of the cases which occurred during the year. A wife became insane from seeing her husband in that state, a brother from visiting his insane sister. A mother and her daughter became insane, in consequence of the disease attacking a younger daughter and the three continuing to reside together.

Recoveries. The forms of Insanity, in those who left the Institution cured, bear nearly the same relative proportion to the number of cases admitted of the same kind, as on former years; the acute varieties of disease, including Mania, Delirium Tremens, and Puerperal Insanity, were cured in larger ratios, those of a less acute nature in much smaller, as appears from the following table, compared with that shewing the forms of disease in those admitted:—

Total,	52	67	119

Of the cures, two-thirds had been placed under treatment within three months of the invasion of the malady, and one-half of the entire number within one month. One case recovered although the insanity had existed for 13 years before admission. Such cases are encouraging, but they are generally solitary exceptions to the recognised principle, illustrated in the table which follows, that the

sooner cases of insanity are removed from home, and placed under proper treatment, the more probable the cure :—

The average period of residence in the Institution of the patients cured has been greater than in former years, and I anticipate as a result that relapses will be less likely to take place. Ten of those cured had been upwards of one year, two of them five, and one seven years resident in the Asylum. These facts are contained in the table which follows :—

Total,	52	67	119

Mortality. The Mortality during the past year has been less than during the four preceding years, and relative to the number of inmates, very much less. In the years 47, 48, 49, and 50, the deaths were 68, 68, 79, and 64 respectively; during the past year they amounted only to 50, although the mean number resident exceeded those of the previous year by 14, and of the three preceding years by 86, 29, and 47. During the four preceding years the deaths were successively 15, 14, 16, and 12 per cent. to the average number resident; during the past year they have been only 9·8 per cent., or 6·7 per cent. to the whole number under treatment.

The following table shews the causes of death :—

TABLE X.—*Causes of Death.*

	Males.	Females.	Total.
Apoplexy,	1	4	5
Arachnitis,	4	1	5
General Paralysis,	13	2	15
Epilepsy,	2	1	3
Marasmus,	0	1	1
Senile Exhaustion,	1	1	2
Pneumonia,	3	1	4
Pleuro-Pneumonia,	1	0	1
Phthisis,	3	5	8
Peritonitis,	1	1	2
Erysipelas of Leg,	1	0	1
Dysentery,	1	2	3
Total,	31	19	50

Of these 50 deaths, 31 died of Insanity, or the diseases immediately causing it, or the exhaustion consequent upon it. Eight died of Phthisis, and three of Dysentery, the most frequent complications of insanity. The diminished mortality of last year is doubtless due in a great measure to a more healthy season, and in particular to the great decrease in the number of cases of Chronic Diarrhœa and Dysentery, as compared with the years preceding it. The number of deaths from General Paralysis (an incurable complication of insanity) was 15, being the same as in 1850, when they materially exceeded those of any former year.

The two following tables exhibit the ages of those who died, and the period of their residence in the Asylum :—

" 11 "	0	1	1
Total,	31	19	50

From these tables it may be inferred that several of the patients were sent to the Institution in a dying state, from the brief period that they survived. Some were at a very advanced age, and others

had long resided in the house. The oldest inmate of the number, who had been a clerk to Sir Walter Scott at the time when *Waverley* was published, although he had spent eleven years in the Institution, seemed to have lost all note of time, and maintained to the last hour, that he had only been three weeks in this retirement.

Pathology. Post-mortem examinations were permitted in 35 cases. These were conducted in the usual manner, and afforded the following results :—

Of those examined, 13 had been cases of General Paralysis, 10 Dementia, 4 Monomania, 3 Mania, 2 Melancholia, 1 Moral Insanity, 1 Puerperal Mania, and 1 Demonomania; and the morbid appearances were as follows :—

Congestion of the Membranes was present in 12 cases; of which 5 were General Paralysis, 4 Dementia, 1 Mania, 1 Monomania, and 1 Melancholia.

Effusion of Serum into Sac of the Arachnoid was present in 23 cases; in 12 of General Paralysis, in 7 of Dementia, 2 of Mania, 1 of Demonomania, and 1 of Puerperal Mania.

Opacity of the Arachnoid was present in 20 cases; of which 9 were General Paralysis, 6 Dementia, 2 Mania, 2 Monomania, and 1 Puerperal Mania.

Sub-Arachnoid Sero-Albuminous Effusion was present in 18 cases; of which 7 were General Paralysis, 5 Dementia, 2 Mania, 2 Monomania, 1 Melancholia, and 1 Puerperal Mania.

Effusion of Lymph beneath the Arachnoid, over the space forming the circle of Willis, was present in 4 cases; of which 3 were Dementia, and 1 Mania. In 3 of these cases, the fourth ventricle was filled with deposit of lymph. In these cases, symptoms of Meningitis preceded death.

Purulent Matter was found in the cavity of the Arachnoid in 1 case of General Paralysis.

Adhesion of Membranes to Calvarium was present in 7 cases; of which 4 were General Paralysis, 2 Dementia, and 1 Melancholia.

Adhesion of Membranes to Cortical Substance in 7 cases; 6 were General Paralysis, and 1 Dementia.

Vessels in Pia Mater and Cortical Substance in 2 cases of General Paralysis were *granular*, and in 2 cases of Dementia.

Crystal-like deposit in the lining membrane of the Lateral ventricles was present in 7 cases ; in 6 of General Paralysis, and 1 of Dementia.

Congestion of Hemispheres was present in 13 cases ; 5 of General Paralysis, 4 of Dementia, 2 of Melancholia, and 2 of Mania.

Effusion of blood into the Substance of the Brain was observed in 5 cases ; of which 2 were General Paralysis, 1 Dementia, 1 Monomania, and 1 Demonomania.

Effusion of Blood into the inferior cornua of the left ventricle was noticed in 1 case of Dementia.

An old Apoplectic Cyst was observed in the Pons Varolia of 1 case of General Paralysis.

The Grey Matter was pale in 4 cases ; in 3 of General Paralysis, and 1 of Puerperal Mania.

Increased Density of the Brain in 2 cases ; 1 of General Paralysis, and 1 of Dementia.

Softening of the Substance of the Brain in 7 cases ; in 4 of Dementia, and 3 of General Paralysis.

Absence of Diploe was noticed in 8 cases ; in 3 of Dementia, 3 of General Paralysis, 1 of Mania, and 1 of Melancholia.

Calvarium Thickened in 7 cases ; 3 of General Paralysis, 3 of Dementia, and 1 of Mania.

Calvarium Thin in 2 cases ; 1 of Mania, and 1 of Dementia.

Calvarium Softened in 1 case of Dementia.

Ossific Deposit in the Dura Mater was noticed in 3 cases ; 2 of General Paralysis, and 1 of Dementia.

Tumour on the Dura Mater opposite the Fissure of Silvius in 1 case of Dementia, and over the top of right hemisphere in 1 case of General Paralysis.

Depression of the Parietal Bone was present in 1 case of General Paralysis.

The following table of *Weights* forms a contribution to the pathology of Insanity, which although of little value in itself from the small number of data, will come to be of considerable interest when the experience of a few years has been added to it.

TABLE XIII.—*Shewing the Weight (in ounces avoirdupois) of the Viscera, with the Form of Mental Disease, and Cause of Death.*

All the means of cure, medical and moral, in operation in former times, have continued to be pursued with increased activity and efficiency during the past year. Treatment.

Of these the most beneficial as a means of cure is undoubtedly active occupation in the open air. The garden, farm, and pleasure grounds have afforded ample opportunities of this kind to the male portion of the inmates of the Western House during the past year. In addition to the ordinary cropping and gardening operations, extensive undertakings in the way of levelling, trenching, extending the lawn in front, forming new roads, laying down new fences, transplanting trees, and other works have been in constant progress; and have afforded occupation to all the able-bodied, from the most intelligent and docile, down to the most imbecile or unmanageable, capable only of wheeling stones in a barrow. The average number employed under the Gardener in this way was, during the summer months, above 100. The females have also frequently afforded bands of cheerful and active workers at weeding, picking, and various other suitable out-door occupations. For them, however, the washing-house, and green, and laundry, and the cleaning operations in constant progress, constitute the chief sources of active occupation. Occupation.

It is with extreme gratification on this occasion that I refer to the statement of work done during the past year by the various tradesmen, drawn up by the Master of Works. It presents the details with sufficient minuteness to enable every one to judge of the very great amount of work which has been executed, and to shew that the charges made for it, by which alone in former statements of this kind its extent and value could be estimated, are so reasonable, as to offer no exaggerated idea, to say the least of it, of the activity and industry of those employed. It may be stated in general terms that no hired tradesman has been employed in the house during the year, but that all our clothing has been made, our house painted and repaired; all our printing, glazing, carpenter work, and upholstery, our gasfittings, and smith and plumber work, plaster and slater and mason-work carried on by ourselves. A great part of the clothing of the officers, attendants, and servants, and that of their families, has been made in the house, in addition Work Executed.

to that of the patients. The value of work done, estimated as in former years, by charging journeyman's wages, in addition to the cost of material, amounts in all to £2024: 15: 2d. A considerable part of the charges made is indeed at a very moderate estimate. For example, only half journeyman's wages is charged for the shoes and boots and clothing made to the attendants, reducing the total value of the work done in this department to less than it would have been had the rule above referred to been strictly adhered to as in former years.

New Erections. In addition to the supply of the ordinary articles required by tear and wear, and ordinary repairs, the principal works of any magnitude made during the year have been a new Bath-room and Lavatory at the Western House, several Out-houses in the grounds, the formation of a new Washing-green, and erection of a new Court, a new Gate and Doorway adjoining the village of Tipperlin, a Workshop for the Plumbers and Gas-fitters, a Gate and Stairway to one of the gardens, laying a considerable piece of pavement in front of the East House, the furnishing of a new Bath-room for the Ladies, and the completion of the Billiard-room. The latter is our *chef d'œuvre*,—it is a very spacious and elegant apartment, with a porch attached, and affords a very great amount of comfort, profitable employment, and amusement to the gentlemen. It is a Reading-room as well as a Billiard-room, and is well stocked with newspapers and periodicals; it is a general rendezvous for the quiet and well-conducted, where billiards, draughts, backgammon, chess, bagatelle, cards, reading, or conversation—or rather several of them combined—may generally be found going on, and offering always a pleasing scene of tranquil and active employment.

The Eastern Department has undergone further changes calculated to improve it both in appearance and comfort. A Bath-room, with marble bath, has been added to the Ladies wing; a large amount of fancy and ornamental painting has been executed by the patients, and considerable additions made to the furnishing of the house.

The amount of work executed by the ladies in the Eastern House, (a statement of which, furnished by Miss Macdougall, is included among the tables,) and that of the articles of clothing made and re-

paired in the Western House, sufficiently attest the activity and industry which pervades the female department.

The out-door amusements and relaxations have been continued Amusements as in former years, with little variety, but equal frequency and zeal. Walks and drives in the country, pic-nic parties to the neighbouring hills and glens, bathing parties, fishing excursions, visits to reviews, cricket matches, and other sights, followed each other in close succession. Bowls, quoits, skittles, and cricket were the favourite games at home, and of these cricket appeared to effect the greatest amount of good, from the cheerful emulation and active muscular exertion which it calls into play.

Musical parties in the Eastern Department, and the weekly concert and ball in the Western, were kept up with their wonted spirit and beneficial results. The latter was occasionally varied as on former years by extraordinary exertions on the part of the inmates to mark a holiday, or do honour to some distinguished guest. Halloween and New Year's-day had their usual festivities. On one of the weekly assemblies, the amiable and accomplished Physician of Hanwell was received by the patients with the respect and courtesy due to his well-known benevolence. On another occasion, Miss Glyn kindly favoured the assemblage with readings from Anthony and Cleopatra; and during the greater part of the year, through the gratuitous assistance of several of the most efficient professional performers from the city, the music was of more than ordinary excellence, and added very much to the interest and enjoyment of the evenings.

The Library of the Asylum has continued slowly to increase, Library, etc. partly through the gifts of friends, and partly from the profits derived from our Monthly Periodical, which still enjoys a renumeraating circulation. The newspapers and periodicals have been increased in number, and all these sources of occupation are eagerly sought after and enjoyed.

Through the application of our Chaplain, a handsome donation of tracts was obtained from the Scottish Tract Society. These are read with avidity, particularly by the females, on the Sabbaths, when a fresh distribution generally takes place.

The Chaplain has favoured me with the following report, which will, I have no doubt, be read with pleasure.

Chaplain's Report.

I HAVE every reason to report favourably with regard to the occurrences of the past year in the Asylum, so far as regards the department of Chaplain.

The attendance at both services on Sabbath has been regular and gratifying throughout the year, and much quietness and decorum have generally been manifested. This has rendered these occasions impressive and interesting, and has been strikingly observed and remarked by all my clerical friends, who have so kindly and acceptably officiated for me. These good results are owing in no small degree to the regularity in attendance, and propriety of conduct so commendable, and so general in the inmates of the Institution.

From frequent opportunities of conducting the service, and proper and satisfactory information, it affords me much pleasure to state, that the attendance at morning prayers on week days, has been rather more than on any former year. And the effects of these meetings are highly beneficial.

In cases of sickness and distress, the ordinances of religion have been sought after with much eagerness in many instances; and in some cases of protracted and fatal disease, have obviously afforded that consolation, which nothing else can possibly confer. Faith in the Redeemer, has continued to sustain them, as their feet approached the dark valley, and love to Him, and confidence in the guidance of the Holy Spirit, have caused them to anticipate, with joy and gladness, the glory that shall be revealed. Their hopes have rested entirely in the exercise of Divine mercy; and with humility, it has been acknowledged as their only trust. Evidence has thus been afforded, that true religion alone can bestow happiness in life, and peace at death.

The Edinburgh Religious Tract Society have kindly furnished another supply of Tracts, which have had a salutary influence in engaging the attention, and contributing to the instruction of many of the inmates. And on this account, they are justly entitled to warm and cordial thanks.

ROBERT LORIMER.

I cordially concur in the meed of praise awarded to the attendants and servants in the Chaplain's report, and have much pleasure in adding that their general conduct throughout the year has been highly creditable both to the Institution and to themselves.

In conclusion, permit me to hope that the present prosperity of the Institution under your management may be deemed by you a sufficient warrant to justify you in proceeding with its extension and completion, so that the benefits which it at present confers upon the community may be still more widely diffused.

DAVID SKAE, M.D.

I cordially consent in the award of prize awarded to the other-
lands and servants in the Hospital's report and have much pleasure
in adding that their general conduct throughout the year has
been highly creditable to the Institution and to themselves.
In conclusion, permit me to hope that the present prosperity of
the Institution under your management may be deemed by you a
sufficient warrant to justify you in proceeding with the extension
and completion so that the benefits which it at present confers upon
the community may be still more widely diffused.

DAVID SKAE, M.D.

It is a pleasure to state that the Hospital has been successful in its
efforts to secure the aid of the public in the support of the
Institution and in the improvement of the Hospital and in the
extension of its services to the community.

The Hospital has been successful in its efforts to secure the aid of the
public in the support of the Institution and in the improvement of the
Hospital and in the extension of its services to the community.

The Hospital has been successful in its efforts to secure the aid of the
public in the support of the Institution and in the improvement of the
Hospital and in the extension of its services to the community.

The Hospital has been successful in its efforts to secure the aid of the
public in the support of the Institution and in the improvement of the
Hospital and in the extension of its services to the community.

ROBERT L. LINSLEY
