Twenty=second Annual Report

OF THE

COMMITTEE OF VISITORS,

For the Year 1874.

THE Committee of Visitors beg to present their Annual Report to the Courts of Quarter Sessions of Lindsey, Kesteven, and Holland, and to the Corporations of Lincoln, Stamford, and Grantham, and to inform them that the number of Patients in the Asylum on the 31st day of December, 1874, was—

Males	•			•			•	•		293
Females	3									308

601

Being an increase of 7 on the number of last year.

During the past year, 5 Patients, who had been sent to the Asylum at Beverley, and who were maintained at a cost of 15s. 9d. a week, have been brought back to the Asylum at Bracebridge, where the cost of

their maintenance is covered by the usual weekly-rate, and the difference, which was previously charged to the Fabric Fund, is thereby saved.

Additions have been made to the House of the Engineer of the Asylum at the cost of £378, and the payment of this sum, and the ordinary expenses of the fabric, have rendered it necessary for the Visitors to levy rates during the year amounting to £2300.

The average weekly-rate for the past year has been 9s. $9\frac{5}{8}$ d., as against 9s. $5\frac{3}{8}$ d. in the preceding year.

Within the last few months complaints have been made to the Visitors that water largely charged with sewage matter escapes from the irrigation field into the Upper Witham; and they have received a communication from the Deputy Town Clerk of Lincoln with a copy of a Resolution, in which it is alleged that the sewage from the Asylum is discharged into the Witham at a point above that from which the Water supply of the City is drawn.

The Visitors hope, that, if at any time water tainted with sewage has passed from the Sewage Field into the Witham (of which, however, they have no know-ledge) it has been due to some accidental circumstance, and cannot properly be charged against the system which has been adopted for disposal of the sewage of the Asylum, which, if carefully and properly worked, would allow nothing to escape from the Sewage Field into the Witham which would interfere with the purity of the water; and they have accordingly given directions that the utmost care shall be taken to ensure the

distribution of the sewage over the land, and to prevent its escape through any pipes or channels into drains communicating with the river. With attention to these directions the Visitors hope that they will not receive any further complaints on the subject.

The Farming operations continue to be satisfactory, and have resulted in a considerable profit to the Institution.

The management of the Asylum, and the condition of the Patients, continue to be as satisfactory as heretofore.

Abstracts of the Fabric Accounts for the year 1874, and of the Annual Lunacy Returns, accompany this Report.

MONSON, CHAIRMAN.

29th April, 1875.

ROBERT TOYNBEE,

CLERK TO THE VISITO

Lincoln, February, 1875.

ANNUAL REPORT

OF THE

MEDICAL SUPERINTENDENT.

THE Medical Superintendent has the honour to submit Twenty-second to the Committee of Visitors his Twenty-second Annual Report, to which are appended the usual Statistics and the Steward's Abstract of Accounts for the year.

Report.

On the 1st of January, 1874, there were 584 Patients in the Asylum, of whom 285 were men and 299 women. During the year 79 men and 77 women were admitted, making the total number under care and treatment 740, viz.: -364 men and 376 women.

Admissions.

Of these, 29 women and 28 men were discharged Discharges and Deaths. recovered; 2 men were discharged on account of defective admission-papers; 1 convalescent man escaped; 5 women were removed by friends under a provision of the Lunacy Acts; I woman, an out-county patient, was transferred to another Asylum; and 36 men and 34 women died.

In all, the discharges and deaths amounted to 139, viz :- 71 men and 68 women, and there remained in the Asylum at the end of the year 601 Patients, of whom 293 were men and 308 women.

Remaining Numbers. Average Daily Resident Numbers. The average daily resident number of men was 297, of women 298—of both sexes 595.

Percentage of Recoveries. The recoveries were 36.5 per cent. of the admissions, viz.:—37 per cent. on the men's side, and 36 per cent. on that of the women.

Death-rate.

Calculated on the average daily resident numbers, the mean mortality was 12.2 per cent., being 13 per cent. amongst the men, and 11 per cent. amongst the women.

Inquests.

Three inquests were held. 1. In the case of a male Patient, quite imbecile and in the last stage of General Paralysis, who accidentally suffocated himself by cramming his mouth full of horse-hair which he pulled out of his pillow. 2. On a male Patient, who, while in an epileptic fit, rolled out of bed, and got his head and face impacted in a most extraordinary manner in an India-rubber chamber-utensil. 3. In the case of a female Patient, who died suddenly in one of the sitting-rooms from Disease of the Heart. The evidence in each case was satisfactory to the jury, and verdicts were returned as above.

Causes of Death Table V. The other causes of death were Organic Disease of the Brain 31, Diseases of the Heart and Lungs 19, of the Abdominal Viscera 10, Erysipelas 5, and Senile Decay 5.

Influence of Age and Duration of Disorder on Rates of Mortality and Recovery.

Compared with the general averages of previous years, there was a falling off of \$\frac{8}{10}\$ths per cent. in the recoveries, and an increase of \$1\frac{2}{10}\$ths per cent. in the mean mortality, both arising from causes which become very evident on referring to the statistics. The Tables

show that the ages of 32 of the Patients admitted ranged from 60 to 90 years-embracing a period of life in which the reparative powers are generally at a low ebb, and indications of natural decay may be expected; that 33 died within one year of their admission, of whom 11 did not survive one month; and that as many as 51 were imbecile, and 23 otherwise chronic, and, hence, almost certainly, incurable cases. whether regarded with respect to bodily condition or duration of mental disorder, helplessness and hopelessness were characteristic of a very large proportion of the admissions. But beyond the necessarily unfavourable influence such cases have on the rates of mortality and recovery, their reception has a direct tendency to increase the permanent population of the Asylum, and to absorb the space available for the treatment of recent and curable cases, which is already too limited for free action, and liable at any time to be filled up. The prevailing practice in sending Patients to the Asylum More discretion needed in sending would be very greatly improved if the words "a proper person to be taken charge of and detained under care and treatment," which occur both in the Order for Reception and the Medical Certificate accompanying it, were rightly understood and applied. So many recent cases would not then be allowed to remain at home to become chronic and pass beyond the reach of successful treatment, nor so many poor creatures in the last stage of infirmity or disease be sent to the Asylum merely to die. Indeed, the accommodation, which for some time past has been less than desirable, must soon become

Table VIII.

Table VI.

Table XI.

Patients to the Asylum, or the Government Grant will lead to its being filled by cases for which it was not intended.

altogether inadequate unless more discretion is used in making the Orders for admission, especially as these are now likely to be more freely applied for in consequence of the Government-grant of four shillings per week towards the maintenance of every Patient confined in the Asylum.

Although the year did not pass without some very

gratifying instances of recovery after prolonged treat-

ment of Patients whose restoration was at one time

apparently hopeless, still the great bulk of the re-

coveries, amounting to nearly 60 per cent., took place

in those who had not been insane more than three

months before being brought to the Asylum.

Table VII.

Table VI.

not be doubted that these were rescued from the encroachments of the chronic form of the disease by being submitted to early treatment, when the symptoms are usually easy to combat, and the cure rapid. Nearly one-half of the recoveries occurred within six months of admission, and as many as 46, or 80 per cent., within twelve months. The malady does not, unfortunately, Importance of Early Treatment admit of being stamped out like an epidemic, but if the chronic stage were averted, as by prompt treatment it certainly can be in nearly all initial cases, hereditary taint would be less common as a remote cause than it is at present, and, as a consequence, many of the ordinary exciting causes would become inoperative, and a diminution of the number of insane persons be surely effected.

General Management.

The general management of the Institution continued the same in principle as has been frequently described in former Reports; and the efforts made to promote industrious habits, cheerfulness, moral tone, and good order throughout the Asylum were rewarded with a large measure of success.

The profits arising from the Farming operations Farm-profit and Weekly-rate. were again satisfactory, and the average weekly-rate for the year was 9s. 95d.

Provisions against Fire.

The provisions against fire ordered by the Visitors are nearly completed. A small fire engine with the necessary length of hose has been purchased, and periodically worked, a fire-plug placed so as to command the laurdry and range of workshops, and valves connected with the water-cisterns fixed in the central staircases. Another valve for use with the pumpingengine in case of fire, and iron-lids to take the place of wooden ones now covering the man-holes opening from the interior of the building into the roof, are ready for fixing. Further protection would be gained by keeping one of Dick's "Extincteurs" in a readily accessible situation on each side of the building.

The water-supply, although much improved by Water-supply. clearing out the well-headings in the early part of the year, was still occasionally defective; but it is expected that all difficuly under this head will be removed as soon as the reservoir now in course of construction in the immediate vicinity of the Asylum is finished.

An additional attendant has been placed on each side of the Asylum solely to watch and take care of for Epileptics. the epileptics during the night; and to facilitate inspection, the whole of the sleeping-rooms in the

Improved Arrangements epileptic wards will be lighted with gas, panes of glass inserted in the doors, and openings for the transmission of sound made in the walls. The work is now far advanced. These arrangements will give the nearest approach to absolutely constant supervision which the structural character of the building will allow, and cannot but prove most valuable as a protection against the accidental death of a Patient during a fit, although no watching or contrivance whatever can in all cases lessen the severity of a fit, or prevent it being fatal.

Attendants and Servants. The Attendants and Servants as a body acquitted themselves of their duties very creditably. The changes amongst the former were rather numerous, but, with two exceptions, they all arose from private reasons of their own. On the men's side, the attendants' wages have lately been supplemented by the addition of an Annual Suit of Uniform Clothing, which, it is hoped, will make them value their situations, and endeavour to retain them.

Staff of Officers.

The staff of Officers continued to give most willing and efficient aid both in the immediate care and treatment of the Patients and in all matters pertaining to the general business and welfare of the Institution.

Conclusion.

In conclusion, the Medical Superintendent desires to tender to the Visitors his grateful acknowledgement of the consideration and support with which they have through so many years uninterruptedly favoured him.

EDWD. PALMER, M.D.

Report of the Commissioners in Kunncy.

Lincoln County Asylum, 25th March, 1875.

WE have inspected this Asylum, and seen all the patients, except 1 man and 2 women who are absent on leave. The present number on the books are 295 of the male and 313 of the female sex—Total 608. The admissions since our last visit, on the 12th of February, 1874, amounted to 182, viz.—84 men and 98 women. In the same interval 32 men and 33 women were discharged, of whom all but 7 were recovered; and 46 men and 47 women have died.

It will be seen that the death rate has again been high, about 12 per cent upon the daily number resident. This, no doubt, is to be attributed chiefly to the severity of the past winter, and to the number of old and feeble cases included amongst the admissions. During the past year 32 patients were received whose ages varied from 60 to 90 years, and 11 died within one month of admission. General paralysis was fatal in 14 instances, other brain diseases in 21, and phthisis, and other lung and heart diseases, in 29. The other deaths requiring special notice were those of four patients who died from erysipelas which has been prevalent in the Asylum, and of four others upon whom inquests were held, viz.:—1. A woman who died suddenly of heart disease. 2. An epileptic who was found dead in bed. 3. An epileptic who died by a very strange accident; he fell out of bed during a fit, when his face and head became fixed in an india-rubber chamber utensil standing at the side, and he was found suffocated; and 4. A man who choked himself by stuffing his mouth with horse-hair, which he had pulled from his pillow. These cases were duly reported to our Board at the time.

Post mortem examinations were made in 30 instances. It is the custom here, when sending notice of death to the patients' friends, to enclose a printed statement, to the effect that the body will be examined, unless a letter or telegraphic

message is received forbidding it, and that in the event of a telegraphic message being sent the cost will be repaid to the sender.

The patients in bed during our inspection were 14 men and 8 wemen. These were distributed in the various wards, an arrangement, in our opinion, less satisfactory than where a special infirmary is provided, duly furnished with all medical comforts, and with a staff of qualified nurses and attendants who are accustomed to the treatment of the sick. We recommend this matter to attention; for, besides those in bed, there were many in each division needing much care and nursing.

The number of vacant beds in the Asylum is becoming very small, and it will not be long before the best means of providing additional accommodation will have to be considered. We have already alluded to the large number of demented old patients resident here, and who are hardly such cases as County Asylums were originally built for.

Allusion was made in the last Report to the necessity which existed for more complete supervision of epileptics during the night, and the engagement of two additional attendants was reported. Alterations are now in progress for securing more efficient watching of such patients sleeping in single rooms, and openings have been made over the doors in one of the galleries on each side, which will contain a jet of gas; and plate glass will be substituted for the wooden panels of the doors themselves. We have some doubt as to the sufficiency of the openings to allow the sound of a patient suffering from a fit to be well heard outside, and we believe that a panel of perforated zinc will be found necessary for the pur-The two dormitories in these wards are not well placed for ensuring constant and easy supervision of all the beds, and we have, with Dr. Palmer, considered how this defect might be best remedied. A large dormitory might no doubt be obtained by advancing the front wall, but this might involve some architectural difficulties; and, besides, as there is much traffic through these wards to other parts of the Asylum, we think that the construction of an inexpensive one-storied building specially adapted for patients of this class would probably be the best, and in the end the most economical course.

The patients were remarkably quiet and well behaved, and no one was restrained or in seclusion. The only recorded case of restraint since the last visit was that of a woman whose hands were secured during fifteen nights, in consequence of strongly suicidal propensities. Seclusion is reported in the cases of 21 males and 7 females, the former on 68 days, or portions of days, and the women on 19. The individual cases of seclusion rarely exceeded two or three, except in the instance of a woman suffering from erysipelas, whose door was only locked to prevent the intrusion of other patients, and of two men who refused to get up, but were not excited.

The general condition of the wards was satisfactory, and the bedding was very clean, but some renewal of the papering is requisite in several places, and we were, as usual, struck with the bare appearance of the galleries. We strongly urge the provision of more books and papers, the stock being quite insufficient, and that more cards, dominoes, &c., be given out. There are associated meetings, at which from 70 to 80 of each sex attend, and about the same number are taken beyond the Asylum premises for exercise.

The numbers reported to be usefully employed are 160 men, and 200 women. Of the former, 48 work on the farm at this season, but many more during the summer and autumn. Forty women are regularly engaged in the laundry, 14 in the kitchen, and a large number in needle-work and ward-cleaning.

We think that a large number of the men might be usefully and benefically occupied were the work-room, some years since in contemplation, to be erected.

Divine service is performed as usual, and attended by from 150 to 160 of each sex.

The attendants and nurses seem to be of a respectable class, and we had no reasonable complaints regarding them from the patients. They are in the proportion of one to twelve of the inmates, not including the head attendants, or the night attendants.

Although our opinion of the condition and management of this Asylum and its inmates is a very favourable one, it is our duty again to press strongly upon the consideration of the Visitors the necessity which exists for a small detached Hospital for contagious disorders.

It is satisfactory to report that the profit on the farm continues to be large, amounting last year to to £657, of which £75 was made from the sewage irrigation, after charging the rent at £30 per annum. The weekly charge is now 10s.

We have given special attention to a male patient named T. E. H., whose case was alluded to in the last report, and who has again appealed to us for liberation; in our opinion he is still of unsound mind, and not fit to be discharged.

The case books and medical register are very well kept, and there is evidence throughout the Asylum of careful and skilful attention to the welfare of the inmates, on the part of the Medical Superintendent.

W. G. CAMPBELL, JAMES WILKES, Commissioners in Lunacy.
