## REPORT

OF THE

## COMMITTEE OF VISITORS

OF THE

# County Aunatic Asylum,

PRESENTED TO THE

COURT OF QUARTER SESSIONS,

Held at TAUNTON, in the said County, on TÜESDAY, the 5th Day of JANUARY, 1875.

HE Committee have again the pleasure of reporting favourably of the state and condition of the Asylum during the past year.

There are now in it 287 males and 288 females, and there is room for 10 more males, but the female side is full, and the extension of that side is progressing favourably, and in the opinion of the County Surveyor will be completed by September 23rd according to the contract.

The management of the Asylum and the conduct of the officers and servants thereof, and the care of the patients therein, have also been satisfactory.

Thrice during the last year there has been alarm of infectious disease; erysipelas shewed itself, and two patients died, the first case it is believed, of infectious disease since the Asylum was opened. The disease was promptly met by proper medical

treatment. A patient was allowed to visit her husband, and on her return stated that there was smallpox in the house. Another patient was transferred from Devizes Asylum and information was afterwards given that she had been in the same ward with a patient who had died of the worst kind of smallpox. In both cases prompt precautions were taken and the infection did not spread.

It may be as well to remark that there is a building for convalescent females separate from the Asylum, where cases of infection on that side of the House could be isolated, but that no similar accommodation exists on the male side.

A heavy demand of arrears of income tax on the profits made upon the foreign patients who have been inmates from the time of opening the Asylum was under consideration at the end of last year, and has been settled for £240 after tedious and troublesome negotiations.

The purchase of land which the Court was so good as to assent to at the last Sessions is progressing and will be completed at Lady Day.

Several times during the past year, the Committee have had to resist proposals to send to the Asylum Criminal Lunatics. The confinement of Criminal Lunatics and Idiots in Asylums intended for the cure of the Insane is altogether unreasonable, and an evil which ought to be remedied.

The Committee have much pleasure in reporting the success of the experiment made by the Board of Guardians at the Frome Union, of establishing wards for the care of their chronic lunatics; one has been returned, the others have all increased in weight, which is the very best evidence that they have been judiciously and kindly treated. At the meeting in September the pay from the Unions was reduced one penny a day, and at that in December a further reduction was made of the same amount. The pay now stands at 9/11 per week.

The Committee are happy to be able to express their continued confidence in the management of the Asylum by Dr. Medlicott and his Assistant Mr. Dove, whose health has been materially benefited by the leave of absence he had last winter.

#### REPORT

OF THE

## REV. R. N. WOOD, CHAPLAIN.

To the Visiting Justices of the Somerset County Lunatic Asylum.

GENTLEMEN,

There is no change in the general condition of the patients since last year. I suppose we must expect that it will remain much the same, that there will always be every variety of mental disease, from that which can hardly be detected without careful watching, to that which takes away the reason altogether. I have seen nothing to change my opinion that except in the last case, religious instruction and the opportunity of attending Divine Service, are both beneficial and a source of much comfort.

I believe it is commonly supposed that cases of religious melancholy are some of those with which a Chaplain has especially to deal. I will therefore make a few remarks on the subject, though aware that opinions formed on a short experience may require to be corrected.

There are some who might, at first view, be supposed to be afflicted with religious melancholy, who are, in fact, suffering from general insane melancholy. A patient may speak as if in deep spiritual trouble, and a few hours or even minutes after express equal distress about a totally different matter, perhaps a mere trifle. We can have little hope of argument or persuasion producing a permanent effect in such cases.

Where the melancholy is really and exclusively religious, I

think a marked distinction ought to be made between those cases where it has been a case of insanity, and those where it is an effect. We may hope to have success in dealing with cases where the mind has become disordered from distress on account of past misconduct, or from having taken up erroneous or one-sided views. But if insanity, arising from physical causes, produces as its principal symptom religious melancholy or despair the case is a very sad one. All that we can say seems useless, sometimes harmful, for the disease is one of the body, from which I believe, there is not often recovery.

The average number of patients attending Chapel has been-

	MEN.		WOMEN.
Sundays	 129	 	190
Other days	 117	 	88

The average number of communicants has been—patients nearly 5; others 5.

The Alms have been £4 4s. 1d. and £2 3s. 0d. sent to the Missionary Candidates' Association. The sum of £4 7s. 6d. has been given to patients leaving the Asylum.

During Advent and Lent there was Evening Prayer with a sermon after choir practice on Friday evening, at which a few attendants from the women's side were present.

The Funerals have been-

Men ... 20. Women ... 16.

Eight of the men and nine of the women were buried in the New Ground.

The School has been continued both for men and women with about the same amount of success as last year. The average attendance was—

Men between ... 14 and 15 Women ,, ... 8 ,, 9

R. WOOD, Chaplain.

Horrington, Nov. 28th, 1874.

#### TWENTY-SEVENTH ANNUAL REPORT

OF THE

#### SOMERSET

## COUNTY LUNATIC ASYLUM,

FOR THE YEAR 1874,

BY C. W. CARTER MADDEN-MEDLICOTT, M.D.,
RESIDENT PHYSICIAN AND SUPERINTENDENT.

THE Medical Superintendent has the honour to submit to the Committee of Visitors, the Twenty-seventh Annual Report.

On the 31st December, 1873, the numbers in the Asylum were 273 males; 279 females; total 552.

The Admissions during the year have been 78 males; 80 females; total 158.

The Discharges during the year have been 39 males; 48 females; total 87; of these have been discharged "Recovered", 32 males; 37 females.

The Deaths during the year have been 25 males; 23 females; total 48.

The average population during the year has been 282 males; 290 females; total 572.

The numbers in the Asylum this day (31st December, 1874,) are 287 males; 288 females; total 575.

The year just closed has been the first since the opening of the Asylum in 1848 having reference to the outbreak of any

epidemic disease with fatal results. In the spring however erysipelas attacked most of the surgical cases in the male infirmary. Immediate attention was directed to the cause, and under the section "Medical Treatment" in this report will be found full particulars of its origin, and the measures adopted for treatment. Fortunately two deaths alone occurred having direct connection with this epidemic, but these were distinctly traceable to defective sanitary arrangements, or in other words to sewage poisoning.

It is only proper also to mention that two cases of suspected Smallpox were under treatment in the summer months. This fact of itself points to the necessity of a detached building for male patients, (similar to that for females near the farm-yard) in the event of an outbreak of some infectious or contagious disease.

With the exceptions just referred to, the Asylum has been remarkably healthy during the past year. The usual details respecting Admissions, Discharges, and Deaths, will be found under their respective headings. On the subject of Admissions however, attention may very naturally be directed to the subsidy offered by the Chancellor of the Exchequer for the maintenance in Asylums of pauper lunatics, amounting to four shillings a week to the unions for each patient. At present little can be said as to any increase in the admissions for the year in consequence of this subsidy, and it is scarcely necessary to repeat here that the more early the treatment after an attack of insanity, the greater the probability of complete mental restoration.

Anything indeed which tends either financially or otherwise to prevent delay is a great advance on the old system of detaining pauper lunatics in workhouses, where from such delay too often curative treatment becomes useless, and but partial alleviation is of any avail. It would be a great abuse therefore to remove all the imbeciles and chronic insane accommodated in the lunatic wards of the workhouses in the county, to the Asylum, simply for the sake of the pay. The detention of this latter class

in workhouses (as long as they remain cleanly, quiet, and harmless) is proper enough, and their removal to the County Asylum would only inflict an unnecessary and possibly an unjust tax on the rate-payers, inasmuch as by judicious occupation and amusement such patients would become industrious, and consequently useful in the unions.

#### ADMISSIONS, DISCHARGES, DEATHS.

The following analysis gives the chief points of interest in these returns:—

#### ADMISSIONS.

The number of admissions during the year has amounted to 158 (78 males and 80 females). There is nothing that calls for special notice in the admissions for the year save and except that affecting "Criminal Lunatics." These cases unfortunately still continue to be brought from various gaols to the Asylum. Consistently with discipline, kindness and toleration must of course be exercised towards them, but it is certainly open to question whether measures for their reform (based on an anti-punitive footing) should be carried out in the County Asylum. From their antecedents, pointing to much depravity and profligacy, it is impossible to prevent moral contagion, and the repressive measures of a prison, such as correction or isolation, are incompatible with the treatment of ordinary lunatics in asylums.

These cases most certainly then should be refused admission into the County Asylum; for it must ever be borne in mind that they are "Criminals," although found "Not Guilty" on the ground of insanity; and moreover the acquittal of criminals supposed to be insane, causes persons to be frequently conveyed to lunatic Asylums who are no lunatics at all, unless that term includes individuals who yield to their passions, instead of governing them. However improperly, it appears then in practise, that these acquitted criminals are to be detained in our County Asylums, until duly qualified by some further crime for the State Criminal Asylum at Broadmoor.

In the 1st Quarter, admitted 29 cases; 12 males; 17 females.

#### DISCHARGES.

The proportion of recoveries has been for the males 41°, and for the females 46°2 per cent. on the admissions. As before so frequently stated, the greater number of recoveries have been found to take place within the first six months of admission, the numbers rapidly diminishing after a longer period.

The system of workhouse probation has also once again been tried during the past year. It will be remembered that in the autumn of 1871, the various Boards of Guardians in the county were communicated with by the Committee of Visitors, in reference to the advisability of utilising workhouses for the reception of harmless lunatics. The unsatisfactory portion of this correspondence referred chiefly to accommodation, inasmuch as the Boards of Guardians replied that in the case of any intended permanent residence in the union workhouse, they were not then prepared to give a guarantee of entire separation from the sane inmates, the existing accommodation moreover failing to meet all the requirements of the Commissioners in Lunacy.

The question of further enlargement of the asylum at that time was most important, and the possibility of drafting off harmless lunatics to workhouses, on account of increasing admissions into the Asylum, was thoroughly well considered. It was felt that the aggregation of such cases (imbeciles and incurables) detracted immeasureably from the value af the asylum as a "hospital for the insane." Unfortunately the system then prevailed, as it continues to do to the present day, of indiscriminately filling the asylum with improper cases, namely idiot children, old people frequently above 80 years of age, consequently only in their dotage, and criminal lunatics. The experiment

nothwithstanding was made, and certain selected harmless cases (47 in number) were transferred to the workhouses. Of these 19 returned, the majority greatly deteriorated in mental, and particularly so in bodily condition. This experience thus proved that without stringent regulations respecting diet &c., the workhouse system could not be depended upon.

Since then however the Guardians of the Frome Union have made alterations in a portion of their workhouse for some years unused, and proper accommodation, distinct from other parts of the house, has been made for the reception of harmless lunatics. In the month of July accordingly, the Committee discharged two men and eight women to the new imbecile wards of the Frome Workhouse, being quiet, cleanly, and harmless. It was especially insisted upon that these patients should be regularly taken out for walks beyond the union workhouse grounds, and that a dietary analogous to that of the asylum should be used. patients were all weighed previous to being discharged from the Asylum, and it is satisfactory to report after five months probation that only one has returned, and none have even lost in weight (special care being paid as regard diet and exercise). This system therefore of workhouse probation is well worthy of further trial in the county, especially with reference to idiot children, and harmless lunatics.

#### DEATHS.

The mortality has been 48 or 8.3 per cent. both sexes on the average numbers resident. There is nothing of particular interest

in the obituary for the year, the causes of death being (with two exceptions from erysipelas) the same as usually occur in asylums. Many patients however are still brought to the Asylum in a painfully unsatisfactory state, only very shortly to die, some in extremely bad bodily health, others very advanced in years, or only in early childhood. It is pitiable to have to draw the attention of the public once again to this latter fact, but during the last year two patients have been admitted, the youngest being 8 years old, the oldest 87, with intermediate ones between 75 and 87. These latter persons, simply in their dotage, improper cases therefore for a lunatic asylum at all, have contributed not a little to swell the tables of mortality for the year.

In the 1st Quarter there were 16 Deaths; 11 males, 5 females.

#### OCCUPATIONS AND AMUSEMENTS.

The "Statistical Tables" appended as usual to the annual Report give the particulars of the various occupations entered upon by the patients during the past year.

It is right to state that only those are returned as "Employed" who have been constantly and regularly at work during a month, the less constant workers being classed with the "unemployed." As a further incentive to occupation, many little extras and indulgences have been granted to patients employed in their various avocations, and this encouragement coming directly from the artisan attendant in charge, creates a personal bond of union between patient and attendant, which is not always severed by discharge.

It is unnecessary to specify in detail the different occupations entered upon. A large number as usual were employed at outdoor work; and there have been also the artisan staff, blacksmiths, carpenters, painters, &c., besides the more refined

manual craftsman, such as cabinet-makers, upholsterers, and others skilled in fancy work of different kinds.

Recognising relaxation and change as necessary conditions of health, the various forms of recreation and amusement have continued as formerly. Cricket and foot-ball have continued as popular as ever, and but for the long continued wet weather in the autumn, the number of "outings" and "pic-nics" would have been the same as in former years. Theatrical performances also took place in the winter months, diversified at times with exhibitions of the magic lantern, the weekly dances, &c. &c.

#### MEDICAL TREATMENT.

The Medical treatment of the patients as might naturally be expected has occupied a large share of labour and anxiety during the past year, but has certainly proved one of the most effective auxiliaries in the administration of the Asylum.

It is not usual in the Annual Report to dilate much upon medical topics, these very properly being considered fit only to take their place in some of the recognised medical periodicals of the day. Inasmuch however as professional subjects must unavoidably be touched upon, and the Annual Report is issued to the general public, it seems only right to render somewhat intelligible medical statements for lay readers.

The first thing then that commands attention is this, that the insane are no longer regarded as individuals beyond the reach of the healing art of medicine. The days have quite passed by since it was considered necessary to pay divine honours to lunatics, and with them too is earnestly to be hoped has passed the age of quackery and superstition regarding them. Everything then that guarantees the future advancement of medicine, has its elevated and ennobling claim as much upon the insane as upon the sane. If then the object of medicine is to cure disease, the Physician of every Asylum will lose no opportunity in bringing all the resources of the most advanced

theories in the scientific progress of medicine to bear on the medical treatment of the insane.

It may then generally be stated, that a very large proportion of patients have been under medical treatment during the past year; and it may further be added, that a majority of the recoveries for the same period have been mainly due to systematic medical treatment, subsequently supplemented by so-called "moral treatment". Even among the imbeciles, as well as those afflicted with congenital idiocy, (cases where mental reclamation obviously must be regarded as almost an impossibility) medical treatment has nevertheless been required, in some instances in relieving temporary bodily suffering, in others in simply ameliorating existing physical conditions, too often only conducive to further bodily degeneration. Consequently the medical treatment of lunatics thus comes to form something more than a convenient compromise in the internal administration of the Asylum, and for this very reason should have more than a purely local interest.

The illusions and delusions of patients often cause grave doubts and fears to the physician, the more so as the ordinary signs and symptoms of bodily disease are so frequently masked among the insane. True that in some cases of mental derangement, nothing is required (as regards treatment) except simple physical repose, necessitating for the time being release from unavoidable responsibilities and cares. But in others again there is a disproportionate strain on the physical powers, great bodily pain perhaps coexisting, with too often its attendant waste of the material tissues. These facts of themselves surely reveal the necessity for the Asylum to be looked upon as a "hospital" for the insane, and should predispose also in moderating popular prejudices about lunatics. The public have no inclination to shut their eyes to facts, but until they are convinced of this necessity, they will never have the same confidence in the internal administration of Lunatic Asylums.

There is no occasion to enter into the details of the medical treatment of the patients, but certain matters relative to hygiene may with propriety be mentioned, the more so as during the spring and early summer months, an epidemic of erysipelas appeared in the male infirmary, seriously complicating for the time being certain surgical cases. Attention therefore was immediately directed to lessen the risks of further propagation, by ascertaining and correcting the causes of any sanitary defects. The surgical cases accordingly were all removed into single rooms, where in addition to stringent measures respecting the systematic removal of all excreta in vessels containing disinfectants, as also the employment of antiseptic dressings, small gasaliers were introduced, communicating by means of a zinc pipe with the foul air extraction shafts. Gas was kept permanently burning in these rooms, and doubtless it had the effect of staving off other cases of blood poisoning, that would inevitably have been induced by the presence of any polluted air in circulation.

At the same time other matters relative to defective hygiene were taken in hand. The soil pipes were all ventilated, inasmuch as it was found that the waste pipes of the water cisterns passed directly into the soil pipes, and owing to the downward currents through the ventilating shafts of closets, sewer air readily enough entered the infirmary ward. However by tapping the outside ejects with a two-inch pipe (carried above the roof), all regurgitation of sewer air was thus safely disposed of, and no further unpleasant consequences ensued.

In conclusion, the Medical Superintendent begs to return his most grateful acknowledgments to the Committee of Visitors, for the renewed confidence and support tendered him in the discharge of his arduous and most responsible duties.
