A. M. JEAFFRESON, Receiver, &c.

We, whose names are hereto subscribed, have Examined and Audited the preceding Account for the Year One Thousand Eight Hundred and Seventy-nine, and find the same correct and the Balance as specified, this Twenty-third day of January, One Thousand Eight Hundred and Eighty.

JNO. BAGGALLAY, Treasurer. JOHN MILES. WALTER D. CRONIN.

Handwritten notes or markings on the left margin, including a small sketch or symbol.

Main body of the page containing extremely faint, illegible text, possibly bleed-through from the reverse side of the paper.

Right margin area, mostly blank with some faint vertical lines or markings.

KING EDWARD'S SCHOOLS.

CHAPLAIN'S REPORT, 1879.

To the Right Worshipful the PRESIDENT, the
Worshipful the TREASURER, and the
GOVERNORS of King Edward's Schools.

MY LORDS AND GENTLEMEN,

I have the honour to present my Annual Report to you on the state of your Schools. The past year has been so entirely uneventful that I have little more to do than record the numbers admitted, discharged, and disposed of during 1879.

In that year there were—

ADMITTED.					DISCHARGED.				
Boys	74	Boys	60
Girls	70	Girls	48
				—					—
Total	144	Total	108

There were remaining in the Schools on December 31st, 183 boys and 189 girls, making a total of 372. This is thirty-six in excess of the number remaining in the

Schools at the corresponding period in 1878, as you have provided accommodation for twenty more children in each School, and you have still room for ten more in each School, which would bring the numbers up to the full complement contemplated by the Court of Chancery's Scheme for the Regulation of the Charity.

The inmates discharged during the last year have been disposed of as follows:—

BOYS.

To the Royal Navy	4
To the Army	4
To Situations (various)	42
Removed by Friends	8
Sent home, physically unfit	2
	<hr/>
	60

GIRLS.

Provided with Situations	46
Removed by Friends	1
Sent home, physically unfit	1
	<hr/>
	48

Our senior Pupil Teacher, JOHN MOORE, having completed his three years' service, was a candidate for a Queen's Scholarship last July, and succeeded, being placed in the first class. He entered the York Training College at Christmas.

The Boys' School was examined by the Government Inspector on the 3rd July; and the Girls' School on 26th June, by the Rev. J. WALLACE, who had undertaken this

duty at the Treasurer's request on several previous occasions. I transcribe for your information the Reports of these gentlemen, and trust that you will be of opinion that the children are well and sufficiently taught.

“ KING EDWARD'S SCHOOL, WITLEY,
July 3rd, 1879.”

The general efficiency of this School is excellent. Religious knowledge is good throughout. The School composition in the 1st and 2nd classes is very good. Recitation, arithmetic, and hand writing are also alike satisfactory in those two classes. In the 3rd and lower classes, the spelling is in some cases defective; but arithmetic, notation, and hand writing, are very fair throughout. The intelligence of the boys is well aroused, and their answers in geography, mental arithmetic, &c., are highly creditable. The singing is remarkably good both for time and expression. The band has much improved, and I am glad to find that its value, as giving an excellent opening in life to the boys, is more recognised by the Governors. The uncertainty of the weather prevented me from seeing the military drill to the best advantage.

WYNDHAM HOLGATE,
H. M. Inspector.”

The Inspector appointed by the Bishop of the Diocese to examine all Schools in Surrey, the Managers of which are willing to admit him, in Religious knowledge only, also visited the Boys' School on the 16th of April, and tabulated his results thus:—Old Testament, “very good”; New Testament, “very good”; Catechism (Repetition), “very good”; Catechism (Explanation), “very good.” Liturgy and Christian Year, “fair” Upper School, Lower School, “good.” Repetition of Scripture, “good,” and in Lower School, “very fair.” Answers in writing, “good.”

The Inspector (Rev. J. W. GEDGE) adds, "The above Table shows how fully this School maintains its high standard of Religious knowledge."

The Rev. J. WALLACE in a letter addressed to the Treasurer, writes—

"THE MAGDALEN,
STREATHAM,
28th June, 1879.

MY DEAR SIR,

You give me no chance of speaking otherwise than with the highest praise of the general appearance of matters in King Edward's Schools. Everything about the rooms is neat, and the children bright and respectful. As regards their studies, I was glad but surprised to find that so limited a part of each day is devoted to book work. I am satisfied this is as it should be. A fair knowledge of needle-work, house-work, washing and cooking, will be of material service to the girls in pushing their way in Service, and will be of the last importance to them if, later on in life, they come to marry.

The proof of good teaching rests, I think, not in forcing on two or three clever children in difficult studies, but in bringing up a class to general proficiency in essential things. Taking reading out loud as a sample; I took the four first classes, marking down every child who made the *smallest* mistake, with the following result—

1st Class	Right	32	Wrong	3
2nd	„	Right	22	Wrong	5
3rd	„	Right	20	Wrong	6
4th	„	Right	18	Wrong	5

In the matter of arithmetic I gave the first class a "Bill of Parcels" of six items, all involving fractions. 16 girls were right, only 3 failed. In divisions of money involving fractions of a penny,

every child in the first and second classes was successful; so in one class in multiplication with three figures, not a child failed. In dictation the writing all round was clear and regular, and the faults in spelling very few.

In history, sacred and profane, and in geography, the upper classes were fairly well up. The catechism was well said all round.

On the whole I think you have an able Mistress who does her work thoroughly, and the Governors have every reason to be well satisfied.

I am, my dear Sir,

Truly yours,

J. WALLACE.

JOHN BAGGALLAY, Esq."

Whilst I am writing of the Girls' School, I may mention with some regret, that my able and zealous colleague, the Rev. W. FAULKNER, has left us, having been appointed by the Governors to their Chaplaincy at Wainflete. He took the deepest interest in his work at the Girls' School, and had gained the respect and attachment of all the officers and inmates. To myself he was a valuable co-adjutor, and I always found him ready to accept and act upon any suggestion whereby the spiritual interests of the School Girls might be promoted. He has been succeeded by the Rev. BENJAMIN WEST, who, I have no doubt, will well discharge the important duties of Assistant Chaplain, with which he has been entrusted.

The Lord Bishop of Rochester kindly held two Confirmations in the Girls' School during the year; the first on the 27th January, deferred from 1878 on account of sickness in

the School, and the second on 8th December. In January 55 girls were confirmed, and in December 44.

I have the pleasure of informing you that Alderman Sir FRANCIS WYATT TRUSCOTT was present at the examination of the Boys' School in July, and announced his intention, in the event of his being elected Lord Mayor, to present a Medal to the School in commemoration of his Mayoralty, to be worn on all public occasions for one year by the boy whose general good conduct entitles him to that distinction. I have received an intimation from his Lordship that he will now carry his intention into effect, and he has kindly promised that he will visit Witley with the Lady Mayoress, on some day during the Summer, and will himself present the Medal to the first successful candidate.

One hundred and seventy rewards, thirty more than last year, were given by the Committee to former inmates, who had maintained good characters in their situations. Of these forty-two boys and thirty girls were rewarded for the first time; thirty-three boys and twenty-three girls for the second time; and twenty-six boys and sixteen girls for the third and last time.

The Annual Concert at the Boys' School took place on January 15, and was attended as usual by a large company of our country neighbours, who were, I believe, much gratified by the entertainment.

The conduct of the children in both Schools has been entirely satisfactory, and their health remarkably good. We

have been visited by no epidemic, and the ailments have been of a trifling kind. Some troublesome cases of Ophthalmia have occurred in the Boys' School, but they have been successfully treated by Dr. SAVAGE, and in a few instances the Committee kindly sanctioned a short residence at the seaside with happy results.

I continue to receive very zealous and efficient support from all the officers and servants of both Establishments. To the Matron of the Girls' School we are particularly indebted, not only for the unwearied attention she bestows upon the girls whilst they are in the School, but for the kind and motherly supervision she exercises over them in their situations, to which I attribute the large measure of success with which this branch of the Institution has been blessed.

It only remains for me to acknowledge with gratitude the constant support and kindness with which the Governors continue to honour me. During the twenty-four years I have held my appointment, the number of inmates has been very nearly doubled. This circumstance has, of course, materially added to my responsibilities and labours; but I am thankful for the amount of health and strength which enables me still to carry on so interesting a work.

I have the honour to be,
My Lords and Gentlemen,
Your obedient Servant,
EDWARD RUDGE.

WITLEY, *January*, 1880.

The first part of the history of the world is the history of the creation of the world and the life of the first man, Adam. It is a story of the fall of man from a state of innocence to a state of sin and death. The second part of the history is the history of the world from the time of the flood to the time of the birth of Jesus Christ. It is a story of the growth of the human race and the development of civilization. The third part of the history is the history of the world from the time of the birth of Jesus Christ to the present. It is a story of the life of Jesus Christ and the spread of the Christian religion.

REGULATIONS.

1. The Boys are in two divisions, which attend the Shops, &c., and the Schools, on alternate days, receiving on an average 15½ hours Instruction in School, and 24 hours Industrial Employment per week.

2. Half Holiday every Saturday, from 12 a.m., when boys are to bathe.

3. Choir practice, and Brass Band, on alternate days, from 12 to 12.45 p.m.

4. Drill for School Boys in summer from 5 to 5.45; and in winter from 12 to 12.45, when weather will permit.

The whole School to Drill twice-a-week during the summer months, after supper.

* Half-an-hour later in Winter Months.

No. 10.

1879.

LONDON.

DAILY ROUTINE.

Hours of Rising.

Six o'clock in the summer months, and not later than 7 o'clock in the winter months.

After private prayer in each dormitory, washing, dressing, &c.

On Week Days.

The girls selected for employment in the Laundry and Kitchen, and in Household Work, to be engaged in their particular occupations, and the rest in making beds, and sweeping and cleaning the dormitories and other apartments.

From 8 to 9 o'clock.—Prayers, breakfast, and recreation.

Girls selected for particular employments to be at their respective occupations from 9 to 1 o'clock, as the Matron shall direct; and on alternate days at School during the same hours.

From 1 to 2 o'clock.—Dinner and recreation.

Girls selected for particular employments to be at their respective occupations, and the rest at needlework, from 2 till 5 o'clock, and in occupation from 5 till 6 o'clock, as the Matron shall direct.

From 6 to 7 $\frac{3}{4}$ o'clock.—Supper and recreation.

From 7 $\frac{3}{4}$ to 8 o'clock.—Prayer.

8 o'clock.—Bed-time.

On Saturdays.

No school to be kept, either in the morning or afternoon. The girls on this day to be engaged in cleaning the establishment, assorting and distributing clean linen, using the bath, and in such other occupations as the Matron shall direct. The recreation of the inmates to be, when the weather will permit, in the airing grounds, and at other times in the day-rooms, which are to be provided with suitable books for amusement and instruction.

On Sundays.

Until 8 o'clock.—The inmates to be occupied in *making beds, changing linen, and delivering up all that is dirty*, and preparing for the proper spending of the day.

From 8 to 10 o'clock.—Breakfast, and walking in the airing grounds, when the weather will permit.

From 10 to 11 o'clock.—In school rooms, reading the Lessons for the day, repeating Catechism, and answering questions on scriptural subjects.

From 11 to 1 o'clock.—In Chapel for Morning Service and Sermon.

1 o'clock.—Dinner.

From 1 $\frac{1}{2}$ to 3 o'clock.—In the day rooms, and airing courts.

3 o'clock.—Afternoon Service in Chapel and Sermon.

7 o'clock.—Supper.

8 o'clock.—Bed-time.

BETHLEM HOSPITAL.

REPORT.

To the Right Worshipful the PRESIDENT, the
Worshipful the TREASURER, and the
GOVERNORS of the Royal Hospital of
Bethlem.

MY LORDS AND GENTLEMEN,

I have to present to you my Report for the year 1879,
accompanied by the usual Statistical Tables.

During the past year the Hospital has received more cases than in most previous years, and of these a large proportion have recovered, viz: 40 per cent. of males, and 58 per cent. of females.

Throughout the year the average numbers have been about 250, and as usual the larger number of applications has been for female cases—we admitted 60 more female than male cases—but even this does not represent the numbers of applicants. I have since July, 1879, kept a book for noting the applications made for admission, and shall have to refer to this book again, and shall give some of the results obtained from it.

The function of Bethlem is not only to receive the cases that are suitable, but to advise friends of patients what to do with those who have developed signs of insanity, and it will be seen that many hundreds every year apply to the Officers for advice and assistance. By this means a large number of cases come before the Medical Officers, and hitherto the cases were disposed of and no record kept, but now we hope to gain useful information about insanity by collecting the chief facts in each case that presents itself.

No more important duty rests on Bethlem than the free advice given to such cases, and I hope that some day a definite out-patient department, for persons suffering from nervous diseases, may be established there. Mental disease is so intimately connected with other general diseases that my endeavour has always been, and still is, to encourage other practising Physicians to visit the Wards of the Hos-

pital; in this I have in part succeeded, and occasional visits have been made, both to the advantage of the patients and myself.

If anything is to make mental disease better understood, and more early and satisfactorily treated, it must be the removal of secrecy in Asylums. If the Asylum is visited by strangers intelligent and kind hearted, abuses cannot exist, and the patients feel themselves still part of an active moving world.

Between July 14th, 1879 and January 1st, 1880, there are notes of 264 applications about patients, and it is certain that in that time over 300 applications were made, so that nearly 600 applications are made annually; this represents a very large amount of interesting cases in which advice or assistance was given—in some cases even out-patient treatment—with success; of these 25 per cent. were acknowledged to have insane relations.

The death rate has been unusually small, there being only 4 deaths among the presumably curable males, and 8 among the females, *i.e.* 3.3 per cent. on admission for the men, and 4.4 per cent. for the women; and even this hardly gives a fair idea of the few deaths, as half the women died within a month of admission, being admitted in a very exhausted state, and 2 of the men died also within a month of admission.

On the other hand we have to record the deaths of 5 patients on the incurable establishment, 4 men and 1 woman.

These patients were admitted respectively in 1840, 1846,

1850 and 1869; all were over 60 years of age, and the one who was admitted in 1869 died at the mature age of 87 or more. The female incurable patient who died was admitted in 1839, and had consequently been 40 years in the Hospital. The vacancies on this establishment were filled by patients who were considered socially and medically suitable; one tradesman, one doctor, one case formerly sent by the Crown recommendation, one fish merchant, and one broker, the fifth vacancy was caused by the discharge cured of a patient who had been in Bethlem since 1844.

During the year a larger number of patients were admitted who had had previous attacks and had recovered; many of these had been in Bethlem before and were re-admissions, but others were credited with former attacks of insanity, though in many instances these attacks were part of the present attack or had been too slight to require removal from home. Of the male admissions (121) 25 were said to have had other attacks, 20 having had one, 4 two, and 1 three, that is over 20 per cent. of re-admissions. Of the 181 female admissions, 47 had had other attacks, that is over 25 per cent.; in 30 cases this was the second, in 10 the third, in 4 the fourth, and in 3 the fifth attack.

The female re-admissions generally exceed in our experience that of the males.

Of the males admitted, 35 or over 28 per cent. had insane relations, and of the women 74 or 40 per cent. had the same family tendency. The cures also shewed almost exactly the same relationship, thus of the males cured 26 per cent., and of the females 38 per cent., had insane relations.

As usual a certain number of cases that were almost hopeless from the very first were admitted. Under this class fall the general paralytics, of whom 15 men and 2 women were admitted during the year. Many of these were only admitted for three months. I am greatly in favour of these temporary admissions; it gives the Medical Officers time to verify their diagnosis, which must of necessity be liable to error if made within one or two days of entrance into the Hospital, and in many cases it gives the friends time to consider what is to be done with the patient who is then considered hopelessly and mortally ill.

A certain number of general paralytics are also kept in for a year or more, and are among the most instructive cases for both Students and Physicians. That the disease is at present incurable is the greater reason for its more careful study and treatment. Whether from treatment or merely by chance a very large proportion of our general paralytics have had remissions or at least arrests of their disease while under treatment at Bethlem, and nearly a whole year passed without one having any access of fits on the male side.

The importance of this disease necessitates most careful bedside watching and recording, and also the utmost diligence in post-mortem examination.

At Bethlem we have established a pathological laboratory, where histology, pathological and normal, of the nervous tissues more especially, is followed, and I doubt not this will in time prove its powerful influence both in treatment of patients and the advancement of science.

We have continued to have resident Students. It is over thirteen years since clinical residents were first introduced, and since then we have had a succession of men who have gained much useful knowledge to spread abroad in the profession, and have rendered great assistance to the Officers and to the patients as well.

My experience of such residents is thoroughly satisfactory; I was a student here myself thirteen years ago, and since then have had five and twenty under my care. In no way have I had cause to regret the plan, and attribute its success to the careful selection of the men, made by the Committee and the Resident Physician.

Besides the resident Students, out-door Students have attended courses of instruction for periods of three or six months, and a large number has attended from other Schools—Guy's and St. Thomas's—during the summer session. I must repeat what I have before said, that such attendance in no way injures the patient, and keeps the Medical Officer actively alive to the needs and requirements of advancing science.

Another year has passed without our having had a suicide in the Hospital, but this year we have to record a suicide committed by a patient whilst on leave of absence.

The question of suicidal tendencies in patients is of very vital importance, and if I had to give my chief reason against private Asylums in favour of public ones, I should say that in public Asylums more risk is justifiable than in private ones; repeatedly we have patients transferred to us from

private Asylums who have been watched night and day, never being left an instant. Such cases with us are not watched so much, and the irritation of suspicion is removed and many such cases get well.

This plan is in my opinion only a natural extension of non-restraint, for the restraint of constant watching is more irritating than even bands and straps. 28·5 per cent. of our admissions last year were suicidal, and the question constantly arose whether the patients, sometimes having had previous attacks or suicidal relations, should be kept in the Asylum until their year was up and then discharged uncured. I cannot bring myself to this, when a patient has passed through an attack and slowly and naturally improves; I consider it my duty to try and restore them to home—some risk is run, but the risk in my opinion bears no proportion to the good done.

The system of granting leave of absence is in my mind of great benefit, giving confidence to friends, who will receive a relation much more readily when they know any relapse only needs the return of the patient without any further trouble; this fact also acts as a check on the patient, and helps to self-control.

During the year 212 leaves of absence from one night to one month have been granted, not all to separate patients, as many have had extensions of leave, and others have had to be tried on leave several times before we were satisfied that they were fit for home. Some other cases, though chronically insane, have been able to spend periods of quiet with friends.

All such mixing of insane with the sane is to be encouraged, leading in many cases to cure of insanity, and in most to a more just knowledge of the disease by the uninstructed.

In only one of the many cases did the friends decline to bring the patient back. In this case the patient was convalescing, and the friends could not understand why a person having been insane need stay in an Asylum after reason had returned.

This is one point where we in Bethlem have an advantage over private Asylums; we can recommend the detention of patients beyond the time when reason has returned without our motives being doubted, whereas the private Asylum owner is doubted if he recommend prolonged detention of reasonable persons.

Persons are rarely fit to leave an Asylum before they can see the justice of their detention; in nearly all the cure is heralded by a period of discontent, at which period relapses are easily produced.

The Convalescent Establishment at Witley has continued to work well, and though the year was unusually wet and unsatisfactory for country excursions, the patients enjoyed the change and were benefited by it. Gas was laid on during the early part of the winter of 1878-9, and has been found to be a great boon, the ease and cleanliness contrasting favourably with the oil lamps.

This year I have to record one escape on each side from Witley; one female patient, since discharged well, escaped,

but was re-captured in Godalming within a few hours; the other patient, a man who had escaped from other Asylums on several occasions, escaped at mid-day, within an hour of the time appointed for his return to Bethlem, prior to his return well to his friends; he was absent a week, no trace of him being found till he returned to his wife, and was brought back to this Hospital.

Patients were sent down to Witley this year on April 29th, and a constant change took place till December 16th, when all but a small party on the female side returned. During the time it was open 81 female and 40 male patients were sent down; this is 20 more than last year, but the Establishment was open a month longer in 1879 than in 1878. I am, with permission of the Treasurer and Committee, keeping the House in partial use during the winter, and purpose sending patients down earlier this year than before, the early months of the year, after winter has passed, being specially cheerful and reviving in the country.

I append the Commissioners' Report of their visit to Witley, and have to say we have endeavoured to comply with their expressed wishes.

No structural changes were effected, the usual cleaning and papering alone being done.

I should be glad to see some further warming of the extremities of the galleries, and hope that the question of re-establishing a laundry may be considered. At present the cost of washing is very large, carriage to and from the country adding greatly to the expense. The present

buildings used for washing and drying could be readily adapted, and some new machinery would be needed. We should not be able to get much aid from our patients as they are drawn from a class not used to such labour, but in the airing rooms we could get some help.

The whole question is for the consideration of the Committee, but any means of saving money must necessarily interest the Superintendent.

Some kind of gymnasium, and a lawn-tennis court of easily drying material, would be desirable, for I have as yet been unable to find suitable employment for the male patients.

The greatest difficulty in a Hospital like this is to find occupation for the men; the women can work with their needles, play the piano, draw and be content; men on the other hand roam hopelessly about the galleries or airing courts, often smoking more than is good for them, and fretting at the enforced idleness; they cannot dig and are not fit for mental labour. Rest is an essential in most cases of mental disease, but ennui is not rest; yearly I regret to see cases drift into chronic insanity because I cannot find employment that will stem the tide, a patient comes to lead a more and more subjective life, a life that fosters the morbid growths of hallucinations and illusions. I do not believe on the other hand, of trying every moment in the life of an insane patient to teach and lecture him, either on natural science or self control.

The convalescent from a fever needs light not rich food,

and the insane patient needs rest and light intellectual food. But where can we get what we want? For a time we kept a journal going called the "*Bethlem Star*," but this was managed by two patients who soon got well and left us without an editor. Our success in curing leaves the difficulty of employment more manifest: the constant succession of patients succeeding one another makes no continuous chain, the links are separate, and to succeed, a thread of unity is needed,

Our singing and other classes have to some extent helped us, and this year we have had several theatrical performances given by amateur companies; for these I am grateful, and have particularly to mention the enthusiastic way in which these have been brought to a successful issue by Dr. Wood, who has relieved me from all trouble and anxiety on that score. Theatricals are useful and so are singing classes, but they occur at rare intervals, and what is needed is the daily influence of some employment. I propose to try drilling and gymnastics this year.

Special thanks are due to some of our Governors who constantly send useful presents of books and engravings, and porcelain works of art, by these means the galleries are becoming more and more cheerful and home-like.

Very few changes have taken place in the Staff or among the Attendants, no cases of mis-conduct or negligence requiring dismissal having occurred. The chief cause of change among our female Attendants is marriage, and I am perfectly satisfied that such should be the case.

I believe that young active women of the lower middle class are best suited for such work as they have here, and I do not believe that lady nurses would succeed so well; the duties of Attendants are very onerous and often very unpleasant, hard manual labour is required as well as cheerful association. In Bethlem we have such a very large area per patient, that the mere keeping it clean is no light business, and we should require a large staff of scrubbers as well as lady nurses, which would make the administration costly as well as cumbrous.

As long as I am supported so cordially as I am by one and all attached to Bethlem, I shall have my labours comparatively light.

I have to thank my colleagues Dr. WOOD, Mr. HAYDON, and Mr. VAUGHAN, for their constant desire to help me and to do good service to the Hospital and the patients.

To the Treasurer and Committee I owe special thanks, for heartily assisting in the welfare of the patients, and being ever ready to encourage me by their personal kindness and advice.

I have the honour to be,
My Lords and Gentlemen,
Your obedient Servant,
GEO. H. SAVAGE, M.D.

Bethlem Hospital.

COMMISSIONERS IN LUNACY REPORT OF
BETHLEHEM ROYAL HOSPITAL.

BETHLEHEM HOSPITAL,
June 19th, 1879.

We have been occupied to-day in visiting this Hospital, which was inspected by our colleagues on the 30th September last year, and we have seen and endeavoured to have some conversation with all the patients now in residence.

There are on the books of the Hospital the names of 246 patients, 37 of whom are men, and 149 are women; at the last visit the total number was 223. At the Convalescent Branch Establishment at Witley, there are 5 men and 21 women. We visited the patients there yesterday, and have to present a separate Report as the result of our inspection of that Institution. Two men and one woman have been granted what is here termed "long leave," *i.e.* absence for a month or more, whilst 4 women are absent on "short leave," that is, have permission to reside out of the Hospital for a period of less than one month. One female patient was out for the day.

The changes which have taken place since the Commissioners last visit have been as follows:—

	M.	F.	Total.
Admitted	82	122	204
Discharged Recovered	30	65	95
" Relieved	2	3	5
" Not Improved	35	38	73
Died.. .. .	8	8	16

The deaths were all due to ordinary causes, 4 being ascribed to general paralysis, and 7 to various forms of lung disease.

The Medical Journal records the names of 18 men and 15 women as being under medical treatment this week, many of these being recently admitted acute cases, and several of whom refuse to take food and require to be fed, but the general health is good; only 3 patients, all of the male sex, were confined to their beds when we passed through the building. With the exception of two or three patients in either division, who have only been lately admitted here, the general demeanour of the inmates was quiet and orderly, and for the most part they appeared to us to be cheerful and contented. No one to-day under mechanical restraint or in seclusion. In the Journal under the head of restraint, we find the names of 4 males who had been wet-packed, and of 1 male and 3 females who had been dry-packed. One male patient is entered as wearing strong clothing at night owing to his attempts at self-injury. Seclusion has been sparingly employed, 4 males and 6 females only having been subjected to that mode of treatment on few occasions, and as a rule for short periods. Complaints of any kind were rare, and all of those which were made were found upon investigation to be founded on delusions; whilst many, both men and women, expressed themselves as well satisfied with the treatment they received and grateful for the care and attention bestowed upon them. There has been an addition to the meals for all the patients now in the shape of supper, which on the male side consists of bread, cheese, and beer, and on the female side of bread, butter, and cocoa. This supper has been rendered necessary by an alteration which has taken place here lately in the hour for the patients' going to bed, which is now at 9 instead of 8 o'clock. This additional hour in the evening is much appreciated by the patients. The dietary in other respects remains as before

reported; we saw and tasted the dinner provided to-day, which in quality was good, and in quantity sufficient.

The associated Entertainments during the winter take place weekly, and consist of dances, concerts, and theatrical representations; about 180 patients in all are able in general to be present on these occasions.

There are besides parties taken to the Theatres, the Royal Academy, and other places of amusement in London, and we were told that a party of female patients visited Covent Garden Market at 5 o'clock this morning. There is no lack of amusements for the summer provided in the shape of bowls, lawn-tennis, badmington, and the like, and we saw some numbers of a very clever paper conjointly edited and illustrated by two of the male patients, which paper is called the *Bethlehem Star*.

Very few structural alterations or additions of importance have been made here since the last visit, but we must notice the good effect of the painting and general decoration in the ward on the ground floor, female side; we were glad to see that renovation was in progress in some of the other wards, and we trust that before long all the wards in the Hospital will present the satisfactory appearance of the one above-mentioned.

It will be seen from the foregoing Report that, under its present management, the high character of this Hospital continues to be maintained.

 JOHN D. CLEATON, } *in Lunacy.*

COMMISSIONERS' REPORT ON WITLEY
ESTABLISHMENT.

BETHLEHEM CONVALESCENT
ESTABLISHMENT, WITLEY,

June 18th, 1879.

We to-day visited this Branch of the Bethlehem Hospital, which is used principally for the reception, from April to November, of the convalescing patients of the parent Institution.

We found at our visit 21 ladies and 5 gentlemen residing here. The patients are changed as often as the Medical Officer deems advisable; during last year over 100 thus passed some part of the year in the country, and up to the present time there has been already 40 persons who this year have received the benefit of change of air and scene. The accommodation provided in the house is sufficient for 26 ladies and 8 gentlemen. We saw the patients to-day, and with all exchanged a few words. Four of the gentlemen had been for a long walk and only returned just before we left, but the ladies were all coming in from the garden at the time of our arrival, and about to dine.

The dinner, which consisted of roast mutton, potatoes, asparagus, rhubarb pudding, and beer, seemed to be much relished by them. The garden, which was looking bright with flowers, is kept in excellent order. There is a large level green available for cricket, lawn-tennis, and bowls,

with a smaller plot close by on which the ladies play croquet.

The larger piece of ground is also used occasionally for drilling the boys of King Edward's School, whose buildings adjoin the Asylum gardens. Attached to the School are gas-works, whence, since the last visit paid by two Members of our Board, on October 21st, 1878, gas has been laid on to this Establishment also, and proves to be a most valuable addition.

There is no means available at the house itself for extinguishing a fire, though we learn that there is a fire-engine in working order belonging to the School, which is practised at intervals. We think that it would be very desirable that the practice should sometimes take place on these premises, so that in the event of fire occurring here, the fire brigade might be acquainted with the locality and arrangements, and thus be able more readily to render efficient service.

There is on the ground floor on the female side a bath room, which we were informed is now used as a cloak and bonnet room by the ladies. It seems that a second bath room is not required, and we would suggest that the bath be removed, and the room properly fitted up for its present uses. Whilst on the subject of bathing, we think two or three additional sponge baths should be provided for the bedrooms.

The Deputy Superintendent remains in charge of the house throughout the year; the head female attendant is in

charge of the ladies during the whole time that the Establishment is open for the reception of patients, but the rest of the staff, consisting of 2 men and 2 women, are changed once a fortnight, so that the majority of the attendants at Bethlehem are enabled to enjoy a change in the country, in addition to the regular leave allowed them by the rules of the Hospital. It is perhaps, hardly necessary to add, that from no one did we receive any complaint, but on the contrary, all expressed themselves most pleased with their home-like life, and grateful for the variety thus given them.

We learnt that about once a week the patients, to the number of a dozen, are taken in a large waggonette for a long drive, or to picnic on the neighbouring hills.

In conclusion, we have to express our satisfaction at the general arrangements made for the patients here, and our belief in the advantage this place affords as a means of promoting the recovery of those who are improving or convalescent.

(Signed) W. E. FRERE, } *Commissioners*
JOHN D. CLEATON, } *in Lunacy.*
