REPORTS

ON

BROADMOOR CRIMINAL LUNATIC ASYLUM, 1868.

SUPERINTENDENT'S REPORT.

Broadmoor Criminal Lunatic Asylum, 19th January 1869.

I BEG to submit, for the consideration of the Council

the Report for the year 1868.

SIR.

The following table shows the admissions, discharges, deaths, and escapes, &c. &c.:

	ning . 1867.		nce itted.		Total	SID O	D	is- ged.	R	te- ved.	Di	ed.	cap	s- ed.	Real 31st	emai Decr	ning , 1868.

Average daily number resident males 355.

Do. do. females 86.

Of the 174 males admitted, 129 were old cases transferred from Fisherton House Asylum, and 3 were readmissions. Table No. 5 gives at a glance the crimes committed by the patients who have been inmates of the asylum within the year, and distinguishes fresh admissions.

ACCIDENTS.

A patient, J. P., attempted suicide in the night by cutting his leg and arm with a piece of crinoline steel which he had concealed.

Principal attendant Dobson was found early in the year to be suffering from diseased heart; he left in June, and died shortly afterwards. Dobson had been for three years in charge of a block occupied by violent and dangerous men,

and there is good ground for believing that the anxious nature of this service induced the disease which cost him his life. He was an excellent officer, and invariably performed his duties in an exemplary manner. He was awarded a gratuity of 381. 11s. 3d., which was paid to his widow.

Assistant attendant Hodgson was kicked by a patient and found to be slightly ruptured. Hodgson left, being in other respects unfit for the service. He was awarded a compas-

sionate allowance of 10%.

Assistant attendant Charles Adams suffered a severe sprain of the knee joint in a struggle with a violent patient; upon the sprain followed a rheumatic affection of the joint, which for the time incapacitated him for work. He has been recommended for a compassionate allowance as some compensation for the injury received.

An accurate account of all minor accidents is kept, and the

list is a long one.

The deputy superintendent, Dr. Orange, was struck upon two occasions by male patients, but escaped, I am glad to say, with but trifling injury.

Male attendants have been struck or kicked by patients

on 63 occasions.

E. P., a female patient of the convict class, has distinguished herself as a violent and dangerous woman. She twice attacked the attendants, and inflicted upon one occasion an incised wound on the forehead of a nurse, which has left a permanent mark. She has three times attacked and beaten other patients more or less severely. Female attendants have been struck or injured by patients upon four other occasions.

ESCAPES.

Five male patients escaped during the year. One imbecile man employed outside the asylum walls made his way into the adjoining woods and was absent three days. He was taken by the police in Windsor Great Park.

A man escaped on the evening of 4th November through a window in the gallery on the ground floor of No. 3 block, the cast-iron cross bar had been removed and was missing.

On the evening of 8th November two male patients escaped from a single room window in No. 2 ward, No. 4 block; the cast-iron cross bar had been broken, the pieces were found in the room.

On unlocking the single rooms and dormitories on the morning of Christmas Day, a patient was found to have escaped from a single room in No. 2 ward, No. 4 block

The iron cross-bar of the window was found under the bed. One only of these four last-mentioned men was readmitted within the year; he was absent for three weeks, and gave himself up to the police at Lancaster.

The four men who made their escape from blocks 3 and 4 are convicts, and it will be observed that the same mode of escape was adopted in each instance—the iron cross-bar of a

window was either broken or removed.

It has long been known that the windows of four of the six blocks occupied by male patients are unsafe; steps have now been taken to secure the windows throughout the male division.

In endeavouring to provide for the safe custody of insane persons of the convict class, it must be remembered that insanity does not deprive the experienced thief or housebreaker of his craft; the difficulty is very generally much increased by the circumstance that the convict is also a lunatic. Those principles now generally adopted in the treatment of ordinary lunatics are in many cases not applicable to the management of the insane convict; in treating the lunatic one cannot afford to forget the habits and tendencies of the man. Persons of the convict class, when insane, possess also very frequently a power of combination but rarely found in ordinary cases of lunacy.

MORTALITY.

The mortality for the year is very low, 1.69 per cent. on the daily average number of males, and 1.16 on the daily average number of females resident.

Inquests have been held in each case of death, and the

following verdicts returned :-

Initials. Males.	Date of Admission.	Date of Death.	Verdict.
W. F W. T C. C J. McE W. C J. S	19 March 1864 5 March 1864 9 April 1866 19 May 1868 8 July 1868 28 Nov. 1864 25 March 1867	23 Feb. 1868 23 March ,, 1 June ,, 27 June ,, 4 Aug. ,, 27 Dec. ,,	Died from disease of brain and spinal cord. Died from consumption. ,, disease of brain. ,, cancer of stomach and liver. Died from abscess of liver. ,, old age, accelerated by bronchitis. Died from disease of brain and empyema.

GENERAL HEALTH.

107 persons resident on the asylum estate have suffered from simple continued fever within the year, viz.:—

Patients -	400-0	97471	9	45
Male attendants	211/21	101112	100 21	25
Female ditto -	The order	2 1	post de	11
Other persons -	1	=	000	26
				-

Total - - 107

The disease has been mild in form. All affected recovered,

though in many instances slowly.

The 36 cases of fever that came under treatment in 1867 occurred within the first three months of the year; the last fresh case was noted in March. In 1868 the disease was most prevalent in the months of February, May, and June, but existed to some extent in every month of the year except January. About 13 per cent. of the average number of male patients and attendants resident during the year suffered attacks of fever. In the female division the proportion was higher, being nearly 23 per cent. upon the average number resident.

In the face of such an amount of fever it is impossible to dwell with any satisfaction upon other points bearing upon general health, such as the low rate of mortality, the moderate number of cases of phthisis recorded, or the total absence of erysipelas.

NEW WORKS.

New Reservoir.

A large reservoir has been formed, estimated to contain upwards of two millions gallons; it is now full. The water is brought in an iron pipe to a filter, from which it passes into a small cemented tank, out of which it is pumped by steam power into the main tank which commands all the asylum buildings. In this main tank the water is again filtered, and this time through animal charcoal, by means of a filter supplied by the Water Purifying Company. The new reservoir is situated at the north-east boundary of the estate, and is perfectly free from any possible contamination from farm-yard manure or other animal matter. These works are only just completed, so that it is impossible to say how far they will answer the purpose for which they have been carried out.

New Closets.

New closets, fitted up on Moule's earth closet principle, have been added to five of the six blocks occupied by male

patients. These closets well deserve attention; a great saving of water is effected, a valuable manure is secured, and with common care there is an absolute freedom from smell. Arrangements have been made here for the daily removal of all night soil from the buildings in which these closets are in use.

Alterations to No. 6 Block.

The additions and alterations to No. 6 block, commenced in 1867, were completed early in the year. The block was opened for the reception of patients in April. It is occupied by the worst class of patients, and has been found in the main to meet the wants of these men.

OFFICERS AND SERVANTS.

Mr. Newman, the assistant medical officer, resigned his appointment, and was succeeded by Mr. Maddox, who joined the service on 1st June.

Mr. Bray, employed temporarily as clerk to the clerk of works, left on 31st March, his services being no longer required.

I have to report the following changes amongst the atten-

dants and servants :-

Resigned from various causes Left on account of health -	-	Male.	Female.
Unsuited for the special work Dismissed for misconduct	-	6 6	2
Certificates refused by the Civil S Commissioners	Servic	ee 5	0
Died	-	1	0

Miss Moore, principal attendant, who resigned to take another situation, had been here from the first opening of the asylum in 1863. She was an intelligent and trustworthy officer, whose place it will be difficult to fill. I am glad of the opportunity of recording here the high sense I entertain of Miss Moore's general character, as well as of the manner in which she performed her onerous duties.

The annexed tables afford a considerable amount of information bearing upon the detail working of the asylum. Dr. Orange kindly prepared the nosological return and the

obituary (Tables Nos. 11 and 12).

I have received during the year much valuable assistance

from the several officers of the establishment.

I have again to acknowledge the unvarying support which I have continued to receive from the Council of Supervision.

I have the honour to be, Sir,
Your obedient servant,
JOHN MEYER,

Superintendent.

The Chairman of the Council of Supervision.

CHAPLAIN'S REPORT.

SIR, Broadmoor Asylum, 18th January 1869.

DURING the year 1868, there has been no deviation from the order of religious services held in this asylum, which has

been described by me in my previous reports.

The accustomed services have been held both morning and afternoon on Sundays; and on other days of the week morning prayer has been said, with omissions from the appointed order of the Church sufficient to bring the service within the limits of 20 or 25 minutes, the time allotted to it by the general regulations of the asylum.

The same services have been attended by both the male and the female patients from February to November, and on Sundays and holidays throughout the year; but on other days during the winter a second morning service has been

held in the women's asylum.

The Sacrament of the Lord's Supper has been administered

monthly as heretofore.

The number of patients attending the chapel on Sundays has ranged from about 70 to 100. Of these the average number of women has been 30, out of an average female population of 86. The number of communicants among the

patients has ranged from 10 to 14.

The supply of books, both of general information and for amusement, has been fully adequate to the requirements of the asylum; and volumes not in requisition for the use of the patients have, without inconvenience, been placed from time to time, and only as a loan, in the library established for the benefit of officers and their families.

The schoolmaster, Mr. Thomas, has continued to give instruction of a simple character to patients who are willing to attend the classes. The classes have ranged from 8 to 36; and altogether as many as 92 persons have come under his instruction. But many of this number can derive but

little permanent benefit from a lesson.

Much of the time of the schoolmaster, however, is devoted to other duties. The books in use by the patients are issued and re-collected by him under my direction. He also conducts the singing in the chapel, patients being trained by him for the choir with much pains, and with considerable success.

Scarlet fever having broken out in the spring among the children residing within the precincts of the asylum, it became necessary to close the school for six weeks. The examination of the children was obligingly postponed by Her Majesty's Inspector in consequence of this interruption, and it was held by him on the 28th of November.

I have the satisfaction to state that the Report of the Inspector to the Committee of Council, which has been transmitted to the managers, was highly commendatory; and a grant of 26l. 17s. 6d. has been made, the largest

previous grant having been 16l. 16s. 5d.

The recent appointment of Miss C. Olorenshaw as the mistress was notified by me in my last report, and I then expressed a very favourable opinion of her qualifications. That opinion has been borne out by the marked improvement in the school under her management. She has been assiduous in the discharge of her duties, and she has proved

herself a teacher of great ability.

The average attendance of children having attained the number required by a recent minute of the Committee of Council on Education, as a condition of their sanction to the employment of a pupil teacher, Miss J. Olorenshaw, a sister of the mistress, has been transferred to this school from a national school at Rugby for an unexpired term of her articles, and she has rendered efficient help in the instruction of the younger children.

The Sunday school has been taught, as in preceding years, by private members of families of officers, under the kind

superintendence of Mrs. Meyer.

The small number of men who attend divine service on Sundays, and the much smaller number of both men and women who attend morning prayer on other days of the

week, have from the first engaged my attention.

Several causes present themselves as contributing to this result. I am inclined to think that one cause may be found in the hour of daily prayer, which is 8.30 a.m., and which cannot well be altered. This is a time when much has to be done in cleaning and in making preliminary arrangements for the day. And although pressure of this kind does not necessarily prevent the attendance of patients, if they are disposed for the fulfilment of their religious duties, yet the work to be done is an alternative of which some may avail themselves.

It might, therefore, have been conducive to a larger attendance if a daily service could have been held in the evening. But the want of a covered way from the detached

blocks, of which this asylum is constructed, renders it unsafe for the patients to be constantly passed to and from the

chapel late in the day.

As a means of meeting the difficulty I have proposed, that, in addition to morning prayer in the chapel, short evening prayers shall be said daily in one of the meal rooms in each block. The proposal having received the sanction of the Superintendent, a form of prayer for this purpose has been prepared by me, and has been printed at the asylum press.

But undoubtedly the main cause of this unfavourable feature in the religious condition of this asylum is to be found in the special character of its inmates. Certainly its moral aspect presents marked features of difference from that of an ordinary county asylum, which are clearly recognized by those who are familiar with both. Among the insane generally the moral character of a large number is determined by a feeble or deluded condition of mind, without any habitual excess of dangerous propensity, except during periods of maniacal excitement, when attendance at divine service is not in question. There is, no doubt, in this asylum a class of patients of a similar type. Acts of violence, which have entailed upon them consignment to Broadmoor, have been done during temporary madness, which, when it has passed, leaves, with whatever may remain of mental feebleness, or of danger of relapse, the moral feelings in their normal condition; and with these patients religious dispositions re-acquire their former influence. To these persons the offices of the church bring consolation and benefit.

But this is proportionately a small class. The acts by which a large number of patients in this asylum have brought themselves under the power of the law have not been isolated outbreaks of viciousness; they have been the actings of a character habitually and excessively deprayed, of which the transgression of the law has been the natural climax. There can be no doubt that in many cases this precedent deprayity has itself been the effect of unsoundness of mind, not then fully developed. And this is a class of patients in whom the self-controlling power is lost or impaired, not so much from feebleness of the mind as from a diseased condition and an abnormal violence of the passions. The offices of religion can have little attraction for patients of this type; religion is rather repulsive to them.

The moral condition of this asylum is made worse by the introduction into it of an increasing number of convicts, who have become insane while they have been undergoing sentences of penal servitude. These men, and in some cases

these women, have, in addition to personal depravity, been taught the worst lessons of prison life; while the amount of remaining intelligence possessed by some of them allows of

their exerting an injurious influence over others.

Personal recollection, however, and information received from others, enable me to state that congregations in asylums for insane persons generally include many patients bordering upon the imbecile class. In this asylum this class of patients, from absence of previous religious influence, are less inclined to comply with the forms of religion, or they are less to be trusted. Here the number who join intelligently in the services is large in proportion to the whole congregation, and although the aggregate attendance is small, probably the number of conscious worshippers is not much fewer, proportionally, than in other asylums.

I have thought that it might be your pleasure that I should lay before you the results of my observation upon this matter somewhat fully, since it has been made the subject of comment in their official report by the Commissioners in Lunacy.

Perhaps I may be permitted to avail myself of this delineation of the more marked moral features of this asylum, to direct attention to the depressing conditions under which the

duties of its chaplain have to be discharged.

It has been my lot for nearly twenty eight years to labour in asylums and prisons, but it never fell to my lot before to witness depravity and unhappiness in forms so aggravated. In other asylums, when the mind resumes anything like healthy action, there is hope of discharge. In prisons the period of detention, however long, has some definite duration; but here the fear of relapse, and the terrible acts to which relapse may lead, render the conditions of release rarely attainable; for many the period of detention is indefinite, and hope is almost excluded. In prisons, whatever may be the depravity it is kept under some restraint by reason, and by fear of consequences; but here there are patients with passions depraved to the utmost, upon whom neither reason, nor shame, nor fear, impose any restraint.

The contemplation, day by day, of so much demoralization, and of so much sorrow, would be unbearable, if there were not some patients upon whom the offices of religion are seen to have their ameliorating and their sustaining influence.

I am, Sir,

Your most humble servant, J. T. Burt,

The Chairman of the Council of Supverision.

Chaplain.

TABLE 12.

OBITUARY, 1868.

TABLE 12.—Obituary, 1868.

			History.	See Manager
No. in Regis- ter.	Sex, Age, Height, Dates of Admis- sion and of Death.	General History.	Mental State during Residence.	Bodily State during Residence.
52	Male, 43, 5 ft. 1½ in. 19th Mar. 1864. 23rd Feb. 1868.	Tried in 1861 on a charge of receiving stolen goods, and sentenced to 10 years penal servitude. Certified to be insane in 1861, during servitude. Had been thrice previously imprisoned. Paralysis observed in 1862.	Morose, taciturn, and inclined to commit vio- lence. No delusions of grandeur.	Symptoms of general paralysis on admission. Convulsions in 1866, and afterwards. Died of general paralysis.
23	Male, 65, 5 ft. 6¼ in. 5th Mar. 1864. 25th Mar. 1868.	Arraigned in 1862, on a charge of wounding with intent to murder, but not tried, being found in- sane by jury. Had previously attempted sui- cide.	Persistent melan- cholia; made frequent at- tempts to in- jure himself. Refused food often, on the ground that the world would come to an end if he were to eat.	In feeble health on admission. Blind of right eye; only stump remaining. Died of phthisis.
362	Male, 39, 5 ft. 4\frac{1}{4} in. 9th April 1866. 1st June 1868.	Tried in 1864 for larceny and sentenced to seven years penal servitude. Certified to be insane in 1866, during servitude. Previously convicted of felony.	Progressing dementia. No delusions of grandeur. Placid and happy.	Was paralysed on admission. Right ear shrivelled. Articulation indistinct. Paralysis gradually in creased. Convulsions (first attack) May 31st. Died June 1st, at 10 p.m.

Temperature and State of Air. No. of Hours after Death.	Head and Spine.	Thorax.
44° F. Dry. 32 hours.	Calvaria thick; dura mater and arachnoid thickened; pia mater adherent to cortical substance; great amount of sub-arachnoid fluid; ventricles large; lining membrane of ventricles much thickened; grey matter of convolutions thin; dorsal portion of spinal cord softened; brain and cord much diminished in weight.	Pleura adherent over lower lobe of left lung; lungs congested; heart and great vessels healthy.
47° F. Dry. 38 hours.	Dura mater adherent to calvaria and thickened; pia mater congested and thickened, and strips easily; subarachnoid fluid increased. Grey matter of convolutions very thin and soft; right optic nerve atrophied; specific gravity '002 greater than that of left; white matter of cerebrum very soft; puncta cruenta increased in number. Spinal cord small, very soft in dorsal portion; vessels of brain and cord congested.	Pleuræ adherent on both sides; mucous membrane of larynx much thickened, rough, and granular; right lung very large, full of tubercular deposit, and here and there infiltrated with pus, there are several cavities; large cavity in left lung; atheromatous deposit on mitral valves, and also on aortic valves.
70° F. Dry. 15 hours.	Calvaria thickened; dura mater very thick, adherent to calvaria and to brain; arachnoid enormously thickened over cerebellum; veins of pia mater numerous and large. Grey matter of convolutions dark in colour, thin, and congested; convolutions flattened; the most inflamed portion is the left occipital; here the vessels of pia mater are full and black; no extravasation; white matter of cerebrum soft, and of a diffused pinkish colour; ventricles large and full of fluid; large quantity of sub-arachnoid fluid; cerebellum soft; all the membranes of spinal cord thickened; dorsal region soft.	Slight old adhesion of pleura at right apex; both lungs much congested; old deposit of tubercle at right apex; no tubercle in left lung; heart fatty; valves healthy; yellow clot in right auricle and ventricle, but not in left.

Broadmoor Criminal Lunatic Asylum. Table 12.—Obituary, 1868—continued.

			HISTORY.	
No. in Re- gister.	Sex, Age, Height, Dates of Admission, and of Death.	General History.	Mental State during Residence.	Bodily State during Residence.
571	Male, 40, 5 ft. 7½ in. May 19th, 1868. June 27th, 1868.	Tried in 1852 on a charge of felony, and sentenced to 7 years penal servitude. Certified to be insane in 1853.	Chronic mania. Memory fairly good; conversation rambling, and often disconnected.	Suffering from ascites and jaundice on admission. The ascites increased, and on June 16th her vomited a large quantity of blood, and again on the 27th, and his death followed in a few hours.
582	Male, 60? 5 ft. 8 in. July 8th, 1868. Aug. 4th, 1868.	Tried on a charge of murder in 1848, and acquitted on the ground of insanity.	Dementia; memory defective; no delusions.	Was very ill on a d m i s s i o n suffering from ascites, ædema of legs, and large tumour or liver; very emaciated.
120	Female, 41, March 25th, 1867. Nov. 18th, 1868.	Tried on a charge of murder March 1st, 1867, and acquitted on the ground of insanity.	Chronic mania, with delusions; often refused food, and required feeding; believed that her food was poisoned.	Feeble on add mission; dies of exhaustion and empyement had no part alysis.

TABLE 12.—OBITUARY, 1868—continued.

	Post-mortem Notes.	
Temperature and State of Air. No. of Hours after Death.	Head and Spine.	Thorax.
71° F. Dry. 21 hours.	Dura mater adherent to calvaria, and also to surface of hemispheres in median line; arachnoid thickened; pia mater strips off readily; convolutions well defined; grey matter not notably diseased; white matter of cerebrum healthy; ventricles small, very little fluid; cerebellum, pons, and medulla healthy; spinal cord not examined; vessels of brain healthy.	Lungs slightly emphyse- matous; right lung con- gested at base; free from cancer; bronchial glands likewise free from cancer; heart, white patch on anterior surface of right venticle; slight thicken- ing of tricuspid valves; considerable disease of mitral valves, edges red and swollen (recent).
75° F. Dry. 29 hours.	Scalp adherent to calvaria; calvaria in some places very thin, dense in structure; dura mater very thick and adherent; arachnoid thickened; pia mater thickened, tears easily from convolutions; grey matter of convolutions of cerebrum softened (p. m.;) small amount of fluid in ventricles; pons softened and fatty; medulla, the difference in colour between white and grey matter not so well marked as usually.	Small amount of fluid in both pleuræ; right lung bound down by old adhesions; upper lobe emphysematous; lower lobe completely airless, sinks in water, due to pressure of liver; left lung, some old adhesions to pleura; both apices contain calcareous matter; heart very small, and firmly contracted.
42° F. Moist. 22 hours.	Dura mater adherent and much thickened; arachnoid thickened, fluid in excess; vessels of pia mater enlarged, containing dark coloured clots; grey matter of convolutions of cerebrum firm in consistence; division between grey and white matter well defined, loss of substance in some places externally; there is an extravasation of blood in the right posterior inferior lobe, the ecchymosis extending an inch from the surface; in some of the sulci there are bags containing thin gelatinous fluid; puncta cruenta numerous; cysts attached to choroid plexus; spinal cord healthy.	Right pleura contains from three to four pints of puriform fluid, very offensive; right lung completely compressed; upper lobe airless, lower lobe consists of slough and broken down lung tissue; left lung emphysematous; at the superior part of lower lobe there is a small patch of gangrene about size of a shilling; there is also a small patch in upper lobe; no tubercle in lung; heart healthy.
