REPORT

OF

THE VISITING JUSTICES.

The following Report of the Visitors of the Lunatic Asylum at Wotton, in and for the County of Gloucester, made in accordance with the provisions of the "Lunatic Asylums Act, 1853," was laid before the Epiphany Court of Quarter Sessions, held at Gloucester, for the County of Gloucester:—

THE Visitors of the County Lunatic Asylum report that the County Asylum contained on the 31st December, 1865, 590 patients, of whom 278 were males, and 312 females. The numbers having been 598 at the close of 1863, and the same number at the end of 1864, so that the number of patients, having been absolutely stationary in 1864, had this year shewn a slight tendency to decrease. This result is very remarkable when the large and progressive increase of the preceding ten years is considered, an increase which, upon the average of the last seven years, had amounted to 30 annually, and during the two years immediately preceding had reached 40 each year. So alarming indeed had the prospect become, that the Visitors felt it their duty to call the serious attention of the Magistrates at the Epiphany Sessions, 1864, to the condition of the County Asylum, and the prospect of its being found inadequate to the requirements of the county for even one more year. They made at the same time some suggestions as to the formation of an Auxiliary Asylum, for quiet and chronic patients, upon a less expensive scale of management. This matter, however, having been referred back to the Visitors by the Court for inquiry, was found to be very difficult of accomplishment, without involving the county in almost all the expense of an entirely new Asylum, a course which the Visitors shrunk from recommending. From this

immediate difficulty the county has been happily relieved by the abeyance in which the increase of pauper lunacy in the Asylum has been kept during the last two years. A result which cannot be attributed to any diminution in the number of lunatics who have presented themselves, for the admissions have been continually on the increase, having amounted during the year to 162, at least 30 above the average number of admissions five years ago. Neither do the cases appear to have been generally of a more favourable character. But a vigorous system of treatment, combining careful watching with the most active and effective medical remedies, and a determination to allow no case to run into the chronic stage which it was possible by any efforts to arrest, while no old chronic cases have been considered as hopeless which could in any way be affected by active treatment, have succeeded in effecting an extraordinary number of cures. 77 patients were discharged cured and 11 relieved in 1864, and 77 cured and 19 relieved in 1865. At the same time greater facilities than heretofore have been afforded to friends in removing patients, who, though not exactly in a state to be discharged as cured, were yet considered so far relieved as to afford a fair prospect of going on well and harmlessly at home if properly taken care of.

The results have hitherto been generally satisfactory, and the increased number of discharges has not led to any increase in the proportion of re-admissions. The number of such having been in 1864, 23 out of 155 admissions, and in 1865, 24 from 162, while the average re-admissions of the preceding 10 years had amounted to about 15 per cent. of the total admissions, or rather more than the present proportion. This struggle against the increase of lunacy in our Asylum has not been maintained without a great strain upon all connected with the institution, and particularly upon the medical staff, by whom a vast amount of labour has been undertaken. Indeed, in consequence of his exertions, Mr. Toller, the Superintendent, became so seriously ill, in June, that the visitors thought it necessary to give him three months' leave of absence to recruit his health; during which time they engaged a second medical assistant to support Mr. Simpson, the regular medical assistant, who was left in charge (and who fulfilled the difficult and onerous duties thus cast upon him much to the satisfaction of the visitors). Since Mr. Toller's return, they have considered it necessary to add a second assistant to the regular medical staff of the institution, and have appointed Mr. R. F. Nell,

M.R.C.S., who had undertaken the temporary duties, as a permanent officer.

The difficulties of management have been increased also by several changes among the attendants, especially on the female side, where some seem to have been tempted to leave by finding they could obtain higher wages at new asylums just starting. The visitors have, in consequence, found it necessary again to raise the scale of wages of the female attendants, which they hope will enable them to secure the services of a proper class of persons for the office.

The visitors have, with the consent of the Court, purchased 15 acres of land immediately adjoining the Asylum, an acquisition of immense importance, though possession of the whole will not be obtained until Michaelmas next, when it will be necessary to build a wall for a considerable distance against a public footpath, which abuts upon that portion of it nearest to the town.

A new skittle-alley has been formed this year for the amusement of the men in bad weather; at other times they are generally employed on the land or at any trade for which they may have an aptitude. Employment is, and always has been considered, in this Asylum, as a matter of the first importance in the treatment of lunatics. Amusements are added as they can be reasonably afforded. Music, some acquaintance with which is now generally sought for in new attendants, is made largely available, and all are taxed to assist in the entertainment of the patients, while at the same time the Superintendent and medical staff lend their full share of assistance and co-operation.

It is satisfactory also to be able to state, that while the comforts of the patients have been increased, and the diet in some measure improved, the charge for maintenance has been reduced from 9s. to 8s. 9d. per week.

The visitors cannot close their report without requesting the magistrates to bear in mind that the margin of accommodation unoccupied at the County Asylum is extremely small, so that, although the immediate emergency has by a great struggle been postponed, yet that some addition to the present buildings may be at any time required.

J. CURTIS HAYWARD, CHAIRMAN.

Gloucester County Asylum,
Thursday, 13th April, 1865.

Since this Asylum was visited on the 16th of May last, there have been 155 admissions, 88 men and 67 women; 73 discharges, 36 men and 37 women; and 67 deaths, 39 men and 28 women. Of those discharged, only 3 had not improved—5 being entered as relieved and 65 as recovered. One inquest has been held, in a case of injury to the spine received before admission, and a verdict of accidental death returned. The other chief causes of death have been general: palsy, epilepsy, diseases of the heart and lungs, and exhaustion from mania; nothing special calling for remark except in the case noticed.

In the Asylum to-day we have seen 602 patients, 290 men and 312 women; besides whom, there are 11 patients, 7 men and 4 women, absent on trial, out of these numbers there being now only six classed as private patients, one having been lately transferred under the 26th section of the Lunacy Acts Amendment Act, from the pauper to the private list.

All the patients seen by us were, upon the whole, in a satisfactory state. There was some noise and confusion in the lower wards on the female side, attributable to the alterations going on there, which include the laying down of a boarded floor in the last flagged gallery; and though in these we should like to have seen the dresses of some of the women less worn and of better material, the remark is far from applicable generally. In this and other respects the general appearance of the patients in both divisions was very good; and the improvements we have to notice in other parts of the Asylum have been extended in many important particulars to the lower wards also. The last flagged gallery on the male side has been replaced by a boarded one since the last visit. A room fitted up with bagatelle boards, and supplied with books and papers, has been opened to relieve wards 7, 8, and 15; a general inadequacy of day-room accommodation to the number of patients being, in our opinion, the general defect of this Asylum at present, and, besides several additions to the planting and gravelling of the airing courts, a skittle-ground is in progress for No. 8. We notice, with satisfaction also, some redistribution of the patients in these wards on both sides, of the epileptics more especially, which have made the comfort greater to all, while the efficiency of the night-watch has had the effect of diminishing during the past year, by nearly one half, the number of wet and dirty cases.

It would be desirable, we think, that the body linen of all the patients should be changed twice instead of once a week.

Of the better wards and their inmates we can hardly speak too favourably. Here we found nearly all the female patients in some way or other employed—those who were doing nothing being the exception, not the rule; and we observed, as in general use, the system of employing patients, as far as possible, in offices and duties of trust, and as would ordinarily be discharged by attendants and nurses. Thus, in one gallery, No. 18, where there were 45 women, the services of one paid nurse suffices to secure the order and comfort that prevail. One other gallery is chiefly under the care of one of the patients. One of the lodge-gates we found in charge of a male patient. The twelve inmates of the cottage appear to be as much trusted as the same number of hired labourers would be. And, as the female side, where a school class was opened five weeks ago, we found this class under the intelligent direction of a patient belonging to the private list.

A school had been established on the male side about a year since, one of the attendants acting as master; and this continues to work extremely well, being attended almost regularly by 30 patients, and the number still increasing. Among the women, though so recently opened, the class is attended daily by about 14, and by 4 or 5 more in the evenings; the subjects comprising reading, writing, arithmetic, and geography; the books used being those of the Irish National Schools; and the proficiency shown very commendable indeed. We noticed, with pleasure, in these classes, mixed with more intelligent patients, several of the helpless kind, where it would not be possible in any other way so to employ and to amuse.

The beds and bedding, upon the whole, were in proper condition; but the cocoa-nut fibre, of which the majority of the men's beds are made, has disadvantages, which it would be well to remove by substitution of some other material, such as horse-hair, when the beds require renewal. There is good ventilation and many comforts in the dormitories and single sleeping-rooms, into which, as well as the galleries, many coloured prints, statues, and pictures, have been introduced since the last visit; but more chairs and washstands, as well as blinds or curtains, and carpets, are still wanting. And we strongly recommend the painting or papering of some of these rooms, which, apart from other advantages, would be a relief from the glare of whitewash that prevails so much.

The records of employment, as well on the farm as in the shops, the wards, and domestic offices, shew that continued efforts are made to extend it to as many of the inmates as possible; and, by a recent purchase of some additional land, of which the Committee will take possession of next year, the number employed as farm labourers will be increased. The grass land rented by the Committee has also been enlarged by 15 more acres since May last.

The use of a sewing machine lately has increased the amount of female work; and a small printing press, which is worked by patients, and by which all the printing of the Asylum is now supplied, has been purchased and set up since the last visit, in the male school-room. In connection with this subject of patients' labour, and its advantages to the Institution, it may be mentioned that, from on and after the opening of the present year, the weekly charge, which, for out county and private patients, continues at 12s., has been reduced, for ordinary patients, from 9s. to 8s. 9d.; while, at the same time, we have much satisfaction in stating an additional solid meat dinner has been substituted for one of the dinners of soup heretofore given. We saw the dinners served to-day—the provisions being good and ample; but the practice of bringing the joints from the kitchen upon uncovered tin dishes, seems to us objectionable.

Of matters in progress at the last visit, and since finished, we have to report: That hand-rails have been placed to all the stair cases; that the tailors' shop, the bacon-room, and the passage to the boiler-room, have been completed; that the course of water pipes, commanding the whole building in case of fire, have been entirely laid; and that, besides the planting, with adequate protection, of from 30 to 40 large chestnut and lime trees, other improvements have been effected in the airing courts and land. These courts are excellently adapted for daily exercises and out-door recreations; and to this circumstance it is attributable that a less number of the inmates, than is usual in such an Institution as this, are taken regularly beyond the grounds. That their amusement generally, in-doors and out, is fairly provided for, we have no doubt.

Three musical entertainments weekly, including a dance, attended always by about 240 or 250 of both sexes, has been given throughout the winter; and pic-nics, to be given from time to time regularly, with the usual out-door games of summer, will begin very shortly. There is a good mixed band of 16 performers, one being a patient and the rest

attendants; and the concerts are conducted by Mr. Toller himself, who takes much interest in these amusements, and in selection of the pieces played. Another source of interest has been opened to the patients during the last few months by means of a photographic apparatus, worked by one of the attendants.

Of other points of statutory enquiry, it will suffice to say that the average number attending chapel is 230, and that the chapel will hold no more; that the members entered under medical treatment to-day are 22 men and 38 women, including many ailments of a slight description; and that, since the last visit, the instances of seclusion has been limited to 35, distributed over 26 patients. We regret to have to notice, that, previously to Mr. Toller's appointment, the case book appears to have been very insufficiently kept. The several cases since that date are properly entered up, but the blanks before it are very numerous indeed; and we suggest these, so far as they concern patients who are still in the Asylum, be immediately supplied.

Our visit to-day has satisfied us that Mr. Toller is discharging his duties with energy and ability; and that the Institution is, in general, in a very favourable state.

(SIGNED), JOHN FOSTER, } *Commissioners*
 JAMES WILKES, } *in Lunacy.*
