REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT LANCASTER,

TO THE

Adjourned General Annual Sessions held January 4th, 1854.

*To Her Majesty's Justices of the Peace for the
County of Lancaster in General Session assembled.*

In pursuance of the sixty-second section of the Statute 16th and 17th Victoria cap. 97, the Committee of Visitors of the Lancaster County Lunatic Asylum beg leave to submit the following report:—

Your Committee have much pleasure in reporting that the Asylum is in a most satisfactory and efficient state, and continues steadily to uphold that very high position which it has long maintained among the similar establishments of the Country. They have also the great gratification of stating their entire satisfaction with the conduct of the Officers and Attendants of the Asylum, for the excellent manner in which they have severally discharged their important, and often very trying duties, to the afflicted objects of their care. No change has taken place in the superior Officers since your Committee's last report, with the exception of the House Surgeon Mr. Cleaton, whose valuable services they regret to have lost, though they rejoice at his success in being elected to the honourable situation of Superintendent of the Asylum at Rainhill. The vacancy thus occasioned was filled up by the appointment of Mr. Wilson, at an annual salary of £80, at present; his predecessor's being £120.

The number of patients in the Asylum at present is 672: namely, Males 335, Females 337, average for the year 645. The admissions during the past year have been 148, being a greater number than in the two preceding years; one-half of these admissions was from the Hundred of West Derby. The increase in the number has not been such as to cause an inconvenient crowding in any part of the building, and your Committee refer with great pleasure to the general good health and comfort enjoyed by the inmates. No instrumental restraint has been used in the Asylum, and in few instances has any seclusion been found necessary. Your Committee have not been unmindful of the reappearance of Cholera in this country; and in the hope that a similar exemption might be secured, as in its last visitation, they ordered a minute examination of the sewage and ventilation, and adopted the most stringent sanitary regulations with a view of preventing, as far as practicable, the effect of that formidable epidemic.

The Chaplain reports that the religious services have been continued during the year with regularity, and without a single instance of misbehaviour among the patients. The Chapel has been filled by a Congregation of about 270 on each of the two Sunday services. The week day services have, under the sanction of your Committee, been held on the evenings of Tuesday and Thursday, and with great advantage, they are attended by a considerable number of the servants of the establishment and upwards of 180 patients.

The charge at the three Asylums for the weekly maintenance of the Patients belonging to the County was 7s. 7d., to April last: it was then reduced to 7s. This reduction led to a deficiency of £600., in the maintenance account of the Rainhill Asylum, which your Committee supplied from the balance they had in hand. They regret to add that in October last they deemed it advisable, from the increased price of provisions, &c., to restore the weekly maintenance to the former charge, at which it now remains.

By the liberality of the Justices in former years, the Asylum has been provided with every thing essential to the convenient and efficient working of so large an establishment ; and the only outlay of the past year, beyond the expense of ordinary repairs which, in a building so extensive, must always be considerable, arose from the reparation of the roof, which sustained much injury from the storms of December, 1852. A large quantity of earth still remains to be removed from the west side of the building, and though your Committee may regret that the grounds continue so long incomplete, yet abundant and suitable employment is thereby afforded to such patients as are capable of engaging in out-door occupation.

In your Committee's last report they expressed much anxiety at the supply of water to the Asylum becoming insufficient, and they referred to some works then in progress under the superintendence of their Architect, Mr. Sharpe. These works have since been finished, and they have great pleasure in reporting that from the 8th of July last, the day on which the new arrangements were complete, the Asylum has been in the enjoyment of a constant and abundant supply of the purest water throughout the driest part of the year, after the rate of 20,000 gallons a day, a supply equivalent to 25 gallons per head for an establishment of 800 inmates ; and, notwithstanding so large a drain, both reservoirs, which together contain nearly 3,000,000 of gallons, or upwards of 5 months supply, were at the end of Autumn quite full, and there has been a constant overflow ever since : your Committee therefore have every hope that the supply of an article of such essential importance in an establishment of this kind, has now been abundantly and efficiently secured at an additional cost of only £250.

From the rapid influx of admissions to our three Asylums and their present crowded state, an important question is soon likely to press itself

upon the attention of the Magistrates. Without venturing to express an opinion as to whether insanity is on the increase, your Committee may remark, that the port of Liverpool annually supplies a considerable number of vagrant Lunatics who have no claim upon the County, either by settlement or an industrial residence ; and it cannot be doubted that the modern treatment of the insane has a tendency to add much to the longevity of those cases where medical skill has failed to effect a permanent cure. These causes may in some degree, account for the crowded state of our Asylums, filled as they chiefly are with chronic and incurable patients ; and though your Committee abstain from suggesting any positive plan for their relief, they beg leave to observe that it not unfrequently happens that applications are made to them by Boards of Guardians for the removal from the Asylum of chronic patients ; and wherever it has been the opinion of the Medical Officers that “ the unsoundness of mind of such patients had the character of harmless idiotcy or imbecility, and was not of a dangerous or violent kind,” and the Guardians could assure your Committee that special and proper accommodation was provided in their Workhouses for such patients, they have invariably authorized their removal. Your Committee, however, cannot avoid adding, that should the detention of chronic cases in Workhouses become more general, means should be taken to provide separate apartments or buildings expressly for idiotic and imbecile paupers : and they venture to entreat the Guardians of all Workhouses, on the score both of humanity and economy, not to allow any Lunatic pauper whose attack is recent, and, therefore, requiring immediate care and treatment, or one whose malady, if chronic, assumes a violent or dangerous character, to be detained in their Workhouse for any longer time than is absolutely necessary for taking proper legal steps for such patient’s removal to an Asylum. Your Committee have recently been informed that the Board of Guardians of the Manchester Union have determined to erect a separate building, capable of containing

200 patients, chiefly of an epileptic class : they look with much interest to the success of this experiment, in the probable expectation that other Unions in the County may deem it advisable to adopt a similar course.

Your Committee have again to express their regret that no distinct Asylum has yet been provided for that class of patients usually described as "Criminal Lunatics," but that the inconvenience and evils of their confinement and association with the ordinary inmates of our Asylums, are still suffered to exist.

THOS. MACKRETH,

Chairman.

Lancaster County Lunatic Asylum,

REPORT OF THE COMMISSIONERS IN LUNACY.

17th Sept. 1853.

There are now 655 patients in this Asylum, viz. 324 males and 331 females. They have all been examined by us to-day, and were at the time of our visit very tranquil and orderly, neat and clean in their persons and dress, and altogether in a comfortable state. A large number of the patients of both sexes are employed as usual in various occupations, and considerable progress has been made in levelling the ground in the front of the Asylum. There is, however, still a large quantity of soil to be removed. When time will permit, we would recommend that the wall at the extremity of the airing-court should be lowered, and the unsightly and dilapidated shed now covering the pump should be replaced by a building of a better and neater description.

The wards and every part of the establishment are in excellent order, and throughout clean and well ventilated. We saw some of the patients at their dinner, and tasted the food, which was abundant and of good quality.

No disease of an epidemic character has existed in the Asylum since our last visit, and the general health of the patients is good.

There have been 54 deaths from various causes, which we have examined and found explained satisfactorily ; and 52 patients have been discharged. The admissions have amounted to 117.

We have examined and signed the books, and we notice that the Case-book is now entered up.

We have made the various enquiries required by the statute, and have received satisfactory replies ; and we have again to record our entire approbation of the condition and management of the Asylum.

(Signed) W. G. CAMPBELL,

J. R. HUME,

Commissioners in Lunacy.

MEDICAL REPORT.

During the year ending in December last, 148 patients have been admitted, 73 men and 75 women, being an increase of 91 over the admissions of the preceding year, a result attributable to the inability of the Rainhill Asylum to receive many of the cases occurring in the West Derby Hundred.

53 patients have been discharged, 38 as recovered and 15 on request, chiefly of relatives.

The daily average number resident has been 646, being 4 less than in the preceding year. The deaths have been 53, making the mortality on the daily residents rather more than 8 per cent. As was remarked upon last year, the two chief causes of mortality have been from general paralysis and consumption; in three instances of the latter disease the patients were far advanced on admission, and it is to be regretted that the certifying surgeon does not more frequently hesitate before sending such cases to add to the mortality of the institution.

It is unnecessary to burden each successive report with the general details of treatment or management. In these respects there is little or no deviation from the principles which have been acted upon for many years; and during the past year, the extensive alterations in the gardens and grounds have afforded a healthy and recreative occupation to a large number of the inmates, in which, however, the women have not been able to participate. It is very doubtful how far any out-door occupation

for the women can be made available in this establishment : the experiment has already been tried, and the result was attended with disappointment, chiefly arising, however, from the previous habits of the patients, most of whom had been trained up in manufacturing pursuits, or had resided in large towns where the taste for agricultural employment could not be acquired ; and hence it was found that such pursuits, to a large majority, were not only distasteful but repugnant to their feelings. As, however, the alterations in the grounds are now rapidly progressing, the facilities for mere recreation, if not employment, will enable the system of exercise in the open air to be more fully carried out than has hitherto been practicable.

The two small hospitals or infirmaries attached to the institution contain beds (together) for about 48 patients. For a long period all these beds have been occupied either by sick persons requiring constant medical treatment, or by patients whose infirmities demand the closest supervision. The Visitors are well aware that these hospitals only provide two rooms each, for the accommodation of these patients, without affording any separation for fever cases, or for those of dirty habits, or (in fact) any provision whatever for the treatment of any case apart from the general inmates of the common hospital : hence it has frequently occurred that patients, either from the loathsomeness of their complaint, from habitually dirty habits, from their state of mental excitement, or from a combination of some or all of these causes, have been treated "*ex necessitate*" in the single rooms of the main building, at a great inconvenience to the general economy of the establishment. When it is remembered that there is no special mode of heating any of these single-bedded rooms, and that there are no such rooms unattached, it will be at once apparent that it cannot be for the advantage of any patient to be thus isolated from the hospital, and from that supervision

and vigilant care exercised over all persons requiring constant medical attention. Moreover, the ordinary duties of every attendant in the Asylum in their respective wards, are sufficiently onerous without imposing extra duties which cannot be discharged for any lengthened period, without incurring the risk of some neglect or inattention elsewhere. Whilst, therefore, it is a matter of gratification to find that the necessity of providing separate day-rooms for the convalescents in the hospitals is engaging the attention of the Visitors, it will not be amiss, for the reasons above specified, to call their attention to the urgent necessity of providing at the same time eight or ten separate bed-rooms to each hospital, for the treatment of such cases as are herein described. It is believed that in an architectural point of view no difficulties will arise in carrying out these extensions. Should these suggestions meet with the concurrence of the Visitors, it would be most desirable at the same time to adopt some plan of heating the hospitals beyond that of mere open fireplaces, and the present construction of these buildings seems to point out the eligibility of effecting this object best, and most economically, by means of hot water.

It is highly gratifying to report that the conduct of the attendants and servants during the past year has given great satisfaction, and that on their part there has been evinced a strong disposition to promote the interests of the Asylum, by cheerfully and readily supporting the general views of management.

E. D. DE VITRÉ,
Visiting Physician.

JOHN BROADHURST,
Surgeon and Superintendent.

REPORT OF THE COMMITTEE OF VISITORS

OF THE

ASSEMBLED AT THE ASYLUM, PRESTWICH, ON THE 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 1884.

**THE COUNTY LUNATIC ASYLUM
AT PRESTWICH.**

The Committee of Visitors of the County Lunatic Asylum at Prestwich present the following Report to the Court of Assizes, sitting at Preston, on the 24th, 25th, 26th, 27th, 28th, 29th, 30th, 31st, 1884.

The situation of the Asylum has afforded the Visiting Commissioners satisfaction inasmuch as it is manifestly in the general good health of the patients, who have been particularly free from epidemic diseases, and the grounds, which have been laid out by the patients, under the direction of the gardeners, have been arranged almost in accordance with the plan and beauty, the most equal to those attached to any similar establishment.

The buildings are in good and substantial repair. The water supply has been improved, both public and private, and the drainage, and the repairs, of the asylum have been carried out by the Visiting Commissioners, and with the aid of the attendants.

REPORT OF THE COMMITTEE OF FACTORS

OF THE

THE COUNTY LUNATIC ASYLUM

AT PRESTWICH.

The Committee of Factors of the County Lunatic Asylum at Prestwich, in compliance with a resolution of the Board of Directors, have the honor to report that they have had the pleasure of visiting the Asylum on the 10th and 11th inst. and have the honor to report that they have seen the Asylum and have been much pleased to find that the same is in a very comfortable and healthy state, and that the patients are well cared for, and that the staff of the Asylum is well qualified for their duties. The Committee also report that they have seen the Asylum and have been much pleased to find that the same is in a very comfortable and healthy state, and that the patients are well cared for, and that the staff of the Asylum is well qualified for their duties.

REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT PRESTWICH,

TO THE

Adjourned Annual General Session, held January 4th, 1854.

*County Lunatic Asylum,
Prestwich, 1st Jan., 1854.*

The Committee of Visitors of the County Lunatic Asylum at Prestwich present the following Report to the Court of Annual Sessions.

The situation of the Asylum has afforded to the Visitors daily-increased satisfaction: its salubrity is manifested in the general good health of the patients, who have been particularly free from epidemic diseases; and the grounds, which have been laid out by the patients, under the direction of the gardener, have been advanced almost to completion, and, in order and beauty, are now equal to those attached to any similar establishment.

The buildings are in good and substantial repair. The whole of them have been re-painted, both inside and outside (indeed, with very few exceptions, all the repairs have been carried out) by the patients, under the care and with the aid of the attendants.

The Asylum, originally intended for 375, has by alterations been rendered capable of containing 500 patients. There are now 475 inmates in the establishment. Several of the more harmless and manageable cases have been draughted into the parochial Workhouses, and several male patients have been refused admission in consequence of a want of sufficient accommodation. The Asylums at Lancaster and Rainhill being now full, the time has arrived when, in the opinion of the Visitors, it is necessary that the Court of Annual Sessions should consider what steps shall be taken for the accommodation of the patients daily seeking admission into one of the three Lunatic Asylums for the County.

The Domestic department in the Asylum at Prestwich is sufficient, from its size and capacity, to meet the requirements of a greater number of patients, so that increased accommodation might be provided by merely adding to or enlarging the present number of wards.

Feeling satisfied that the land at present attached to the Asylum will very soon be found quite insufficient even for the existing number of patients, the Visitors have entered into negotiations for a lease of about 18 additional acres.

The following Table will shew the number of admissions, discharges, and deaths, in each year since the opening of the Asylum.

	1851.			1852.			1853.		
	M.	F.	TOTAL.	M.	F.	TOTAL.	M.	F.	TOTAL.
Admitted.....	217	211	428	137	135	272	164	159	323
Discharged, } cured	35	32	67	50	57	107	45	65	110
Discharged, } not recovered	1	1	2	3	2	5	25	27	52
Died.....	31	24	55	30	27	57	42	31	73

From this statement it is evident that the Asylum at present holds a high position among curative establishments.

The Visitors desire to express their sense of the valuable services of the Superintendent, the Chaplain, and the Assistant Surgeon, who have been indefatigable in the discharge of their arduous duties.

The conduct of the officers and servants generally, has been marked by attention to their several duties, and by kindness to those committed to their care.

During the past year some additional amusements have been afforded to the patients. A band has been trained from among the officers and attendants, and much assistance has been afforded by various friends.

A large addition has been made to the library by donations of books from various gentlemen.

The attendance of the patients at chapel has been regular and uninterrupted; their behaviour has been very good, and marked by attention

to the services. Additional accommodation has recently been afforded for about 100 patients by the erection of a gallery.

The employments of the patients have been directed to the cultivation of industrious habits, and have been marked by a very salutary influence on the patients themselves. A large amount of useful labor has been performed, and a consequent decrease has taken place in the cost of the establishment to the County.

The Visitors receive from the patients and their friends the warmest thanks for the benefits which the former have received while under their directing care.

THOS. S. MILLS,

Chairman.

REPORT OF SUPERINTENDENT.

County of Lancaster Asylum,

Prestwich, March 1854.

GENTLEMEN,

I have to report to you that 323 patients (164 men and 159 women) were admitted in the course of last year (1853), which, added to the 388 left in the Asylum on the 1st of January of the same year, made a total of 711 under care and treatment during that period.

The results have been as follow :—

110 have been discharged, recovered (3 having been re-admitted);

18 ditto relieved ;

34 ditto not improved ;

1 has escaped ; and

73 have died.

The daily average number of patients resident in the Asylum throughout the year has been 456. The number remaining in the Institution on the 1st of January 1854, was 475 ; viz. 244 men and 231 women.

The per-centage of recoveries upon the admissions was 34 ; somewhat lower than that of the previous year, which was 39·34. This is readily accounted for by a reference to Table III., which shows a great influx of patients whose maladies had been of long duration, varying from one to forty years ; and by the extraordinary number admitted in whom insanity was combined with those formidable diseases, general paralysis and epilepsy.

Of the 323 admissions, 44 were affected with general paralysis and 46 with epilepsy, making altogether 90. If to these be added 22 whose ages ranged between 60 and 80 years, and a number of others in whom the mental disease had been of long standing, it will be immediately seen how very few cases, comparatively, remained which promised much hope of recovery.

The per-centage of deaths upon the number under treatment was 10·42, a very slight advance upon that of the previous year, (which was 9·93,) notwithstanding the severity with which the winter suddenly made its approach in December, sensibly affecting the feeble and especially the paralyzed.

Death resulted in 44 cases out of the 73 from general paralysis, epilepsy, and disease of the spinal cord ; in 10 from chronic disease of the heart and lungs ; in 1 from natural decay in old age ; and in the remaining 17 from various causes specified in Table XI. From general paralysis alone we lost 29 patients, chiefly amongst the males. Out of the 518 male patients admitted during three years, upwards of 100, or one-fifth, suffered from that disease.

In consequence of the apparently large number of that class of inmates in this establishment, I was led to abstract from the obituaries published in the various reports of the English County Asylums *receiving paupers only*, (at least from as many as I had in my possession,) the number of patients dying from general paralysis, and I found that out of the aggregate number, 1685, death had resulted in 319 instances from general paralysis, or in the proportion of 19 per cent., whilst out of the 185 who had died in this Asylum since its opening, 59 (or 32 per cent.) had been the victims of that, sooner or later, fatal disease. Pursuing the comparison still further, I found that the proportion of deaths from this disease in the males was 25, and in the females 9, per cent. upon the respective numbers in the collected Asylums, whilst 51 per cent. in the males and 9 in the females was the ratio in our own. The explanation is, I presume, that intemperance and debauchery, the principal sources of this disease, prevail more in large manufacturing towns than in other places, as it is the manufacturing districts which mainly contribute to fill this Asylum.

In spite of the reduction that deaths and removals to workhouses have made in our number of paralytics and epileptics, we counted on the 1st of January last, 44 of the former and 91 of the latter, making a total of 135.

This leads me to the subject of the present state of the Asylum as regards numbers; for although room was made in this establishment last autumn for urgent cases by removing many epileptic and demented patients to workhouses, we were constrained to refuse admission to several applicants. At the same time information was received that the Asylums at Lancaster and Rainhill were also full.

This gave rise to a proposal at the Annual Sessions, to provide a chronic establishment, or a place for the reception of those deemed incurable; but for many reasons (the erection of such places receiving no longer the sanction of the legislature being, I believe, not the least) the idea was abandoned. I cannot but congratulate the chronic lunatic upon the result; for although there are in this institution some 50 patients who might be properly cared for in a well-appointed place somewhat superior to a workhouse, yet by far the greater number of *chronic* lunatics, in my humble opinion, require, equally with the *recently* afflicted, the advantages which a well-constructed County Asylum affords.

With this report you will receive plans and estimates for enlarging the Asylum so as to accommodate an additional 100 patients, which have been prepared at your request by Messrs. Mills and Murgatroyd, Architects, of Manchester, in pursuance of an order made at the last Annual Sessions.

If this addition be made at Prestwich, and a like increased accommodation be provided at the other County Asylums, I apprehend that the wants of the County will be met for some years to come, especially if the guardians of Manchester and one or two other large towns carry out their projected plans of building hospitals for epileptics.

I am happy to say that the general health of the patients has been good during the past year, and that no accident worthy of observation has occurred, with the exception of one that happened to a man far advanced in general paralysis, and which proved fatal to him. He greedily attempted to swallow a large piece of beef (nearly half-a-pound

in weight) which, by its pressure upon the windpipe, caused suffocation. This is the first and only one of its kind which has taken place since the establishment has been in operation, notwithstanding we have so many of those patients who are peculiarly prone to it. Our immunity from such mishaps is attributable to the system, which has been adopted from the commencement, of mincing all the food consumed by that class of inmates.

The employment and amusements of the patients have been carried on as in former years. A list of work executed by them under the direction and with the assistance of the attendants, will be appended as usual to this report, at least so far as is practicable. I may say in a few words that, with the exception of fixing some new gas retorts and a large boiler, all the repairs, in addition to many alterations and improvements, have been accomplished by our own regular staff of servants and patients. The additional 18 acres of land which you have just concluded upon renting, will afford increased healthy and remunerative means of employing the patients, the want of which would before very long have manifested itself, now that the bulk of the work in forming the grounds is completed.

The Commissioners in Lunacy at their last visit left the following report :

“ Prestwich Asylum,

“ 26th Sept. 1853.

“ We have officially visited this Asylum, and personally examined all the patients, 464 in number, of whom 239 are men and 225 are women. 2 men were in seclusion, but no one was under mechanical restraint, and all the patients were tranquil and orderly.

“ A large proportion of the patients were engaged in various employments, and it appears by the register that as many as 378 of the whole number are regularly occupied in useful labor.

“ Prayers are read daily in the house, and the Church service is performed entire twice every Sunday. The attendance of the patients averages 310, and their conduct is reported to be most orderly and satisfactory.

“ Considerable progress has been made in laying out the grounds and airing courts, which are in excellent order ; and a great quantity of useful furniture has been made by the patients and placed in the wards.

“ We noticed several patients who appeared to be rapidly approaching convalescence, and we observe with pleasure that since the Commissioners' last visit in March, 68 patients have been discharged recovered ; 39 other patients have also been discharged ; and within the same period 37 have died and 179 have been admitted.

“ In conclusion, we have again the satisfaction of reporting that the institution is in a highly satisfactory state.

(Signed) “ J. R. HUME.

“ W. G. CAMPBELL,

“ Commissioners in Lunacy.”

The weekly cost per patient for the last year was 6s. 10d., being but a very slight increase upon that of the previous one, although there has been a considerable advance in the price of provisions.

I remain, Gentlemen,

Your obedient humble Servant,

J. HOLLAND, F.R.C.S.,

Superintendent.

*To the Committee of Visitors of the
County of Lancaster Asylum, Prestwich.*

The weekly cost for fuel for the last year was £100, being but
 a very slight increase upon that of the previous one, although there has
 been a considerable advance in the price of provisions.

REPORT OF THE COMMITTEE OF VISITORS

THE COUNTY LUNATIC ASYLUM
AT RAINHILL.

REPORT OF THE COMMITTEE OF VISITORS

1872

COUNTY LUNATIC ASYLUM, DUBLIN

1872

Printed and Sold by G. B. S. & Co., Stationers, 11, St. Paul's Church-yard, Dublin.

The Committee of Visitors of the Lunatic County Lunatic Asylum, Dublin, have the honor to acknowledge the receipt of the Report of the Managers of the Institution during the last year.

THE COUNTY LUNATIC ASYLUM

At Rainhill. Considerable progress has been made in the improvement of the Asylum since the last year, and the Committee are glad to find that the new works have been finished which will be found very useful for the exercise of the patients, and no small improvement of general appearance. The kitchen garden has been enlarged, and as it was found that the rock was very near the entrance, part of it has been removed, and soil substituted, which has increased the extent of vegetable ground. The use of the Asylum, and has been a healthy employment for the patients. The remaining projected out-buildings have been completed, and will be found a great addition to the accommodation of the Asylum, and have been finished.

The Committee in passing expressions of their warmest thanks to the Managers for the progress made in the building, &c. &c. which has been done. They also expressed the prevailing cheerful feelings of the patients, which is now maintained by the kindness and proper attention of the Managers. The Committee are warmly engaged in the cause of

REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT RAINHILL,

TO THE

Adjourned Annual Sessions held January 4th, 1854.

The Committee of Visitors of the Rainhill County Lunatic Asylum have much pleasure in being able to speak in satisfactory terms of the progress of the institution during the past year.

Considerable progress has been made in the laying out of the grounds: new walks have been formed which will be found very useful for the exercise of the patients; and no small proportion of planting has been effected. The kitchen-garden has been enlarged; and, as it was found that the rock was very near the surface, much of it has been removed, and soil substituted, which has increased the supply of vegetables for the use of the Asylum, and has been a healthy employment for the patients. The remaining projected out-houses have been completed: a cottage for the farmer, a farm stable, accommodation for eighty pigs &c., have been provided.

The Commissioners in Lunacy recommended that additional accommodation should be provided in the washing department, which has been done. They also suggested the providing additional furniture for the wards, which is now preparing by the patients under proper superintendence. The Commissioners also strongly urged the necessity of

increased accommodation in the chapel. The present one will not contain more than 120 patients in addition to the attendants. They considered that, as the Asylum now contained as many as 400 patients, the chapel ought to be enlarged to accommodate 250 in addition to servants. A plan and estimates have therefore been obtained for a new building, which will be laid before the Magistrates at the present Sessions. It has been formed with a view to the possibility of future enlargement, should it at any time be found necessary, by the construction of an additional aisle without interfering with the building. It is proposed to attach a burial-ground to the new chapel, which would in many respects be desirable, and would be a considerable saving in the expense of funerals.

The present high price of provisions has made it necessary to increase the weekly charge on the parishes in this and the other County Asylums.

The Committee have much pleasure in being able to report in favorable terms of the conduct of the officers generally, and their attention to their duties; and the experience (though short) which they have had of the conduct and abilities of the gentleman who was appointed Superintendent in the last year, gives them every reason to believe that the Justices have been fortunate in their selection.

JONA. BROOKS,

Chairman.

County Asylum, Rainhill,

2nd January 1854.

REPORT OF SUPERINTENDENT.

*County of Lancaster Lunatic Asylum,
Rainhill, March, 1854.*

Gentlemen,

I have the honour to submit to you a statement of the progress of this institution during the past year. The general results are arranged in the usual tabular forms, which are appended.

It will be seen, from Table I., that the admissions, as compared with those of the preceding year, are very few in number. This has unhappily not been the result of a proportionate decrease in the prevalence of insanity in South Lancashire, but is due to the fact that, as early in the past year as the month of April, this Asylum became full, and cases were afterwards received only as vacancies were created by the death or discharge of patients in the institution. Admission could not, consequently, be afforded to several applications from Liverpool and other places, and in many instances these patients were therefore obliged to be sent to Lancaster or Prestwich.

The recoveries upon the total number treated (10 per cent.) are somewhat below the proportion of the previous year: this is explained by the well-known fact that the majority of cures takes place among recent

admissions, of which, as already stated, there have been fewer than ordinary. As compared with the admissions, however, the per-centage of cures (35·85) is more favorable than that of 1852.

Of those discharged recovered, 4 only have been re-admitted; the cause of relapse being, in two instances, a return to habits of intemperance.

The mortality is a little higher than usual, owing mainly to a large number of cases of "general paralysis" which had accumulated, and which ended fatally during the severe weather of the early part of the year, and also to the fact that 4 patients, when admitted, were in so advanced a stage of incurable physical disease that they died within a fortnight.

Upon the whole the health of the patients has been good throughout the year, the institution has been free from epidemic disorder of any kind, and the patients have enjoyed an unusual degree of immunity from autumnal diarrhoea, a result I believe in some measure attributable to the improved dietary which you sanctioned last summer; while the excellent system of heating and ventilation which exists in the institution cannot be otherwise than highly beneficial in a sanatory point of view.

By reference to the table of "The Forms of Insanity in Patients admitted during the year," it will be seen that general paralysis is still the most frequent, as it proves to be the most unfavorable of complications. This disease, which (although capable in its early stages of palliation by careful nursing and attention to hygienic precautions) has hitherto, in the unanimous experience of the profession, been found incurable, appears to prevail to a larger extent in proportion to the

population in Lancashire and Middlesex than in any other part of the kingdom, justifying the belief that its prevalence is, in some measure, incidental to the active spirit of commercial enterprize which characterizes these counties. Almost all the cases of this description admitted during the past year have taken place among artizans of a higher class, and have been traceable to intemperance, to reverses of fortune, or overstraining of the mental energies.

As might be inferred from an examination of Table V., a considerable number of our admissions consist of Irish immigrants, who are also Roman Catholics. In three instances insanity seemed to have been produced by the excitement and embarrassment incidental to contemplated emigration to America, and in each of these cases the patients were Irish peasants.

The two most fertile sources of insanity, however, as shown in Table VIII., are intemperance, and poverty with domestic misery; and, in this respect, the experience of this institution is in accordance with that of almost all County Asylums.

Table VII. has been inserted for the purpose of showing the physical state of patients on admission. It will be seen that one-half of the whole number were in a feeble and exhausted condition of health, rendering a liberal and nutritious diet essential.

From my experience during a connection of three years with the excellent Asylum at Lancaster, as well as from what I have observed at this institution, I believe that regular and healthful occupation is a most powerful agent in the successful treatment of the insane, and renders most efficient aid to the operation of pharmaceutical remedies.

The inordinate expenditure of nervous energy which is constantly taking place in mania and other forms of insanity, and which may not inaptly be likened to an electric current of low tension which is being constantly evolved, is, I believe, by the judicious occupation of the individual, not only diverted into a channel which is profitable to the institution, but is also kept within a healthful limit, and thus a more vigorous and regular exercise of the various faculties of the mind, which had previously been weak and irregular but preternaturally active in their operation, is induced.

Entertaining these views, the employment of the patients has formed a leading feature in the management of the institution. Nearly five-sixths of the men and two-thirds of the women are employed daily in the various occupations mentioned in the copy of the "Daily Register" appended. The whole of the men's wards, and the greater part of the women's, have been painted, and many of them coloured by the men patients, under the direction of the attendants. Walks, twelve feet wide and upwards of a mile in length, have been formed in the grounds, the foundation being rock, chiefly taken out of the kitchen garden, where it has been advantageously replaced by soil. Large quantities of furniture and fixtures have also been made during the past year, which have supplied many deficiencies and materially contributed to the comfort of the patients and the cheerfulness of the wards. The tables of "Articles made by the Patients" give, however, but a very imperfect idea of the work really done by them in the course of the year, inasmuch as the large amount of repairs done by the Joiners, Bricklayers, Plumbers and Blacksmiths cannot be arranged in a tabular form; and a similar difficulty exists in registering the labour bestowed on 20 acres of arable land, and on about 8 acres of kitchen garden, from which an ample supply of vegetables has been obtained up to the present time. In

addition to what has been above stated, occupation is afforded constantly to three patients in attending to about 80 pigs which are now kept at the institution.

Although believing in the paramount importance of employment as a remedial agent in the treatment of the insane, I am equally satisfied of the expediency as well as of the humanity of combining amusement with occupation. Every means at our disposal has accordingly been put into requisition, to provide relaxation for the patients at proper periods, and to beguile from time to time the tedium of confinement. In the summer, cricket and bowls are favourite amusements; and the assembling occasionally of nearly 300 patients of both sexes upon the bowling-green upon a fine afternoon, to enjoy the pastime of dancing, has been found highly satisfactory. The music on these occasions is supplied by our own brass band lately organized, which now numbers 15, chiefly selected from the officers and attendants. In the winter months, weekly assemblies are held in the recreation-hall in the evening, for music, dancing, and glee-singing, and are highly appreciated by the patients of both sexes; and, in addition, a most interesting course of lectures on a personal tour in the East, illustrated by dissolving views of sacred localities, shown by the aid of the magic lantern, has been delivered during the last few months by our excellent Chaplain, the Rev. Mr. Higgins.

I am glad to be able to say that mechanical restraint is never employed in the Asylum, and that seclusion is not found necessary, either frequently or for long periods of time, especially among the men patients; while it is equally gratifying to me to add that, through the preservation of a merciful Providence, no suicide nor serious attempt at self-destruction has taken place during the year.

There have been several attempts at escape, and in three instances they were successful. Our proximity to a large seaport like Liverpool, whence the majority of our patients come, and whither those who attempt to escape usually direct their course, renders recapture often difficult and troublesome. The utmost vigilance is, however, exercised to guard against these accidents, but it must be remembered that such occurrences cannot be altogether prevented, without the adoption of architectural arrangements and precautions at variance with the interests of the patients generally, and assimilating more to the discipline of a prison than to the regulations of a hospital for the care and treatment of the insane

I have not thought it advisable to make any remarks upon the medical means in use for the treatment and recovery of the patients, being doubtful as to whether such remarks might be considered admissible into a communication which is not addressed to members of the medical profession. Should any of the Magistrates, however, feel an interest in these matters, the books, in which a full record of each case is kept, are always open to their inspection.

Among the tables appended will be found, in addition to those having reference to the statistics of the past year, a "Table of Admissions and Discharges since the Opening of the Institution," as well as others relating to the "Form of Insanity," "Religious Profession," &c., of those patients who were in the Asylum on the 1st of January 1854.

In reviewing the state of the institution during the past year, it affords me much pleasure to say that I believe considerable progress has been made, in all departments, in carrying out the objects for which it was established; and although unquestionably much more remains to be done to render it thoroughly efficient, (among which may be mentioned the

increase of church-accommodation already determined upon,) it is a source of gratification and encouragement to me to know that such matters continue to engage your earnest consideration, and to believe that your sanction and support will, as heretofore, be at all times accorded to any humble efforts of mine to promote the interests of the institution.

In conclusion, I would wish to speak in terms of high commendation of the zeal and energy evinced by the Steward, Matron, and various Officers and Servants of the establishment in the discharge of their respective duties.

To my colleague, Mr. Rogers, the House-Surgeon, my especial thanks are due for his zealous co-operation, and for the untiring energy and perseverance which he has displayed in the discharge of his professional duties. To our excellent Chaplain, the Rev. Mr. Higgins, I beg also to acknowledge my heartfelt obligations, not only for the kind and judicious manner in which he has administered to the spiritual wants of the patients, but also for the readiness with which he at all times enters into any scheme for the amusement or instruction of the inmates, and for the general welfare of the establishment.

I have the honour to be,

Gentlemen,

Your obedient humble servant,

JOHN D. CLEATON,

Medical Superintendent.

*The Committee of Visitors of the
County of Lancaster Lunatic Asylum,
Rainhill.*
