REPORT OF THE COMMITTEE OF VISITORS

OF THE

LANCASTER COUNTY ASYLUM

FOR THE

YEAR ENDING 31<sup>st</sup> MARCH 1884

THE COUNTY LUNATIC ASYLUM  
AT LANCASTER.

The Committee of Visitors of the Lancaster County Lunatic Asylum, in pursuance of the Act in that behalf relating, submit the following report—

They have great pleasure in expressing their satisfaction with the management of the Asylum, and the general improvement of the same, and also in stating fully due to the efficient and judicious management of the Asylum, and the conduct and efforts of the staff. The only change among the Officers during the year was caused by the death of Mr. Wilson, on 27<sup>th</sup> Feb; he had been succeeded by Mr. Clarke, as Clerk to the Visitors, since Mr. Wilson's death in 1882; and your Committee have to express the best of its experience in saying, and one who had so faithfully discharged his duty.

The Lancaster Asylum is capable of accommodating 1000 lunatics, and the number at present is 500, viz, 200 males and 300 females. The Asylum has been the subject of many reports of the year 1883.

REPORT OF THE COMMITTEE OF VISITORS

OF THE

THE COUNTY LUNATIC ASYLUM

AT LANCASTER

The Committee of Visitors, appointed by the Board of Directors of the County Lunatic Asylum, in pursuance of the provisions of the Act in that behalf made, have the honor to report to the Board, in conformity with the provisions of the said Act, the result of their visit to the Asylum, on the 10th day of April last, and the result of their subsequent visits to the Asylum, on the 17th, 24th, and 31st of the same month, and on the 7th, 14th, and 21st of the month of May, 1854.

The Asylum is situated in the town of Lancaster, and is a large and commodious building, and is well adapted for the reception and treatment of the insane. The Asylum is under the management of the Board of Directors, and is supported by the County of Lancaster.

# REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT LANCASTER,

TO THE

*Adjourned General Annual Sessions held January 3rd, 1855.*

---

*To Her Majesty's Justices of the Peace for the  
County of Lancaster in General Session assembled.*

In compliance with the "Lunatic Asylums Act, 1853," the Committee of Visitors of the Lancaster County Lunatic Asylum beg leave to submit the following report :—

They have great pleasure in expressing their satisfaction with the state and condition of the Asylum, and its general management ; their commendation also is again justly due to the Officers and Attendants for their attention and care in promoting the comfort and welfare of the patients. The only change among the Officers during the year was caused by the death of Mr. Willan, in April last ; he had been connected with the Asylum, as Clerk to the Visitors, since its commencement in 1816 ; and your Committee have to regret the loss of so experienced an adviser, and one who had so faithfully discharged his duty.

The Lancaster Asylum is capable of accommodating seven hundred patients. The number at present is 664, viz. 328 males, 336 females. No inconvenience has been felt during any period of the year from

overcrowding. The admissions have been nearly the same as in the previous year, namely 149, and as usual a large proportion of them have been sent from the Southern Division of the County. The deaths have been greater, partly owing to several patients who had long been resident dying at an advanced age, and partly to the increased number of deaths from general paralysis. No epidemic or infectious disease has prevailed during the year, and the health of the patients has, upon the whole, been good.

Your Committee submit the following satisfactory report from the Chaplain: "The services in the chapel, two in the week, and two on Sunday, have been performed regularly. Upwards of two hundred patients, and many of the servants, avail themselves of the week-day services. The chapel continues to be well filled on the Sunday. The congregations have been uniformly attentive and orderly (without a single exception) during the year. I have reason to believe and know that, in many cases, the patients feel a real interest in the services, and that that interest is more than temporary in its effects. I have been cordially helped," he then adds, "by my brother Officers, and by the Servants at all times, and I owe my best thanks to them for their kindness."

Your Committee have had the Asylum buildings recently surveyed by their Architect, Mr. Sharpe; and he reports that they are all in a perfect state of repair; and he adds that the reservoir within the grounds is at present entirely full, and the supply of water abundant.

Your Committee think it right to mention, that in the course of the year, the arrangement agreed upon at a meeting of the Committees of the Lancaster, Rainhill, and Prestwich Asylums, in 1851, at which it was determined that the charges for the weekly maintenance of patients

at the three Asylums should be the same, has now been abandoned, and the Committee of each Asylum now fixes the rate for the weekly payment of patients at such a sum as under its own peculiar circumstances may be considered adequate and proper.

In October 1853, your Committee came to the determination of completing the grounds surrounding the Asylum, which had hitherto remained in an unfinished and unsatisfactory state, owing to the various additions made from time to time to the buildings. For this purpose they deemed it advisable to call to their assistance Mr. Mc.Pherson, whose experience and advice they have found of great practical benefit. The alterations he proposed have to a considerable extent been effected. The unsightly and precipitous mound of earth, west of the approach, which obstructed the free circulation of air in the yards appropriated to the patients, has been removed, and a sloping bank made, sown with grass seeds, and broken by planting low ornamental shrubs. The principal improvement, however, consists in an elevated terrace, seven hundred and fifty yards in length, and twelve feet in width, formed at the upper part of the sloping bank, and extending from the entrance gate of the Asylum to the southern extremity of the grounds. This walk cannot be too highly estimated in a sanitary point of view, as it affords the patients and attendants the benefit of healthful exercise in a dry and airy situation. The aspect of the whole now assumes a light and cheerful character, a most desirable feature in all Asylum grounds, but most especially needed in those at Lancaster, in consequence of the position in which the Asylum is placed. The work remaining to be completed is the ground to the east of the Asylum, a considerable part of which has hitherto laid waste. It is intended to appropriate the whole to culinary purposes, and the patients are now employed in bringing it into such a state as may fit it

for the production of such vegetables as will be most useful to the Establishment.

The "Burial Board of Lancaster" having selected a part of the Moor adjoining the Asylum for the purposes of a Cemetery, the consent of your Committee became necessary to enable them to proceed, as the boundary wall of the Cemetery came within the prescribed distance of the Asylum lodge. The opinion of the Medical Officers was taken, and they reported that they saw no objection, in a sanitary point of view, to the proposed scheme. The consent of your Committee was therefore given. The work is now in progress, and will, it is expected, be finished in the course of the summer, when the present burial ground of the Asylum will most probably be closed; its proximity to the buildings being in many respects highly objectionable.

In the last report of "The Commissioners in Lunacy" the important question of the association of Criminal Lunatics with the ordinary inmates of Asylums is discussed, and your Committee cannot resist the pleasure of extracting from that report the following judicious and enlightened observations. "We think it very important," say the Commissioners, "that ordinary Asylums should be, in fact and character, considered and managed simply as hospitals for the medical and moral treatment of insanity. Residence therein should not be associated in the minds of the inmates, or their relatives, with the degrading ideas of criminality and imprisonment. All the inmates alike should be taught to feel that the object of their being placed there is recovery from mental disease, for which temporary seclusion from general society is one of the means of treatment. The construction and arrangements of the buildings and grounds, and the entire system of management should, as far as possible

be divested of the idea of imprisonment. Thus the notions of a prison and safe custody are carefully avoided, and the true object of institutions for the insane is properly recognised. Practically, this enlightened and humane policy is now carried out in all well conducted Asylums, which, on that ground, amongst others, are wholly unfit for the purpose of the due security of Criminal patients. The conclusion to which the foregoing observations lead is, that state provision should be made for the separate custody, care and treatment, in Asylums exclusively appropriated to the purpose of Criminal Lunatics." Your Committee entirely concur in the views here so well stated, and having witnessed the evils, in the Lancaster Asylum, of the present system of association, they trust that before long they will thus be remedied.

THOS. MACKRETH,

Chairman.

*Lancaster County Lunatic Asylum,*

*January 2nd, 1855.*

The first part of the book is devoted to a general history of the United States from its discovery to the present time. It is written in a simple and plain style, and is intended for the use of schools and families. The second part of the book is devoted to a history of the United States from the year 1776 to the present time. It is written in a more detailed and interesting style, and is intended for the use of those who wish to know more of our country's history.

## REPORT OF THE COMMISSIONERS IN LUNACY.

---

*Lancaster County Asylum,  
24th Oct. 1854.*

There are now 666 persons, 333 of each sex, patients in this Asylum. We have to-day gone through and inspected all the wards, and have seen the patients either in the day-rooms and galleries, or in the work-rooms, laundry, and work-shops. At the time of our visit they were, almost without exception, remarkably quiet, orderly, and comfortable. One only, a female, who was labouring under maniacal excitement, was in seclusion.

Since the visit of the Commissioners on the 17th September 1853, 171 patients have been admitted and 77 have been discharged, 71 of whom were recovered. Within the same period 84 deaths have occurred, 42 of each sex; 17 of the deaths are ascribed to consumption, 16 to general paralysis, and a large proportion of the others to exhaustion and to different forms of cerebral disease. At present the general bodily health of the patients is good, and there is no epidemic or contagious disease in the house. About 50 of the females and half that number of the males, are registered as being under medical treatment; but their ailments, for the most part, are of a trifling kind.

A very large number of the patients are regularly employed in healthful and useful labour, upwards of 250 of each sex upon an average. Of the men, about 50 are employed in the garden and on the farm, from 20 to 30 in the tailors', shoemakers', and joiners' shops, and more than twice that number in cleaning the wards. Of the women, about 60 work in the kitchen and laundry, and 150 find employment at their needle and in knitting, in scouring the floors and bed-making, and otherwise in the galleries. A great deal has been done since the last visit, by the labour of the male patients, in removing soil, and levelling rough ground. The terrace walks have been much extended, and the ground in front of the Asylum has been rendered smooth and level. The unsightly shed which covered the pump has been taken down and removed.

We particularly noted the dress as well as the bedding of the patients, and found them to be clean, warm, and comfortable. We regret, however, to observe that there is still a considerable number of iron bedsteads (as many as 40 or 50), and also of tub or trough bedsteads of a very clumsy, inconvenient, and offensive construction. We trust that an early opportunity will be taken to replace them by others of a more convenient and approved form.

The accommodation for the sick in the infirmaries is less complete than might be expected or desired in an institution which is otherwise in so satisfactory a condition. The attention of the Visitors will, no doubt, be directed to the best mode of remedying this deficiency whenever any fresh alterations are brought under consideration.

We saw the patients at dinner and tasted the provisions, which were well cooked, decorously served up, and supplied in ample quantity.

About 270 of the patients (as many as the building can conveniently accommodate) are in the practice of attending divine service in the chapel, where they conduct themselves with great propriety.

We have only to add that the different rooms and galleries are in excellent order, remarkably clean, and quite free from any offensive odour; and that the condition of the Asylum and its inmates reflects great credit on those to whom more immediately its supervision and management are entrusted.

(Signed)

J. W. MYLNE,

T. TURNER,

Commissioners in Lunacy.

## MEDICAL REPORT.

---

---

The Lancaster County Lunatic Asylum was among the first of the public institutions in the kingdom to recognise and adopt the *non-restraint* principle of treatment, and after a lapse of fifteen years, it will, perhaps, not be out of place briefly to review the results attendant on such an important change.

It will be within the recollection of many of the Visitors, that previous to the year 1840, mechanical restraint formed the rule of practice rather than the exception; all cases on admission were at night placed under restraint, and were only released when, from familiarity with their symptoms, it was thought they could be trusted without; two large compartments in the Asylum were fitted up with a variety of mechanical contrivances for the constant restraint of refractory patients. These compartments contained a row of stalled seats, surrounding nearly two-thirds of the wall in each room, and served the double purpose of a water-closet and ordinary seat; the flagged floors were heated by hot air, and the patients were secured by handlocks to each side of the upper portion of the stalls, and by leglocks to the lower portion, the heated floor superseding the necessity of stockings and shoes: all the bedsteads, and many of the fixed seats, were so constructed as readily to admit of the free use of mechanical means to restrain their occupants. Early in the spring of 1840, an attempt was made to mitigate the horrors of such a mode of treatment, and with the cordial sanction and

approbation of the Visiting Magistrates, these compartments were speedily abolished, along with all other forms of mechanical restraint then in common use in all parts of the establishment. Within the above period upwards of 3,000 patients have been under treatment, and only in one instance has it been deemed necessary to have recourse to mechanical restraint; this occurred in 1844, in the case of a violent epileptic patient, who was placed under restraint for a period of six hours, the particulars of which were fully set forth in the report of that year: and it is gratifying to add that in no case subsequently has it been considered necessary or justifiable to adopt any kind of mechanical restraint as a remedial agent.

Such a total revolution in the treatment of the insane in an old-established Asylum was not accomplished without much anxiety and difficulty; the prejudices of custom were to be softened down; the fears and apprehensions of the attendants were to be subdued, and their *willing* co-operation gained in vigilantly seconding every effort to introduce a more humane mode of treatment: suffice it to say, that a steady and considerate perseverance ultimately surmounted every difficulty, and it is with no ordinary satisfaction that an appeal can now be confidently made to the statistics of the Asylum, in proof of the unspeakable advantages of moral over mechanical means of treatment, as observable in the general quietness and decorum of the establishment, in the cheerful aspect of the patients, in the comparative freedom from acts of destructive violence, and in the large proportion of inmates who are constantly engaged in some useful occupation; to which might be added, a decreased mortality, and an increased per-centage of cures. But it must be allowed that, coterminously with the changes above enumerated, it had been deemed necessary materially to improve the dietary, which could not fail in having a salutary effect. It may be

interesting to state, that several patients who had been under constant restraint were, in the course of time, under the milder mode of treatment, reported to be cured and restored to their friends.

Experience, therefore, leads to the undoubted conclusion, that mechanical coercion in every well-appointed Asylum is altogether unnecessary; but to carry out the system successfully, it must be borne in mind that no considerations of less importance than the cure and well-being of each individual case ought to interfere; and whilst the occupation of many of the patients may be of value and importance to the institution, nevertheless the care and attention bestowed upon them must not be permitted to abstract, in any degree, from that efficient supervision required by all patients whose peculiar symptoms call for special attention.

Simultaneously with the adoption of the non-restraint system, efforts were made to deprive the building, as far as practicable, of its prison-like appearance. The iron bars were removed from the windows, open fireplaces were more generally had recourse to; and every measure, not incompatible with the wants of the institution, and yet calculated to give an air of cheerfulness and domesticity, was readily promoted. To this end, the galleries and sitting-rooms have been hung with suitable pictures, the patients have been induced to take an interest in the growth and care of plants; birds and domestic animals have been placed under their charge; reading, and amusements of different kinds are encouraged, all tending to relieve the tedium and monotony of hospital life.

The system of occasional seclusion is in many instances attended with marked benefit: it is essentially valuable in cases of epileptic mania, especially among women; in many cases of general paralysis, accom-

panied with temporary but uncontrollable restlessness and excitement; and in cases of acute mania. It is necessary, however, to guard against this means of treatment assuming a routine character, and hence no patient is allowed to be placed in seclusion without its being immediately reported. In a majority of instances a few hours suffices to tranquillize the nervous system, and to restore the patient to his or her wonted position in the establishment; but in acute cases, and in the advanced stages of general paralysis, a more prolonged confinement is frequently necessary. All patients under seclusion are a source of great anxiety, and require close attention; their wants must be constantly cared for, their habits punctually attended to, and on no occasion ought their seclusion to be unnecessarily protracted.

A large proportion of the men have during the past year been employed in spade labor, in connection with the improvements in the ground, and in general gardening and farming operations.

The custom of affording relaxation by short walking excursions into the country is found to be very beneficial, a privilege which at all times is highly estimated; and amusements of various kinds in the open air are promoted as far as practicable, and are participated in with a keen relish by numbers of the inmates.

The band recently formed under the auspices of the Steward and Chief Attendant is becoming daily more proficient, and its enlivening strains on many occasions proves a great source of pleasure and innocent amusement. This institution labors under the disadvantage of not possessing a recreation-hall for musical parties, dancing, or other entertainments. Much advantage is derived in other Asylums from

accommodation of this kind, and it is hoped that such a defect will not long be permitted to exist here.

The admissions during the year have been 149,—81 men and 68 women, being an increase of 1 over the admissions of the preceding year. The deaths, 83, have been in the proportion of 12 per cent. on the daily average number resident, 680; and the number of recoveries, 62, is much higher than last year.

There has been no epidemical disease in the Asylum during the past year, and the condition of health has perhaps been over the average. The chief causes of death have arisen, as will be observed by the annexed tabular form, from consumption and diseases of the brain, especially from general paralysis; and it also will be observed, that several of the patients who have been long resident in the Asylum, have died at an advanced age.

It is well to call attention to the contemplated improvements in the hospitals. The necessity for such alterations is almost constantly forced on the attention of the medical officers, for reasons already assigned in their special report.

The temperature of the galleries has been satisfactorily maintained by the aid of steam pipes on the women's side of the house, and it is most desirable that similar means should be extended to the main building of the men's wards, where it is equally needed. The basement story in particular requires artificial warmth in the winter months, not alone to increase the temperature, but to diminish the humidity of the atmosphere.

In conducting a large establishment of this kind, it is a matter of great importance to find all progressive attempts at improvement encouraged by the Visitors, and cordially supported by the different officers of the Asylum. The Medical officers gratefully acknowledge the valuable aid afforded to them by the Visitors, and the efficient co-operation of their colleagues; and they have the satisfaction of stating that the conduct of all the attendants and servants, with one or two exceptions, has been exemplary.

Mr. Wilson succeeded Mr. Cleaton as House-Surgeon in March 1853, and the great attention and assiduity with which he has discharged his professional duties merit the highest commendation.

E. D. DE VITRÉ,  
Visiting Physician.

JOHN BROADHURST,  
Surgeon and Superintendent

George Lewis Esq. Chairman  
17th January 1855

The Committee of Visitors of the County Lunatic Asylum at Prestwich, in pursuance of the provisions of the Act in that behalf made, have the honor to report to the Court of Directors the following report for the past year to the Court of Directors.

The Asylum has received the constant attention of the Visitors who have most liberally and cordially co-operated in assisting the Committee in their efforts to improve the Asylum and to secure in every respect for the patients the best which is possible.

On the 21st ult. there were in the Asylum 255 male and 255 female patients. During the year the total number of patients discharged was 127 male and 127 female.

The Committee regret that they have been compelled to refuse numerous applications for admission, and that the present difficulty has been in retaining suitable accommodations for the most urgent cases.

If the Court should think proper to direct an enlargement of the

# REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT PRESTWICH,

TO THE

*Adjourned Annual Sessions held January 3rd, 1855.*

---

*County Lunatic Asylum,  
Prestwich, 1st Jan. 1855.*

The Committee of Visitors of the County Lunatic Asylum, at Prestwich, pursuant to the provisions of the Act 16 and 17 Victoria, cap. 97, present the following report for the past year, to the Court of General Annual Session.

The Asylum has received the constant attention of the Visitors, who have much pleasure in confirming the opinion of former Committees, as to its eligibility and fitness in every respect for the humane purposes to which it is devoted.

On the 31st ult., there were in the Asylum 236 male and 255 female patients, during the past year 248 were admitted, 139 were discharged, 94 died, and 121 cured.

The Committee regret that they have been compelled to refuse numerous applications for admission, and that the greatest difficulty has been felt in retaining suitable accommodation for the most urgent cases.

If the Court should think proper to direct an enlargement of the

Asylum, the Visitors beg to refer to a report presented in April last, shewing the plans and estimate of the cost of providing accommodation for 110 additional patients.

The buildings, which have been thoroughly painted and whitewashed by the attendants and patients, are in an efficient state of repair. Much has been done to give increased cheerfulness to the wards, by the introduction of a considerable number of sofas, chairs, tables, book-cases, pictures, aviaries and flowers. The whole have been provided at a very trifling expense, and all the articles of furniture have been made by the patients and attendants.

Considerable progress has been made in laying out the grounds and walks, and the gardens are in a satisfactory and productive condition.

The Visitors have taken on lease the 18 additional acres of land referred to in the last report, which, besides being remunerative in supplying farming produce for the consumption of the Asylum, have proved beneficial in affording healthful employment to the patients.

The general health of the patients continues to be good, and the institution has been free from epidemic disorders of any kind; but with reference to the medical statistics, the Visitors would refer to the report of the Superintendent, which, at the usual period, will be circulated amongst the Magistrates of the County.

In conclusion the Visitors desire to express their unqualified approval of the conduct of the officers of the institution, amongst whom no change has taken place since the last report.

THOS. S. MILLS,  
Chairman.

## REPORT OF SUPERINTENDENT.

---

---

*County of Lancaster Asylum,  
Prestwich, Mar. 7th, 1855.*

Gentlemen,

In matters connected with the management of the Asylum during the year 1854, so little deviation has there been from the general routine of former years, that it will be unnecessary for me to trouble you with any lengthened report, beyond presenting to you the usual Statistical Tables, which will exhibit the results of the past year's labours.

The number of patients left in the Asylum on the 1st of January 1854, was 475, (244 men and 231 women.) The number admitted throughout the year was 248, (119 men and 129 women,) making a total of 723 under care and treatment during the twelve months. The removals and deaths have been as follow :—

121 have been discharged, recovered (4 having been readmitted) ;

15 ditto relieved ;

3 ditto not improved ;

1 (a criminal lunatic) has escaped ; and

94 have died ;

leaving 490 in the institution on the 1st of January 1855.

As is usual in County Asylums generally, every year adds to the number of permanent cases, and, therefore, it is principally to the more recent admissions that we look for recoveries. The per-centage of cures upon the admissions has been 48·79: upon the total number under treatment, 16·73.

The deaths, which are 13 per cent. upon the total number under treatment, have been more numerous than in previous years; and at first sight this mortality would appear great, but will be readily explained by a reference to the causes. It will be seen, by Table No. XI., that 55 deaths are attributable to diseases of the brain, general paralysis and epilepsy; 19 to chronic disease of the heart and lungs; 11 to exhaustion after mania; 3 to old age; and the remaining 6 to various causes specified in the table.

The chief cause of death is general paralysis, a disease which I confess never to have seen cured, although I have known it to have been considerably relieved in the early stage, and, by great care on the part of the patient, kept in abeyance for some time.

Continued attention has been given to the useful employment and recreation of the patients, as a most important auxilliary to the strictly medical means adopted in their treatment, and with the same beneficial results as heretofore, both as to the great object of the institution—the restoration of the patients—and the economical administration of the establishment.

The proportionate number of recoveries from year to year, and the short period of residence to which the majority of those patients who

recovered have been subjected, (the average term of residence of 110, out of the 121 cured last year, being only four months) will, I hope, exempt us from any suspicion that, by retaining them longer than necessary, or by over-working them, the interests of the patients are sacrificed to those, in an economical point of view, of the institution. I make these remarks because the subject of employing patients more extensively (which, in some Asylums, has been the case of late years) has, within the last few months, received a severe and, I am inclined to think, somewhat unjust criticism from a few medical men whose opinions, from their several positions, are entitled to respect.

It is still a source of much gratification to me to be able to state—and I say it in no boastful spirit—that as yet we have not lost a patient by suicide, although, as all know who regularly visit the Asylum, great confidence is constantly placed in the inmates. Since the opening of the establishment (upwards of four years since) nearly 1,300 patients have been admitted, (of whom more than 400 have been recovered and restored to their homes,) and a large proportion of these have had a strong suicidal tendency.

The internal comforts of the Asylum are annually increased through the instrumentality of the patients and attendants: the accuracy of which observation is attested by the following report left by the Commissioners in Lunacy at their last visit.

*“ Prestwich Lunatic Asylum,  
“ Oct. 16th, 1854.*

“ There are at present 241 male and 256 female patients, making a total of 497, in the house, besides 2 males who are out upon leave. We

have gone through and inspected the different galleries, day-rooms, and doimitories, and have seen all the patients in their several wards. At the time of our visit the patients were, for the most part, seated at table and dining; and, with few exceptions, were tranquil and orderly. A few who were labouring under maniaical excitement, were placed in seclusion; and a considerable number, who were suffering from attacks of general paralysis, were keeping their beds. The general condition of the patients, however, in respect of bodily health is very good, and there is no contagious or epidemic disease prevailing among them.

“Since the visit of the Commissioners on the 26th of September last, 127 male and 150 female patients have been admitted. Within the same period 148 patients, viz., 63 males and 85 females, have been discharged, of whom 120 are registered as being recovered, and 1 male has made his escape. The deaths during the period have amounted to 102, of whom 65 were males and 37 were females. The principal causes of death assigned for this mortality are—general paralysis, to which are ascribed 35 deaths; disease of the brain, with paralysis, causing 10 deaths; epilepsy, causing 7 deaths; maniaical exhaustion, causing 12 deaths; and pulmonary consumption, causing 12 deaths.

“Many patients continue to be sent to the Asylum in a sinking and hopeless state.

“No instance of suicide has occurred among the patients since the opening of the institution nearly four years ago.

“We found the various corridors and apartments clean, sweet, well aired, and in excellent order. A great number of convenient and neat

articles of furniture, both of a useful and ornamental kind, such as easy chairs, settees and sofas, small tables, bookcases, shelves, aviaries, &c., have been introduced into the galleries and sitting-rooms. Nearly all these have been manufactured or fitted up by the patients themselves, and they, as well as the numerous prints with which the walls are covered, and the flowering plants in the windows, contribute very materially to the cheerfulness and comfort both of the house and its inmates.

“ Divine service continues to be regularly performed as heretofore, and is attended on an average by about 300 of the patients, who are stated to conduct themselves with the utmost propriety and decorum during the service.

“ The return of employment shews that upwards of 360 patients are regularly employed in different occupations suited to their sex and previous habits of life. Almost all the articles of furniture, including the bedsteads, tables, chairs and sofas, and the whole of the clothing for the use of the house, are made by the labour of the patients themselves many of whom have been taught the trade of tailors or shoemakers since their admission. About 70 of the men work in the garden and on the farm, and more than 60 of the women are employed in the laundry.

“ The grounds are being gradually trenched and levelled, and a large portion of the land now bears excellent crops of vegetables, and appears to be already in a high state of cultivation.

“ We particularly noted the appearance and clothing of the patients who seemed to us to be clean and neat in their persons and dress. The

dinner to-day consisted of potatoe soup, with meat in it. We tasted the soup, which was rich and savoury, and was well cooked. The quantity supplied also was ample.

“ Altogether the condition of the Asylum and its inmates is very satisfactory, and fully warrants our conclusion that the management and supervision of the institution are equally judicious and efficient.

Signed,

“ J. W. MYLNE,

“ T. TURNER,

“ Commissioners in Lunacy.”

In consequence of the dearness of provisions, the average weekly cost per patient during the past year advanced to 7s. 7·85d.

I remain, Gentlemen,

Your obedient humble Servant,

J. HOLLAND, F.R.C.S.

Superintendent.

*To the Committee of Visitors  
of the County of Lancaster Asylum,  
Prestwich.*

# REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT RAINHILL,

IN THE

Age of the Lunatic Asylum held January 3rd, 1884.

## THE COUNTY LUNATIC ASYLUM

### AT RAINHILL.

The Committee of Visitors of the County Lunatic Asylum are again able to make a favorable report of the progress of the Institution during the past year.

The number of admissions during that period has been considerably less than was the case in previous years, which has arisen from the Asylum being full at the commencement of the year, so that patients could only be received as vacancies occurred either by discharges or deaths.

The Committee have in consequence been compelled to refuse admission to upwards of 50 applications from townships in the Hundred of West Derby, some of these were sent to the Lancaster Asylum as long as there was room to receive them; since that time the townships had no remedy but to send their cases to the private Asylum at Haydock Lodge, where on the 23rd of the present month, there were no less than 20 from Liverpool only.

# REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT BAINBRIDGE

FOR THE

YEARS 1887 AND 1888

## THE COUNTY LUNATIC ASYLUM

The Committee of Visitors of the County Lunatic Asylum was again able to make a favorable report of the progress of the institution during the past year.

The number of admissions during that period has been considerably less than was the case in previous years, which has arisen from the fact that being full at the commencement of the year, so that patients could only be received as vacancies occurred either by discharges or deaths.

The Commission has in consequence been compelled to refuse admission to applicants from townships in the hundred of York Parish, some of these were sent to the Lancaster Asylum as long as the latter was open to receive them; also that time the township had no vacancies to send their cases to the County Lunatic Asylum at Bainbridge. At the close of the present month there were no less than 28 more

# REPORT OF THE COMMITTEE OF VISITORS

OF THE

COUNTY LUNATIC ASYLUM AT RAINHILL,

TO THE

*Adjourned Annual Sessions held January 3rd, 1855.*

---

---

The Committee of Visitors of the Rainhill County Lunatic Asylum are again able to make a favorable report of the progress of the institution during the past year.

The number of admissions during that period has been considerably less than was the case in previous years, which has arisen from the Asylum being full at the commencement of the year, so that patients could only be received as vacancies occurred either by discharges or deaths.

The Committee have in consequence been compelled to refuse admission to upwards of 50 applications from townships in the Hundred of West Derby ; some of these were sent to the Lancaster Asylum as long as there was room to receive them : since that time the townships had no remedy but to send their cases to the private Asylum at Haydock Lodge, where, on the 20th of the present month, there were no less than 26 from Liverpool only.

This is a grievance much complained of, as the expense to the townships is much increased, and they consider that the County is bound to provide whatever accommodation may be found necessary.

In consequence of the high price of timber and labour during the past year, the Committee thought it better to defer the contract for the new Chapel.

Several additional work-rooms for the men, including a blacksmith's shop, have been now completed ; the work has been done principally by the patients and artizan attendants.

Considerable improvement has been made in the drying closets ; and the alteration promises to answer remarkably well.

In consequence of a failure in the springs, it has been found necessary to deepen the well which supplies the institution with water. This has been successfully accomplished, and in addition, a large tank capable of containing 30,000 gallons has been constructed, for receiving the water from a large portion of the roof, which may be used for many purposes, and be the means of saving to a considerable extent the drain upon the spring.

The whole of the building both within and without, has been painted and colored during the past year ; and part of the additional furniture, recommended by the Commissioners in Lunacy, has been made on the premises, and has added much to the comfort of the patients.

A complaint having been made by the inhabitants of the neighbourhood of a nuisance arising from the Asylum manure tanks, the Committee, after a full enquiry into the case, and finding that the same was well

founded, took the advice of an able Engineer, and upon his recommendation resolved to lay down a tubular drain along the adjoining road, for the purpose of conveying away the surplus liquid without danger or annoyance to the public. A motion for a grant of a sum of money to defray the cost will be brought before the present session.

The planting, levelling, and laying out of the grounds has been going on favorably. It is a most advantageous and wholesome employment for the patients, and will find ample and healthful occupation for them for some time to come.

The farm crops this year have been good, the potatoes comparatively free from disease, and will furnish, it is expected, an ample supply till the end of next March. The advantages of a large and productive kitchen garden, now brought into an excellent state of cultivation, has been felt and appreciated ; while the cultivation and consumption of the variety of vegetables which it produces are most conducive to health.

The high price of provisions of every description has made it necessary to increase the amount of weekly charges, and it is feared that a still further advance will be required.

The Committee have much pleasure to speak in favorable terms of the officers and servants of the institution generally ; with very few exceptions they have been attentive to their duties, and have discharged them with zeal and fidelity. They have every reason to be gratified with the medical abilities and judicious superintendence of the officer at the head of the establishment, and they consider the matron well qualified for her office, and deserving their notice and approval.

JONA. BROOKS,

*2nd January, 1855.*

Chairman.

founder took the advice of an able Engineer, and upon his recommendation resolved to lay down a tubular drain along the adjoining road, for the purpose of conveying away the surface liquid without danger or annoyance to the public. A motion for a grant of a sum of money to defray the cost will be brought before the present session.

The planting, leveling, and laying out of the grounds has been going on favorably. It is a most advantageous and wholesome employment for the patients, and will find ample and healthful occupation for them for some time to come.

The farm crops this year have been good, the potatoes comparatively free from blight, and will furnish, it is expected, an ample supply to the end of next March. The advantage of a large and productive kitchen garden, now brought into an excellent state of cultivation, has been fully and appreciated; while the cultivation and consumption of vegetables of vegetables which it produces are most judiciously adapted to the health of the patients. The high price of provisions of every description has made it necessary to increase the amount of weekly charges, and it is hoped that a still further advance will be required.

The Committee have much pleasure to speak for the able exertions of the officers and servants of the institution generally; who very few days pass but they have been attentive to their duties, and have discharged them with zeal and ability. They have every reason to be gratified with the medical abilities and judicious superintendance of the officers at the head of the establishment, and they consider the position well performed by all of them, and bearing their notice and approval.

MEMORIAL ARTIUM  
 THE JANUARY 1855

REPORT OF THE COMMISSIONERS  
IN LUNACY.

---

*Rainhill Asylum,*  
25th Jan. 1854.

We have officially visited this Asylum, and personally examined all the patients: they were generally in a composed and comfortable state, and their clothing clean and of good quality. No patient was in restraint; indeed instrumental restraint is never employed, and judging from the medical journal the instances of seclusion are not numerous.

On an average 132 males and 170 females are regularly employed, and the whole of the clothing and bedding is made by the patients. The whole of the land is now brought under cultivation, and as many as seventy or eighty pigs are kept in the new piggeries which have been erected since our last visit.

With respect to the several observations made by the Commissioners at their visit in April last we find that—

1st.—The number of seats and chairs has been materially increased, and that more are still being manufactured in the Asylum.

2nd.—That there is now sufficient dining accommodation, both in the wards and the laundry.

3rd.—There is still a deficiency in easy chairs, sofas and settees, for the infirm and sick ; but these will shortly be supplied.

4th.—The washing accommodation has been considerably increased, but in the artizan's ward a further increase would be desirable.

5th.—The bedding for patients of dirty habits is now provided with straw mattresses and stretchers.

6th.—The chapel accommodation is the same as heretofore, and quite insufficient for the wants of the institution. The subject is under the consideration of the Committee of Visitors, who have not yet decided whether it is more desirable to enlarge the present chapel, or build another on a new site.

Since the last visit of the Commissioners in April, 79 new patients have been admitted, 47 have been discharged, of whom 26 were recovered, and 37 have died. We have examined the register and case books, and made enquiries into the causes of the deaths, which are somewhat beyond the average, and the explanations given are satisfactory.

We found all the wards clean, well warmed and ventilated, and in excellent order; and the whole establishment evidently under careful and judicious management.

The water supply has been found insufficient for the wants of the Asylum, but we are glad to learn that active steps have been taken to remedy this defect.

(Signed) J. R. HUME,

W. G. CAMPBELL,

Commissioners in Lunacy.

...the water supply has been found insufficient for the wants of the  
 Asylum, but we are glad to learn that other steps have been taken to  
 remedy this defect.

## REPORT OF SUPERINTENDENT.

---

---

*County Lunatic Asylum,  
Rainhill, March, 1855.*

Gentlemen,

I have the honour to submit to you the usual Annual Report of the Medical Superintendent, and inasmuch as the monthly reports which I am in the habit of laying before you at each Committee meeting, embrace all matters of importance connected with the institution, it will be unnecessary for me, in the present instance, to do more than direct your attention to certain facts of interest set forth in the statistical tables contained in the appendix.

Table No. I, being a summary of the admissions, discharges and deaths, will, on examination, be found to bear a favourable comparison with that of the previous year, inasmuch as, although there have not been so many admissions, the number of recoveries has been greater and the deaths have been fewer. The admissions in 1853 were 145, the recoveries 52, and the deaths 59; during the past year the admissions have been 122, while the recoveries were 61, and the deaths 52.

Of those who have been discharged during the year, 4 have been re-admitted, a relapse having in two instances been caused by a return to intemperance.

The health of the patients during the past year has upon the whole been tolerably good ; and, notwithstanding the fatal prevalence of cholera and diarrhœa in the summer within a few miles of the institution, and the serious mortality caused by typhus fever in the autumn, at the neighbouring town of St. Helens, I am thankful to say that the Asylum has not been visited by any severe epidemic. A few cases of fever have occurred among the patients, all of which have ended favourably, a result probably in some measure referrible to the efficient system of ventilation which is in operation, and which ensures one of the greatest desiderata in fever, namely a constant and abundant supply of pure air. The comparative absence of diarrhœa in the institution at a time when it was so generally prevalent, may, I believe, in a great degree be attributed to a carefully regulated diet, with plenty of fresh vegetables, supplied in great variety from the kitchen garden, which has now become highly productive.

It will doubtless be noticed that the mortality of the past year, (10·18 per cent.) although below that of the preceding one, is still higher than in many of the older and larger Asylums. This may be accounted for by the fact that in all the latter institutions there is an accumulation of chronic patients ; among this class it is true that the chances of recovery are less favourable, but there is also less activity of symptoms, and not so much wear and tear of the nervous system, and consequently there is proportionably less danger to life than among more recent cases of insanity.

It will be seen from Table XIV, that a large proportion of the deaths during the past year have occurred from those intractable diseases general paralysis and pulmonary consumption. In the solitary instance of

exhaustion after mania, the lungs were also found to have been diseased.

Three patients admitted during the past year, were at the time in the last stage of incurable physical disease. From the time of their reception they were unable to leave their beds, and all that could be done for them was to smooth their passage from the world with care and humanity. Death took place in two instances within a week, and in the other case within three weeks after admission.

Tables V, VI, and VII, shewing the nation, religious profession, and physical condition of the patients admitted during the year, give very similar results to the returns of the year 1853. The chief features being the large proportion of Irish, and the great extent to which physical exhaustion prevails among those annually admitted into this Asylum.

Table No. VIII shews the probable "Causes of Insanity" in 93 of the cases admitted during the past year. It is generally difficult, and often impossible, to ascertain what was the particular cause, or what the combination of circumstances which produced the insanity. The essential advantage, however, of such information in regulating the treatment, and, when recovery takes place, in forming an opinion as to the probability of a relapse, and suggesting precautions to guard against it, is so obvious, that extreme care and attention is at all times given to obtain from the friends of the patients, or otherwise, facts bearing upon the matter in question. On reference to this Table it will be seen, that in 33 cases, (26 per cent. of the admissions during the year,) insanity has been caused by *Intemperance*. The Rev. Mr. Clay, the indefatigable Chaplain to the Preston House of Correction, clearly proved in a most

interesting paper which he read before the Statistical Section of the British Association at the late meeting at Liverpool, on the "Effect of good or bad times on committals to Prison," that periods of commercial activity and of prosperity to the working classes, when labour is abundant and the workman well paid, are, contrary to what might, *à priori*, have been expected, accompanied by an increase of crime as exemplified in the records of our Gaols and the returns of the Police authorities. Mr. Clay remarked, quoting one of his own reports, "This lamentable anomaly in the moral condition of the working classes can only arise from the fact that high wages, to the ignorant and uneducated poor, bring with them the means of gratifying the propensity to intoxication which is so fatal to their comfort and character. The money earned by their toil and skill, instead of being employed in accordance with the dictates of prudence and the requirements of civilized life, is dissipated in rioting and drunkenness, and the results are misery, crime, and the gaol."

The well known relation which exists between crime and insanity has, since I became acquainted with Mr. Clay's views, led me to examine the subject for the purpose of ascertaining in what degree the latter was influenced by conditions apparently so powerfully affecting the former. My investigations have been confined to the parish of Liverpool and the union of West Derby, embracing together the town of Liverpool. Owing to the difficulty of obtaining reliable information as to the absolute prevalence of insanity before the year 1849 in the union of West Derby, I have been obliged to limit my observations to the last six years: the results are therefore less striking and conclusive than they probably would have been had the examination been carried also over the preceding ten years, during which period there were greater extremes of depression and prosperity than have occurred since. As a tolerably

accurate indication, however, of the condition of the working classes during the time under consideration, I have taken the returns of relief afforded by the West Derby Union and the Liverpool District Provident and Charitable Societies,\* and have arranged them in a tabular form, with the number of insane sent to Asylums from Liverpool, during the corresponding years. (*See this table on next page.*)

It will be seen from the table that in those years in which, from the high price and abundance of labour, the demand for relief was the smallest, the number of Lunatics was the greatest, and the converse. If the six years are divided into triennial periods it will be found that while the parochial and charitable relief required in the last three years has diminished about 50 per cent., insanity appears to have increased 65 per cent.

Should it therefore appear, after more extended observation, that prosperous times are, as compared with seasons of commercial depression, not only accompanied by a greater prevalence of crime, but are also attended by an increased developement of insanity, we must, I apprehend, look, in the latter as well as in the former example, for an explanation to the greater prevalence, at such periods, of *intemperance*, the too frequently besetting sin of the thriving operative and well-paid mechanic.

Where insanity is the result of intemperance, the cases very generally arrange themselves into two classes: First, those where the mental disorder is attended by general paralysis or epilepsy; and secondly, cases

\* I have been unable as yet to obtain returns which could be drawn up in the same manner as those inserted in the accompanying table, of the aggregate amount of relief afforded by the Parish of Liverpool during the corresponding years.

Table referred to in page 91.

	No. of Individuals annually relieved by the West Derby Union.	No. of Individuals annually relieved by the L'pool Charitable Society.	No. of Families annually relieved by the L'pool District Provident Society.	No. of Pauper Lunatics annually sent to Asylums from the whole of the town of Liverpool.
1849..	66,750	13,342	18,756	95

				2d triennial period
	<b>Decrease of Relief</b> required in the last three years as compared with the three preceding, <b>56.27 per cent.</b>	<b>Decrease of Relief</b> required in the last three years as compared with the three preceding, <b>44.48 per cent.</b>	<b>Decrease of Relief</b> required in the last three years as compared with the three preceding, <b>53.60 per cent.</b>	<b>Increase of Insanity</b> in the last three years over the three preced- ing, <b>65.46 per cent.</b>

\* Six per cent. ought to be deducted from the number of Insane recorded in 1852 and 1853, for the greater influx of Irish Immigrants during those prosperous years, than which occurred during 1849, 1850, 1851 and 1854 respectively. Notwithstanding this deduction, the general results are not much affected.

where such complications are wanting. In the former class the chances of recovery are most unpromising, while in the latter the prognosis is favorable, but, from the probability that the patient will be unable to overcome the fatal habit of drinking, a relapse is to be feared.

In the early part of the past year, the Commissioners in Lunacy addressed circulars to the medical officers of the principal Asylums throughout England and Wales, requesting information as to the employment or disuse of mechanical restraint and seclusion in the Asylums under their superintendence. The answer which the system of management pursued in this establishment enabled me to return, was in substance, the following. "That mechanical restraint had not been found necessary and had not been used in any instance, since the opening of the institution in January, 1853 :

"That seclusion was occasionally employed for short periods of time, chiefly among the women patients in cases of a particular character, [defined] and under certain circumstances [specified], and that it had appeared to act beneficially ; but that, as a general rule, simple out-door occupation had been found a most salutary as well as profitable substitute for seclusion, and that it was adopted very commonly with good effect during the periodical excitement of chronic mania :

"That the chief object aimed at in the management of the institution, independently of the strictly medical treatment of the patients, was,—to assimilate it as much as possible to the state of a well-regulated family, judiciously apportioning the time of the patients to occupation, to exercise, to amusement and instruction, to meals, and to sleep,—remembering that as vice and misery were among the most fertile causes of mental disease, order and social comfort must be powerful remedies."

The Commissioners, in their last report to the Lord Chancellor, remark "That the facilities which seclusion holds out to harsh and indolent attendants, for getting rid of and neglecting troublesome patients under violent attacks of mania, instead of taking pains to sooth their irritated feelings, and work off their excitement by exercise and change of scene, render it liable to considerable abuse." Fully coinciding in the views thus expressed, the employment of seclusion in this institution has been most carefully watched, and, whenever practicable, out-door exercise or occupation substituted. The result continues to be most satisfactory. The aggregate period of seclusion in the past year has been lessened, on the men's side, to *one-tenth*, and on the women's side to *one-half*, of that of the year 1853, which had already shown a considerable reduction as compared with that of the previous year. A corresponding change for the better has at the same time been apparent in the increased tranquility of the wards, and in an improved tone of feeling among both patients and attendants, while the employment-books show that a great quantity of useful labour has been accomplished.

From Tables XVIII and XIX, extracted from the 'Daily Register,' it will be seen that about three-fourths of the patients engage in some occupation. Tables XX and XXI show, as far as a tabular form will permit, the results of such employment. As has, however, been remarked in a former report, tables can only be made to express a small proportion of the work actually done by the patients in the course of the year. In accordance, therefore, with a suggestion made last year by some members of the Committee, an estimate has been appended (see Table XXII) of the value of the labour of the patients during the year, calculated upon a scale similar to that adopted at the Hanwell Asylum.

There is nothing new to record concerning the amusements provided for the patients. Out-door games and pastimes are during the summer months still extremely popular, while the weekly assemblies for music, dancing, and glee-singing, which have, with few exceptions taken place regularly, continue to be highly appreciated by the patients of both sexes. The preservation of an orderly demeanor as a condition of being able to join these parties has, in many instances, been of great service in inducing self-control, and in strengthening the weak will of patients labouring under mania; while the convalescence of others, of whose mental condition listlessness, lethargy, or despondency, was the chief characteristic, has been materially promoted by the healthful stimulus given by recreations of this description to their torpid or depressed nervous and muscular systems.

In addition to the provision for relaxation now enumerated, much gratification and pleasant instruction has been derived from a course of lectures on the East, kindly delivered during the year by the Chaplain to the institution, and illustrated by dissolving views of Oriental scenes, shown by the aid of the magic lantern.

From the published accounts appended to this report, it will be seen that there is an increase in the weekly cost per patient of  $9\frac{1}{2}$ d. upon that of the preceding year. This has been due to the advance in the price of provisions: the latter item is greater by 1s. a week per individual than it was in 1853. There has been a reduction under most of the other heads.

In conclusion, I beg gratefully to acknowledge the continued cordial

co-operation of my fellow-officers, and to thank the Committee of Visitors for their uniform kindness, and for the consideration with which they have at all times received any suggestion of mine for promoting the welfare of the institution.

I have the honour to be,

Gentlemen,

Your obedient humble Servant,

JOHN D. CLEATON,

Superintendent.

*The Committee of Visitors of the  
County of Lancaster Lunatic Asylum,  
Rainhill.*
