## Seventeenth Annual Report OF THE COMMITTEE OF VISITORS, *For the Year 1869.*

---

THE Committee of Visitors beg to report, for the information of the several Courts of Quarter Sessions, and of the Corporations of Lincoln, Stamford, and Grantham, that the number of Patients in the Asylum on the 31st day of December, 1869, was—

Males .....	276
Females .....	302
<hr/>	
Total .....	578

being an increase of 17 on the numbers of last year.

The average weekly rate for the past year is 8s. 9½d.

Shortly after the last Annual Report was presented, the opening service took place in the new Chapel, and the Committee desire to place on record their acknowledgments to the Lord Bishop of Lincoln and the clergy, who so kindly took part in its celebration, and to Dr. and Mrs. Palmer, for the very liberal and elegant hospitality offered by them to a large party of Visitors and their friends.

The Courts of Quarter Sessions and Corporations having consented to an expenditure of £3200, the

Committee of Visitors have recently been enabled to effect the purchase of twenty-two acres of grass land in Lower Bracebridge, which it is proposed to irrigate with the Sewage of the Asylum, which will be carried to the land by gravitation, according to a plan suggested by Mr. Lawson, C.E.

Negotiations are in progress with Mr. Sibthorp, by which the Visitors will secure in perpetuity direct access to the land they have purchased, as well as the right to lay down sewage pipes through the land which lies between the Asylum grounds and the fields which it is intended to irrigate.

The Committee hope that by adopting the system of irrigation they will be able not only to utilize the sewage of the Asylum, the disposal of which has for some time past been attended with great expense and difficulty, but also to effect a considerable saving in the cost of milk for the Patients, which is now purchased at an expense of nearly £500 a year.

The Visitors can again refer with complete satisfaction to the admirable management of the Asylum by Dr. Palmer, the Medical Superintendent.

Abstracts of the Fabric Accounts for the year 1869, and of the Annual Lunacy Returns, accompany this Report.

G. K. JARVIS,  
CHAIRMAN.

28th April, 1870.

ROBERT TOYNBEE,

CLERK TO THE VISITORS.

*Lincoln, February, 1870.*

# ANNUAL REPORT

## OF THE

### MEDICAL SUPERINTENDENT.

---

Seventeenth Report.	THE Medical Superintendent has the honour to submit to the Committee of Visitors his Seventeenth Annual Report of the progress of the Institution, together with the usual Statistical Tables illustrating the results of the year 1869.
Tables I. and II.	The number of Patients in the Asylum at the commencement of the year was 561—273 men and 288 women.
Admissions.	During the year, 71 men and 88 women were admitted, making the whole number under treatment 720—344 men and 376 women.
Discharges and Deaths.	Of these, 30 men and 30 women were discharged recovered, 1 man and 12 women relieved, 3 men and 1 woman not improved, and 34 men and 31 women died, making the total number of discharges and deaths 142—68 men and 74 women.
Remaining Numbers.	The number of Patients remaining in the Asylum at the close of the year was 578—276 men and 302 women.
Average Daily Resident Numbers.	The Average Daily Resident Number of men was 273, of women 299, and of both sexes 572.
Largest Number Resident.	The largest number resident at any one time was 593—277 men and 316 women.

Calculated on the Admissions, the Recoveries were 42.2 per cent. on the men's side, and 34 per cent. on the women's side—in all 37.7 per cent.

Per centage of  
Recoveries.  
Table III.

The per centage of Deaths, calculated on the average daily resident numbers, was 12.4 amongst the men, and 10.3 amongst the women, the mean mortality being 11.3 per cent.

Death-rate.  
Table III.

Compared with the year immediately preceding, there was an increase of 16 in the number of admissions, of 10 in the average daily resident number, and of 17 in the number remaining in the Asylum at the end of the year; there was also an increase of 5.5 per cent. in the recoveries, while the death-rate was less by 2.2 per cent.

Comparative  
Numbers.  
Table III.

Of the Admissions, 6 were cases of Congenital Imbecility or Idiocy, 8—subjects of Paralysis, 9—of General Paralysis, 19 were imbecile from Advanced Age or long-standing Brain-disease, and 64 were in a hopeless condition of Chronic Insanity, accompanied in many instances with incurable disease of other organs than the brain. The remaining 53 cases, including some that were considered doubtful and others known to be subject to relapse, were noted as being probably curable.

Character of  
Admissions.  
Table XI.

The number of Epileptics admitted was unusually large, and raised the proportion of that unfortunate class so high as to amount to one-eighth of the whole number of Patients in the Asylum. They were all of them found on examination to have been very properly brought, and to require more care and watchfulness than under ordinary circumstances they could have received at home or in workhouses. It may be observed that a strong hereditary taint and a low general

Proportion of  
Epileptics.

organization pervade this class of Patients, and that it is a rare event for any of them to become well enough to be discharged with safety.

Table IV.

Of the cases sent out recovered, 32 were derived from the admissions of the year, 20 from the admissions of the previous year, 5 from those of 1867, and the remaining 3 from those of the year 1866. The average duration of their treatment was rather less than four months for each case.

Removals, and  
Discharge of  
Harmless Cases.

Of the 17 Patients who were discharged relieved or not improved, 1 man was removed to another County Asylum, 1 woman (subsequently re-admitted) was discharged in consequence of a defect in the Order for her admission, 2 men and 1 woman were removed by relatives who signed the usual undertaking, and 1 man and 11 women (chronic and harmless cases) were found fit to remain with their friends or in workhouses after having been out of the Asylum for a month on probation.

General Health.

The bodily health of the Patients generally was very good throughout the year. No epidemic prevailed amongst them, and the occurrence of acute disease was very infrequent.

Causes of Death.  
Table V.

The mortality was mainly attributable to Paralysis, Epilepsy, General Paralysis, Exhaustion from Chronic Brain-disease, Pulmonary Consumption, and Senile Decay. Twelve Patients only died from other causes.

Inquests.

A statutory notice is sent to the Coroner whenever the death of a Patient takes place, and if such have occurred suddenly and unexpectedly, or without the presence of an Attendant, it has always been the custom

of the Superintendent to apply for an enquiry even though it might be clear to the Medical Officers that death took place from natural causes. Inquests were held in five cases, in three of which the Cause of Death was found to be Epilepsy, in one general Softening of the Brain, and in the other Asphyxia occurring in a paralyzed Female Patient, through her turning on her face in bed.

Only one accident of moment occurred. A healthy young male Patient fell and fractured his arm while carrying clothes from the laundry during the frost in December. The fracture was simple, and complete re-union of the broken bone took place without any untoward symptom.

Accident.

The dietary of the Patients was improved, and rendered more acceptable to most of them, by substituting fish for soup at dinner once a fortnight, the supply of fish being obtained from Hull at a price which adds but little to the provisions account.

Dietary.

The new Chapel was opened for Divine Service on Tuesday in Whitsun-week by the Lord Bishop of Lincoln, assisted by the Chaplain of the Asylum (the Rev. C. C. Ellison), the Rev. Prebendary Perry, and the Rev. J. Swift. About 300 of the Patients, the household and working-staff of the Institution, several of the Committee of Visitors, and many clergymen, ladies and gentlemen from the neighbourhood were present. The Bishop read the Communion Service, and after preaching a most impressive sermon, administered the Holy Communion to 77 communicants. A dinner of roast beef and an ample allowance of plum-cake at

Opening of the  
New Chapel.

tea were further commemorative of the day amongst the Patients.

Description of  
the New Chapel.

The Chapel, built of stone quarried on the estate, is 70ft. long by 45ft. wide, and contains 450 sittings. The western gable is surmounted by a small bell-cote. The roof is high-pitched, and the timbers, which are all exposed to view, are stained and varnished. There are separate entrances for the sexes, through porches, between which are retiring-rooms for epileptic Patients. The altar-table stands on a dais enclosed by a suitable railing, and floored with encaustic tiles. A vestry is formed by an enclosure behind the pulpit, and a similar enclosure in an opposite corner forms an inside porch to the chaplain's entrance. The sittings, vestry, and the rooms for epileptics are floored with wood, all the other parts with blue and red tiles. The interior is warmed by a Gurney's stove.

Attendance at  
Chapel.

The increased accommodation thus provided has had the effect of more than doubling the number of Patients attending the Sunday Services, in which they join with an amount of attention and propriety of demeanour that leave nothing to be desired.

Presentation of a  
Harmonium to  
the Chapel.

It is gratifying to record that a fine new Harmonium, of the value of £50, was presented to the Chapel, at Christmas, by the sisters of a Patient who died in the Asylum, as a thank-offering for the care taken of their relative while in the Institution.

The general management of the Asylum has been very similar to that described in former Reports.

Advantages of  
Farm-labour.

Farm-labour has continued to be the chief, as it is the most healthful and curative, employment of the

male Patients, the majority of whom being drawn from the agricultural class, know but little of any other kind of labour, and always seek their customary occupation with the earliest dawn of convalescence. A large number of the chronic cases also of every form of insanity, are found to forget themselves, as it were, when engaged in husbandry, and to work with a skill and steadiness truly remarkable; while not a few imbecile and inactive Patients become busy in some trifling work on the land, and are both healthier and happier for their exertions. Indeed, all the Patients have derived more or less recreation of the most salutary kind, either as workers or observers, from the farming and gardening operations carried on. The additional land taken into occupation by the Visitors during the year will enhance the material resources of the Institution, and permit of progressive improvements without increasing the weekly-rate.

The weekly dance and other amusements, indoor and out, were steadily maintained, and diversified as opportunity occurred by the engagement of professional performers. The superintendent has to acknowledge with many thanks the kindness of one of the Visitors, Mr. Rich<sup>d</sup>. Hall, in providing an afternoon's recreation for a party of upwards of a hundred patients by obtaining free admission for them to an unusually good circus performing in the town.

An improved supply of hot water to the wards has been obtained by increasing the size of the pipes connecting the feed-cistern with the hot water tank on each side of the Asylum, and there is now no difficulty

Amusements.

Repairs and  
Improvements.  
Hot Water  
Supply.

in providing any number of consecutive warm baths. Owing to the large amount of earthy salts contained in the well-water, the boilers had become very defective from corrosion. That on the men's side was found on examination not to have a sound plate in it, and has been replaced by a new one; the other, on the women's side, not so badly eaten away, was repaired, and will last some time longer.

Pumping and  
Washhouse  
Engines.

The pumping and washhouse engines were taken down and thoroughly repaired, and connected by gearing so that either can at any time do the work of the other, and the engineer be enabled to keep them in a state of efficiency without any interruption of the washing, or the water-supply.

Painting.

The window-sashes, spouts and external doors of the building have received two coats of paint, and the doors in and about the kitchen and offices where there is great traffic, been plainly grained and varnished.

Warming  
Apparatus.

The pipes and plates in the rarefying chambers of the warming apparatus have been disconnected and thoroughly cleansed and repaired.

General  
Condition of the  
Building, &c.

With the exception of the cisterns for the supply of cold water, which have been frequently patched, and will probably require new lead bottoms at no distant time, and the rinsing machine in the washhouse which is showing signs of decay, the whole of the building and apparatus is in an excellent state of repair.

The Laundry and  
Washhouses.

The enlargement of the Laundry and Washhouses has been a great boon to the Institution. The work in them which was formerly harassing and disagreeable to the Patients and servants owing to the confusion

occasioned by want of space, is now done smoothly and systematically, and is of positive value in a curative point of view to the Patients employed therein. It is but right to state that the Housekeeper has greatly contributed to this improvement by the careful and judicious manner in which she has managed this as well as every other branch of her department.

The engineer, having been appointed to a similar situation in another Asylum, resigned his duties here at Midsummer, and was succeeded by Mr. Fredk. Chester, who is in every way competent to his work.

Engineer.

Considering the natural qualifications required in those who are engaged in the wards and industrial divisions of an Asylum, and the constant demands made on their patience, watchfulness and temper, it is pleasing to report that the Attendants and Servants, as a body, performed their duties very creditably, and that their short-comings were few, and confined to such of them as had not been long in the service.

Attendants and  
Servants.

The Superintendent begs to offer his grateful acknowledgements to the Committee of Visitors for their continued support in the arduous and responsible duties of his Office; and also to the Assistant Medical Officer, the Steward, the Chaplain, the Housekeeper, and the Head Attendants for their willing and able co-operation with him.

Conclusion.

EDWD. PALMER, M.D.

## LINCOLN COUNTY ASYLUM,

20TH OCTOBER, 1869.

We have received the following return regarding the changes which have taken place among the Patients since our last visit in February, 1868, viz:—

	M.		F.	Total.
Admitted .....	125	—	129	— 254
Discharged .....	52	—	55	— 107
Died .....	54	—	63	— 117

Of the Patients discharged 86 were reported as recovered.

The death-rate has again been somewhat high, but no epidemic or special disease has prevailed. The following are the assigned causes of death:—

	M.		F.	Total.
General Paralysis .....	12	—	6	— 18
Apoplexy and Diseases of Brain	17	—	16	— 33
Epilepsy .....	3	—	3	— 6
Consumption .....	7	—	15	— 22
Diseases of Lungs and Heart...	4	—	7	— 11
Senile Decay .....	4	—	10	— 14
Other Ordinary Causes .....	7	—	6	— 13-117

Inquests were held in four cases, in one of these the verdict was accidental suffocation from epilepsy, in the others the deaths were sudden, owing solely to natural causes.

The total number under treatment during the period above alluded to has been 803—and the numbers now on the books are 274 of the male, and 305 of the female sex.

With the exception of 2 men and 4 women who are away on probation, we have seen and spoken to every patient, and have made all the statutory enquiries regarding their treatment, and the visitation and management of the Asylum. We have again a most favourable report to make of the great cleanliness and good order which prevails throughout the Establishment, and of the satisfactory personal condition of the Patients, who at the time of our visit were remarkably free from excitement. As regards their occupations and amusements, we have nothing new to report; the proportion

of those usefully employed being much as usual. The very necessary and judicious enlargement of the laundry and washhouse has however afforded the opportunity of usefully occupying an increased number of women.

The new Chapel, which is capable of accommodating 450 persons, has been completed, and was opened for service at Whitsuntide, when the Bishop of the Diocese officiated. The attendance of patients of both sexes was last Sunday 350.

The old Chapel has now been converted into the long needed Recreation Hall, in which we are glad to find associated weekly meetings are held for dancing and other amusements. Another important improvement effected since the last visit, is the alteration made in the bath pipes and taps, by means of which every patient is now allowed fresh water.

The dinners to-day consisted of boiled beef with apple puddings and treacle, and seemed to be much relished by the patients. A very judicious alteration has recently been made in the dietary by the substitution of a fish dinner for soup on one day in the fortnight.

There are now only five vacancies in the female division, and the question of enlargement on that side of the house must, therefore, very shortly engage the attention of the Visitors.

In the male wards there are still vacancies for 35 patients: could about twenty of these be made available for out county patients, it would certainly prove a source of profit to the Institution, and be of great temporary assistance to neighbouring counties.

In any alteration or enlargement of this Asylum we strongly recommend that arrangements be made to provide certain dormitories on each side in which epileptic and suicidal patients could be placed to sleep, so that they would be under the constant supervision of a special attendant on duty during the night. This would in the most effectual manner guard against death by suffocation during epileptic fits, and offer the best security against suicide.

We have examined and signed the books and registers. Last week nine patients of each sex were under medical treatment, and one man was secluded for one day. The amount of seclusion since the last visit has been very small, and there has been no restraint.

The cases are carefully written up, but we desire to draw attention to the fact that in their present shape, viz.,—separate sheets screwed together in loose covers—they do not fulfil the requirements of the lunacy laws as regards the "Case Book"—nor afford that security in the form of a permanent record, which it was the intention of the Legislature to provide—moreover, as we have this day experienced, the present arrangement occasions much difficulty in referring to special cases.\*

We have again the satisfaction of recording our sense of the able and zealous manner in which the management of this Asylum is conducted by Dr. Palmer.

W. G. CAMPBELL,	}	Commissioners in Lunacy.
JOHN D. CLEATON,		

---

\* Case-books in this form were adopted in order to keep separate the records of cases discharged, of those who have died, and of those continuing under treatment; but in deference to the opinion of the Commissioners, they have been set aside, and the old form of case-book returned to.—*Med. Supt.*
