REPORT

OF THE

COMMITTEE OF MANAGEMENT

OF THE

CATERHAM ASYLUM,

FOR THE YEAR 1881.

24th March, 1882.

To the Metropolitan Asylums Board.

The Committee have the honour of presenting their Eleventh Annual Report.

At the beginning of the year 1881 there were 2,043 patients in the Asylum; during the year 227 patients were admitted, 44 were discharged, and 205 died, leaving 2,021 under treatment at the close of the year. The death-rate was 10.2, being higher than in 1880, 1879, and 1878, and lower than in 1877 and the three preceding years.

Many of the patients received were very old (25 being between 60 and 70 years of age, 17 between 70 and 80, and 4 between 80 and 90), and although certified as "chronic and harmless lunatics or imbeciles," most of them were suffering merely from the helplessness and childishness incidental to advanced age. The admission of a large number

of old and infirm patients during the past few years has caused an appreciable increase in the expenditure for "maintenance" and "general management," inasmuch as most of these patients had to be at once placed in supplemental infirmaries created specially for them, and put upon extra diet; moreover, the proportion of patients capable of being usefully employed in domestic work, in the workshops, and on the farm has steadily diminished, rendering necessary an increase in the number of attendants and employés to execute work formerly done by patients; from the same cause it has also been necessary to fix additional machinery in the laundry.

Several improvements have been effected in the sanitary arrangements, and additions made to the furniture and fittings in the wards, so as to render them more comfortable and suitable to the increased number of senile and infirm cases.

The usual works connected with the cleansing, painting, and ordinary repair of the buildings and machinery have been executed, but the condition of the corridors and some of the roofs is such as to necessitate, before long, a considerable expenditure to put them into a proper state.

The Lunacy Commissioners, reporting upon their inspection of the Institution in December last, stated: "We found the Asylum in good order, and it is evident that the wellbeing and comfort of the inmates are thoughtfully considered; their diet is good and liberal."

A considerable addition has been made to the Asylum estate by the purchase of 82 acres of good farm land adjoining the Asylum, at £100 per acre; it is admirably adapted

and situated for the reception of sewage, and generally it is likely to be more useful and profitable than the 63 acres of Caterham Park land, which has been rented for several years, and which will now be given up.

Appended are the Reports from the Medical Superintendent, Steward, Matron, and Resident Engineer, in which will be found details of the medical and domestic history of the Asylum.

The Committee have much pleasure in adding that these Officers continue to devote themselves diligently to their responsible duties, and to use their best efforts to ameliorate the condition of the large number of afflicted persons placed under their care.

(Signed) GEO. WARD, Chairman.

Male and Female Patients laboriously employed are allowed Bread and Cheese, and half-pint Beer at 11 a.m., and half-pint Beer at 4 p.m.

* The Irish Stew is to be made with 3 ozs. Meat and the Liquor from the Meat of the previous day, 12 ozs. Potatoes and other Vegetables, and 4 ozs. Dumpling for the Males, and 3 ozs. for the Females.

† The Soup is to be made with 4 oz. Meat and the Liquor from the Meat of the previous day, Peas, Rice, Scotch Barley, Herbs, &c.

† In lieu of the 4 oz. of Butter daily, the Female Patients may be given an extra ounce of cooked Meat on each of the four meat days.

MEDICAL SUPERINTENDENT'S REPORT.

CATERHAM ASYLUM, December 31st, 1881.

To the Committee of Management of the Metropolitan District Asylum, Caterham.

Mr. CHAIRMAN AND GENTLEMEN,

I have the honour to submit to you my Annual Report upon the general condition of the Asylum, for the year 1881, together with the usual statistical information.

The statistical results of the year are as follows:-

	Males.	Females.	Total.
On the 1st of January, 1881, the			
Asylum contained	939	1,104	2,043
There have been admitted during			
the year	122	105	227
The total number under treat-			
ment has been	1,061	1,209	2,270
Of this number there have been			
discharged	22	22	44
There have died	100	105	205
There remained under treatment			
at the close of the year	939	1,082	2,021

The number of admissions has been ten in excess of the previous year. I regret that I am unable to report any real

improvement in the physical condition of those admitted. The aged, decrepid, and paralysed, whose mental condition is simply that of the childishness incidental to advanced years, and who might therefore with undoubted advantage have been retained in the Infirmary Wards of their Workhouses, continue to be frequently sent here; and, as an actual instance of this, I may mention that four females were upon one occasion admitted, aged respectively 75, 80, 82, and 86. Apart from the inhumanity of sending such harmless and easily managed cases of senility such a long distance, it unduly taxes our Infirmary accommodation, as such admissions require to be immediately on their arrival removed to our Infirmary Wards, thus restricting the number of beds absolutely required for the reception of the sick of our resident population. There has latterly been a slight improvement in the medical certificates of those newly admitted, but in many instances they still contain really no evidence whatever that the person certified is of unsound mind, and therefore a fit and proper subject to be deprived of his or her liberty.

With regard to the causes of the Mental disorder in those admitted, lengthened experience only tends to strengthen the opinion I expressed in my last report, viz., that the combined causes of hereditary predisposition and alcoholic excess will account for the sad Mental condition of a large proportion of our population.

The character of the admissions have been more of the County Asylum type, this being most probably due to the crowded condition of the Home-County Asylums, thus necessitating their consequent removal to a haven of safety elsewhere.

The number of the recoveries was 13, being exactly the same number as last year. 7 male and 9 female patients were discharged for transfer to County Asylums, having exhibited indications of being either suicidal or dangerous to others. 7 men and 8 women were discharged, having sufficiently improved to be able to reside with their friends.

The average number of patients resident during the year was 2,000. The highest number resident in the Asylum on any one day was 2,045.

The death-rate for the year has been comparatively high, as I ventured to predict it would be in my last annual report, owing to the exceptionally large number of aged, paralysed, and enfeebled patients then under care here.

There have been 205 deaths, 47 of which were due to exhaustion of old age, and 22 to that fatal form of brain disease known as General Paralysis of the Insane, being 10 in excess of those who succumbed to this incurable malady in the preceding year. Table VII. also reveals the fact that 25 per cent. of the deaths were upwards of 70 years of age, 40 being between 70 and 79, 10 between 80 and 89, and 1 between 90 and 99 years of age at the time of their death. The percentage of deaths on the average numbers resident was 10.82 males and 9.75 females.

The general health of the patients, considering the advanced ages of many of our residents, has been fairly good. They suffered somewhat from the extreme cold, and from the subsequent long-continued prevalence of the East Winds in the early part of the year; and in March last a patient was admitted from St. Saviour's Union who exhibited

undoubted evidence of being the subject of Smallpox within 48 hours of her arrival here. I therefore instantly took steps to remove 50 female patients from the Detached Hospital, and transferred this case to a room in that building, and placed her under the care of a volunteer Nurse, and in strict quarantine. I think it is a matter for congratulation that the disease was confined to this single patient, and I am indebted to the Officers and Nurses for their zealous assistance in this emergency, which enabled me to complete the arrangement already mentioned within some 4 hours of its initiation. I should mention that the disease was of the semi-confluent form, and that the patient eventually recovered.

The admittance of visitors to patients was suspended from January until August, for the greater protection of our resident population, in consequence of the prevalence of Smallpox in the Metropolis; and, although this deprivation was keenly felt by the patients, we endeavoured, by providing additional amusements, to mitigate the loss of this muchappreciated privilege. Various improvements tending to increase the comfort and well-being of the patients have been effected, notably, the addition of a number of invalid chairs of an improved design to the Infirmary wards, and also the substitution of ordinary chairs in place of forms in several of the wards; the addition of glazed tiles to the walls of the female bath room; the continued substitution of cement floors in place of wood in the water-closets of both divisions; the fitting of fire-guards in all the ward kitchens (similar to those previously supplied to the Epileptic wards), and the construction of rockeries in the female airing courts.

Continued attention has been given to the recreation of

the patients during the past year. The weekly dance is a most popular amusement, and this has been supplemented by frequent theatrical performances, miscellaneous entertainments, and, during the summer months, cricket and various other out-door amusements, such as the Easter and Whitsuntide athletic sports, which are red-letter days in our calendar of amusements, and are greatly enjoyed by the patients of both sexes. My thanks are specially due to my colleague and Assistant Medical Superintendent, Mr. Seccombe, for his cordial and valuable co-operation in all that concerns the welfare of our community.

The domestic comfort and happiness of the patients depends materially upon the intelligence, character, and kindly disposition of the Attendants and Nurses, who are so closely associated with them, and I therefore gladly acknowledge the efficient and zealous aid I have generally received from those members of the staff in ministering to the welfare of those entrusted to my charge.

The Local Government Inspectors have paid their periodical visits of inspection, and the Commissioners in Lunacy visited the Asylum in December, and reported in most gratifying terms regarding its condition.

It has not been found necessary to resort to either restraint or seclusion in the treatment of the patients, and there has been no fatal casualty during the year.

The male Night-Attendants continue to periodically meet for fire-drill under the direction of the Resident Engineer; and, as an additional precaution, the nurses have been instructed in the use of the fire-hose, in the event of a fire occurring in their respective blocks.

There have been comparatively few changes in the subordinate Staff. In October last, Head Attendant Hardyway elected, with your sanction, to return to his former duties as night attendant, and Charge Attendant Wm. Finch was selected to fill the vacancy thus created.

My best thanks are due to the various Officers for their kindly assistance and co-operation during the past year. In closing my report, I desire to sincerely thank you for the continued kind and hearty support I have received from you in the management of this Asylum, and without which it would have been impossible for me to have discharged my onerous duties satisfactorily.

I have the honour to be, Gentlemen,

Your obedient Servant,

The ranks Naghta Attendents continue to regradients

meet for Securiff under the direction of the Resident Man.

neet; and, as an additional queenation; the moses have be

REPORT OF STEWARD.

CATERHAM, SURREY, January 1st, 1882.

MR. CHAIRMAN AND GENTLEMEN,

I beg to present the usual statistics for the year 1881, for your consideration. The Asylum has, during the past year, been conducted upon the same lines as heretofore, and though the cost per head has slightly increased, this is in a great measure due to a decrease in the numbers, which during the epidemic of Smallpox in the Metropolitan area, were not augmented from time to time, and therefore establishment expenses which would have sufficed for a larger number had to be distributed over a smaller number of days' maintenance, making a slight increase in the individual cost.

The land agreed to be purchased by the Committee has not yet been formally transferred—a fact much to be regretted, as the season may pass away and leave us unable to cultivate it during the ensuing spring and summer, which will entail a loss on our Farming Account next autumn.

The class of inmates still remains as infirm as last year, and perhaps more so. It is very rare indeed now that a freshly imported case is able to work, and those who were comparatively able when the Institution was first opened,

have had twelve years nearly added to their lives, thus rendering many somewhat less able-bodied than on their admission.

There has been no change in the Staff connected with the Administrative department during the year.

The various duties of those connected with this department have been carefully and conscientiously performed, and their conduct and deportment have been satisfactory.

Thanking the Committee for their continued confidence in me,

I am, Mr. Chairman and Gentlemen,

Your obedient Servant,

(Signed) GEORGE WHITE,
Steward.

A SORRED

MATRON'S REPORT.

CATERHAM, SURREY, January 2nd, 1882.

GENTLEMEN,

I have the pleasure to submit to you my Eleventh Annual Report, giving a statement of the work done in the female department of this Asylum.

There have not been any changes, either in the Laundry or the Workroom. Several of the Attendants have left, some, as in previous years, to be married, and some from "love of hange." There has been no case of misconduct amongst them during the year, and at the present time they are working fairly and steadily.

Each year our work seems to increase, and the Patients admitted from time to time are, in almost every case, too old and too feeble to be of any use, either in the Laundry or at domestic work in the blocks, thus throwing a greater strain on the Staff. The new washing machine now being fixed will prove of much use to us when in working order.

In the Laundry during the year 124,997 dozen articles have been washed; these, valued at 6d. per dozen, realise the sum of £3,124 18s. 6d.

Tables are appended showing the amount of work done in the Needleroom.

The amusements have been of the same character as in former years, the weekly dance still standing out prominently amongst them. Some entertainments have, also, been given by the Medical Superintendent to the invalids in the Infirmaries. A lecture was also given by Dr. Elliot in the Recreation Hall, illustrated by the magic lantern; this was very interesting, and the people were highly delighted.

The Annual Staff Ball was most enjoyable.

In conclusion, I beg to tender my sincere thanks for your unvarying kindness and support on all occasions.

I am, Gentlemen,

Your obedient Servant,

(Signed) E. E. MOSELY,

Matron.

To the Committee of the Caterham Asylum.

CATERHAM, March, 1882.

To the Committee of Management.

GENTLEMEN,

I have the honor to place before you an account of the work that has been executed in my department during the twelve months ending 30th December last.

In my last report I stated that sundry works were in course of being carried out, among others, in the Female general bath-room the floors and bath casings have been formed of concrete, the drainage re-arranged, the walls lined with glazed tiles, and the room re-painted throughout.

The whole of the wood floors to the water-closets and slop sink rooms on the upper floors in the blocks are in process of removal in favour of concrete. Floors of this material, which is both durable and economical, have been laid down in other parts of the Asylum as from time to time required.

All the Dormitories have been provided with pigeon holes for the patients' clothing.

Arrangements have been made to take off any abnormal pressure of sewage gas which may arise in the drains, by means of Banner's cowls and pipes.

The Chapel is now warmed by a separate stove and boiler, instead of being connected with the boiler hitherto

used for warming the single rooms at Female A block, which was not sufficiently powerful for both purposes. The result is a successful one.

It was found necessary to renew some plates in No. 3 steam boiler, they having become so much corroded as to be no longer safe.

The following painting has been done:—the whole of the Male blocks externally; and Female A 3, and C 1, 2, and 3; Matron's house, Committee rooms, Laundry buildings, Farm cottage, Detached infirmary, Male and Female corridors, &c., internally.

The heavy drifting snowstorm and gale of January 18th, and the terrific hurricane of October 14th, did very considerable damage to the roofs and ceilings in all parts of the Asylum.

The Nurses are now drilled in the use of the fire-hose, so that on an emergency they may be of some assistance in extinguishing a fire; and the Artisans and Attendants are periodically drilled as before.

The quantity of water pumped during the year amounted to 38,490,979 gallons, out of which 3,733,000 gallons were supplied to the Guards' Barracks, and 7,162,000 gallons to the Caterham Spring Water Company, for which the Managers receive £817 2s. 11d.

The maximum depth of water in the well was 202 feet on April 1st, and the minimum depth, 82 feet on June 20th.

The Engines and Pumps, although they have been heavily

called upon, performed their duties in a most satisfactory manner, and are now in excellent condition, as are also the various other engines, machines, and apparatus.

The consumption of gas was 9,441,750 cubic feet, at a cost of £706 18s. 1d., or 1s. 6d. per thousand cubic feet; the maximum daily consumption was 46,137 cubic feet, and the minimum 12,922 cubic feet. Appended to this report is a detailed account of the cost of the manufacture of the gas, from October 2nd, 1880, to October 1st, 1881.

I beg to conclude my report by thanking you for the uniform kind support and consideration I have received from you.

I remain, Gentlemen,

Your obedient Servant,

(Signed) WM. CRICKMAY, Assoc. M. Inst. C.E., Resident Engineer.
