METROPOLITAN ASYLUMS BOARD.

ANNUAL REPORT

FOR THE YEAR

1916.

MEDICAL RESEARCH COMMITTEE LIBRARY

(19th YEAR OF ISSUE.)

OFFICE OF THE BOARD,

EMBANKMENT, E.C.

PEINTED BY HENDERSON & SPALDING, LTD., SYLVAN GROVE, OLD KENT ROAD, LONDON. S.E 15.

1917.

BIBLIOGRAPHICAL NOTE.—Before the year 1886 no regular annual record of the work of the Board was published. (In the year 1871, however, and again in the years 1876 and 1877, the Chairman of the Board issued a report of the nature of an annual report, with some statistics.) For the years between 1886 and 1897, both inclusive, the Chairman of the Board issued an annual report and the Statistical Committee also issued a report, each separately. These reports may, together, be taken as the reports of the Board for those years.

For the year 1898, and for subsequent years, an annual report of the Board, and so called, has been issued, consisting of a summary of the work of the Board for the year, the reports of the several standing committees, and the report of the Statistical Committee. The reports for the four years 1898, 1899, 1900, and 1901 were issued in two volumes : vol. I. containing the report of the Board and the reports of the standing committees, except that of the Statistical Committee, which itself formed vol. Π . The report for the year 1902 commenced a new series in one volume, bound in cloth and furnished with an index. The reports are sold to the public at 5s, a copy, in one volume or two as the case may be.

The separate reports of the Chairman of the Board above referred to and the first report of the Statistical Committee (1886) were of foolscap size ; all the remainder are of the size of this volume.

In the report for 1888 a spot map showing smallpox admissions was included. In the report for 1889 spot maps showing admissions of all diseases to the Board's hospitals were included. In the report for 1890 were included spot maps of notifications also. In the reports for 1891 to 1902 spot maps of notifications but not of admissions were included. In the reports for 1903 to 1905 spot maps of notifications of smallpox and typhus cases only are included.

The following reports are nearly or wholly out of print :—The reports issued in 1871, 1876, and 1877. The report of the Statistical Committee for 1886. The report of the Board (two vols.) for 1900. (For this year—1900—however, all those parts of the report which referred to infectious diseases have been collected and separately printed, and copies may still be obtained. For the years 1899 and 1900 a somewhat similar collection was made as regards the imbecile asylums, and copies may still be obtained.)

From the years of the opening of the several institutions to 1885, annual reports of the medical superintendents, with statistics, and, in some cases, reports by the committees of management, were issued separately, and copies of many of them may still be had.

The annual reports of the Captain-Superintendent and Committee of the training ship Exmouth may be obtained in a separate form from 1877 to 1914; the reports of the Children's Committee from 1898 to 1914; the reports of the Ambulance Committee from 1884 to 1897; and the reports of the Finance Committee from 1900 to 1907.

On account of the War, the reports for 1915 and 1916 consist each of a small volume sewn in paper covers, without charts—preceding volumes having consisted of about 260 pages, with charts and tables, bound in full cloth.

ANNUAL REPORT.

REVIEW FOR THE YEAR.

1. At the time of compiling this report (July, 1917) the war which is still raging dwarfs every other topic. No extended account of the year's work will, in the circumstances, be looked for, nor would any such account be suitable.

I. STAFF.

Military As in 1915, various questions connected with 2. service. staff claimed perhaps a larger amount of attention than any other subject, and that of military service not the least. At the end of 1915, as was indicated in the report for that year, the Managers had allowed all their eligible male employees of military age to attest for military service under Lord Derby's scheme. They prepared a list of those whom they considered indispensable for the carrying on of the service, and when the early groups were called up in January, 1916, it became necessary to make the first appeals for exemption. The Managers decided to enter all their claims with the City of London Local Tribunal. As a result of negotiation with the Advisory Committee for the City through the military representative, Major Lionel de Rothschild, M.P., an arrangement was entered into whereby about 130 employees received temporary exemption up to July, 1916, while a number of others were given shorter periods of exemption. The passing of the first Military Service Act in the spring of 1916 made little difference to the Managers' service in one way, because every permanent employee of military age and fitness had already volunteered, and had either been released or had attested and had been exempted. The exceptions did not exceed 3 in number. But in another way the Military Service Act had a serious effect. It indicated the grave need there was for men for the army and rendered it imperative that the Managers should not seek to obtain exemption for any man who was not absolutely indispensable. So thoroughly, however, had the scrutinising of the lists been carried out in 1915 and early in 1916, that when the claims were again submitted in June, 1916, the Advisory Committee found few cases to question, and fewer still in which they could safely refuse exemption. In fact, of the men originally listed in 1915 as indispensable very few indeed have been taken, except a few ambulance drivers, whom it was found possible to replace by

women, as is set out in paragraph 17 of this report. Exemption for a further period of six months was accordingly granted after considerable negotiations, which, however, did not at any stage necessitate a difference of opinion or recourse to the Tribunal.

In July, 1916, the second Military Service Act was passed, under which men who had previously been rejected from military service were rendered liable for re-examination. It must be remembered that the Board was relying on the retention of a number of these men, and it therefore became essential to enter appeals for several of this class. The cases in which appeals were accordingly entered were all granted exemption up to January, 1917.

On the whole the Managers claim that they have not sought exemption for any man who ought to have been released for the army, while, on the other hand, they have felt it their duty to endeavour to retain such as are necessary to enable the Board's work to go on as efficiently as could reasonably be expected under war conditions.

Ceneral 3. Some of the questions connected with the staff, questions. apart from those arising out of the voluntary, and subsequently of the compulsory, releasing of men for the army, were the making of arrangements for the employment of older men or women in their place ; the employment of married women as temporary employees; the special difficulties with certain classes of employees; the difficulties in arranging for annual leave; the consideration of questions concerning the feeding of the staff; the efforts to expand and increase the amenities of office so as to attract new employees and so as to keep in the service those already there; and, above all, the question of remuneration, including the awarding of special bonuses to certain sections of the staff, in addition to the so-called "war bonus"-all of which called for much work, thought and care.

The position which these and other questions occupied at the close of the year is so different from that which they occupy at the date of this report that it seems a profitless task to summarize them; and to record decisions which have already become obsolete would seem to be a work of supererogation. Such a summary could hardly claim even an historical interest. When the present economic conditions show a sign of settlement there may, perhaps, be some value in reviewing what has been done.

Cost and number The annual cost of the staff may be taken at £465,926, some details of which are given in Table vII. The superannuation allowances now amount to £15,830, which is distributed among 340 pensioners. The deductions made during

the year under the Superannuation Acts from the pay of employees on the books amounted to about £8,000.

The staff numbered about 7,000, and some details will be found in Table IV.

II. WORK IN CONNECTION WITH THE WAR.

War refugees. 4. The number of refugees under the Board's care has been considerably reduced, and at the end of the year only the camp at Earl's Court and the Edmonton Refuge were in use for their accommodation.

St. Anne's Home, Streatham Hill, which had been used for Belgian soldiers (réformés and conscripts), was closed and handed over to the Bermondsey Guardians, and the inmates of Millfield House were transferred during the summer to the Edmonton Refuge.

The Hackney Wick Refuge, which had been used for some time for the accommodation of families of refugees suffering from infectious disease, was also closed, and the buildings were lent to the Home Office for the accommodation of interned enemy aliens. Surrey House, Wandsworth, was taken into use in the place of the Hackney Wick Refuge.

Some statistics will be found in Table v.

At the Dispensary and Observation Hospital, Sheffield Street, W.C., a considerably larger number of cases were treated than during the previous year, as the following figures show:—

Total No. of cases registered at the Dispensary, 4,158, a daily average of 13.41 ,, ,, consultations 14,583 ,, ,, 47.04 In the Observation Hospital 288 cases were dealt with, of which the following are some particulars :---

m . 1 1 1 .		Male.	Female.	Total.	
Total admissions	 	 177	111	288	
Transferred to M.A.B. institutions	 	 45	25	70	
", ", other institutions	 	 69	27	96

Died	 	 2	2	4	
Remaining on 31 December, 1916	 	 10	6	16	
Dental cases	 	 42	137	179	

War hospitals and other accommodation. 5. The other work of the Board in connection with the war may be summarised as follows :---

(1) The handing over to the Government of the Brook Hospital, Orchard Hospital, Grove Hospital, and part of the Southern Hospital. These hospitals contain a total of more than 4,400 beds.

Of these, the Brook and the Grove Hospitals (which latter was handed over in November, 1916) are to some extent managed by the Board for the Government, but the Board has no responsibility in the matter of the others.

(2) The allocation of part of the High Wood School for the accommodation of soldiers.

(3) Accommodation and treatment of soldiers suffering from tuberculosis and other diseases.

(4) The reception of numbers of patients from the London County Council Asylums, with a view of enabling the Council to hand over one of their large asylums for military purposes.

(5) The reception of sane epileptics from the Belmont Institution, under the care of the Fulham Guardians, so that that institution might be handed over to the military authorities.

III. FINANCIAL MATTERS.

Economies.

6. The Board have relaxed none of their efforts to conduct their work in as economical a manner as It may, perhaps, be noted here that, in order to assist possible. the Government as far as possible in conserving their coal sup-

plies, the Board have made successful efforts at using coke instead of coal for stoking purposes, and have otherwise reduced the consumption of this important article.

Expenditure. 7. Table VII. sets out under the customary headings the figures for the year. The total expenditure amounted to £1,272,447, which is equal to a rate of 6.76d. in the pound.

The loan indebtedness was reduced in the year by £240,667, leaving £1,558,476 owing, which, with the exception of a small amount, will in the ordinary course be extinguished in about six years. No additional sums were borrowed during the year.

Some interesting financial statistics are given in Table VI., and the balance sheet is reproduced in Table VIII.

IV. PATIENTS AND OTHER DEPENDENTS.

Summary.

8. The total number of persons admitted into the

institutions of the Board during the year was (excluding war refugees) 37,010, which is 11,564 fewer than those admitted during the previous year. The total number remaining on 31 December was 13,486, which is 1,260 fewer than in the previous year. Particulars of the various classes will be found in the paragraphs following, and a reference to two new classes of patients in paragraph 24.

The average cost of maintenance of inmates was 9d. per head per day, which sum includes food, clothing and medicine, but neither attendance nor rent.

Infectious 9. The care of persons suffering from infectious disease-Fever. disease has always been, and still continues to be, the Board's chief concern. The admissions were 20,692 in number, and at the end of the year there remained 2,859 patients in the hospitals. Details will be found in Table x.

The admissions were 7,613 fewer than in 1915, and the number remaining under treatment at the end of the year was 1,166 fewer than last year. The lowest number under treatment at any one time was 2,495 (on 16 September), and the highest 4,093 (on 3 January).

The number of diphtheria cases received was 7,695, being 444 in excess of the previous year, and indeed the highest of any year on record. For the first time in the history of the Board the number of these cases has exceeded the number of scarlet fever cases.

This is the chief feature of the year's work in infectious disease; the other is the comparatively small number of scarlet fever admissions. The figures are remarkable. At the beginning of the year there were 2,420 cases under treatment. This number gradually declined to 967 on 15 September, and the usual autumnal increase which followed it was very slight, no higher figure than 1,199 being reached, which was on 14 November, after which it again rapidly declined, until at the end of the year there were only 926 scarlet fever cases under treatment.

This comparative paucity of scarlet fever cases has been a very great boon from several points of view, one of which is that it has enabled the Managers, notwithstanding great difficulties experienced in the securing of necessary staff, to accede to numerous requests of the army and naval authorities for the removal and treatment of soldiers and sailors suffering from various infectious diseases, chiefly measles.

The incidence of disease in the several months of the year is shown in Table XI., and its geographical distribution in Table XII., while Table XIII. gives the rates per cent. of mortality for five years.

Infectious dis- 10. One smallpox patient was admitted in May, and **ease-Smallpox.** was discharged recovered in June. Residence, 30 days. For particulars as to vaccination, see Table XIV.

Infectious disease— Notification statistics. 11. In the metropolitan area during the year 25,920 cases of infectious disease were notified, or 18,945 fewer than in 1915. Of these 18,924 were legally admissible to the Managers' hospitals, and 17,086, or

90.28 per cent., were actually admitted. Table IX. shows the number of cases of each disease notified, and the deaths from the principal diseases admissible to the Board's hospitals; also the ratio of such notifications and deaths to the population. The highest notification rates per 1,000 persons living were in Bethnal Green 7.3, Stepney 6.8, and Shoreditch 6.8, as compared with an average rate for London of 4.5. The average for 1915 was 6.2. Cost of infectious hospitals. The amount spent on this branch of the work was $\pounds 422,313.*$

Tuberculous
patients.12. Except the reception at the Northern Hospital
of a small number of girls who need treatment and
education at the same time, no extension of work in this direction
has taken place during the year. The cost incidental to the
treatment of tuberculous patients is defrayed as regards insured
persons by the insurance committees concerned, and as regards un-
insured persons partly by the Government and partly by the Board.

The cases treated during 1916 numbered more than 2,500, particulars of which will be found in Table XXIV., while other details will be found in Tables XV. to XXIII.

It will be seen that, adopting the usual method of calculating mortalities, the death rate on all cases was 9.9 per cent.

Mental defectives. 13. Table xxv. sets out the admissions, transfers, deaths, discharges, and numbers remaining in the Board's several asylums and industrial colonies according to the parishes and unions to which the maintenance of the patients was chargeable. Table xxvi. (which did not appear last year) sets out particulars for each asylum. Table xxvii. shows the movement of the asylums population during the year 1916. The direct admissions were 89 more and the indirect admissions 374 more than in the preceding year, while the total discharges were 36 more and the deaths 152 more than in the previous year; the result being a total decrease in the number remaining at the end of the year of 20.

These two tables refer to certified cases only; the uncertified or mentally deficient cases are dealt with in Table XXVIII.

The cost of this section of the work was £257,582.*

Children's hospitals, schools, and homes.
 14. Table XXIX. shows the direct admissions from the various parishes and unions during the past year, viz., 2,506, as compared with 2,181 in the preceding year. The total numbers remaining at the end of the year were 1,794. The cost of this part of the service was £115,748.*

Training ship 15. As will be seen on reference to Tables xxx. and xxx1., 345 boys were admitted to the training ship during the year, a decrease compared with the previous year of 84. Of 394 boys discharged, 115 entered the Royal Navy and 98 the Mercantile Marine. At the end of the year 571 boys remained under training.

The new and most promising part of the work of training boys for the sea, namely, their practical experience in the new

^{*} Exclusive of war charges, head office and other central expenses.

sea-going tender provided in 1913, has been wholly suspended by reason of the war.

The cost of this part of the service was £23,203.*

Distinctions have been gained in the war by old Exmouth boys, an account of which will be given in a future report.

The casual poor. 16. The number of this class received during the year was 9,865, while for 1915 the figures were 14,515. On the last day of the year there remained 91. Details are in Table XXXII.

The decrease in the number of inmates continued during 1916, the average number remaining on Friday night in each week being only 94, as compared with 132 during 1915 and 252 during 1914. At the end of the year only 6 of the 24 wards that were taken over in April, 1912, remained open. The various philanthropic agencies which undertook to receive suitable cases from the casual wards, and from the office used in connection with the scheme for dealing with homeless persons at night in Central London, continued their operations during the year.

The cost of the casual poor service was £17,201.*

V. AUXILIARY SERVICES.

Land and river ambulance services. 17. One of the chief links in the chain of the Board's activities is the land ambulance service, and if this were to snap or even become seriously weakened, the most important part of their work would come practically to a standstill.

In the report for 1915 reference was made to the difficulties experienced in making good the losses of the driving staff of the ambulance service caused by so many of the men being called up for military service. The depletion had become very serious at the beginning of the year 1916, and an appeal by advertisement was made for the services of women motor drivers. The response was gratifying. The ambulance work of three stations was taken over by women, and has been carried on most satisfactorily. The duties are arduous, necessitating exposure to the inclemencies of weather at all hours of the day and night, and involve an appreciable risk of infection in carrying patients to and from the ambulances. More serious difficulties, however, developed in connection with the staff of mechanics employed in the work of repairing and overhauling the motor vehicles and maintaining them in running order. So many men left either to join H.M. Forces or to secure more highly paid work in the munition factories, that towards the end of the year it had become impossible to continue the maintenance of the fleet of ambulance vehicles in an efficient condition. Women could not take the

place of these men, who were skilled mechanics. Earnest representations on the subject were made to the Local Government Board, the military authorities and the Ministry of Munitions, who all agreed that the work of the Board was of national importance and must be carried on; but all seemed equally powerless to supply the men required, and at the end of the year nothing had been settled.

Fortunately there was a lessened prevalence of infectious disease in London, the number of patients conveyed to hospitals and elsewhere by the Board's ambulances totalling 53,467, as compared with 66,807 in the previous year, and 81,305 in the year 1914.

A number of ambulances have been held at the disposal of the military and the police at times when Zeppelin attacks were expected, but on only one occasion were their services required, when nine injured persons were taken up after bomb explosions on the outskirts of London. These ambulances were in charge of women.

A summary of the work of the land ambulance service is given in Table XXXIII.

The cost of the land service was £34,931.

18. The steamboats of the river ambulance service conveyed 1,404 passengers to and from Long Reach. Of that number 1 was a case of smallpox and 985 were fever patients, all of whom were taken to the river hospitals, and 418 were visitors, staff, workmen, &c.

The vessels were under steam 6,999 hours, and under way 523 hours; they ran 5,452 miles, and consumed 177 tons of coal.

The cost of this part of the service was £7,417.

Works department. 19. The cost of the minor works carried out by the direction of the Engineer-in-Chief, under contracts made by the Board (mostly for the upkeep of the fabric of institutions), was about £20,000, of which £13,000 was due to building works and repairs, and the remainder to engineering works and repairs. Besides this amount, a certain sum, not easily ascertainable, was incurred for work done by the staff of the institutions under the direction of the Engineer-in-Chief, and, in addition, the sum of £2,600 was spent on cleaning and painting works during the year.

The last report gave a list of works which had been postponed on account of the war, and noted that the following were then in progress :---

Extension of Tooting Bec Asylum		£171,000
Extension of East Cliff House		£34,000
Engineering works at the North-Western	Hospital	£9,000

The work in connection with the first of these was entirely suspended towards the middle of the year by the order of the Government, but the other two were proceeded with; the last was quite finished at the end of the year, and the other nearly so. Supply 20. The work of the department entrusted with the duty of arranging for the Board's supplies has throughout the year again been specially onerous by reason of the conditions arising from the war.

The following is a classification of some of the principal contracts for supplies entered into during the year :

						Approximate total value.
Bread (monthly contracts)					-	 £30,100
Flour (,, ,,)					-	 17,100
Potatoes (fortnightly contra	acts)					 9,900
Bacon (weekly contracts)						 11,500
Eggs (,, ,,)					-	 11,200
Other provisions					208	 150,000
Necessaries (<i>i.e.</i> , soap, sod and the like)				aints,	35	 12,900
Stores goods (i.e., cotton, clothing, hardware, boots	linen	and wo	ollen g	oods, &c.)	74	 34,900
Coal and coke					56	 104,000

In addition, 77 other contracts for various supplies were made, of which no estimate of value sufficiently reliable for any useful purpose can be given. There were also made centrally through the Contract Department upwards of 7,800 purchases of miscellaneous goods, of values ranging from £1 or less to £100, or, in some cases, more, required at different institutions and not obtainable under contract. Owing to the fact that a considerable proportion of the Board's supplies, obtained in normal conditions under periodical contracts, including delivery, were on account of war conditions necessarily purchased during the year under review as and when they could be obtained—which in many cases meant purchase in bulk where produced, or on rail or ex wharf or warehouse—no accurate statement of the gross total cost of the supplies arranged for centrally can be given.

It may be said, however, that the total exceeded £600,000, the increase over previous years' amounts being largely due to war prices.

	Descrif	otion.		 Satisfactory.	Unsatisfactory.	Total.
Milk				 4	2	0
Provisi	ons		 550	13	563	
Necessa	aries			 397	15	412
					-	
		Т	otals	 951	30	981
					_	

Unsatisfactory samples represent 3.06 per cent. of the total number analysed, a decrease of 5.44 on the previous year's percentage of 8.5. All deliveries of milk at the Board's institutions are tested with the Gerber apparatus before acceptance, so that samples are sent for professional analysis only in special circumstances.

Bacteriological 21. The work of this department is best set forth in the words of the bacteriologist and the bacteriological adviser, and the following is their report for the year :--

DIPHTHERIA ANTITOXIN.

(1) The preparation of diphtheria antitoxin has been carried out much on the lines of former years. The number of doses supplied during 1916 to the various institutions of the Board was 37,446 doses, each of 4,000 units, or, in all, 149,784,000 units.

During the year 9,019 cases, including 540 in which diphtheria bacilli were found to be present, although they manifested no clinical evidence of the disease, were treated for diphtheria in the Board's hospitals. It is calculated that, on the average, 16,607 units were used for each patient. The corresponding figures for 1915 were 159,844,000 units for a total of 8,172 patients treated, or 19,559 units per patient.

In addition to the Board's institutions, two hospitals not under the Board, viz., the Middlesex Hospital and the Hospital for Sick Children, Great Ormond Street, were, as in previous years, provided with diphtheria antitoxin, the total amount supplied during 1916 being 300,000 units. The quantity supplied during 1915 was 600,000 units.

DIAGNOSTIC WORK.

(2) During the past year 449 specimens, mainly swabs from the throat, nose, or ear of patients in the hospitals of the Board, have been examined for the presence of virulent diphtheria bacilli. These specimens were derived from 254 patients in whom diagnosis was doubtful, or who were awaiting their discharge from hospital. Specimens from 2.8 per cent. of the diphtheria patients treated in the Board's hospitals were thus examined at the laboratories, the remainder probably being cases in which the diagnosis was simple and straightforward. In 1915 the corresponding figures were 845 specimens from 416 patients, or 5.09 per cent. of the total cases treated.

In addition, 51 specimens from patients in the children's institutions and 10 specimens from the war refugees have been similarly examined.

(3) During 1916, 333 samples of blood taken from typhoid patients in the Board's fever hospitals have been examined for the determination of the agglutinative reaction upon the typhoid bacilli of the serum from these samples, with the object of corroborating or correcting the diagnosis of enteric fever (Widal's reaction). These specimens were derived from 301 patients.

49 samples of blood from 48 inmates of the Board's asylums and 2 samples from other institutions under the Board were tested in a similar manner.

171 samples of blood have also been examined for their agglutinative reaction upon organisms allied to typhoid bacilli, viz., the members of the paratyphoid group.

(4) Of faces 53 samples, and of urine 54 samples, from 19 cases in the

Board's hospitals were examined for the presence of typhoid bacilli, and 5 samples of fæces and 5 samples of urine from 2 cases were similarly examined for the Board's asylums.

(5) Of sputum, 5,079 samples were examined microscopically for the presence of tubercle bacilli. These specimens were derived from patients in the Downs Sanatorium, Northern Hospital, Queen Mary's Hospital, and the War Refugees' Dispensary. In addition, 54 specimens from cases suspected to be suffering from tuberculosis have been examined for various institutions under the Board.

(6) Of cerebro-spinal fluid from cases suspected to be suffering from cerebro-spinal meningitis, 127 samples were submitted for examination during the year.

(7) Other samples (10 in number) were received at the laboratories and there examined with the object of separating and, if possible, identifying the organisms present. In 11 cases standardized vaccines designed for use in the treatment of these cases were prepared from the bacteria isolated from the material submitted for examination, and in 3 cases vaccines prepared from organisms, cultures of which are maintained at the laboratory, were supplied.

(8) 1 sample of excreta was examined for the presence of the dysentery bacillus, and 4 examinations for the gonococcus have been carried out. 1 sample of urine was examined for the presence of albumen and casts.

(9) 92 specimens have been examined for the Wassermann reaction.

(10) The water supplies of certain of the Board's institutions have been kept under observation during the past year, 31 samples of potable water taken from 4 institutions being brought under examination.

(11) The sterilizing plant at Leavesden Asylum has been tested once during the year.

(12) Outfits necessary for diagnostic work and a large quantity of various culture media and tuberculin dilutions were supplied to the Board's institutions.

Pathological laboratories. 22. The Board's Research Pathologist (Dr. Mair) has continued his research work on behalf of the Board at the Lister Institute, and early in the year submitted a paper "On the Etiology of Scarlet Fever," which subsequently appeared in vol. xx. of the Journal of Pathology and Bacteriology. The work which Dr. Mair has accomplished during the past three years will be of great value as a preparation for further investigations into the causation of infectious diseases.

VI. THE BOARD OF MANAGEMENT AND ITS WORK.

23. A list of the members of the Board, with their addresses and the unions or parishes they represent, is given in Table II. The present Board was elected in 1913, and in the ordinary course of events a new election would have fallen due in 1916, but in consequence of the war, the continuance in office of the present members was extended for another year, *i.e.*, until May, 1917. In like manner, the *status quo* with regard to the Committees, the chairman and vice-chairman of the Board, and the chairmen of the committees and sub-committees has been preserved. Several changes have taken place owing to resignation, and one to death, viz., that of Mr. W. F. Penfold, who represented the Wandsworth Guardians for 24 years.

24. When the Board was first formed its only duties were to provide accommodation for imbeciles and for fever and smallpox patients of the poor law class, but the number of classes now cared for by the Board is about 20, and during the year two further classes have been added, viz., sane epileptics, for whom the Board have on several occasions during the past few years been asked to provide, and parturient women suffering from venereal disease. The first class will be accommodated in the Epileptic Colony at Edmonton and in the Children's Home at Hanwell, and it is hoped to arrange for the reception and treatment of the parturient women in the City of London guardians' establishment at Thavies Inn, but at the end of the year admissions had not actually commenced.

A general description of the work of the Board is given in No. I. of the Appendices and Tables, while No. III. gives certain details of each of the institutions controlled by the Board.

25. Most of the work of the Board is done by committees (and their sub-committees), of which the following is a list :--

General Purposes Committee, a committee of the whole Board, to whom are referred all questions of policy and all questions affecting the Board's work as a whole. This committee has 4 sub-committees.

Finance Committee (12 members), whose duties are sufficiently indicated by its name.

Hospitals Committee (36 members), who manage the infectious hospitals, a list of which is included in Table III. This committee works through 14 sub-committees.

Asylums Committee (30 members), who manage the imbecile asylums and the industrial and epileptic colonies. A list of these institutions is included in the same table. This committee has 7 sub-committees.

Children's Committee (36 members), who manage the hospitals, schools and homes for sick children, a list of which is given in the same table. This committee has 10 sub-committees.

Sanatorium Committee (9 members), to manage the sanatoria mentioned in the same table.

Works Committee (16 members), who supervise building and engineering work. One sub-committee.

Contract Committee (18 members), who arrange for the supplies needed at the several institutions. One sub-committee.

Ambulance Committee (12 members), who control the land ambulance service.

Training Ship Exmouth Committee (12 members), who manage the training ship. Three sub-committees.

Casual Wards Committee (12 members), who control the casual wards.

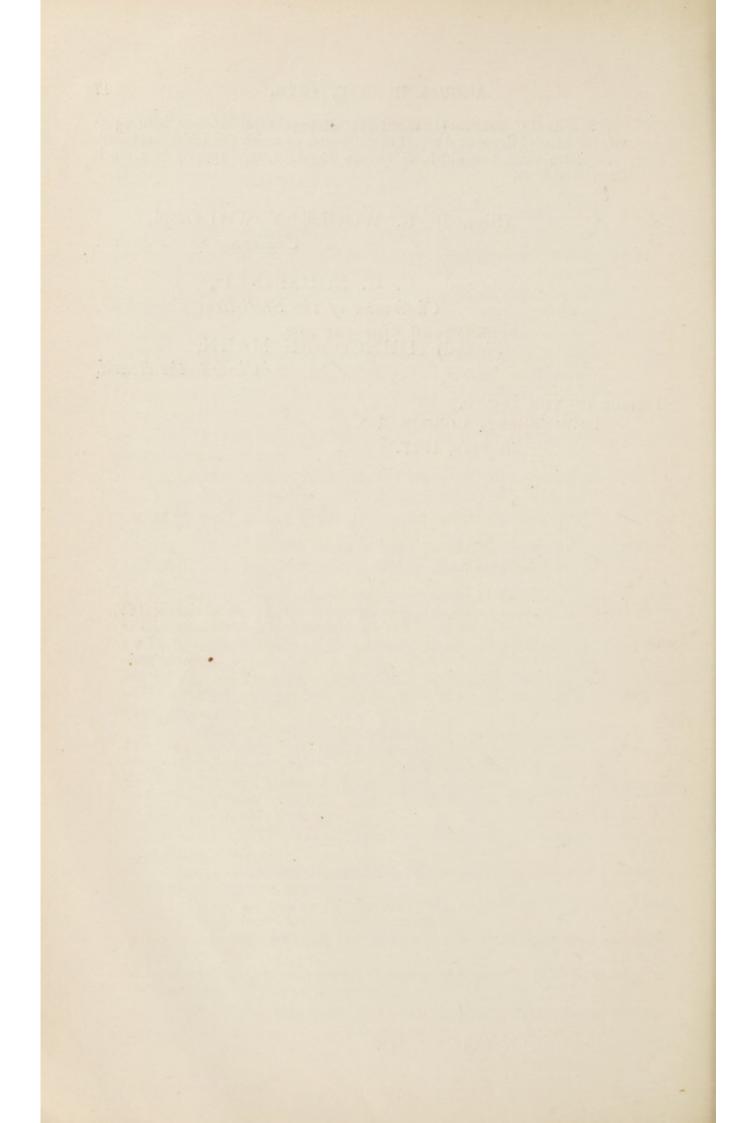

Statistical Committee (12 members), whose principal function is to supervise the issue of the annual report of the Board, of which this is the nineteenth consecutive issue, but which, as already explained, now appears in a much diminished form.

(Signed) R. WOOLLEY WALDEN, Chairman of the Board.

(Signed) E. C. BOUSFIELD, Chairman of the Statistical Committee.

(Signed) DUNCOMBE MANN, Clerk to the Board.

Office of the Board, Embankment, London, E.C. 20 *July*, 1917.

APPENDICES AND TABLES.

I.

CONSTITUTION AND DUTIES OF THE METROPOLITAN ASYLUMS BOARD.

CONSTITUTION.

The Metropolitan Asylums Board was established by an Order of the Poor Law Board, dated 15 May, 1867, pursuant to the provisions of the Metropolitan Poor Act, 1867 (100 & 31 Vic., c. 6). This Act empowered the Poor Law Board to combine into districts the unions and parishes of the metropolis as they should think fit, for the purpose of establishing "asylums" for the reception and relief of the sick, insane or infirm, or other class or classes of the poor, and to issue Orders controlling the action of the Managers of any such district.

The Metropolitan Asylum District embraces all the unions and parishes in London, and the Board deal with those matters which it is considered can best be transacted by a central authority for the whole of the metropolis rather than by each separate board of guardians acting locally. The Poor Law Board and their successors, the Local Government Board, have from time to time issued Orders for the direction and guidance of the Metropolitan Asylums Board.

The Board is composed of 73 members, 55 being elected by the metropolitan boards of guardians and 18 nominated by the Local Government Board.

DUTIES.

(i.) Infectious diseases.

The first Order already referred to, dated 15 May, 1867, constituted the Board

for the reception and relief of the classes of poor persons chargeable to some union or parish in the said district respectively, who may be infected with, or suffering from, fever, or the disease of smallpox. or may be insane.

The Diseases Prevention (London) Act, 1883 [46 & 47 Vic., c. 35], removed the civil disabilities which had till then been attached to admission into the Board's hospitals. In 1888 the Board was authorised to admit diphtheria patients, and by the Poor Law Act, 1889 (52 & 13 Vic., c. 56), they were empowered to admit nonpauper cases of fever, diphtheria, and smallpox.

These provisions with regard to the removal and reception of fever, diphtheria, and smallpox patients were subsequently incorporated in the Public Health (London) Act, 1891 [54 & 55 Vie., c. 76].

By Order dated 18 February, 1911, the Local Government Board sanctioned the admission to any of the infectious hospitals of poor persons suffering from such infectious or contagious diseases other than those above mentioned as they might thereafter determine. On 22 February, 1912, the Board sanctioned the admission of poor children suffering from measles or whooping cough received through the metropolitan poor law authorities, while by further Orders, dated 30 May, 1911, and 9 August, 1912, issued pursuant to the provisions of the Public Health (London) Act, 1891, sec. 80, the Local Government Board sanctioned the admission, subject to certain restrictions, of non-pauper cases of measles and whooping cough respectively.

On 2 July, 1912, the Local Government Board (under their Order of 18 February, 1911) authorised the Managers to receive into their infectious hospitals poor persons suffering from puerperal fever through the poor law authorities, and by Order dated 20 August, 1912, prescribed that, subject to certain restrictions, non-pauper cases should also be admitted.

Provision is made at the infectious hospitals for the instruction of medical students and of candidates for the diploma of public health. Provision is also made for bacteriological work and for research work into the causation of infectious disease.

The Board receives from the several medical officers of health notifications of infectious disease occurring in the metropolis, and publishes information relating thereto. [Infectious Disease (Notification) Act, 1889 (52 & 53 Vic., c. 72), and Public Health (London) Act, 1891 (54 & 55 Vic., c. 76), s. 55, s.s. (4).]

(ii.) Sanatoria and hospitals for tuberculous patients.

The Board has entered into arrangements under which it provides accommodation for tuberculous patients in the county of London as required by the Insurance Committee for the county [National Instrumce Acts, 1911 to 1913, 1 & 2 Geo. 5, c. 55, and 3 & 4 Geo. 5, c. 37]. Accommodation for non-insured persons is also provided, the cost being borne partly by the Government and partly by the Board.

(iii.) Ambulance service.

By the Poor Law Act, 1879 [42 & 43 Vic., c. 54, s. 16]. superseded by sec. 79 of the Public Health (London) Act, 1891, the Board was empowered to provide an ambulance service for the removal of patients.

(iv.) The mentally defective.

The Local Government Board Order, dated 15 May, 1867, included the "insane" amongst the classes of poor for whose reception and relief the Board was constituted.

A further Order, dated 18 May, 1875, defined the persons to be admitted into the Board's imbecile asylums as

such harmless persons of the chronic or imbecile class as could be lawfully retained in a workhouse; but no dangerous or curable persons such as would under the statutes in that behalf require to be sent to a lunatic asylum shall be admitted.

A Local Government Board Order, dated 2 April, 1897, included feeble-minded children amongst the classes of poor persons to be received by the Board, and authority was subsequently given for the retention of these cases after 16 years of age. The provisions in this behalf are now incorporated in an Order dated 29 December, 1911, and called the Metropolitan Asylums (Mentally Defective Persons) Order, 1911, which defines the mentally defective persons to be received as

persons not certified as lunatics, who by reason of mental defect are incapable of receiving proper benefit from ordinary instruction, or cannot be properly trained in association with other persons in ordinary schools or institutions, or are incapable of using ordinary means or precautions for protecting themselves from injury or improper usage or treatment, or are incapable of maintaining themselves by work ; provided that any such poor person on admission into an asylum belonging to the Metropolitan Asylum Managers shall not exceed 21 years of age.

(v.) Boys for training.

The provision of a training ship for the training of boys for sea service was sanctioned by the Local Government Board in 1875, under the terms of the Metropolitan Poor Amendment Act, 1869 [32 & 33 Vic., c. 63, s. 11.]

(vi.) Sick children.

By Orders of the Local Government Board, dated 2 April, 1897, and 11 September, 1908, the Board was constituted as the central metropolitan authority for dealing with various classes of poor law children, the sick and convalescent, those suffering from ophthalmia and ringworm and the mentally defective (see above). Under the first of these Orders the Board also provided for juvenile offenders from 1902 to 1910, when this branch of work was transferred to the London County Council.

(vii.) Casual poor.

On 10 November, 1911, the Local Government Board issued the Metropolitan Casual Paupers Order, 1911, forming a district conterminous with the existing Metropolitan Asylum district for the relief of the casual poor of the metropolis. The Order also provided under section 10 of the Pauper Inmates Discharge and Regulation Act, 1871 [34 & 35 Vic., c. 105], that the Managers of the Metropolitan Asylum district should be the Managers of the new district. Prior to the issue of this Order, every metropolitan board of guardians was required by the Metropolitan Houseless Poor Act, 1864 [27 & 28 Vic., c. 116], to provide casual wards for "destitute wayfarers and foundlings."

As contemplated in the Casual Paupers Order, the Local Government Board on 28 March, 1912, issued the Metropolitan Casual Wards (Transfer) Order, 1912, transferring to the Managers on terms prescribed therein those of the casual wards provided under the Act quoted, which it was proposed to continue.

The effect of these two Orders was to centralise the control under the Board, from 1 April, 1912, of most of the casual wards administered prior to that date by the separate boards of guardians.

In connection with the casual wards the Board has undertaken the management of a scheme for dealing, in co-operation with the police and voluntary agencies, with the homeless poor at night.

(viii.) Parturient women suffering from venereal disease.

The Local Government, in September, 1916, issued an order adding this class to those for whom provision is made by the Managers, and arrangements are being made for the treatment of such cases in the City of London guardians' institution at Thavies Inn.

(ix.) Sane epileptics.

In 1916 the Managers, on the suggestion of the Local Government Board, undertook to receive sane epileptic children in a portion of one of their children's homes, and subsequently they agreed also to arrange for the care of male adult sane epileptics. Early in 1917 the Local Government Board issued an order adding sane epileptics to the classes of poor persons for whose maintenance the Metropolitan Asylum District is deemed to be formed.

(x.) Summary of duties.

The work of the Board now includes the following and the administration of the institutions, particulars of which are shown in Table III. :--

Infectious diseases— fourteen hospitals for smallpox, scarlet fever, diphtheria, enteric (or typhoid) fever, typhus fever, measles, whooping cough and puerperal fever (with arrangements for dealing with plague and cholera).

Bacteriological establishment and laboratories.

- Sanatoria for tuberculous patients (National Insurance Act, 1911-1913) two institutions and part of one of the infectious hospitals.
- Parturient women with venereal disease—to be treated in the first instance for the Managers by the Guardians of the City of London Union.
- Notification of infectious disease—the collection and distribution of information in this matter.
- Mentally defective—four asylums for imbeciles, including infirmary for aged patients, two industrial colonies for improvable imbeciles and feeble-minded.

Sane epileptics—one colony and part of a children's home.

Sick children—two hospitals for sick children, four sanatoria and homes (three at the seaside), one home for ringworm and other skin diseases, and two ophthalmia schools.

Boys—a training ship Exmouth I. and its tender Exmouth II.

- Casual poor—eighteen (12 closed) casual wards for homeless poor; homeless poor night office.
- Ambulance services—seven ambulance stations, three riverside wharves, with motor ambulances and ambulance steamers.
- Central stores—for reception of goods and their distribution to the various institutions.

TABLE VI.

Summary of the main financial statistics of the district.

OTE.-Unless otherwise stated the following statistics relate to the financial year ended 30 September, 1916.

- The Metropolitan Asylum district is coterminous with that of the metropolitan unions and parishes, *i.e.*, the Metropolis, excluding the inns of Court (Inner and Middle Temples, Gray's Inn and Lincoln's Inn), which during the continuance of certain payments are extra parochial.
- The population of the district, as estimated by the Registrar-General at the middle of 1915, and retained for 1916, was 4,310,020.
- The rates ble value of the district was £45,126,449 on the 6 April, 1916, being a decrease of £129,515 (0.26 per cont.) during the year then ending.
- The produce of one penny in the £ on the rateable value of the district at 30 September, 1916, represents £183,025.
- The precepts levied by the Managers on the constituent parishes and unions of the district for the year work out at 61.5d. in the £, a.d the average for the past five years was 5.8d. in the £.
- The total expenditure for the year was £1,308,164 (Loan £35,717, and General £1,272,447), and the average for the past five years £1,252,581 (Loan £41,530, and General £1,211,951).
- The expenditure on general account for the year was £1,272,447, as against the year's income of £1,377,395.
- The **rateable value** of the property occupied by the Board is **£176,513**, and the amount of the **rates paid** last year was **£55,384**, of which **£28,001** was paid to metropolitan authorities, and **£27,383** to provincial authorities.
- The borrowing powers are limited to one-fifth of the rateable value of the district.
- No loans were raised during the year.
- No amount was borrowed during the year. The total **amount borrowed** to 30 September, 1916, was **£5,814,449**. The **amount repaid** in the year was **£240,667**, making the total amount of **loans discharged £4,255,973**.
- The amount of loans outstanding at 30 September, 1916, was £1,558,476, and works out at £3 10s. 0d. for every £100 of rateable value, and is £0.36 per head of the population of the district as estimated by the Registrar-General at the middle of 1916.
- The rates of interest on loans vary from \$2 15s. Od. per cent. to \$4 5s. Od. per cent. and the average rate of interest at 30 September, 1916, was 31 per cent.
- The institutions under the control of the Managers are shown in Table III.

The average daily number of inmates maintained was in-

1912	 	 	 	 15,191
1913	 	 	 	 15,406
1914	 	 	 	 16,619
1915	 	 	 	 16,295
1916	 	 	 	 14,514

- The number of persons in receipt of superannuation allowances at the end of the year was 340, and the superannuation payments, excluding compensation, amounted to £15,830 for the year.
- The percentage deductions from the pay of the staff under the Poor Law and Asylums Officers' Superannuation Acts during the year amounted to **£8,022**, after allowing for contributions refunded.

.

The mortalities returned as above include all deaths occurring from intercurrent diseases.
The mortality rates are calculated according to the Registrar-General's formula—*i.e.*, by dividing the deaths, multiplied by 100, by half the sum of the admissions, discharges, and deaths for the year.
These figures differ from those given in the Board's report for 1915, pp. 41-43, owing to the subsequent correction of errors of diagnosis.
