MOULSFORD PAUPER LUNATIC ASYLUM.

REPORT

OF THE

COMMITTEE OF VISITORS.

To

*The Berkshire County Council,
The Council of the Borough of Reading, and
The Council of the Borough of Newbury.*

THE COMMITTEE OF VISITORS OF THE MOULSFORD
LUNATIC ASYLUM REPORT WITH MUCH PLEASURE :—

That the state of the Asylum continues good,
and that everything has been kept in a proper
state of repair.

They also desire to record that the general conduct of the Staff has been most satisfactory.

With very deep regret the Committee refer to the death of Dr. Douty, who had ably presided

over the Institution for a period of 5 years, and who, after a short illness of only a week, died in July last.

A short time afterwards the Committee appointed Dr. Murdoch, who had been Assistant Medical Officer for seven years, to fill the vacant post.

Doctors Dunn and Johnston have respectively been appointed First and Second Assistant Medical Officers.

The Report of the Commissioners in Lunacy, which is very satisfactory and speaks highly of the efficient state of the Asylum, is appended.

In consequence of the increase of the numbers in the Asylum, the want of a Detached Infectious Hospital had become so absolutely necessary that the Committee were obliged to ask the 3 Bodies in Union to allow them to erect a Building not to exceed £3,000 in cost. This consent having been obtained the Committee have instructed Mr. Hine, an architect of some celebrity in Asylum work, to draw plans, and this is now being done. When this Hospital is completed it will free the Wards which are at present used for Infectious Cases, and postpone for some time longer the necessity of increasing the accommodation in the Asylum.

In the early part of the year two cases of Typhoid occurred, but happily neither terminated fatally. In consequence of this the Committee called in the services of Mr. Rogers Field, but he

was unable to detect any important sanitary defect.

During the past Winter there has been an outbreak of Scarlatina, 5 of the Staff and 7 of the Patients having been attacked.

The cost of Repairs has been £1,170 13s. 5d., and of Additions and Improvements £308 18s. 2d. for the year ending 31st March, 1893 ; of this latter sum £210 11s. 6d. has been spent in the re-arrangement and improvement of the Heating Apparatus in the original building.

Lodging money has been earned for the same period from the Boroughs of Reading and Newbury to the amount of £336 11s. 0d. This, with the amount of profit on out-county, private and criminal patients, viz.: £187 0s. 10d., has been applied in aid of the Repairs Fund.

The principal Repairs, Renewals and Improvements carried out during the year have been :—

Painting outside woodwork on East and North East fronts of Male Wards 4, 5, 6, 7 and 8.

Painting, Whitewashing, Colouring, Varnishing, &c., in Male Wards 1, 5, 6 and 7 : Female Wards 1, 2, 3 and 4 ; Medical Superintendent's House and Assistant Medical Officers' Quarters.

Fixing a Sewer Gas Destructor on main sewer of the female division.

Taking up and re-laying Drains at Farm Yard.

Alterations to Heating Apparatus and fixing casing to coil in Male I. Ward.

Fixing corrugated Iron Fence to Yard for ashes, &c.

Fitting up Pantry near the Kitchen.

Fixing Gas Brackets in Chapel.

Making Path round Paddock for extended exercise of Male Patients.

The patients on the books of the Asylum on the 31st March, 1893, were :—

	M.	F.	TOTAL.
From Unions in Berkshire	152	221	373
„ The County of Berks	3	1	4
„ Parishes in the Borough of Reading..	55	70	125
„ „ „ Newbury	27	12	39
„ Unions not in the County of Berks ..	1	2	3
Private patients.. ..	4	4	8
Criminal patients	0	0	0
Totals	242	310	552

Since the 1st April, 1892, there have been admitted Pauper Patients, 44 Males and 69 Females, total 113; and Non-pauper Patients, 2 Males and 3 Females, total 5. Of the Pauper Patients, 3 Males were received from other Asylums.

The discharges have been :—

	M.	F.	TOTAL.
Of Patients recovered	19	29	48
„ relieved	4	1	5
„ not improved	4	2	6
Total.. ..	27	32	59

Of these 2 Males were removed to other Asylums.

14 Males and 30 Females have died ; total 44.

Of the number of Pauper Patients belonging to the Bodies in Union there has been an increase of 7 Males and 9 Females ; total 16.

The Establishment consists of :—

A Medical Superintendent	1
Two Assistant Medical Officers	2
A Chaplain	1
A Clerk to the Visitors	1
A Steward and Clerk of the Asylum	1
A Housekeeper	1
A Head Male Attendant	1
A Head Female Attendant	1
An Assistant Clerk and Steward	1
A Stores Assistant	1
A Foreman of Works	1
An Engineer	1
A Farm Bailiff	1
A Gatekeeper	1
A Gardener	1
A Baker	1
A Carpenter	1
Two Painters	2
A Bricklayer	1
A Gasman	1
Two Stokers	2

A Shoemaker	1
A Tailor Attendant	1
Male Attendants	23
Nurses	26
Indoor Servants, Laundrymaids, &c.	10
A Hall Porter	1
Farm and Garden Servants			8
						<hr/> 94

The weekly charge for maintenance of paupers has been 8s. 6d. throughout the year.

ALBERT R. TULL,

CHAIRMAN.

April, 1893.

REPORT
OF
TWO COMMISSIONERS IN LUNACY,

23rd NOVEMBER, 1892.

REPORT
or
COMMISSIONERS IN LUNACY.

(Entered in Visitors' Book.)

BERKS LUNATIC ASYLUM,

Nov. 23rd, 1892.

We regret we have to begin this entry by a reference to the death of Dr. Douty, late Medical Superintendent of this Asylum, which occurred somewhat unexpectedly in the summer. Dr. Douty had, during the time he held the office, displayed much zeal and intelligence in the discharge of the duties incident to it, and in the management of the Asylum, the condition of which he had certainly improved. He has been succeeded by Dr. Murdoch, who was his assistant and with whom are now associated two Assistant Medical Officers.

We have to-day thoroughly inspected the Asylum, which we find in excellent order. The wards are clean, bright, and cheerful, and the arrangements for maintaining in them a proper temperature have been greatly improved. The beds and bedding in the sleeping rooms are clean and good; and we can on the whole express a favourable opinion of the dress of the patients of both sexes. We would recommend however a greater variety of material and patterns for the women's dresses, which may be provided without increase of cost.

The alteration of the Water Closets, by the removal of soil pipes to the exterior of walls and the introduction of improved apparatus, has made further progress, but several remain to be dealt with. In the meantime there does not appear to be any serious sanitary defect, and we have not to-day detected any bad smells in the wards. A gas destructor has been fixed on the main sewer of the female division, and seems to be very effective as a ventilator and for destroying the Sewer gas. The only other improvement calling for notice is the lighting of the chapel by gas.

The Committee, we learn, are considering the erection of a detached hospital for infectious disease; and there can be no question of the advantage of such a building, both for its primary purpose and as the means of relieving so much valuable space in the Asylum now kept empty to meet the occurrence of cases of infection. We have looked at two sites proposed for this hospital and prefer that near the chapel. In designing the hospital, care should be taken not to plan it on too large a scale. Accommodation for five patients of each sex should be quite sufficient, and generally the building should be of an economical character.

Reference was made by our Colleagues last year to the Laundry, the principal want of which would seem to be more drying closets, some difficulty being felt at this season in getting the clothes and linen dried.

The patients on the books to-day are 548 in number, being 20 more than at the visit of our colleagues on Dec. 8th, 1891. Since then 53 patients have been discharged, 41 of them having recovered; 105 have been admitted and 32 have died.

Including the beds of the so-called infectious wards, which would be released by the erection of a detached hospital, there are 55 vacant beds in the male, and 39 in the female division.

Except 8 Private cases and 3 Out County Patients, all are chargeable to the bodies in Union, namely, Berkshire, and the Boroughs of Reading and Newbury.

The above deaths have all been due to ordinary causes. No suicide or fatal casualty has occurred, and no Inquest has been held. The causes of death were verified by post-mortem examination in all but 5 instances. The mortality for 1891 was at the rate of 7.6 per cent. of the average number resident, and for the period since the last visit it has been somewhat lower. A case of Typhoid Fever occurred in each division, but both patients recovered. In the case of the man it was thought he might have contracted the disease by working at the Sewage Farm, but in the case of the woman the source could not be traced. Mr. Rogers Field was employed to examine the drains but found no defect in them. Dr. Murdoch informs us that it is intended, wisely we think, to abolish the present sewage tanks at the Farm, and to distribute the sewage in a fresh state on the land.

The only other exceptional disorder was the Influenza, which attacked 30 patients, but all recovered. The present health of the Asylum is good: 6 men and 13 women were to-day in bed, but several only on account of weakness.

Since the last visit the only case of restraint was that of a woman who wore lock gloves for 91 hours for surgical reasons; and one man once for $6\frac{1}{2}$ hours, and 6 women on 8 occasions, and for a total of 133 hours, have been secluded.

We have seen all the patients but one woman who is absent on trial. They have been very orderly and well behaved, and free from complaints. We saw 317 at dinner in the Hall, and the fare and manner of serving it were good.

The returns of useful employment made to us, if no mistake has been made in the reckoning, are very satisfactory,

showing that 73 per cent. of the Males and 79 per cent. of the Females are so employed. We are informed that all the clothing of the patients and their boots and shoes and all repairs of the same are made and done in the Asylum. The same remark applies to the matter of exercise to which proper attention appears to be given, large numbers walking daily beyond the Airing Courts, and a good proportion also having walking exercise weekly beyond the Asylum bounds.

The night supervision of the epileptics (77 in number), and of actively suicidal cases (numbering 27), as well as of the sick and infirm, is good, each class in each division being watched by a stationary night attendant, while a fourth visits the whole of the division at intervals. A recording clock with electric communications tests the vigilance of these attendants.

The present staff includes 20 male and 22 female ordinary attendants for day duty. These numbers give an attendant to 12 patients in the male and one to 14 in the female division.

The present weekly charge for maintenance is 8s. 6d.

(Signed)	C. S. BAGOT	} Commissioners
	JOHN D. CLEATON	

MEDICAL SUPERINTENDENT'S

ANNUAL REPORT, 1892.

TWENTY-SECOND ANNUAL REPORT

OF THE

MEDICAL SUPERINTENDENT.

MR. CHAIRMAN AND GENTLEMEN,

I have the honour of submitting to you my report upon the general condition and management of your Asylum for the year ending December 31st, 1892, together with the usual statistical tables.

The changes amongst the patients have been as follows :—

	Males.	Females.	Total.
Patients in the Asylum on January 1st	226	296	522
Admissions	49	65	114
Total cases under treatment	275	361	636
Discharges—			
“ Recovered ”	19	22	41
“ Relieved or not Improved ” ..	8	4	12
Deaths	14	24	38
Remaining in Asylum on Dec. 31st ..	234	311	545

The above table shows that during the year there has been a net increase of 23 patients. As regards chargeability, there is an increase of 16 in those chargeable to the Unions in the County of Berks, and of 12 chargeable to Reading ;

whilst those chargeable to Newbury have decreased by 2. The number belonging to the Private and Criminal Classes shows a decrease of 3. At the close of the year there were none of the latter on the books of the Asylum.

Admissions.

The past year has been exceptional in that since the opening of the Asylum it gives the largest number of ordinary admissions, viz.:—114. It is further marked by the very large number of old broken down patients received, complete wrecks in mind and body. So much was this the case during the months of September and October, that admission after admission was in such a state as to necessitate immediate confinement to bed, thus taxing the Hospital accommodation to its utmost. Of those admitted no less than 42 per cent. on being examined were noted to be in very bad physical health, whilst only 10 per cent. could be looked upon as in good health. On the whole the class of admissions has been unsatisfactory. Out of the total, 36 were looked upon as curable, 18 as doubtful and no less than 60 utterly hopeless. The anticipation of recovery in regard to the curable cases has been realized in the case of 26 up to the end the year.

The number of patients in the Asylum at the beginning of the present year (1893) who can be considered as curable is 10, and 18 are considered as doubtful. Amongst the admissions were 3 Criminal Patients, who after a few weeks residence were transferred to the Pauper Class and made chargeable to their respective Unions. There were also 5 Private Patients admitted, of whom 1 recovered, 1 died, 2 were removed and 1 remains.

Twelve of the admissions were relapsed cases, *i.e.*, patients who had been previously discharged recovered from this Asylum, and had again become insane. Only 1 of these had been discharged during the current year, the case being that of a man subject to severe epileptic fits and maniacal excitement. With 5 months residence here and appropriate treatment his fits entirely left him and he was

discharged; but after an absence from the Asylum of four months he was re-admitted, having resumed his drinking habits and as a result the fits returned with their attendant excitement.

With regard to the causes of insanity in those admitted, Hereditary Influence as usual heads the list with a total of 25. Previous Attack as a predisposing cause is noted in 17, whilst Intemperance in Drink is credited with only 4; in comparing this number with the admissions from this cause in former years, one is led to conclude that Alcohol as a cause of insanity in this County is much on the decrease. There is however a marked increase in those admitted suffering from General Paralysis, a most fatal form of mental disease, no less than 11 being so affected. This disease is usually associated with the worry and bustle of town life and the evils and temptations of crowded communities. Why it is becoming more prevalent in such a purely agricultural County as Berkshire, is difficult of explanation, but the fact remains. There were also admitted 11 Epileptics and 14 Idiots and Imbeciles, 3 of whom were boys aged 7, 8 and 11 years.

Causes.

Fifty-three cases were discharged, 41 as recovered, 2 as relieved, and 10 as not improved. Excluding those cases which were transferred from other Asylums, and from the Private and Criminal Class to the Pauper Class, the recoveries give a rate of 38 per cent. on the admissions, which is an increase of 9 per cent. on that of last year. The past year yielded no less than 26 recoveries, which considering the large number of aged and feeble people, idiots, general paralytics, and epileptics admitted must be looked upon as fairly satisfactory. The average recovery rate in County and Borough Asylums for 1891 as recorded in the Returns of the Lunacy Commissioners is 41·3 per cent.

Discharges.

The deaths during the year numbered 38—14 Males and 24 Females, giving a rate of 7 per cent. on the average

Deaths.

daily numbers resident, and of 5·9 per cent. on the total number under treatment. The average rate for County and Borough Asylums for 1891, was 10·4 per cent. This low death rate is so far satisfactory, but it means a large accumulation of old helpless patients who will in the future require much attention and nursing. On referring to Table 8, it will be noticed that of those patients remaining in the Asylum no less than 130, or close upon one fourth of the total number are over 60 years of age. General Paralysis accounts for 7 deaths, and Phthisis for 6. Of the latter, no less than 5 were females, which would point to some defect in the female division, such as overcrowding and an insufficient air space.

The average age at death was 53·6 years ; 27 of these were over 60 years of age.

There has been no less than 33 post-mortem examinations out of 38 deaths.

No Coroner's Inquest has been held during the year, and I am pleased to say neither has there been any suicide. This immunity reflects great credit upon the Nursing Staff, whose vigilance is constantly taxed to avert such an untoward calamity.

Escapes.

Three male patients escaped during the year, but each was brought back to the Asylum after an absence of a few hours. Considering the large number industrially employed here this number of escapes is remarkably few.

Accidents.

The past year has been singularly free from serious accidents. Two old patients fell and broke both bones of the forearm ; another an old woman, tripped whilst coming down the stairs, falling on her head, producing all the signs of fracture of the skull. She also suffered from a severe form of heart disease, viz. :—Aortic-regurgitation. After a prolonged illness, requiring the most careful nursing, she made an excellent recovery.

General Health. Influenza.

Early in the year we had a return of our old friend the Influenza, which however left us without repeating the

havoc of its previous visit. We found that enforced detention in bed was all that was necessary in warding off complications. More serious however was the advent of scarlatina in our midst during the month of December. So far, 2 female and 3 male members of the staff, with 5 patients have been affected. How it originated could not be definitely ascertained, but it was probably introduced by patient's relatives during their visits. In the spring there were two cases of Typhoid Fever, one a male the other a female. Mr. Rogers Field, with your permission, made an inspection of the Sanitary arrangements without being able to point out any defect. So far as his investigation extended, he found the drains in good order, all sinks and W.C.'s properly trapped, and the water supply free from pollution. Many of the openings of the external soil pipes in the original building were however considered too low, in some cases being on a level with the dormitory windows. On the male side the soil pipe ventilators being connected with the shaft from the boilers, were found to act as fresh air inlets, instead of foul gas outlets, the gases being consumed in the shaft. With your permission an attempt was made to introduce the same system on the female side by fixing a Holman's Sewer Gas Extractor and Combustor, to the Main Drain. The experiment was attended with complete success, and now there is a strong draft of fresh air down the ventilators on the female side of the house. Typhoid Fever on the male side is quite a new experience here, and it is more than probable that the disease was contracted at the Sewage Beds. The patient was a young man, somewhat delicate, and suffering from primary Dementia, and as a means of treatment was allowed to go as one of a party working at the Sewage Beds; he did no work however, and only hung listlessly about. He was employed there about one week and after a period of two weeks (the usual period of incubation of Typhoid), was prostrated with the disease which proved of a very

Scarlatina.

Typhoid

severe type. Hitherto it has been a moot point whether Typhoid could be contracted on land laid down for Sewage irrigation, but the above case goes far to prove the danger to young people who may be employed in such sanitary vocations.

Infectious Hospital.

At the present time you have under your consideration the advisability of erecting a detached Infectious Hospital where such cases as the above could at once be isolated. It is only by prompt attention to this that such diseases occurring in a community can be successfully combated. Further, as pointed out to you in a Special Report on the subject, more sleeping accommodation is required in the female division, where at the end of the year there were 9 more patients than provision was allowed for. By the erection of such a hospital, two dormitories each to accommodate 32 patients at present, used for the so called isolation of fever cases, could be utilized as ordinary sleeping dormitories and thus meet the overcrowding for a few years.

Amusements.

The Associated Amusements have been much as in former years, consisting of Dances, Music, Theatricals, Cricket, Football, &c. My best thanks are due to those Members of the Staff who devote much of their spare time to the getting up of such successful entertainments, which tend largely to hasten recovery and to relieve the monotony of Asylum life.

Treatment.

Every possible means to improve the condition of the patients, or to aid in their recovery is utilised. We rely less on drugs and more and more on nourishing food, warmth, good nursing, and plenty of open air exercise. During the spring a pathway was made round the large field behind the Asylum, and is now used by walking parties of male patients who hitherto had been exclusively confined to the Airing Court. A similar recreation ground situated beyond the chapel has been in use for the female patients for several years. Those walks are much appreciated and greatly tend to the general tranquility of the patients.

The average number industrially employed is a high one, being no less than $74\frac{1}{2}$ per cent. : 68·3 males and 78·5 females. Every endeavour is made to induce patients to employ themselves, but it is surprising to find the number of able bodied men and women who absolutely refuse to put their hands to anything, saying, "they did not come to an Asylum to work." It is however more surprising still to find that many of the patients' relatives object to their employment, even should the patient be willing, and this in spite of all explanation, pointing out the advantages to be derived therefrom.

Employment.

Two Members of the Board of Commissioners in Lunacy made their annual visit of inspection of the Asylum on November 23rd, and left a very gratifying report which is appended.

Com-
missioners.

The Asylum Mechanics, with the assistance of patients, have been fully employed and much useful work, besides ward painting and cleaning, has been completed. The most important are—

New Work.

The fitting up of a new housemaid's pantry.

A new chimney built at the gashouse.

The Chapel supplied with gas.

Re-arranging the farm drainage, thus doing away with cesspools and replacing them with man-holes and strainers.

In the Autumn the Hot Water Pipes in the original building, the heating of which was very defective, were re-arranged and brought into the Wards by Messrs. Haden. The beneficial effect on the male side has been all that could be desired, but the circulation in the female division has so far not been successful. Alterations during the coming spring will, I trust, be attended with better results.

In July, the sad tidings of the death of Dr. Douty, your late Medical Superintendent, fell upon the Staff with

Staff.

the most appalling effect. For over five years it had been my privilege to be associated with him in his work. During that time our intercourse both officially and privately had been of the most pleasant description, and he always extended to me the greatest kindness and courtesy. By the Staff and Patients he was universally beloved, and all could rely upon receiving the most ready assistance and unvarying consideration. Thus cut off on the threshold of his life's work, he left us deeply missed and regretted.

Dr. Beaver who was promoted as Senior Assistant, resigned his appointment in October, to enter into private practice, and leaves during the present month. Dr. Dunn, at present Assistant to the West Riding Asylum at Wakefield, has been appointed as his successor. Dr. Johnston, who had some Lunacy experience at the Leicester County Asylum, was appointed Junior Assistant, and entered upon the duties of his office in November last. To both gentlemen I gladly tender my thanks for their ready and loyal assistance. It was with regret that you accepted the resignation of Miss Crowter, who for over five years had been your Head Female Attendant, and who has been appointed in a similar capacity to the Wilts County Asylum. Miss Bearpark, from the Winson Green Asylum, has been appointed to the vacancy. From Mr. Nicholls, your Clerk and Steward, I have the most willing and reliable assistance, and my earnest thanks are due to him for his unstinted and untiring endeavours to assist me in everything that tends to the welfare of the institution. The conduct of the subordinate staff has with few exceptions been excellent, and much credit is due to all the Attendants and Nurses for the manner in which they have carried out their most trying and oft times irritating duties.

To you, Gentlemen, I beg to tender my most sincere thanks for the confidence you have reposed in me, and for the support and assistance you have invariably extended to me in this my first year of office as your Medical Superintendent.

Owing to the changes in the Senior Staff, the coming year will doubtless be attended with much anxious work; but with your continued advice and support it will be my constant endeavour to maintain your Asylum in a high state of efficiency as a Hospital for the treatment and care of the insane.

I am, Mr. Chairman and Gentlemen,

Your obedient Servant,

J. WM. A. MURDOCH,

Medical Superintendent.

Berks Asylum,

January 19th, 1893.

CHAPLAIN'S REPORT.

CHAPLAIN'S REPORT.

To the Committee of Visitors, Berks Asylum.

GENTLEMEN,

As the year 1892 closes, I have once more the pleasure of submitting to you my Annual Report in accordance with the General Regulations of your Asylum.

The Chapel Services have been duly performed on Sundays—morning and afternoon—with a sermon at each service—on Christmas Day, Good Friday, Ascension Day, and every Wednesday throughout the year. On all the Festivals we have had Special Choral Services and suitable Chapel decorations.

I find that any extra efforts put forth in making the Chapel cheerful and the services bright and hearty, are very greatly appreciated by the Patients, as also by the Staff.

The average attendance of Patients at Divine Service has been 347 during the year now closing.

I cannot but notice with pleasure the earnest attention and reverent demeanour of our people during service. As Chaplain, I should like to express my sincere thanks—and I feel sure the thanks of the patients too—to those of the Officers and Staff who form the Choir, and who so ably and willingly use their vocal powers in making the services bright, and in helping the rest—not so gifted in voice—in the musical portions of the Services.

The Holy Communion has been celebrated in the Chapel once each month, and on Christmas, Easter and Whit-Sunday. The average number of communicants has been 28. As I remarked in my last Annual Report to you, the number of Communicants compared with our population is small, but for reasons which are obvious, I do not think it wise to press the Patients in this matter. I have every reason to believe that those who do communicate do so in a proper spirit.

As explained in detail in the Chaplain's Journal—which has been examined by you at your Monthly Meetings—I have visited the Wards, Airing Courts, Workshops and other parts of the Asylum regularly throughout the year. The Male and Female Infirmary Wards have received my constant attention. It has been my privilege to conduct services of a short and simple character in these Wards for those unable to attend Chapel. The Holy Communion has been administered from time to time to Sick Patients.

To the Majority of the Patients, services, especially when bright and hearty, are most helpful, of this there is no doubt, and yet I find that a very great deal can be done by *personal* conversation. The Patients are always ready and wishful to speak to me on many personal difficulties and troubles, and by this individual work, perhaps more help and comfort is given than in any other way, the more so as the cases so vastly differ in character and consequently in treatment.

There is perhaps no work more capable of bringing out the sympathy and solitude of those who believe in the brotherhood of man and the Fatherhood of our Creator, than that among the inmates of such an Institution as this. The special circumstances of the place render the work of the Chaplain interesting, and at the same time difficult. I know there are many people who—being unacquainted with the life—imagine that the ministrations of religion are

utterly thrown away upon the population of an Asylum for the Insane. From experience I can safely say this is not so. A large proportion of the Patients—although unfit to be at large—are apparently so slightly affected in mental condition, that their religious instincts are as keen and as well balanced as many so called sane people. There are many others too, to whom loss of liberty and of their own domestic surroundings add to the sadness of their position. All these require personal advice and help from their Chaplain. There are again others who are the victims of religious mania, and these are certainly difficult cases for any Clergyman to deal with, yet in many ways, and in their several degrees, they are influenced by consolation, sympathy, and instruction. Whether the Patients are the innocent subjects of circumstances, or the victims of their own folly or neglect, it is surely a duty and a privilege to try at least to soften the severity of their lot, and the efforts both of a religious and secular character which are put forth on their behalf cannot fail to mitigate to some extent the tediousness of their enforced seclusion.

I have attended members of the Household and Staff who have required my administrations as Chaplain.

The Wards are fairly provided with Bibles, Prayer books, and Hymn books, and all these are in sound repair.

The Library is still greatly appreciated. There are some 725 Volumes, and these are regularly issued to the various Wards.

Since my last Annual Report—Dec. 18, 1891—there have been 37 deaths amongst the Patients. Of these 22 have been buried in the churchyard at Cholsey, the other 15 were removed by their relatives or friends.

As well as these deaths amongst the Patients, the death of Mr. Douty, our late Superintendent was one which we all felt bitterly. The grief amongst the Staff and

Patients at the time of the bereavement was as genuine as it was keen.

I am hoping to present several members of the Staff to our Bishop next month for Confirmation, and am now holding preparation classes for the Candidates.

I have assisted regularly throughout the year in the various kinds of Entertainments and recreative sports promoted for the welfare of the Patients.

Thanking you sincerely for the courtesy and kindness which you have extended to me and my work in the past.

I am, Gentlemen,

Your obedient Servant,

AUGUSTUS E. FARRAR,
CHAPLAIN.
